A careful estimate has been made of the operating costs for fleets of two and three barges, and also for the self-propelled barges, covering the most difficult part of the route, a distance of 157 miles—or round trip of 314 miles. The barges, it should be mentioned, usually get no return cargo. Summarizing the results, which are derived from observations over a period of only four months, it may be said that for towboat *No. 1*, with two barges, the average ton-mile cost has been 2.74 mills, the lowest ton-mile cost 2.06 mills. Towboat *No. 2*, with two barges, average ton-mile cost 1.99 mills, lowest ton-mile cost 1.47 mills. Towboat *No. 3*, with two barges, average ton-mile cost 2.23 mills, lowest ton-mile cost 1.53 mills. With three barges towboat *No. 3* shows average ton-mile cost of 1.72 mills, lowest ton-mile cost 1.63 mills. For the self-propelled steel barges, with loads varying from 637 to 797 tons, the ton-mile costs varied between 1.47 mills and 2.17 mills.

These costs all include interest, depreciation, and maintenance of the plant, as well as operating costs, but include nothing for interest on the cost of the improvement and for its operating charges. The improvement cost, about $10,000,000; operating expenses are about $150,000 annually. An analysis of the figures of cost shows that the daily cost of the crews of towboats and self-propelled barges is nearly half the daily cost of transportation, including all overhead expense. The average time consumed on the round trips observed indicate a speed for the tows of 2½ miles per hour, including lockages, and of 3.4 miles for the self-propelled barges. Plainly the opportunity for improvement lies here. Either the relatively large expense of the crew must be distributed over a greater quantity of freight, or else greater speed must be attained through a modification of the design of the carriers.

ATTEMPTS WORTHY OF PRAISE.

Now, I wish to impress upon you the fact that the attempts to utilize the waterway of which I speak are worthy of the highest praise, and that if their success is open to question it is due to failure to analyze costs and to take the steps shown necessary by such an analysis. As further illustrating my point concerning the necessity for careful cost analysis, let me now ask your attention to a case upon one of our western rivers. Here a well-managed corporation, including in its membership most of the business men in the large and prosperous city at the upper end of the route, which is slightly over 400 miles long, has for the past four years been engaged in the attempt to make this water route a serious competitor of the many railroad systems running between the same termini. The difficulties confronting the navigation company are extreme, for the improved river channel has not yet been completed and the available low-water depth is as yet less than 4 feet instead of the 6 feet contemplated. At both termini the water fronts had been practically monopolized by railroads, thus adding to the expense of cartage and to the total cost of transportation. Undismayed by these difficulties and stimulated to persistence in their experiments by the feeling that rail rates to their city were disproportionately high and could be lowered only by demonstrating that the water route could actually carry and deliver freight to ultimate destination at less than the rail rates, the public-spirited men at the head of this enterprise have proceeded with this work along lines that in the end alone can lead to success.

TOWBOAT AND BARGE.

Navigation was begun in 1911, with certain plant secured by purchase, and at the same time it was decided to investigate the types of boats best suited to successful and economical use on this stream. As a result of the studies and advice of experts, it was decided that the towboat and barge method of navigation afforded the greatest promise of success and improved steel vessels of fireproof construction and suitable size and motive power were adopted. The investigations made by this company are of great value and contribute substantially toward the solution of important problems connected with economical transportation upon our shallow-draft rivers. Thus the company has established terminals with rail connections at both termini, and uses mechanical devices for transfer of freight. It has entered into joint traffic and interchange arrangements with connecting carriers, both rail and water, and handles traffic on through bills of lading. It receives and delivers goods on shippers' sidings, pays switching charges within certain limits, transfers freight to and from the boats, assumes carriers' risk in lieu of marine insurance, and does all this at 80 per cent of the corresponding rail rate. The present plant consists of 1 steel packet, 2 steel towboats, and 12 steel barges—with steel fireproof and weatherproof locked deck houses. So far, the traffic receipts have not fully covered operating expenses, but the company believes that when the improvement of the river has advanced sufficiently to permit full cargoes to be carried, their undertaking will be a financial success. In the meantime, the service rendered has been so satisfactory that the volume of freight offered shows a high annual increase. This traffic includes much high-class package freight. This is the most thorough attempt I know of to revive a river traffic that has disappeared in the face of rail competition, and it should go far toward showing the real possibilities in this important field of the transportation problem in this country. I mention this instance in order to show what successful business men familiar with rail-transportation methods and facilities regard as necessary in an efficient navigation enterprise. They recognize that the community has become accustomed to service of a certain character and that a successful water carrier must give at least as complete a service as a railroad and at figures somewhat lower in order to divert traffic from its accustomed routes.

RAIL AND WATER CONTRAST.

To conclude, railway transportation has been brought to a high degree of efficiency by study and experiment which involved large expenditures. Certain classes of water transportation, such as ocean and lake carrying lines and the Ohio and Mississippi coal carriers, have also achieved success through similar means. As yet comparatively little has been done toward the improvement of the methods of the shallow-waterway carriers in general. Railroads show 0.066 pound of fuel expended per ton-mile of freight transported and 2.5 days' labor per 100,000 ton-miles. Great Lakes carriers expend 0.029 pound of fuel per ton-mile, with 0.9 day's labor per 100,000 ton-miles. For an Ohio River towboat the figures were 0.021 pound of fuel and 1.31 days' labor, while for a Mississippi River packet 1.129 pounds of coal and 65.64 days' labor were expended.

The influence of time in increasing operating costs has apparently not been fully appreciated. Ordinarily freight is moved off and on boats by uneconomical and time-consuming methods, and insufficient efforts have been made to adapt the hulls and power of the carriers to the conditions of the channels to be navigated. Excepting when the carriers, working either singly or in fleets, can move low-class freight in very large quantities, speeds of 2 to 3 miles per hour are uneconomical. For bulk freight 4 miles per hour and for package freight 6 miles per hour seem to be a minimum. The United States is now engaged in a series of studies and experiments as to the best forms for hulls for towboats and carriers, and as to the economical relations which should exist between channel width and depth and boat beam and draft. The complete results of their studies can not be available before another year. In the meantime let us all remember that the largest boat which can float on a given waterway is by no means certainly the most economical boat for its navigation, and that if a traffic of great volume is to be provided for the channel, dimensions must be correspondingly large. A waterway of small channel dimensions is as economical as a narrow-gauge railway, and no more. Each has its use, but neither is suitable for a large volume of traffic.

The Lawyer and Democracy.

EXTENSION OF REMARKS

OF

HON. CHARLES G. EDWARDS,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 22, 1917.

Mr. EDWARDS. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing therein a very interesting and instructive article written by Mr. Charlton G. Ogburn, a prominent member of the Savannah, Ga., bar, entitled "The Lawyer and Democracy," which, in my opinion, is well worth preserving. The article referred to appeared in the American Law Review in the September-October, 1915, issue, and attracted wide attention throughout the country, and is as follows:

THE LAWYER AND DEMOCRACY.

The American Government has been a government of lawyers. Theoretically a government of the people, for the people, by the people, representative participation has made it in practice a government by those to whom authority has been delegated. An overwhelming majority of these representatives of the people have been members of the bar. Lawyers have dominated every Congress and the official family of every President. Out of 27 Presidents of the United States, 22 of the number have been lawyers. The making of the laws and the administration of the laws of this Nation, as truly as the interpretation of these laws, have been in the hands of lawyers.

That this has been a more successful government than governments by militarists, imperialists, bureaucrats, and diplomats none can deny. If lawyers have been the undisputed political leaders of America, they have likewise, in only a slightly lesser degree, been its intellectual leaders also. Except for the brief period when the church dominated thought, the intellectual leadership of this country has clearly rested with the legal profession. The founders of our common schools and of our State universities have been mainly lawyers. The leaders of governmental reform have, with few exceptions, been members of the bar. In every crisis in the life of this Nation, since the days of James Otis and Patrick Henry, lawyers have been at the helm, safely directing the course of affairs and maintaining the fight for popular liberty and national independence.

Lawyers have been the leaders of the people, because they have been in close touch with the life of the people and have understood the needs and aspirations of the people.

This Nation was founded on the idea of personal freedom and was the outgrowth of the struggle to attain it, in connection with economic independence. The right to the enjoyment of individual liberty, free from oppression by the Government, the right to the possession and

accumulation of property, free from interference by the King—these were among the motives that impelled the founders of this Nation to endure many hardships in order that they and their children should not be deprived of these rights without due process of law.

This struggle was only a continuation of the hard fight long waged in the mother country. The men who settled America and their brothers who remained behind in England were fighting the same battle under different conditions by different methods. And it was the same fight their fathers had fought before them.

The victory of the founders of this Nation achieved for the enjoyment of personal liberty and the possession of individual property free from interference by the sovereign was complete. The economic conditions under which they lived were favorable. The resources of the country were bountiful. The advantage that many persons took of the rights thus secured them under circumstances so auspicious was so prompt that soon aggregations of wealth became so amassed as to interfere with the opportunity vouchsafed under a democracy. The fight of the people against the tyranny of the sovereign in this country is a fiction. The people are now turning to the Government for protection against the tyranny of property. Reform has gone deeper into the structure of society, and works for the rescue of nonproperty holders for the freedom denied them by the unequal distribution of wealth.

The problem of government now, therefore, is the development and protection of social rights, and the modification and restriction of individual rights.

Our law, however, was built up around individualism before the theory of collectivism was evolved. Our supreme law is the Constitution. Every clause of it is packed with the history of the struggle of the middle classes against the sovereign. Its distrust of the people is shown clearly in the method it provided for the selection of the President. Its ignoring of human impulses is shown in the system of checks it sought to maintain.

The common law, which is the trunk of our law, with few prunings and few growths, was received directly from England and echoes in its every principle and application the conflict our English ancestors waged with a tyrannical king. The landmarks in the history of our law are such events as the signing of the Magna Charta in 1215, the Petition of Rights in 1628, the Bill of Rights in 1689, etc.—all representing the victory of individual and property rights over the oppression of the sovereign. Even our criminal laws and police regulations reveal their origin by embodying the eighteenth century ideas of punishment, of suppression, of using the State as a policeman.

What effect does this study of the system of law have on the mind of the lawyer and the judge? What influence in turn do the lawyer and judge, saturated with the philosophy of such a legal system, exert on the law's further development? In seeking an answer to this question the writer is guided by his own observations made in the study and the practice of law. He derives from other members of his profession the substance of this answer through their own spoken and written words.

Beginning the study of law, the student devotes himself to textbooks or case books explanatory of the system of law evolved from the individualism of earlier centuries. All of his ideas are obtained from this historical study.

Whether he imbibes these principles directly from the textbook writers or whether under the guidance of the law professor he works out these principles from the "cases" handed down by the judges, his understanding of the law is virtually the same. He is directed to the English and American judges of earlier days, to Erskine, to Blackstone, to Coke, and others, as the fountain head of common-law learning. He becomes saturated in the eighteenth century philosophy, in which the law schools are seeped. Of economics, of politics, of the system of social sciences that have lately grown up he is taught nothing. That these sciences may be as important to an understanding of the laws of society of to-day as are these 200-year-old cases does not concern the law school. Its function is to teach a craft. It prepares the lawyer to win lawsuits.

When he has begun his practice before the courts the young attorney finds this same philosophy of the law his chart. For the settlement of legal principles of to-day he must cite precedents musty with age. He becomes more concerned with the precedents themselves than with the principles back of them. He piles precedent on precedent, as if to overwhelm the court with the weight of them. His desire to serve aggregated wealth is likewise a powerful incentive to conservatism. Then when he is raised to the bench he has become too deep-rooted in the past to be able to shake off the cold grip of the dead judges that have ruled his thinking.

To know the past and to understand the developments through prior centuries is necessary. Unless men acquired and accumulated a knowledge of what has gone before we would still be cave dwellers. On the other hand, to live in continual contemplation of the past, to look solely to history for a criterion of our actions, is fatal. This is true of individuals, of institutions, of peoples. Nothing, for instance, is so obstructive to a city's growth as historic traditions, when they come to mean more to its citizens than the glories of the future. Tablets commemorating the deeds of ancestors, when they take the thoughts away from the needs of posterity, had best be torn down. A city whose chief source of pride is in the monuments to dead heroes that grace its parks had just as well be all monuments. A harbor that becomes of greater significance to a community because it was the scene of some Revolutionary War event than because it is fraught with possibilities, say, for South American trade, had best be filled in and made into farm land.

What we look upon becomes a part of us as much as what we live upon. It is significant, therefore, that in a lawyer's office, or a judge's chamber, among the mural decorations, for instance, we are likely to find a framed copy of the Magna Charta—that instrument 700 years old, exacted by property owners from a despotic king.

The effect this contemplation of the past has upon lawyers and judges is strikingly exhibited in the committee reports, resolutions, and addresses of the American Bar Association. To select this field of research is more fair to the profession than to take the arguments of lawyers before the highest courts or the decisions of learned judges in leading cases. In bar association meetings lawyers speak for themselves, rather than for clients, and they are influenced by motives, not to win cases, but to improve conditions affecting the profession and the Nation.

If we attend meetings of physicians, of engineers, of scientists, of educators, the proceedings impress us with the fact that in these fields wonderful achievement and advancement is being made. If we attend bar association meetings we are forced to the conclusion that lawyers are still "thrashing over old straw." The addresses before the American Bar Association and the reports of its committees, all representative of the best that is in the profession, afford a discouraging answer to our question. The tone of these addresses and reports, almost without exception, is reactionary and narrow. Toryism is noticeable in almost every vote taken by the association. Its members are appealed to to counteract the growth of populistic movements, as dangerous to the permanency of government. There is a constant deploring of the modern attacks on ancient landmarks. It would seem almost that the profession is endeavoring to use the bar association as a broom to sweep back the waters of this rising flood of modernism.

We discern in the addresses no new perception of the needs of the masses. We hear no analysis of the ancient reasons back of the "precedents," no differentiating conditions now and then. There is always the same insistence on the principles of the freedom of contract; the same reliance on the antiquated political and economic philosophy of the eighteenth century; the same eloquent tributes to the Constitution with its safeguards of individual property rights, struck off in the light of eighteenth century politics.

If the great body of lawyers in America are alive to the world-wide movement in liberal democracy that is beginning to shake this new century, their spoken and written words give little indication of it; if their average thinking has been touched by this movement, the tone of these addresses fails to show it. Leaders of the profession, in some instances, have demonstrated their awareness to this revolution by their protests against certain of its manifestations. But these very protests, and the manner of their reception, prove that the American bar is either ignorant of or indifferent to its underlying purposes.

One of the most active committees of the American Bar Association, for instance, is the committee to oppose judicial recall. The writer is not concerned in this article with the merits or the dangers in the recall of judges. What he does want to direct attention to is the a priori thinking which characterizes the reports of the American Bar Association on this subject—the dogmatic assertions in these reports that the movement is vicious, the stressing of the legal phrases of the questions almost to the total elimination of its social features.

Another pointed illustration of the kind of thinking now being done by lawyers is the charge made by the American Bar Association at its 1914 meeting that the Clayton Act of the present Congress, giving the right to labor unions to exist, confers special privilege. This arbitrary characterization of an important law passed by the Congress of the country after long debates, signed by the President, and not yet interpreted by the Supreme Court, is neither lawyerlike nor statesmanlike. The fact is entirely ignored that, in associating themselves into unions laboring men evince the same tendencies toward self-protection that brought about the formation of this Government and that are among the objects to be attained in all Governments.

A further side light on the attitude of the lawyer toward live modern problems is sufficiently discernible in two expressions from a leading lawyer of New York, which are quoted in his language, as follows: "When a man is poor and can not find any other man who, legally or morally, ought to pay him money, his poverty is not a case of injustice, but of hardship." And again: "When the Beef Trust sells beef, is it under an altruistic obligation to the public or to any individual in the community to sell its own property for less than he is willing to pay? In employing its workmen, is it under a similar obligation to pay them higher wages than the workmen are willing to accept?"

In an address before the American Bar Association meeting of 1912, which the writer attended, a very eminent lawyer felt called upon to come to the defense of John D. Rockefeller. His words were as follows: "Well, somebody would have to control all that money if Mr. Rockefeller did not, and I have an abiding faith that it will accomplish much more good for humanity in the hands of Mr. Rockefeller than it would in the hands of Mr. Gompers!" Such a vital issue as woman suffrage the American Bar Association is unwilling even to discuss and treats it as something too dangerous to touch. A few more instances will doubtless suffice for present purposes.

On the subject of inheritance taxes, I think I am justified in saying that the following quotation expresses the attitude of a majority of the members of the American Bar Association: "In any country where a written constitution contains the usual Anglo-Saxon bill of rights there exists an essential repugnancy between the constitution and such legislation" (taxing inheritances). "Private property is taken for public use without compensation. * * * It is not creditable to the American bar that it has allowed this repugnancy to remain unchallenged and has permitted its clients' property to be seized on the flimsy pretext that a man has no right to execute a transfer of his property to take effect at his death without the State's consent."

The phase of the modern movement in democracy which has met the greatest opposition from the bar has been the movement for direct participation in government by the people. Lawyers are strong believers in the sufficiency of representative government to carry on needed reforms. They do not consider that the danger from the selfish vote of the few is greater than from the uninformed vote of the many. Nor do they fully realize the deep determination of the people never again to allow the corporations to get control of representative government and its agencies and establish "a Government of the many by the few and for the few," as was the case several years ago in virtually every State in the Union, brought about by an alliance between party machinery and corporations. Lawyers have apparently not been keenly aware of the admirable trend in political thinking toward a stronger Government, as evinced by Woodrow Wilson's strengthening of the Executive, and of the passing of the negative type of Government and the development of the positive type. And they do not realize that this trend will require as an offset greater direct participation, which, instead of overturning our democracy, will in fact give us our first real democratic Government.

Very strikingly do the proceedings of the bar associations reveal still other evidences of the lawyer's lack of progressive thinking. The eighteenth century idea of private justice is so strongly embedded in the minds of lawyers that they do not fully grasp the modern meaning of "social justice."

The "excessive individualism" abounding when this country was largely agricultural, around which our laws were developed, has so impressed itself upon the members of the American bar that their vision of the social theory of property, established and maintained for social purposes, is obstructed by the large proportions in which the individual idea of private property looms up before them. That private ownership even of land must yield as against public interest, is still inconsistent with their processes of thinking. They are reconciled to the taking of private property for public use under the right of eminent domain, for the reason, doubtless, that public-service corporations which profit by this right are their clients. But that private property can be taken for the use of the State, that forests and land, mineral rights, and water powers can be saved for the whole people from private exploitation; that even the abolition of private property can be achieved, if the good of the people demands it, is as yet contrary to the lawyer's ingrained idea that the State exists for the welfare of the individual.

Possibly nothing obstructs the lawyer's acceptance of the modern theory of social justice more than the principle of individual freedom of contract running through all the law. Here again the lawyer has allowed his rapt contemplation of the past to warp his powers of thinking in applying new conditions to old principles. Hence he fails to see that there can be no individual freedom of contract, when there is such a glaring inequality of economic status.

This refusal to adopt the social theory of contract is a chief reason why the courts uphold the oppression of wage earners, child labor, immoderate hours for laborers, and unhealthy occupations for women.

There are, of course, a number of leading lawyers and judges, students of politics and society of to-day, who are thoroughly alive to merely blind worshipers of the past. But the bulk of the profession have been trained in an environment that has, in a most natural way, so affected their mental processes that they have become, scarcely through any fault of their own, incapable of meeting new conditions in the social order. And these lawyers often fool themselves into thinking that the reading of half a dozen articles on the currency question or the tariff act is keeping in touch with public progress. Likewise they often believe they are nobly serving their community, for example, by presiding over local school boards; that their generous impulse toward education is sufficient. They do not seek for other proofs of fitness.

The number of laws recently enacted in the United States that give expression to the cry of human rights against property rights shows that legislatures are yielding to the demands of modern society. But these steps in progress are taken in spite of the activity of the great body of lawyers, rather than because of it.

The resistance offered by our courts to the onward push of liberal democracy can not be attributed entirely to an antiquated system of law. The common law is elastic and flexible; and it will ordinarily yield under properly directed pressure to modern requirements. Through the power of judges to overrule prior decisions the law contains within itself the ability to reform itself. But the blame should rest rather with the lawyer and the judge, who, lacking in progressive thinking, are influenced in their interpretation of the law by their own inability to grasp modern industrial and social problems, and who believe "that the tendency to err is in the direction of not declaring enough laws unconstitutional."

If orderly government is to endure, we must have the assistance of those who, because of their fundamental knowledge of the law and experience in the law, are particularly able to guide opinion into proper channels of legislative enactment, who are technically capable of framing laws that will embody the demands of modern society and at the same time meet the requirements of the Supreme Court that passes upon their validity.

This need is illustrated by the history of recent legislation known as workmen compensation acts, which at first were so improperly drawn that the Supreme Court declared them void, but when redrawn properly were unanimously upheld. The laymen's efforts at lawmaking will necessarily be crude on the technical side. The advancement of society is made through its use of the services of those most able to minister to its needs. The making and the construing of laws for a society as complicated as is ours of the twentieth century require special training, experience, and effort. If lawyers were in the same degree as formerly leaders in politics and reform undoubtedly the Constitution and the judiciary would come in for much less muckraking.

The need of this leadership will be greater in the future than ever before. The effects of the European war, if nothing else, will make it so. The efforts to better the conditions of living have not been halted by this war, as some believe. The thinking that the war is causing the masses of men and women to do will give a pressure to reform and an impetus to democracy greater than either ever had before.

In qualifying anew for this great leadership, lawyers could satisfy their conservative training and natures, if need be, by studying afresh the purposes of the framers of the Constitution, that its aim should be the control of Government by the people. If this control has been lost, let it be the duty of the lawyers to discover the means by which it can be regained. Let them reread the Declaration of Independence, which declares that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed, that whenever any form of government becomes destructive of these ends it is the right of the people to alter or abolish it, and to institute a new government, laying its foundation upon such principles and organizing its powers in such a form as to them shall seem most likely to effect their safety and happiness.

If lawyers must seek examples in the past, let them remember that the distinguished members of their profession who signed this Declaration of Independence were radicals—and more than radicals. And if the lives of the great lawyers of the past who helped to make this country great have any significance for us now, it should be to inspire the lawyers of to-day to stand with the people in their fight for a real democracy and to devote themselves unhesitatingly to the service of this democracy in the critical period upon which it is now entering.

CHARLTON G. OGBURN.

Savannah, Ga.

Public Buildings.

EXTENSION OF REMARKS
OF
HON. WILLIAM E. COX,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

Monday, January 22, 1917.

Mr. COX. Mr. Speaker, I am uncompromisingly opposed to this bill, not that I am opposed to public buildings in general, but I am opposed to the vicious system of making authorizations for public buildings as set out in this measure. Everyone knows that it is going to pass, and pass by a large majority. It is so framed by its authors as to make it pass. It takes care of upward of 400 congressional districts in the United States and of every State in the Union except Vermont. Thus riveted with iron and steel it is impossible to even make a dent in it. It could not be defeated with a 42-centimeter gun or destroyed by a German Zeppelin. It will withstand all attacks and assaults made against it, no matter from what source these assaults may come. I am opposed to it for many reasons. First and foremost, it is an inopportune time to pass a public buildings bill, with the Treasury of the United States depleted and a positive deficit confronting us in the near future of not less than $300,000,000, with another assured deficit at the close of the fiscal year 1918 of $500,000,000, which means that additional taxes must be laid upon the people in some form to replenish the Treasury of the United States, and no matter in what form it may be laid taxes always constitute a burden upon the part of those who pay them. There is pending before the Ways and Means Committee now a proposition proposing to impose a tax upon all corporations and copartnerships in excess of 8 per cent profits. This is a tax that the people will feel, and feel it strongly; but this is only one of the means and methods to be adopted by the Ways and Means Committee to raise revenue to meet the ever occurring deficit. Other means of raising revenue, if the papers are to be believed, will be resorted to by the Ways and Means Committee, to wit, the selling of Government bonds and certificates of indebtedness, which means a charge upon the people to pay the interest on the bonds and certificates of indebtedness and to set aside a sinking fund to redeem these obligations at maturity.

It is argued by the friends of this measure that it does not carry an appropriation. Grant this to be true. It carries a fixed obligation on the Treasury soon to be carried out and enforced by appropriations made by proper appropriation committees. There are some meritorious projects in this bill, particularly in the larger cities, where it is often difficult, if not impossible, for the Government to rent suitable quarters to house its various Government activities; but there is no excuse for making appropriations for every little third and second class post office in the United States located in small towns having populations ranging from 1,000 to 3,000 and where the Government can rent quarters at cheap rent suitable to take care of whatever Government agencies may be located in the town.

Section 3 of the bill makes authorizations for buildings to be erected upon sites authorized in the public-buildings bill four years ago. I select only a few of these proposed buildings to be located in small towns with populations ranging from 1,000 to 3,000, and where the postal receipts range from $4,000 to $8,000 per year, and where the rent ranges from $150 to $500 per year. I herein insert:

Lenoir, N. C.: Population, 1910, 3,364; estimated population, 1916, 4,662; receipts, 1915, $9,827.27; receipts, 1916, $10,686; present rental, $650; site authorized, $8,000; site acquired, $4,500; saving, $3,500; pending bill, $30,000; department estimate, $55,000.

Monroe, Ga.: Population, 1910, 3,029; estimated population, 1916, 3,772; receipts, 1915, $7,361.51; receipts, 1916, $8,319; present rental, $450; site authorized, $5,000; site acquired, $5,000; pending bill, $30,000; department estimate, $45,000; decrease in bill from estimate, $15,000; class 2.

Marengo, Iowa: Population, 1910, 1,786; estimated population, 1915, 1,352; receipts, 1915, $7,503.33; receipts, 1916, $10,676.65; rental, $480; site authorized, $5,000; site acquired, $3,500; saving, $1,500; class 3.

Mount Olive, N. C.: Population, 1910, 1,671; estimated population, 1916, 1,357; receipts, 1915, $5,679.28; receipts, 1916, $6,382; present rental, $420; site authorized, $5,000; pending bill, $30,000; department estimate, $35,000; decrease in bill from estimate, $5,000; class 3.

Murray, Ky.: Population, 1910, 2,089; estimated population, 1916, 2,257; receipts, 1915, $6,357.93; receipts, 1916, $6,617; present rental, $510; site authorized, $5,000; site contracted for, $4,000; saving, $1,000; pending bill, $25,000; department estimate, none; class 3.

Nephi, Utah: Population, 1910, 2,759; estimated population, 1916, 3,105; receipts, 1915, $4,936.08; receipts, 1916, $5,190; rental, $280 (post office), $96 (agriculture); total, $376; site authorized, $5,000; site contracted for, $5,000; pending bill, $25,000; department estimate, $30,000; decrease in bill from estimate, $5,000; class 3.

Newcastle, Wyo.: Population, 1910, 975; estimated population, 1915, 651; receipts, 1915, $4,174.70; receipts, 1916, $4,589; present rental, $312; site authorized, $5,000; site contracted for, $4,400; saving, $600; pending bill, $25,000; department estimate, $25,000; class 3.

Newark, Del.: Population, 1910, 1,913; estimated population, 1916, 2,353; receipts, 1915, $11,388.31; receipts, 1916, $10,736; present rental, $1,050; site authorized, $5,000; site acquired, $4,000; saving, $1,000; department estimate, $30,000; class 2.

Pikeville, Ky.: Population, 1910, 1,260; estim ted population, 1916, 1,764; receipts, 1915, $6,149.72; receipts, 1916, $6,804;

present rental, $332; site authorized, $7,500; pending bill, $35,000; department estimate, $25,000; class 3.

Provincetown, Mass.: Population, 1910, 4,369; estimated population, 1915, 4,362; receipts, 1915, $11,191.78; receipts, 1916, $12,378; present rental, $700, and customs service, $100; total, $800; site authorized, $8,000.

Rogersville, Tenn.: Population, 1910, 1,242; estimated population, 1916, ——; receipts, 1915, $7,679.56; receipts, 1916, $6,031; rental, $350; site authorized, $3,000; site contracted for, $2,250; saving, $750; pending bill, $25,000; department estimate, none; class 3.

Forest City, Ark.: Population, 1910, 2,484; estimated population, 1916, 3,191; receipts, 1915, $9,687.77; receipts, 1916, $11,000; rental, $400; site authorized, $5,000; site contracted for, $4,500; saving, $500; pending bill, $25,000; department estimate, $55,000; decrease in bill from estimate, $30,000; second class.

Green River, Wyo.: Population, 1910, 1,313; estimated population, 1916, ——; receipts, 1915, $4,370.18; receipts, 1916, $4,275; rental, $210; site authorized, $6,000; pending bill, $25,000; department estimate, $25,000; third class.

Eminence, Ky.: Population, 1910, 1,274; estimated population, 1916, 1,434; receipts, 1915, $4,402.53; receipts, 1916, $4,437; present rental, $193; site authorized, $8,000; acquired, $6,850; saving, $1,150; pending bill, $40,000; department estimate, $30,000; third class.

Falmouth, Ky.: Population, 1910, 1,180; estimated population, 1916, 1,209; receipts, 1915, $5,638.24; receipts, 1916, $6,318; rental, $340; site authorized, $5,000; site acquired, $5,000; pending bill, $25,000; department estimate, $25,000; third class.

Greensburg, Ind.: Population, 1910, 5,420; estimated population, 1916, 5,662; receipts, 1915, $18,036; rental, $776; site authorized, $12,000; site not yet contracted for; pending bill, $45,000; department estimate, $60,000; decrease in bill from estimate, $15,000; second class.

Greenville, Ala.: Population, 1910, 3,377; estimated population, 1916, 3,511; receipts, 1915, $9,294.81; receipts, 1916, $10,849; rental, $480; site authorized, $5,000; site contracted for, $5,000; pending bill, $30,000; department estimate, $35,000; decrease in bill from estimate, $5,000; second class.

Highland, Ill.: Population, 1910, 2,675; estimated population, 1916, 3,116; receipts, 1915, $9,611.45; receipts, 1916, $9,659; present rental, $650; site authorized, $7,000; site acquired, $4,000; saving, $3,000; pending bill, $25,000; department estimate, $30,000; decrease in bill from estimate, $5,000; second class.

Huntingdon, Tenn.: Population, 1910, 1,112; estimated population, 1916, ——; receipts, 1915, $4,427.28; receipts, 1916, $4,713; present rental, $360; site authorized, $2,500; site acquired, $2,500; pending bill, $25,000; third class.

Huntsville, Tex.: Population, 1910, 2,072; estimated population, 1916, ——; receipts, 1915, $10,707.61; receipts, 1916, $12,126; present rental, $780; site authorized, $5,000; site acquired, $5,000; pending bill, $30,000; department estimate, $25,000; second class.

Kissimmee, Fla.: Population, 1910, 2,157; estimated population, 1915, 4,221; receipts, 1916, $11,296; present rental, $360; site authorized, $6,000; site acquired, $5,000; saving, $1,000; pending bill, $35,000; department estimate, none; second class.

Rossville, Ga.: Population, 1910, 1,059; estimated population, 1916, ——; receipts, 1915, $8,062.48; receipts, 1916, $8,334; rental, $486; site authorized, $4,000; site contracted for, none; pending bill, $25,000; department estimate, $30,000; decrease in bilil from estimate, $5,000; class 2.

Sandersville, Ga.: Population, 1910, 2,641; estimated population, 1916, 3,028; receipts, 1915, $7,855.16; receipts, 1916, $8,618; rental, $540; site authorized, $5,000; site acquired, $5,000; pending bill, $30,000; department estimate, $55,000; decrease in bill from estimate, $25,000; second class.

Sequin, Tex.: Population, 1910, 3,116; estimated population, 1916, 3,551; receipts, 1915, $10,884.68; receipts, 1916, $11,952; rental, $510; site authorized, $7,500; saving, $7,000; pending bill, $30,000; department estimate, $45,000; decrease in bill from estimate, $15,000; second class.

St. Johns, Oreg.: Population, 1910, 4,872; estimated population, 1916, ——; receipts, 1915, $6,751.25; receipts, 1916, $5,205; present rental, $600; site authorized, $5,000; pending bill, $25,000.

Stuttgart, Ark.: Population, 1910, 2,740; estimated population, 1916, 3,671; receipts, 1915, $12,940.02; receipts, 1916, $12,879; rental, $1,000; site authorized, $5,000; site contracted for $4,000; saving, $1,000; pending bill, $30,000; department estimate, $50,000; decrease in bill from estimate, $20,000; class 2.

Sylacauga, Ala.: Population, 1910, 1,456; estimated population, 1916, 1,816; receipts, 1915, $7,256.27; receipts, 1916, $7,699; rental, $534; site authorized, $5,000; site acquired, $5,000; pending bill, $30,000; department estimate, $25,000; increase in bill from estimate, $5,000.

Union Springs, Ala.: Population, 1910, 4,055; estimated population, 1916, 4,942; receipts, 1915, $7,027.98; receipts, 1916, $7,005; rental, $600; site authorized, $5,000; site acquired, $4,500; saving, $500; pending bill, $25,000; department estimate, $45,000; decrease in bill from estimate, $20,000; class 3.

West Point, Va.: Population, 1910, 1,397; estimated population, 1916, 1,453; receipts, 1915, $5,039.37; receipts, 1916, $5,602; rental, $600; site authorized, $5,000; pending bill, $25,000; department estimate, $25,000; class 3.

Waynesboro, Ga.: Population, 1910, 2,729; estimated population, 1916, 3,168; receipts, 1915, $7,450; rental, $400; site authorized, $5,000; site acquired, $4,093.75; saving, $906.25; pending bill, $25,000; department estimate, $30,000; decrease in bill from estimate, $5,000; class 3.

Brinkley, Ark.: Third class; population, 1910, 1,740; estimated population, 1916, 1,796; receipts, 1915, $6,114.53; receipts, 1916, $6,751; present rental, $500; site authorized, $5,000; contracted for, $3,750; saving, $1,250; pending bill, $25,000; department estimate, $25,000.

Boyne City, Mich.: Second class; population, 1910, 5,218; estimated population, 1916, 7,929; receipts, 1915, $11,063.17; receipts, 1916, $10,191; present rental, $750; site authorized, $10,000; site acquired, $8,000; site contracted for, no; saving, $2,000; pending bill, $30,000; department estimate, $35,000; decrease in bill from estimate, $5,000.

Carlinville, Ill.: Second class; population, 1910, 3,616; estimated population, 1916, 3,885; receipts, 1915, $12,566.28; receipts, 1916, $12,401; rental, $600; site authorized, $10,000; site contracted for, $8,000; saving, $2,000; pending bill, $30,000; department estimate, $45,000; decrease in bill from estimate, $15,000.

Carrollton, Ill.: Population, 1910, 2,323; estimated population, 1916, ——; receipts, 1915, $7,854.95; receipts, 1916, $8,234; present rental, $600; site authorized, $7,000; not yet contracted for site; pending bill, $25,000; department estimate, no estimate; second class.

Central City, Ky.: Population, 1910, 2,545; estimated population, 1916, 3,296; receipts, 1915, $5,707.92; receipts, 1916, $5,808; rental, $600; site authorized, $7,500; site acquired, $7,500; pending bill, $30,000; department estimate, $30,000; third class.

Coleman, Tex.: Population, 1910, 3,046; estimated population, 1916, 4,103; receipts, 1915, $10,723.84; receipts, 1916, $11,296; rental, $780; site authorized, $5,000; site acquired, $1; saving, $4,999; pending bill, $30,000; department estimate, $50,000; decrease in bill from estimate, $20,000; second class.

Crockett, Tex.: Population, 1910, 3,947; estimated population, 1916, 4,785; receipts, 1915, $7,801.03; receipts, 1916, $9,203; rental, $360; site authorized, $6,000; site acquired, $6,000; pending bill, $25,000; department estimate, $45,000; decrease in bill from estimate, $20,000; second class.

Dillon, S. C.: Population, 1910, 1,757; estimated population, 1916, 2,223; receipts, 1915, $7,733.63; receipts, 1916, $7,869; rental, $400; site authorized, $7,500; site acquired, $7,500; pending bill, $25,000; decrease in bill from estimate, $5,000; third class.

Edenton, N. C.: Population, 1910, 2,789; estimated population, 1916, ——; receipts, 1916, $9,064; present rental, $600; site authorized, $7,500; site acquired, $4,000; saving, $3,500; pending bill, $25,000; department estimate, $35,000; decrease in bill from estimate, $10,000; post office, second class.

Eldorado, Ark.: Population, 1910, 4,202; estimated population, 1916, 6,170; receipts, 1915, $9,806.93; receipts, 1916, $10,572; present rental, $565; site authorized, $5,000; site contracted for, $5,000; pending bill, $25,000; second class.

Mr. Speaker, the above items are wholly indefensible from any viewpoint whatever. They can not be defended upon the ground of economy or on the ground of necessity. They can only be defended upon the ground that "You have grabbed in the bill, and I will grab, too; you have one of these buildings, and I will take one myself; you have your share in this bill, and I am going to get my share." This policy and system of authorizing public buildings can not be defended. It is wrong; it is vicious; it is immoral; it is exactly what holds the Congress up to ridicule, contempt, if not public scorn. Some may believe it is in the interest of economy to erect these buildings. Those who take this view of the matter lose sight of the proposition that the annual cost and upkeep of these buildings when erected and completed amounts to from five to ten times more per year than the rent which the Government now pays. It will actually cost the Government from $2,500 to $4,000 per year upkeep to keep these buildings—janitor service, interest on the money, depreciation and repair shows this to be true. No business man in any

of the small towns where these buildings are to be erected, when thoroughly acquainted with the facts, would agree to the policy set forth in these bills. The Government should be run as near as practical on business methods and business policies, and any business man who would undertake to run his business upon the plan set forth in this bill would soon be forced into either voluntary or involuntary bankruptcy. No business man would think of erecting a business house in which to conduct his business at a cost of $30,000 for the building and $5,000 for the site if the cost and annual upkeep would aggregate $4,000 per year when he could rent a private building to serve his purpose exactly at an annual rental of not to exceed $500. It would be absurd to think of a business man doing this, and no business man fit to stay out of an insane asylum would think of doing it; but the items as above stated are authorizations for buildings to be erected on sites which the Government now owns. Owning the property, there might be some excuse to erect buildings thereon, because the Government owns the site, has paid the money for it, and the Government must go forward and either erect the buildings on these sites or else permit them to lie there. The mistake was made four years ago in authorizing sites for these small places.

But section 5 of this bill proposes to buy and purchase sites for equally a large number of post offices in little towns of the second and third class. No defense on earth can be made to the items authorized to be purchased in this section.

I set forth a few of these items which gives the name of the place, its population, postal receipts for 1915, and the annual rental which the Government is now paying. The items set out in section 5 is the most daring attempt to raid the Treasury of the United States, and to raid it at a time when the people are overburdened with taxation, that was ever heard of before:

San Benito, Tex., $6,000; population, not given; receipts, 1915, $8,199.12; annual rental, $180.

Sanford, N. C., $7,000; population, 2,282; receipts, 1915, $9,568.04; annual rental, $500.

Sheffield, Ala., $5,000; population, 4,865; receipts, 1915, $7,968.77; annual rental, $660.

Stanford, Ky., $5,000; population, 1,532; receipts, 1915, $6,228.48; annual rental, $396.

York, S. C., $9,000; population, 2,326; receipts, 1915, $8,596.98; annual rental, $600.

Williamston, N. C., $5,000; population, 1,574; receipts, 1915, $6,043.18; annual rental, $300.

Winder, Ga., $5,000; population, 2,443; receipts, 1915, $7,317.19; annual rental, $406.

Windsor, Ga., $4,000; population, 2,241; receipts, 1915, $7,918.08; annual rental, $600.

Winona, Miss., $7,500; population, 2,512; receipts, 1915, $8,584.35; annual rental, $460.

Summerville, S. C., $5,000; population, 2,355; receipts, 1915, $7,796.61; annual rental, $440.

Susanville, Cal., $10,000; population, 688; receipts, 1915, $7,058.08; annual rental, $600.

Thomaston, Ga., $5,000; population, 1,645; receipts, 1915, $6,144.63; annual rental, $360.

Waurika, Okla., $5,000; population, 2,928; receipts, 1915, $6,480.82; annual rental, $420.

McMinnville, Tenn., $5,000; population, 2,299; receipts, 1915, $8,724.74; annual rental, $540.

Milan, Mo., $5,000; population, 2,191; receipts, 1915, $6,684.48; annual rental, $500.

Monticello, Fla., $5,000; population, 1,829; recepts, 1911, $6,065.70; annual rental, $600.

Okolona, Miss., $5,000; population, 2,584; receipts, 1915, $5,425.40; annual rental, $480.

O'Neill, Nebr., $6,000; population, 2,089; receipts, 1915, $8,924.77; annual rental, $720.

Ozark, Ala., $5,000; population, 2,229; receipts, 1915, $6,416.74; annual rental, $400.

Paris, Mo., $5,000; population, 1,474; receipts, 1915, $7,037.89; annual rental, $540.

Pascagoula, Miss., $5,000; population, 3,379; receipts, 1915, $6,179.94; annual rental, $514.

Perry, Fla., $5,000; population, 1,012; receipts, 1915, $6,439.25; annual rental, $360.

Perryville, Mo., $5,000; population, 1,708; receipts, 1915, $5,662.91; annual rental, $400.

Pelham, Ga., $6,000; population, 1,880; receipts, 1915, $6,719.12; annual rental, none.

Pineville, Ky., $5,000; population, 2,161; receipts, 1915, $7,369.33; annual rental, $600.

Rich Hill, Mo., $5,000; population, 2,755; receipts, 1915, $7,831.80; annual rental, $480.

Rockwood, Tenn., $6,000; population, 3,660; receipts, 1915, $5,857.91; annual rental, $360.

Russellville, Ky., $10,000; population, 3,111; receipts, 1915, $7,898.31; annual rental, $448.

Salisbury, Mo., $5,000; population, 1,834; receipts, 1915, $7,438.25; annual rental, $500.

Ely, Nev., $5,000; population, 2,055; receipts, 1915, $8,315.16; annual rental, $900.

Essex, Conn., $6,000; population, 2,745; receipts, 1915, $8,087.39; annual rental, $240.

Greer, S. C., $5,000; population, 1,673; receipts, 1915, $6,643.48; annual rental, $360.

Hartsville, S. C., $3,000; population, 2,365; receipts, 1915, $9,884.33; annual rental, $480.

Hawkinsville, Ga., $8,000; population, 3,420; receipts, 1915, $8,129.91; annual rental, $772.

Henderson, Tex., $5,000; population not given; receipts, 1915, $6,666.76; annual rental, $300.

Hickman, Ky., $5,000; population, 2,736; receipts, 1915, $8,538.80; annual rental, $520.

Indianola, Miss., $5,000; population, 1,098; receipts, 1915, $7,661.88; annual rental, $450.

Jackson, Ga., $5,000; population, 1,862; receipts, 1915, $6,647.65; annual rental, $340.

Lafollette, Tenn., $6,000; population, 2,816; receipts, 1915, $5,425.91; annual rental, 425.

Las Vegas, Nev., $5,000; population, 945; receipts, 1915, $7,198.68; annual rental, none.

Lenoir City, Tenn., $6,000; population, 3,392; receipts, 1915, $5,986.59; annual rental, $500.

Lexington, Miss., $5,000; population, 2,428; receipts, 1914, $8,421.84; annual rental, $600.

Manning, S. C., $5,000; population, 1,854; receipts, 1915, $5,435.28; annual rental, $350.

Marion, N. C., $6,000; population, 1,519; receipts, 1915, $8,315.52; annual rental, $924.

Clinton, N. C., $5,000; population, 1,101; receipts, 1915, $6,254.73; annual rental, $480.

Columbia, Miss., $5,000; population, 2,029; receipts, 1915, $8,505.15; annual rental, $660.

Commerce, Ga., $5,000; population, 2,238; receipts, 1915, $6,290.89; annual rental, $500.

Covington, Ga., $5,000; population, 2,697; receipts, 1915, $7,031.21; annual rental, $400.

Corvallis, Oreg., $10,000; population, 4,552; receipts, 1915, $27,479.83; annual rental, $1,404.

Conway, S. C., $3,000; population, 1,228; receipts, 1915, $6,030.89; annual rental, $490.

Cuthbert, Ga., $6,000; population, 3,210; receipts, 1915, $7,813.40; annual rental, $600.

Decatur, Ga., $8,000; population, 2,466; receipts, 1915, $7,230.65; annual rental, $600.

Dickson, Tenn., $5,000; population, 1,850; receipts, 1915, $7,451.91; annual rental, $425.

Duncan, Okla., $5,000; population, 2,477; receipts, 1915, $8,042.36; annual rental, $480.

Dunn, N. C., $7,000; population, 1,823; receipts, 1915, $9,252.97; annual rental, $500.

Easley, S. C., $5,000; population, 2,983; receipts, 1915, $5,342.35; annual rental, $300.

Eaton Rapids, Mich., $7,500; population, 2,094; receipts, 1915, $8,985.23; annual rental, $800.

Eldorado Springs, Mo., $5,000; population, 2,503; receipts, 1915, $7,626.21; annual rental, $390.

Albemarle, N. C., $6,000; population, 2,116; receipts, 1915, $8,759.99; annual rental, $606.

Alvin, Tex., $6,000; population, 1,453; receipts, 1915, $9,051.14; annual rental, $100.

Bamberg, S. C., $5,000; population, 1,937; receipts, 1915, $4,257.77; annual rental, $220.

Ashburn, Ga., $5,000; population, 2,214; receipts, 1915, $6,468.82; annual rental, $480.

Baxley, Ga., $5,000; population, 831; receipts, 1915, $6,639.50; annual rental, $408.

Beckley, W. Va., $10,000; population, 2,161; receipts, 1915, $9,305.50; annual rental, $600.

Berkeley Springs, W. Va., $10,000; population, 864; receipts, 1915, $6,485.23; annual rental, $450.

Blakely, Ga., $6,000; population, 1,838; receipts, 1915, $6,327.50; annual rental, none.

Brownsville, Tenn., $5,000; population, 2,882; receipts, 1915, $8,111.42; annual rental, $660.

Cairo, Ga., $6,000; population, 1,505; receipts, 1915, $7,273.48; annual rental, none.

Charleston, Mo., $5,000; population, 3,144; receipts, 1915, $9,346.62; annual rental, $810.

Mr. Speaker, not one of the items contained in sections 3 and 5 of this bill standing alone could possibly pass this House. If all the authorizations which I have set forth under section 3 and section 5 was pending in one separate bill, it would never pass in the kingdom come, because they have no merit in them, no necessity for the authorizations, but by combining these authorizations with a large number of other authorizations, so as to take care of upward of 400 congressional districts, these unmeritorious items and projects will pass the House beyond question.

The system of making authorizations in this way is wrong, vicious, and can not be defended. My firm hope is that if the Senate does not checkmate and kill this bill it will meet with a stern veto on the part of the President as quickly as it reaches his desk.

I have asked the Treasury Department to submit a list of items carried in this bill which it would not be advantageous to the country to pass, and I make this list a part of my remarks:

Places where sites and buildings authorized in public building bill, 1916, could not probably be built with profit to the Government.

[The last column, "Maintenance," indicates the approximate cost of the maintenance of a building constructed in accordance with proposed legislation in the bill. Where site only is authorized the estimate is, of course, based upon the supposititious cost of a building which will probably be subsequently authorized.]

Place.	Population.	Receipts.	Present rent.	Bill.	Section.	Maintenance.

[1] The conditions here are peculiar, and while as a simple business proposition it is not advisable to erect a building the facts may appear to warrant it. The place is a summer resort and the competition for the advantages accruing to the business firm housing the post office are considered so great by the citizens that an offer has been recently made and accepted by the Post Office Department, to provide post-office quarters after Dec. 1, 1916 for $1 per year. The receipts for the fiscal year ending June 30, 1916, were $109,303.42.

Places where sites and buildings authorized in public building bill, 1916, could not probably be built with profit to the Government—Contd.

Charleston, S. C., Harbor and Navy Yard.

EXTENSION OF REMARKS
OF
HON. RICHARD S. WHALEY,
OF SOUTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,

Monday, January 22, 1917.

Mr. WHALEY. Mr. Speaker, under leave to extend my remarks on the future development of the harbor and the navy yard at Charleston, S. C., both of which have been unwarrantedly, erroneously, and falsely attacked and misrepresented from time to time by those totally lacking in knowledge of the facts and through dissemination of erroneous facts by interested parties, I insert an article prepared by Hon. R. Goodwyn Rhett, president of the Charleston (S. C.) Chamber of Commerce, and also president of the Chamber of Commerce of the United States, and presented to the Commission on Navy Yards and Stations:

[Brief by R. G. Rhett, president Charleston Chamber of Commerce.]

THE CHARLESTON NAVY YARD AS A YARD OF THE FIRST MAGNITUDE.

The question as to whether the Charleston Navy Yard should be made a yard of the first magnitude may be divided into two parts:

First. Should a yard of the first magnitude be established on the South Atlantic Coast of the United States?

Second. If so, should the Charleston Navy Yard be developed as such?

Our warships are floating fortresses containing the machinery necessary to wage war, whether offensive or defensive, upon the sea. They are very costly things—about $20,000,000 for a single dreadnaught battleship. Our navy yards are repair shops for these floating fortresses and all their delicate and costly contents. Manifestly they should be placed where they may be needed in time of war. The existence of a suitable harbor and yard within reach of a crippled battleship may mean its salvation, and that salvation may mean infinitely more than the $20,000,000 it costs and the lives it holds.

A first-class navy yard may be built and equipped for but a fraction of the cost of one warship, but it takes a long time to do so. It must, of course, be beyond reach of bombardment from the sea. It must also be safe from capture, either by a direct attack from the sea or by a force landed in its vicinity and attacking in the rear. Otherwise, crippled ships or any ships at all taking refuge within the harbor which holds it and the yard itself might be captured and become the base for an enemy's naval and military operations. Hence all first-class yards ought to be upon our main territory and within the protection of the Army, so as to make their capture impracticable, unless

the enemy has not only obtained the mastery of the sea but of our military forces also.

The Atlantic coast of the United States is about 2,500 miles in extent and about midway projects Cape Hatteras, one of the most dangerous capes known to navigation. On the northern half of this coast there are six navy yards, five of them of the first magnitude; on the southern half there is but one yard, and that yard is located in the harbor of Charleston.

Leaving Hatteras, the coast turns sharply to the southwest, facing the West Indies, the Caribbean Sea beyond, and the Panama Canal. One of the purposes of constructing this canal was to enable us to transfer our ships of war from one coast to the other. At present every naval base for large ships on the Atlantic coast is separated from the Panama Canal by Cape Hatteras.

In the event of war it is not improbable that naval attacks will come via the West Indies, where naval bases may be found and utilized by an enemy. The necessity of establishing a first-class navy yard in a harbor facing these waters and capable of taking in or sending out warships of the largest size must be apparent to everyone.

With all of our large yards concentrated along the northern coast, it would be very much easier for a victorious fleet to bottle up our battleships and battle cruisers than if they were compelled to guard another base south of Hatteras.

Again, our bases for the Navy and our munitions plants for both Navy and Army are now entirely too much concentrated for safety. A sudden coup upon that coast and the capture by surprise of these essentials to naval and military warfare might effectively conquer us without hope of recovery. On the other hand, there is entirely too much of our coast left comparatively unprotected and without the means of either giving refuge to and making repairs upon our great battleships or of constructing new ones if it should become necessary.

The south Atlantic coast is the nearest of all our coasts to the center of population of the country (Bloomington, Ind.). It certainly should receive greater attention and more serious consideration. It faces one of the two quarters from which naval attacks may be expected, and one of its harbors unquestionably should be equipped for the gathering or dispatching of a large fleet in connection with the Panama Canal.

The Navy Department recognized the importance of a naval station on this coast many years ago, and established it at Port Royal. Later on, when the draft of vessels had increased considerably, and one of the battleships found difficulty in entering the dry dock there, the expenditure of money upon its improvement was held up, and a board was appointed by Secretary John D. Long, of Boston, Mass., to investigate the question of transferring the station to Charleston Harbor. In its report this board refers to the work of the former boards in these words:

"We are aware of the fact that in selecting Charleston as a site for a naval station in preference to Port Royal we are departing from the opinion of two boards of naval officers, which have previously considered the question of the establishment of the naval station on the south Atlantic coast, one of which was presided over by Admiral Porter. * * * There is, however, no inconsistency in this connection. When the previous board selected Port Royal as the best site for a naval station on that coast the great scheme for the improvement of southern harbors had not been carried forward to any extent, and Port Royal possessed the only harbor on the coast which large ships could enter under any circumstances. * * * Vessels are now of greater size, and because of their large fixed weights and their steel bottoms are much more liable to damage or disaster if they take the ground in outlying waters than with the wooden ships of former times. Security of entrance and anchorage are therefore of greater relative importance than formerly, etc."

The special board, above referred to, was appointed by Secretary Long in pursuance of the act of June 7, 1900, for the purpose of "examining into the expediency of changing the location of the naval station now at Port Royal, S. C., to some point in the State of South Carolina, at or near the city of Charleston." It uses these words in its report:

"The board interprets the purpose of the law under which it is organized and its instructions from the Navy Department as further limiting its action to the consideration of a naval station capable of accommodating, docking, repairing, and constructing the largest vessels of war, with approaches, anchorage, and shop facilities suitable to a dry dock with 30 feet over the sill, and considers the various questions involved from that point of view. Upon this assumption the above requisites are placed in the order of their relative importance, etc."

This board consisted of the following officers: Rear Admiral Frederick Rogers, Rear Admiral G. W. Sumner, Capt. George A. Converse, Civil Engineer C. P. Asserson, Naval Commander J. H. Linard, Commander E. H. C. Leutze, Lieut. Commander S. A. Staunton.

Again, the commandants at the navy yard have invariably expressed surprise that the Government has not recognized the importance of developing the Charleston Navy Yard, e. g.:

Admiral Helm, when commandant of the yard, used these words in an article prepared by him for the Charleston Chamber of Commerce in 1914:

"During the last 12 years since the establishment of the navy yard at Charleston was determined, the enterprise has come in for a vast deal of misrepresentation, and Senator TILLMAN, who has been its steadfast champion, has been roundly abused because of it. Nevertheless, even under hostile administrations it has grown and expanded. The fact is, as all naval men recognize, that with the opening of the Panama Canal the Charleston Navy Yard becomes an invaluable asset of the Navy. The prime purpose of the canal is to afford a quick means of transferring our battleships from our Atlantic to our Pacific coast. The incomparable superiority of the Charleston Navy Yard lies in the fact that not only is it the nearest yard of first-class equipment to the Panama Canal, but it is the only yard south of Norfolk which is impregnable against an attack by sea. Charleston, although under siege throughout two great wars, has never been captured from the water. Its defenses to-day guarantee it against such a fate in future and make the Charleston Navy Yard sheltered from storm and protected against any hostile fleet, the great strategic base from which any possible naval warfare of the future is most likely to be conducted."

Admiral Edwards used the following words in the article prepared by him for the Engineering Review in 1916:

"It behooves the thoughtful and progressive officer of the Navy to give immediate, extended, and careful consideration concerning the possibilities of development of the Charleston (S. C.) naval station. Whether viewed from a financial, industrial, or strategic standpoint, the progressive, if not the rapid, development of this naval station intimately concerns the efficiency and operation of the fleet.

"For military and strategic reasons it appears of paramount importance that there be developed on the Atlantic coast at some point south of Cape Hatteras a naval station capable of docking and repairing our largest and most important battleships. The protection of the Isthmian Canal, a project that involved an expenditure of about $400,000,000, combined with the general existing belief upon the part of naval experts that if the fleet of the United States will ever be called upon to engage in battle the contest will take place in the Caribbean, makes it a matter of importance to the efficiency of the fleet that there be developed on the mainland of the Atlantic coast (and independent of any projected outlying naval base) a first-class naval station.

"The channel and harbor conditions of the Charleston Navy Yard, together with its industrial possibilities, appear to be measured by some of our naval experts from conditions existing about the period of the close of the Civil War. As evidence of the satisfactory existing character and extent of the channel conditions on the navy-yard water front, it is only necessary to state that the battleship *Connecticut*, about two years ago, with packed bunkers and a fully supply of ammunition and stores, made a complete turn in the channel in front of the navy yard and proceeded to sea without the aid of tugs."

Admiral Benson, chief of naval operations, uses the following words in his evidence before the Committee on Naval Affairs on March 16, 1916:

"I do think that we ought to have a good yard somewhere south of Hatteras, with docks and places where ships in case of injury in battle, or for other reasons, could get into dock without having to come to our northern yards. There is the case of the *Lion*, in the Dogger Bank battle, which is a very good illustration of how a vessel may be saved after she is badly injured by being able to get into dock without having to go too far; and my ideas are not changed—or, I mean to say, the necessity for it has been emphasized—as to having some place down in that vicinity where we could have docks to which vessels could be taken."

Whether an outlying naval base should also be established on some island in the Caribbean is another question. That is of use only in the event we control the sea. This is a question of establishing a yard for use by all ships of the Navy whether we do or do not control the sea. To construct and equip a first-class yard beyond the protection of our land forces would be to make such a yard a dangerous liability instead of an asset in the event of a naval defeat.

The port of Charleston is located about 400 miles south of Hatteras. It is directly north of the Panama Canal, and its sailing distance to the mouth of that canal is 1,564 miles. The sailing distances of the various ports on this coast, as well as the sailing distances from the other yards on the North Atlantic to the Panama Canal via the Windward Channel, are as follows:

	Miles.
Portsmouth, N. H	2,174
Boston, Mass	2,157
New York, N. Y	1,974
Philadelphia, Pa	1,946
Norfolk, Va	1,779
Wilmington, N. C	1,612
Charleston, S. C	1,564
Savannah, Ga	1,574
Jacksonville, Fla	1,527

There is no port on the South Atlantic coast which is nearer and with better rail connection to the centers of industry from which can be rapidly assembled skilled workmen and supplies than the port of Charleston. Nor is there any port better situated with reference to our arsenals and army posts from which could be drawn military forces and ammunition for its protection. While a yard located lower down the coast might be slightly nearer Panama and the West Indies it is seen from the sailing distances above given that this difference is inconsiderable.

On the other hand, there is no harbor on the South Atlantic outside of the harbor of Charleston—and possibly the harbor of Port Royal—wherein a large fleet could be assembled, and one of the essential elements of a yard of the first magnitude is the possibility of assembling a large fleet in its immediate vicinity and in connection with it. But let us take up the requisites of a yard of the first magnitude as given by the Naval Board above referred to in their order of importance as laid down by that board:

"First. Accessibility from the sea, including the depth of water in channels, the facility of approach to these channels, and the certainty and ease with which they may be navigated.

"Second. Immunity from attack, which includes the question of its attack by bombarding at long range from the open sea and the question of its attack by enemies' vessels which may force the entrance to the harbor, the latter question involving a consideration of the defensive works which have been or may be established for the protection of the harbor.

"Third. Its protection from unusual storm tides.

"Fourth. Safe and commodious anchorage in the immediate neighborhood of the naval station.

"Fifth. Health and sanitation, including water supply.

"Sixth. Railroad and steamship facilities. This affects the cost and the time of delivery of material and the certainty and regularity of its supply, and also affects to some degree the question of additional supplies of labor.

"Seventh. The labor supply.

"Eighth. The suitability of the site selected, as to extent of water front and to character of soil for foundations for the docks and heavy buildings which a naval station requires.

"Ninth. Cost of establishment, which includes cost of dredging in the approaches and on the water front, necessary grading, etc."

Now, let us consider each of these requisites in order.

First. The accessibility from the sea, including the depth of water in channels, the facility of approach to these channels, and the certainty and ease with which they may be navigated.

Forty years ago the entrance to the harbor of Charleston was less than 12 feet at low water. A project for the deepening of this channel was adopted consisting of two jetties shaped like a funnel and projecting out into the ocean. This project made little progress at first, but upon the adoption of a plan for continuous work it rapidly drew to completion and resulted in securing, first, a depth of 21 feet at low water, as originaly proposed, and shortly afterwards a depth of 26 feet at low water. At the time of the report of the Naval Board, above referred to, this depth had only reached 23 feet. The board reported, however, that it had no doubt of the depth being further brought to 26 feet, which, in fact, was done within a very short time. This was followed by a project for 28 feet, with a width of 1,000 feet outside of

the jetties, 500 feet within the jetties. This depth of channel, with a width of 800 feet outside and 500 feet within the jetties, has been in existence for about three years. A dredge is now at work increasing the outside width, and the engineer in charge states that within a year the requisite 1,000 feet there will be obtained.

On the 9th of December, 1911, the Secretary of War transmitted to Congress a recommendation that the depth of this harbor be increased to 30 feet at low water. The estimated cost of this increased depth was $140,000. For the past three years this project was pressed upon the Committee on Rivers and Harbors, but was not provided for, because all new projects were excluded from consideration.

The incomparable superiority of the harbor of Charleston to all others on the coast, as to present depth, cost of maintenance, cost of further deepening, and easy accessibility to the ocean is shown in the following tables, made up from the 1915 Report of the Chief of Engineers, War Department, Vol. II:

Table No. 1.

	Depth low water.	Minimum width.	Distance from ocean.	Cost to date.	Total cost of maintenance to date.
	Feet.	*Feet.*	*Miles.*		
Charleston	28	500	7½	$5,022,950	$61,821
Savannah	23	400	28	8,976,214	1,264,986
Wilmington	26	150	30	5,052,254	922,614
Jacksonville	24	300	28	5,681,647	686,661

Mean rise of tide in Charleston Harbor 5.2 feet, giving a high-water depth of 33.2 feet.

Table No. 2.

	Maintenance.				New work, 3 years.	Total expenditures, 3 years.
	1913	1914	1915	Total, 3 years.		
Charleston		$18,702	$1,175	$19,877	$132,909	$152,786
Savannah	$234,925	177,436	178,084	600,445	397,680	998,125
Wilmington	80,000	80,000	80,000	240,000	537,934	777,934
Jacksonville	6,112	87,607	3,729	97,448	1,538,167	1,635,635

For over two years, from May 29, 1914, to September —, 1916, no dredge was at work on the harbor entrance of Charleston. The estimates for maintenance were $40,000 per annum. The actual costs have been practically nothing. The significance of this is not only in the matter of costs. It may be impracticable for work to be done on a harbor entrance in time of war, and the great advantage of having a harbor for a first-class yard with the above record does not need comment. But the question has been raised as to the practicability of increasing the depth of water from the ocean to the Charleston yard to 35 feet or even to 40 feet at low water, and the cost of obtaining such depth, if practicable. The following letter from the district engineer of the War Department on the subject will answer that question:

WAR DEPARTMENT,
UNITED STATES ENGINEER OFFICE,
CUSTOMHOUSE,
Charleston, S. C., October 14, 1916.

From: The district engineer officer, Charleston, S. C.
To: Mr. R. G. Rhett,
President Chamber of Commerce, Charleston, S. C.
Subject: Ship channel from navy yard to the sea.

DEAR SIR: In compliance with your request of October 10, 1916, in reference to the above subject, your attention is invited to the following tabular statement showing the yardage to be excavated to obtain channels of certain depths. All channels are 800 feet wide beyond the jetties, 500 feet wide between them, and 600 feet wide within the harbor up to the navy yard.

Estimate of amount of dredging ship channel to United States navy yard, Charleston.

Locality.	30-foot depth (cubic yards).	35-foot depth (cubic yards).	40-foot depth (cubic yards).
Outside jetties	600,000	4,000,000	8,666,666
End jetties to Sumter	100,000	1,100,000	3,260,000
Sumter to Cooper River	50,000	100,000	1,555,555
Opposite city		450,000	1,066,666
Cooper River to navy yard		1,700,000	5,266,666
Total	750,000	7,350,000	19,815,555

2. It is rather difficult to make any satisfactory estimate of cost of dredging, for the simple reason that this would depend upon the amount of funds available, the character and capacity of dredging machines used, labor conditions during the period of operation, cost of supplies, and the like, which are all variable factors. If Government dredges can be leased from other engineer districts, the unit cost will be below that to be obtained by arrangements with private contractors. On the other hand, if dredges must be built especially for this work, the unit prices will closely approach those to be obtained by contract. I inclose tables showing cost of dredging with various seagoing dredges and pipe-line hydraulic dredges, the former being suitable for work in outer harbor; that is to say, between and beyond the jetties, and the others being adapted to work within the harbor.

3. The question of maintenance also enters, and this is still more difficult of prediction, but it is highly probable that for either the 35-foot or the 40-foot channel it will be necessary to operate, almost constantly, a seagoing hopper dredge of moderate size and a pipe-line or bucket dredge within the harbor. Bearing on this point, the operating cost of the dredge *Atlantic* was $76,576 for the fiscal year 1915, covering 236 days of actual dredging. For the *Manhattan* the cost for the year amounted to $68,734, covering 218 days of actual dredging. Both of these amounts are exclusive of ordinary and extraordinary repairs, additions, and alterations, office expenses, and surveys.

4. As to cost of operating pipe-line dredges, the *Col. A. M. Miller* is taken as a representative dredge. This dredge has a 20-foot discharge pipe, has a displacement of 710 long tons, and is supplied with the necessary attendant plant, such as towboat, launch, and barges. She was operated in Texas City Channel and Port Bolivar Channel on the coast of Texas, dredging mud, sand, and clay to the amount of practically 3,000,000 cubic yards in 280 days of actual dredging, and the total operating cost was $76,367, exclusive of renewals to pump and pipe line and cost of operating towboats and launches, the total field cost being $101,830, which was further increased by office expenses, extraordinary repairs to dredges, to towboats, and to barges, bringing the gross cost for the year to $111,008.

5. Based on cost of maintenance of the existing 28-foot project at the channel entrance, the maintenance of the 35-foot channel might be estimated at $60,000 per annum, and the 40-foot channel at $80,000 per annum, while the maintenance of the channel from the navy yard to the jetties might be covered by similar amounts, bringing total annual maintenance of the 35-foot channel to $120,000 and for the 40-foot channel to $160,000. But, I repeat, that these figures are scarcely better than mere guesses.

6. As a basis of comparison the following information is appended:

(a) For the port of Wilmington, N. C.: The present project provides for a channel 26 feet deep, 300 feet wide in Cape Fear River and 400 feet wide on the ocean bar, at an estimated cost of $572,940, with $80,000 annually for maintenance.

(b) For the port of Savannah: The present project provides for a channel 26 feet deep at mean low water from the sea to the western limits of the city, a distance of 28 miles, with widths varying from 400 to 600 feet, and a channel thence 2 miles to the foot of Kings Island, 21 feet deep at mean low water and 300 feet wide. The original estimated cost of the 26-foot project was $2,705,700 and the 21-foot project was estimated to cost $140,000, with an annual maintenance for both amounting to $250,000.

(c) Jacksonville to the ocean, St. Johns River, Fla.: The present project provides for a channel 30 feet deep at mean low water, width to be 300 feet in the straight reaches, increasing to as much as 600 feet in the bends and through the jetties, with an anchorage basin opposite Mayport (about 4 miles from the mouth) 800 feet in width beyond channel limits. Estimated cost of the work proposed is $2,852,000 for first construction and $60,000 per year for maintenance for the first five years after completion, and this does not include the restoration of the jetties to their original section which may ultimately be required. In addition to the foregoing, a project has been adopted to secure a depth of 24 feet at mean low water from the deep-water line to the pierhead line for the entire frontage between Hogans Creek and the railway bridge, at a total expenditure of $486,500, with $1,000 annually for maintenance.

Yours, truly,

G. A. YOUNGBERG,
Major, Corps of Engineers.

TABLE I.—*Cost of dredging by certain large United States Engineer Department seagoing dredges, based on record for the fiscal year ending June 30, 1915.*

Name of dredge.	Displacement (light tons).	Locality.	Gross cost per cubic yard (cents).	Total yardage (cubic yards).
Atlantic	2,670	New York	7.19	1,289,786
Do	2,670	Cape Fear River	9.98	156,400
Benyaurd	2,978	Mississippi Passes	5.3	1,825,281
Delaware	4,200	Delaware River	2.78	3,210,589
Galveston	3,375	Galveston	6.34	1,735,495
Manhattan	2,670	Delaware River	2.11	4,295,583
Navesink	3,150	Providence and Narragansett.	6.582	1,720,000
Raritan	2,930	New York	7.92	1,752,094

It will be noted that in all cases the yardage made for the year was very high, which operates to reduce unit costs.

The average gross cost per cubic yard for all seagoing hopper dredges owned by the Engineer Department and operated during the year named was 7.4208 cents.

TABLE 2.—*Cost of dredging by certain United States Engineer Department pipe-line hydraulic dredges, with discharge pipe 20 inches in diameter and over, based on records for the fiscal year ending June 30, 1915:*

24 dredges average ..... 5.82649 inches

The yard was located on the western bank of the Cooper River above the city, because of the splendid facilities which were to be obtained there. For instance, the Government secured both banks of the river for a distance of over 4 miles on one side and over 3 miles on the other. It also acquired 2,250 acres of land for the yard, and at the same time located it out of reach of bombardment and of severe storms. But in doing so it called attention to the fact that the Cooper River would have to be dredged above Drum Island at a cost of about $12,500 in order to give a low-water depth of 25 feet.

The board plainly expected this dredging to be done as a part of the construction of the yard. Its location up the Cooper River was deliberately made and the dredging of the approach was contemplated as one of the necessary expenses to enable the Government to secure the many advantages which the selected site afforded. The failure to have this approach dredged at the trifling expense of a few thousand dollars has been the cause of many misunderstandings and misrepresentations, and has prevented the proper recognition of the great merits as well as the great importance of the yard.

However, the deepening of this approach was provided by Congress in the last naval act. Owing to the increased size and draft of large war vessels it was deemed advisable to make this approach 30 feet at low water, 1,000 feet wide on the turns and 600 feet on the straight stretches. The contract for this work, to be completed within one year, has already been awarded by the Navy Department.

Nowhere on the South Atlantic coast is there any harbor where access to the sea may be had through a channel of such depth as 40 feet

at anything approximating the cost for such access to the Charleston yard—if at all.

Second. Immunity from attack, which includes the question of its attack by bombarding at long range from the open sea and the question of its attack by enemies' vessels which may force the entrance to the harbor, the latter question involving a consideration of the defensive works which have been or may be established for the protection of the harbor.

With reference to this, the above board uses the following language:

"Both stations are secure from bombardment by an enemy's fleet from the open sea. * * * Charleston is strongly fortified and affords ample opportunity for the use of ocean mines, and is wholly secure in this respect."

In the recent allotment of the War Department, $150,000 has been set aside to improve the fortifications of this harbor. This is to be devoted to the carriages of the large guns so as to increase their range to such point as would prevent any possible bombardment even of the city. Charleston has never been captured from the sea. Its defense is easy, and has already been well provided for. Its connections by three railway systems with Washington and the northern yards and Army posts, also by the same systems with the western Army posts, give it ample protection from any force landed on the coast and attempting to attack from the rear.

Third. Its protection from unusual storm tides.

The best evidence on this subject is the history of the yard since its establishment in 1902. We have had a number of the severest storms in the history of the city since that time, and no serious damage has been done to any portion of the yard. It was located up the Cooper River for the purpose of affording it protection against storms as well as for the purpose of removing it from the danger of bombardment from the sea.

Fourth. Safe and commodious anchorage in the immediate neighborhood of the naval station.

Inasmuch as the situation at the time of the investigation of the naval board above referred to was the same in this respect as it is to-day, the conclusions of that board on this subject are very important. This is what the board said:

"At Charleston there is ample anchorage in Rebellion Roads below the city and in the Cooper River above the city opposite Drum Island. In front, on the Cooper River side, there is also room for mooring heavy vessels, the distance between the 24-foot contour line at low water varying between 280 and 400 yards. The heaviest vessels could lie here moored head and stern to fixed moorings without any improvement in the anchorage, and with very little dredging could swing freely at fixed moorings."

In 1905 the coast squadron, under command of Admiral Dickens, spent a part of the winter in Charleston Harbor, and the admiral had a survey made of its capacity for a fleet of battleships of the deepest draft then designed. His statement on the subject, made in a speech at a banquet given to the officers of the cruiser *Charleston*, which came in for its silver service while the coast squadron was there, is as follows:

"After entering the harbor 50 battleships with 26 feet draft can be anchored in Charleston Harbor at single anchor, 400 yards apart, with a scope of 45 fathoms of chain. Sixty-five battleships with the same draft and with the same scope of chain can be moored in Charleston Harbor 1,000 feet apart. Thirty-five battleships can be moored above the Battery." (See Yearbook, City of Charleston, for 1905, p. 33, Appendix.)

Battleships and battle cruisers now draw more than 26 feet, but it can be easily seen by an examination of the harbor that a fleet of the first magnitude, comprising dreadnaughts, battleships, and battle cruisers, together with whatever other vessels would form the necessary complement of such a fleet, could find ample anchorage within its waters.

With reference to an anchorage and turning basin opposite the yard, the Government owns both sides of the river for over 3 miles. The width of the river opposite that portion of the yard which is now developed varies from 1,500 to 2,500 feet. The cost of securing a depth of 30 or even 35 feet for, say, 1 mile in front of the yard would be a comparatively small matter. It would not only give an ample turning basin for the largest battleships but would also give anchorage for a considerable number of them.

Fifth. Health and sanitation, including water supply.

The health and sanitation of the yard can best be described by the medical officer in charge from the records. It is understood that there is no healthier spot to be found anywhere. The climate is described in the annexed statement, taken from the reports of the Chief of the Weather Bureau at Charleston:

Charleston's weather conditions.

[Mean normal records taken from United States Weather Reports since 1871. Figures in italic inches of rainfall.]

[1] Average.

III. Climatology and Sanitation.

CLIMATOLOGY.

"The climate of Charleston and vicinity is classed as subtropical; neither the protracted and enervating heat of the Tropics or the rigorous winters of higher latitudes are experienced in this section.

"The proximity of the ocean tends to produce a small seasonal range of temperature and reduces the range of accidental variations during summer and winter. Great temperature changes are infrequent.

"Charleston's average annual temperature is 65.6°. The highest monthly average is 81.3° in July and the lowest is 49.3° in January. Extremes of heat during summer months occur when the barometric conditions are such as to counteract the sea breezes, west to southwest winds resulting, accompanied by a natural rise in temperature.

"The mean relative humidity at Charleston, determined by observations at 8 a. m. and 8 p. m., is respectively 79 per cent and 78 per cent.

"The average annual precipitation is stated to be 52.07 inches; monthly averages range from 7.26 inches in July to 2.87 inches in November. Rains are most frequent and profuse from June to September, inclusive. The average annual number of days with rain (0.01 inch or more) is about 117.

"Fog occurs on an average of three or four days per month during the cold season, and is of seldom occurrence in summer. Dense fogs rarely continue as long as 24 hours.

"The prevailing direction of the wind from May to August, inclusive, is south, from seaward, which during this period is cooler than land breezes. Northeast winds prevail during September; from October to January, inclusive, the winds are from the north, and from February to April, inclusive, from the southwest. The average hourly wind movement, in miles, determined from records extending over 38 years, is 10. The wind is seldom of destructive violence except in the case of tropical hurricanes, which are not frequent. Between 1893 and 1911 no cyclonic storms approached sufficiently close to Charleston to be very destructive. The heavy storms during the two years mentioned occurred in the last week of August. Due to the extension of the facilities for obtaining weather data, information relative to the approach of these storms is known well in advance.

"The above data are taken from an account written by Mr. J. H. Scott, United States weather forecaster, and from the Summary of Climatological Data, published by the Weather Bureau."

The water supply comes from the mains of the city water supply on its way into the city. It has always been ample and of good quality, both for potable and manufacturing purposes.

It, of course, would necessarily be ample for any developments which might be made at the yard.

Sixth. Railroad and steamship facilities.

There are three railway systems at Charleston—the Southern Railway, the Atlantic Coast Line Railway, and the Seaboard Railway. Each of these systems extends in all directions; that is, north, west, and south. The Atlantic Coast Line has a double track for a considerable distance of its line toward the north and is double-tracking its entire line in that direction. The distance from the yard to Washington via the Atlantic Coast Line is 505 miles. The distance via the Seaboard is about 530 miles, and the distance via the Southern, through Columbia is 620 miles. All these lines reach out westward to Atlanta. They all also extend via affiliated lines into the coal fields of Kentucky and West Virginia. Two of them, the Atlantic Coast Line and the Seaboard, go directly south to Savannah, Jacksonville, and other points. The Southern Railway has a modern coal exporting and bunkerage terminal, with rates on a parity with Norfolk. The Clinchfield Corporation is preparing to erect a second terminal. In this connection the Standard Oil Co. and the Texas Co. both have a large number of storage tanks in the harbor from which their oils are distributed over North and South Carolina and to points beyond. There is no port in the South which has more or better railway facilities. With reference to steamship facilities, the Clyde Line maintains a service between New York, Charleston, and Jacksonville, giving four sailings a week to and from New York. It also maintains a weekly service to Boston. The Baltimore & Carolina Steamship Co. gives a service of two sailings per month for Baltimore. The Morgan Steamship Line has a service from Galveston which uses Charleston as a port of call on its way to Philadelphia.

In the event of urgent need, forces could be transported from the yards at Norfolk or Philadelphia to the yard at Charleston almost overnight—the distance to the Norfolk yard being under 500 miles and the distance to the Philadelphia yard being about 625 miles. The rail connections with the centers of industries and of supplies are such as would insure quick and economical deliveries of materials and supplies.

Seventh. The labor supply.

The board above referred to has this to say on that subject:

"In order to cope with important repairs to two or three large ships simultaneously, a body of not less than a thousand mechanics skilled in shipbuilding and allied trades must be constantly available. It is well known that such a body of skilled men does not exist anywhere along the South Atlantic coast. Assuming the material equipment

of a first-class navy yard is provided (which is merely a question of sufficient expenditure), it is also necessary to provide the skilled personnel. Experience, both in navy yards and private shipbuilding establishments, shows that this is only possible by offering such inducements to workmen as will lead them to permanently settle in the immediate vicinity. Such conditions include not only steady employment, but suitable homes, schools for their children, and the attractions outside of their working hours to which they have been accustomed. These can only be found in cities. * * * It therefore appears that to successfully establish a first-class navy yard it is necessary to locate it in close proximity to a city capable of accommodating a considerable industrial population. Further, if in such city there does not already exist a large body of workmen, skilled in shipbuilding and allied trades, it will be necessary for the Government to give steady employment in the navy yard to retain such workmen when once settled in the vicinity. * * * A supply of labor at any navy yard or station larger than that which is available from the industries of its vicinity, can be obtained only by colonizing workmen, in which case the yard must be supplied with sufficient work to keep them constantly employed or by securing them on short notice from points more or less distant, whose industries are on so large a scale that sufficient inducements will always attract the necessary number of men. The board considers that at the present time this latter condition is the one which applies to any naval station established on the South Atlantic coast, and therefore attaches considerable importance to the easy and cheap communication which Charleston has with the northern seaboard."

The employees of the yard have been increased in the last three years from less than 700 to over 1,400. Provision has been made by the department to begin the construction of a gunboat on the ways recently erected. There is ample room for doubling the capacity of these ways and, if construction work can be given at the yard, a considerable force of skilled mechanics may be afforded permanent employment, and in the event of a large vessel docking for repairs, can furnish the workmen necessary for such repairs.

It has always been found possible to accumulate the labor necessary for whatever work has been given to the yard, and if the compensation paid at the yard be placed and kept on a parity with that paid at other yards, and steady employment assured, it will not be difficult to acquire and maintain a sufficient force at the yard for all practical purposes. In cases of emergency this could be supplemented by the shipment of labor overnight from other yards or other industrial centers.

There has been some complaint with reference to the housing of labor in the city and the vicinity of the yards, but if we take into consideration the fact that there has been a constant agitation for closing or contracting the yard—and numerous articles have misrepresented it in a most outrageous way—it is not surprising that investors have not been willing to erect attractive houses which would be tenantless in the event of the adoption of a policy of contraction. Assurance has been given that any number of houses desirable, either in the vicinity of the yard or in the city, will be supplied at very reasonable rentals, ranging from $15 to $20, and containing modern conveniences, provided there is any assurance of the yard being developed as a first-class yard.

Eighth. The suitability of the site, as to extent of water front and as to character of soil for foundations for the docks and heavy buildings which a naval station requires:

The area of the yard is 2,250 acres. Its water front is approximately 7 miles, 4 of which are on the west side of the river, where the yard proper is located. It affords ample room for the development of a yard of the first magnitude. As to the character of the soil for foundations, the present dock is constructed without any piling, and no difficulties have been experienced with it. The board has this to say with reference to foundations:

"Eighteen borings were made on the Lawton land and Chicora Park (present site of the navy yard). These borings, after passing through upper strata of marsh mud, sand, and clay, found solid marl at depths varying from 23 to 54 feet, in one hole only the marl being found as low as 62 feet."

A large number of very substantial buildings have been erected at the navy yard and the foundations have invariably been excellent.

The three railway systems all have their tracks running to the limits of the yard and connecting with the yard tracks. Settlements have been made both to the southwest and to the northwest of the yard, where buildings have been erected and are being occupied both by employees of the yard and the employees of industries to the north of the yard. In the latter section a town has been laid out and improvements made at an expense of several hundred thousand dollars. A number of industries have been located there and are developing rapidly. This town furnishes sites for industries with all possible advantages and with low taxation, and has given to the community of Charleston its first opportunity of expanding industrially on a solid foundation. It is therefore not improbable that the number of skilled mechanics engaged in industries around the navy yard and in the city will be very considerably increased in the not distant future.

Ninth. Cost of establishment, which includes cost of dredging in the approaches and on the water front, necessary grading, etc.

There has been expended already upon the Charleston Navy Yard over $5,000,000. It now has one granite dock, which is described as follows: Length, 566 feet; length of the forehead to the outer sill, 548 feet; width and coping, 134 feet; width from the top of the keel blocks, 96 feet 2 inches; width at the coping, 113 feet and the fraction of an inch; governing width, 6 feet above the sill, 101 feet 11⅛ inches; depth at mean high water to sill, 34 feet 1⅛ inches. This would be able to admit our largest dreadnaughts if it were of sufficient length, but at present that is only 548 feet. A provision was inserted in the last naval act for lengthening this dock, but the conferees on the bill concluded that Congress should await the report of the commission to be appointed under the terms of the act as to the advisability of making Charleston a first-class navy yard. In the event of the board concluding that this is the proper thing to do, Congress would have to consider the advisability of lengthening the present dock or of constructing a new dock.

The approaches to the yard have been in need of improvement ever since its location on the Cooper River. The present act provides for this approach to be made 30 feet in depth at low water, 600 feet wide on straight stretches, and 1,000 feet on the turns. No further expense would be necessary in this respect until our ships were made of deeper draft than any of present design. There is now one pier at the yard at which there is 32 feet of water on both sides. Its length at present is only 450 feet, but its extension would be a matter of small expense, and even as it is it could be utilized to moor large ships. There is no additional grading to be done at the yard, and the most of the low places have already been filled. The remainder of such places would be filled without any additional expense, as it is being done with what is taken out of the approaches to the dock by the dredge kept there for that purpose. The cost of operating this dredge per annum has never exceeded $9,000, and has averaged considerably less. The dock having been placed a considerable distance away from the river, an approach of something like a thousand feet had to be excavated to reach it. This excavation has naturally been filled up to a more or less extent each year from the edges of the embankments on each side. With each year, however, these embankments more nearly approach the angle of rest, and the probable cost of maintaining the proper depth to this entrance may be expected to be very much reduced. Especially would this take place in the event of a second dock being installed.

In conclusion, the whole subject may be summarized as follows:

1. A first-class navy yard on the South Atlantic coast is strategically of the utmost importance for the defense of the country.
2. The harbor of Charleston is suitable for the location and development of such a yard, and affords every requisite therefor, except an adequate labor supply from adjacent industries.
3. No other harbor along that coast can supply the two essential requisites, namely, accessibility from the sea, with a depth of 35 and possibly 40 feet at low water, and anchorage for a fleet within the harbor.
4. At no other harbor could so many of the other requisites be fulfilled, and nowhere along the coast would the labor supply be any better.
5. Over $5,000,000 has been already expended upon the Charleston Navy Yard. A dry dock and building ways have been erected there, and a force of skilled workmen sufficient to take care of all work which has been assigned to the yard, and numbering about 1,400, has been assembled there and kept steadily employed.

The Public-Buildings Bill.

EXTENSION OF REMARKS

OF

HON. DUDLEY DOOLITTLE,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 23, 1917.

Mr. DOOLITTLE. Mr. Speaker, I think the expenditure of public money at this time should be confined to public matters of absolute necessity. I voted against the omnibus buildings bill for the same reasons that prompted me to oppose the special rule which the House adopted to take up the bill for consideration, without which rule it could not have been considered this session of Congress.

It is not my purpose now to criticize individual items that go to make up the bill; let it be admitted for the sake of the argument that every item therein contained is meritorious and able to commend itself to us on its own merits—stand on its own bottom—nevertheless, with the exception of the post-office building at Paris, Tex., to replace the one destroyed by fire, separate provision for which could be made in 10 minutes, consideration of every item in the bill could be postponed without violence or damage to any legitimate interest until the finances of the United States Treasury are in better shape and the national deficit eliminated. I oppose adding $38,000,000 carried by this bill to this deficit. We are about to add more and new taxes on the people to pay the huge expenses already incurred for "preparedness," guarding of the Mexican border, national armor-plate plant, Government nitrate plant, the Alaskan Railway, American merchant marine, the good-roads act, the educational-extension laws, the widows' pension law, the Danish West Indies, and many other extraordinary matters, amounting in all to hundreds of millions of dollars, and a Treasury deficit of approximately $300,000,000 faces us in the immediate future as a result thereof. The buildings bill could wait, and it should have waited.

House bill 8931, introduced by me last session for a public building at Council Grove, in the fourth congressional district of Kansas, which I have the honor to represent here, was incorporated in the omnibus bill by the committee at lines 8 and 9, page 18. The postal receipts of the Council Grove post office are well above $10,000 per annum, as required by the rules for post-office buildings in cities, and the city itself more than meets the requirements. Aside from the prospering and ever-expanding agriculture, live stock, and business interests of the surrounding country and the city proper, with its many enterprises, railways, shops, paved streets, water works, sewers, electric lights, historic edifices, public library, magnificent schools, churches, and courthouse, the quaint and interesting history of Council Grove would in itself almost entitle it to some tangible recognition by the Government.

An aggressive citizens' committee has presented some interesting statements in connection with their city, which I shall read into these remarks:

Age, romance, legends of the past, or historical associations, while perhaps having no especial bearings in connection with the claims of a town for Federal recognition in the way of a public building, still Council Grove's story has always begun, and ever will be associated with the beautiful traditions of her past, a past not made up of fiction but of the realities of the founding and building up not only of Kansas but the whole Southwest.

Tradition, long since proven, tells us that the pyramid of rocks on the hilltop adjoining Shadeland Heights and overlooking Council Grove from the southwest, marks the last resting place of Juan Padilla, soldier-poet-priest, who came here with Coronado, and dwelt among the red men in 1541, almost a hundred years before our forefathers established themselves and civic and religious freedom at Plymouth, Mass.

It was at Council Grove, in September, 1806, that Gen. Zebulon Pike halted his Government expedition and made his memorable treaty with the Indian tribes before entering upon his exploration of the newly acquired "Louisiana Purchase."

It was under the "Council Oak," still standing, and marked by a tablet erected by the Daughters of the American Revolution, that Gen. Sibley, in 1822, made a treaty between the Government of the United States and "Wild tribes of the plains" for the right of the white man to use the highway to Mexico, ever to be known to posterity as "The Old Santa Fe Trail," and this route as surveyed and laid out by the Government in 1825–1827, was for half a century the avenue through which the immigration and commerce which built up the West flowed, and Council Grove played an important and lasting part as the last outpost of civilization.

The Government agency for the Kaw or Kansas Indians, established in 1825, was permanently located at Council Grove in 1845. The town had become an important point for Indian trade, and as early as 1817 the Chouteaux of St. Louis had established trading post here, while Storrs, also of St. Louis, opened a supply store in 1821, and after the treaty of 1822 numerous traders ventured into business here. In 1846 a post office was established. This is said to be the second oldest post office permanently established in Kansas, and the patrons of which for a number of years included a territory equal to one-half the State of Kansas. The Indian mission established in 1846 also included a school for the Indians. The first school for white children established in this great State of schools was opened at Council Grove in 1850. In 1854, upon the organization of Kansas as a Territory, Gov. Reeder, after a personal visit, recommended Council Grove for the Territorial capital, but owing to the town site being entirely surrounded by and located on the Kaw Indian Reservation, the chance that would have ultimately made Council Grove the capital of Kansas had to be passed by. Council Grove was the scene of many stirring and exciting incidents in the passing of the "trains" over the trail. The passing of our armies to and from the Mexican War, the California gold rush, and the hordes of adventurous pioneers brought to and through Council Grove a host of characters the like of which the civilized world will never again behold. It was while on their return march from the Mexican War that the soldiers of Gens. Doniphan and Price held a Fourth of July celebration at Council Grove.

The "old trail," now the main street of our city; the "old mission," still standing, and owned and occupied by the descendants of its first teacher; "Council Oak," with its historic marker, "Padilla's monument," erected by his faithful Indian friends in the day of the Spanish dominion of this whole continent; "Custer's Elms," "Fremont Park," "Soldier Hole," "Hermit's Cave," "Belfry Hill," and numerous other relics of that dim past, which we as loyal descendants of a sturdy race look upon with veneration and a just pride, are well; but it is to the city of Council Grove this year of our Lord 1916, with the fine showing of her post office, her banks, railways, fine public schools, her many churches, library, fine courthouse, and other public buildings, her modern sewer system with septic treatment, one of the best pure-water systems in the State, ice plant, one of the finest and best equipped electric power and light plants in the West, but best of all her fine citizenship of progressive, up-to-the-minute residents which extends to the surrounding country rich in fine homes, agricultural and stock resources unexcelled, complete rural delivery over good roads, to all the facts so ably set forth in the financial and commercial statements of this committee, we, as citizens of Council Grove, point with pride, and feel that she is entitled to a public building for her post office, and to the fairness of this proposition we pin our faith.

CITIZENS' COMMITTEE.

The item for Council Grove can stand alone on its merits. Despite the motion of my friend from Wisconsin [Mr. FREAR] to strike it out, based on his old and erroneous figures and data, the Council Grove site and building remained in the bill by a unanimous vote, the gentleman from Wisconsin himself not even voting against it.

Public Buildings Waste.

EXTENSION OF REMARKS

OF

HON. JAMES A. FREAR,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 19, 1917.

Mr. FREAR. Mr. Speaker, a most remarkable spectacle has been presented in the discussion of the $38,000,000 public-buildings bill now before the House. Prior to taking up the bill under the five-minute rule the House occupied nearly an hour in discussing a $300 expenditure by the Military Committee and then rushed through items in the public-buildings bill reaching between $5,000,000 and $10,000,000 within four hours and charged opponents of the bill were filibustering when efforts were made to discuss various items in the bill, a large portion of which time was taken up by those who were urging their individual projects.

The opponents of this bill, including members of the committee and both Democrats and Republicans, have shown to the House that the public-buildings bill, with authorizations of $38,191,200, contains over 200 items that are specifically shown to be wasteful by the Treasury Department, and in many cases the increased cost to the Government under separate propositions will reach over 900 per cent annual maintenance charges alone, apart from the original investment.

In addition to the Treasury Department statement, however, many other items are contained in the bill wherein increased cost to the Government makes questionable the construction of public buildings in such localities. This statement is made irrespective of the condition of the Treasury and goes to the merits of the bill itself. There have been presented in the RECORD statements showing that under the report of the House committee, headed by the gentleman from Indiana [Mr. CLINE], practically one-half the items of this bill would be eliminated because of the failure of a locality to present the population and receipts recommended in his report, which are found in the report No. 1029 of the House, Sixty-second Congress, second session, and appear on page 1652 of the RECORD of this present session.

The report of the Public Buildings Commission contained in Document No. 936, Sixty-third Congress, second session, on pages 8 and 9, shows conclusively—under even that liberal interpretation—practically half of the items contained in the bill ought to be eliminated. In the minority report filed by Postmaster General Burleson, pages 18 and 19, limitations are placed upon locating public buildings, upon locality conditions, which would, on the basis proposed by him, eliminate, presumably, 75 per cent of the items of this bill. His report is supported throughout by expert testimony submitted in that report. Notwithstanding this arraignment of the waste and extravagance contained in the bill an attempt has been made apparently to justify some of the items by acts of courtesy to different Members, and by insisting that where a small site has been purchased in a crossroad town it is economy for the Government to go on and erect an expensive building rather than sell the site or hold it until the demands of the community require a public building. No law can govern this Congress or future Congresses in the determination of where buildings should be placed, because each Congress is a law unto itself; and, in view of the character of the bill presented to the House, it is a subterfuge to say that it complies even in a remote degree with existing law passed at previous sessions.

GOVERNMENT BUILDINGS FOR "OTHER PURPOSES."

One of the reasons urged for violating the supposed rule which prohibits the erection of buildings in small villages is that which receives support by reason of a claim that other governmental interests are to be housed in the same building. This proposition throws the door wide open to appropriations for any village of the country; and in order to show that it is openly violated and to indicate the present methods of securing appropriations for that violated rule I call attention to the following items contained in bills introduced from one single State, and including nearly a dozen bills introduced by one member of the committee. In nearly every case the post office is united with other purposes, so that the rule is violated in Whitesville, with 321 population and $2,031 receipts; McKee, with 146 population and $526 receipts last year; Boonesville, 236 population and $829 receipts last year; and a number of other proposed projects where other purposes are urged in that particular district.

The following list of items is contained in separate bills filed by Representatives of this one State, wherein 17 out of 22 items proposed are for post office and other Government purposes, and thereby are not to be limited by any amount of receipts named under any law. By this means the proposed limitation is shown to be of no value. Kentucky now has 12 Government courthouses—double the number of either Illinois or Ohio.

Only a limited number of the above items are contained in the pending bill, but "other Government purposes" are usually named:

Kentucky.

Places.	Population.			Post-office receipts.	Kind of building.	Amount asked.	By whom asked.	Amount granted.
	1910	1900	1890

[1] Site.

[2] Not in census of 1910.

According to the Building Commission's report, 12 Federal courthouses have been constructed in Kentucky, or double the number that are contained in the State of Ohio, and yet nine items in this list just quoted were proposed for one single district in Kentucky for other governmental purposes in addition to use as a post office, thereby attempting to escape from a supposed rule which, however, is honored by its nonenforcement.

CONGRESSMEN DETERMINE LOCATIONS.

This single illustration is given to show the vice of the present system of passing omnibus public-buildings bills. In the RECORD it has been shown that the committee refuses to accept any advice from the Treasury Department as to the necessity for the construction of a public building at any particular place, and has directed the department to submit no statement on the subject. This course has prevented any statement of necessity from an unbiased source to receive consideration in the making up of the bill. On the other hand, a statement appears in the RECORD that the Building Committee has called before it in every case the local Congressman representing the locality who introduced the original bill, to ascertain whether or not his community needed the post office, and on his statement as shown by the various hearings, and usually his statement alone, the insertion has been made of a public building for that locality. Notice has been thus given to 300 or 400 Members who have items in the bill. Some of the members of the committee have as high as four items in the bill, but in view of the general character of the bill criticism need not be made against that practice, because all business principles are necessarily violated in the preparation of a bill of this character.

The opponents of this measure have sought to set forth the facts in order that the House and the country may know just what kind of a bill is being passed in the Sixty-fourth Congress, carrying authorizations of over $38,000,000 at a time when the Federal Treasury will show a deficit of $300,000,000, according to the statement of the Secretary of the Treasury. This bill has been condemned by the Secretary of the Treasury in his report. It is also opposed, according to statements on the floor, by the Postmaster General and others in high authority. With this record before us, what can be said in defense of such a bill or the practice which permits legislation through an omnibus measure? I do not care to make any further argument against this bill, which will be passed by the House. In my remarks of December 7, a fairly complete analysis was made of the various items, showing how bad this bill is when measured by the official reports of congressional committees, United States Treasury estimates, and all other data that could be secured on the subject. It will go through the House under the pressure of the steam roller, but as an humble Member of this House, I predict that we will soon see the end of such measures, and that Congress will purge itself of legislation which is wasteful in character and objectionable in its methods of preparation. A reform ought to be instituted at once by those who have the power and influence to bring about a change. The advice of the Speaker of the House, that a limitation of receipts might be established to automatically authorize the department to erect buildings without any further legislation beyond the appropriation, may be urged upon the attention of the House. Under the present methods of preparation probably 2,000 or 3,000 cities and villages in this country are equally entitled to public buildings under the liberal methods pursued. Less than 100 buildings are being erected annually under the present system. How do you propose to catch up? Think of the waste.

What more can be said to show the indefensible character of this bill than that one fact? I am extending these remarks in the RECORD because under the five-minute rule no opportunity is given for any extended argument against the bill; but the facts have been presented and I trust in another House a more thorough scrutiny will be given, and in the interests of economy and wise legislation it is to be hoped that this bill will be defeated and no other of like character ever again offered in the House for passage. I submit letters and statements which speak for themselves:

PUBLIC BUILDINGS.

[From 1916 report of the Secretary of the Treasury.]

May I respectfully say that as a result of my study of the public-buildings question for the past three years and my experience gained in the administration of the laws relating to the designing, construction, and operation of public buildings through the Supervising Architect's Office I am convinced that the methods pursued by the Congress for the past 15 years of providing Federal buildings through so-called omnibus public-buildings bills have resulted in the construction of many public buildings in small towns and localities where they are not needed and at a cost which is clearly unjustified by any actual requirements of the communities in which they are erected. The conclusion is irrestible that authorizations for public buildings in these small communities are too frequently dictated by local reasons and without regard to the best interests of the Government.

In the past two decades the Congress has authorized and appropriated approximately $180,000,000 for public buildings, and the major part of this great sum has been expended on costly structures in small localities where neither the Government business nor the convenience of the people justified their construction; and while the initial cost of these buildings represents a large waste of public funds this is not the worst of it. The most serious aspect is this: The annual operation and maintenance of these buildings impose on the Treasury a permanent and constantly increasing burden.

There are now more than 1,000 Federal buildings to be operated and maintained, and this number is being increased at the rate of a

new building every fourth day in the year. Meanwhile the cities and larger towns have outgrown their Government buildings, and nearly every populous center in the United States is to-day acutely in need of additional space to meet the demands of greatly increased and constantly increasing Government business. To such an extent has the Government business outgrown the old structures in the cities that the rentals for outside space now amount approximately to $3,000,000 annually. This capitalized at 3 per cent represents $100,000,000, and is doubtless the amount required to provide the facilities sorely needed for the prompt, efficient, and economical conduct of the public business in the great centers and large cities of the country.

Common sense and business judgment would seem to demand that structures for the transaction of Government business should be authorized only in localities where they are imperatively needed, and that buildings should not be erected where no public necessity can be shown. This result could be accomplished by divorcing the public-buildings question from all local or political considerations and authorizing no public buildings until a thorough and intelligent investigation of each proposed building or project has been made by this department and a full report thereon has been submitted to the Congress. If such reports were followed by the introduction and passage of separate measures to cover each proposed building project, the abuses and evils of the omnibus-bill method would be eradicated.

—

TREASURY DEPARTMENT,
Washington, December 28, 1916.

Hon. JAMES A. FREAR,
House of Representatives.

MY DEAR CONGRESSMAN: The department is in receipt of your letter of the 22d instant, requesting further information in regard to the total amount of the authorizations carried in the present public-buildings bill, and especially to the department's tabulated statement received by you, showing the total amount carried in the bill to be $38,794,700.

These figures were based upon the original bill (H. R. 17052) and supplement thereto (H. R. 17188).

This total amount included authorizations for a few places which, while changing existing legislation as to the manner of handling the projects, did not alter the amount previously authorized. Deducting these items from the total authorization in the bill, a net authorization of over $37,000,000 remains. However, the new bill (H. R. 18994) makes several changes and additions to the previous bills in a total amount of over $600,000.

The entire amount therefore authorized in the new bill is $39,376,200. Deducting from this the amount already authorized, which involves only reauthorization of previous amounts with revised method of handling the projects, in amount $1,185,000, the net authorization contained in the bill is $38,191,200. * * *

With this explanation it is believed that you will be able to obtain the full information which you may desire as to any particular building. * * *

Very truly, yours,

B. R. NEWTON,
Assistant Secretary.

—

TREASURY DEPARTMENT,
Washington, December 18, 1916.

Hon. JAMES A. FREAR,
House of Representatives of the United States.

MY DEAR CONGRESSMAN: The department is in receipt of your letter of the 27th ultimo, requesting certain information in connection with the pending public-buildings bill.

Reply to the same has been delayed because of the work involved in making the analysis of the bill which was required in order that a satisfactory response might be submitted to the questions you propound. There is transmitted herewith copies of an analysis which has been made and upon which replies to a portion of your inquiries will be based.

Your first question is whether, upon the basis of the operating costs of the proposed buildings to be erected, including sites and all, less than 20 per cent of them could be provided with profit to the Government. The answer to this question is dependent somewhat upon whether in speaking of sites and buildings to be bought or built you refer to all the items provided for in the bill, including extensions to buildings already constructed and increases in limits of cost for buildings and sites previously authorized. As will be seen from the paper transmitted, the analysis has been confined to sections 3, 4, and 5 of bill H. R. 17052 and sections 2 and 3 of the supplemental bill H. R. 17188. These sections contain 306 items, or over 70 per cent of all the projects provided for in the bill. They provide for buildings on sites previously authorized, for sites and buildings, and for sites only, and it will be noted it is stated that it is not to be assumed that necessarily all contained in the remaining sections of the bill constitute good business propositions. It is difficult to cull from the remaining portions of the bill the ones which may not be business propositions, each one having peculiarities of its own; and conditions that would rule in one place would not apply in others. With this preliminary explanation it is proper to state that, taking into account the total amount of authorizations in the sections analyzed, namely, $21,501,000, it would appear that $9,516,000, or over 44 per cent are not business propositions. If the whole bill, in amount $38,794,700, be taken into consideration, and all but the amount culled from the sections referred to be regarded as the business propositions, which the department is not prepared to allow, the percetage would be nearly 25 per cent.

Your second question, as to whether probably one-half of the amount authorized in the bill could not be saved with profit to the Government, based upon the present Government necessities of the various localities, is rather a difficult one to answer positively. Of course, the figures given above do, to a certain extent, reply to your question, but there are a number of propositions included in the bill providing for large expenditures in certain cities, such as Boston, Dallas, Tex., Chicago, Detroit, Kansas City, and Philadelphia, and while relief of present congestion in public business is called for at these and other places mentioned in the bill and not included in the analysis, it is questionable whether all of the proposed amounts could be expended with profit to the Government. In the case of Chicago the bill provides for an increase in the limit of cost of $4,250,000, whereas this department reported that no increase was considered necessary. Whether the elimination of such questionable amounts would aggregate an additional 25 per cent of nonbusiness propositions contained in the bill can not be definitely stated, but it unquestionably would amount to a considerable sum.

Your third question, as to whether the establishment of a commission, consisting of the Secretary of the Treasury, Postmaster General, and Attorney General, to submit recommendations as to the construction of public buildings, has been given careful consideration; and while the department is heartily in favor of some change in the present methods leading to the authorization and construction of public buildings, as indicated in the remarks of the Secretary of the Treasury in his annual report for the fiscal year ended June 30, 1916, pages 21 and 22, it is not thought that the appointment of a board such as you suggest would accomplish the desired result. The Office of the Supervising Architect has had years of experience in connection with the obtaining and formulating of information upon which to base reports in connection with proposed Federal buildings. All that is needed to perfect this system is a small additional force of investigators under the charge of some one familiar with this class of work to examine local conditions and collect data supplemental to that furnished by the various departments as to their needs in places named. If this were provided and Congress should authorize preliminary investigations, either generally for the entire country or specifically for places named, it would be possible for the Secretary of the Treasury to submit annually to Congress a list of places where new buildings or sites are required or where extensions or remodeling is necessary, together with all the facts bearing upon the questions and estimates relative to the probable cost of each and all projects.

Respectfully,

BYRON R. NEWTON,
Assistant Secretary.

—

DECEMBER 28, 1916.

Hon. B. R. NEWTON,
Assistant Secretary, Treasury Department, Washington, D. C.

MY DEAR MR. NEWTON: The subject of estimates furnished by the Treasury Department of the probable expense in connection with the erection of public buildings at different points is of importance because it affects the necessity of public buildings at such places.

May I ask you if such information has heretofore been given Congress; and if not, whether the information has been available at all times? This request is made because it seems incredible that the committee or Congress would authorize buildings at places where the maintenance cost will reach from three to ten times the present cost, as shown by the estimates submitted by your department.

Very truly, yours,

JAMES A. FREAR.

—

DECEMBER 29, 1916.

Hon. JAMES A. FREAR,
House of Representatives.

MY DEAR CONGRESSMAN: The department is in receipt of your letter of the 28th instant, referring to the subject of estimates furnished by the Treasury Department as to probable expense in connection with the maintenance of public buildings erected at different points, and notes your inquiry as to whether such information has heretofore been given to Congress.

In reply, you are informed that in reporting on the bills which constitute the pending omnibus public-buildings bill this department did furnish estimates of the cost of maintenance of buildings in small villages, but received several letters from the chairman of the Committee on Public Buildings and Grounds requesting the department to refrain from incorporating this information in its reports, and stating that the committee desired simply the estimate as to probable cost of the proposed building. The department, believing, however, that it was its duty to give Congress the benefit of this information, continued embodying an estimate as to the cost of maintenance of all buildings of the class above referred to.

The department had in mind the fact that with the enactment of each successive omnibus bill the number of post-office buildings in small communities had increased, with a corresponding cost to the Government, while in even ratio the necessity for relief in the cities and larger towns was increasing, and the rental charge to the Government for outside space all the time was growing. Being in position to focus more accurately upon this condition, and to foresee the effect of still further extending it, the department felt warranted in giving to Congress any and all information along these lines for its consideration in dealing with the public-buildings situation.

The department felt further that it might be subjected to criticism for the erection of buildings in places where the Federal activities did not appear to warrant the same, and that it should properly set forth in its report all facts which would show the effect of proposed legislation.

In reporting on these bills the department began by giving in the usual way, first, the estimated cost of site and building in accordance with the space required, and then added the population, postal receipts, and rental paid by the Post Office Department, concluding with the following paragraph:

"The department feels constrained, in view of all the conditions, to advise against the construction of a Federal building in this place at the present time."

After receiving the protests of the chairman of the Committee on Public Buildings and Grounds against this form of report on bills, the department modified its form of report by giving merely the bare facts, showing the cost of maintenance, including interest on total investment, depreciation and repairs, janitor service, supplies, etc., but omitting the recommendation of the department that no building be erected.

The chairman of the Public Buildings and Grounds Committee, in his letter of March 31, 1916, to the department stated as follows:

"Now, I desire to again ask that we hereafter confine ourselves to our proper jurisdiction. In future reports we only want a simple statement of the activities to be housed, the space needed by each, the postal receipts, the probable cost, etc. If we desire anything further in a particular case, we will ask for it."

In his letter of April 3 he used the following language:

"I desire again, therefore, to most respectfully ask that in making these reports you will confine it to a simple statement of the facts asked for, because that is all the committee desires to have."

The correspondence between this department and the chairman of the committee is contained in letters as follows: Chairman of committee to department, March 18, 1916; departmental reply, March 29, 1916; chairman of committee to department, March 31, 1916; chairman of committee to department, April 3, 1916; departmental reply, May 4, 1916; chairman of committee to department, May 6, 1916.

The letters from the chairman of the committee and the departmental replies are undoubtedly on file, and presumably the chairman of the Committee on Public Buildings and Grounds will permit you to examine same.

Very truly, yours,

BYRON R. NEWTON,
Assistant Secretary.

MARCH 17, 1916.

CHAIRMAN COMMITTEE ON PUBLIC BUILDINGS AND GROUNDS,
House of Representatives.

SIR: In response to your request of March 7, the following report is submitted on H. R. 395, which provides for a public building at Sandersville, Ga.

The branches of the service to be accommodated, the space desired, and the rental paid at Sandersville, Ga., are as follows:

Post office, 3,440 square feet, $600 rent.
Civil Service Commission, 500 square feet, no rent.
Department of Agriculture, 512 square feet, no rent.
Internal-Revenue Service, 1,200 square feet, no rent.

The census of 1910 reports a population of 2,641. The postal receipts for the fiscal year 1915 were $7,855.16, and for the fiscal year 1905 were $5,306.52.

It is estimated that a two-story building covering a ground area of 4,300 square feet will be required, and that the cost of such a building, nonfireproof, using the simplest materials, will be $55,000.

Under the authorization of the act of March 4, 1913, a site has been acquired at a cost of $5,000.

The department feels constrained, in view of all the conditions, to advise against the construction of a Federal building in this place at the present time.

Respectfully,

_____,
Secretary.

—

APRIL 5, 1916.

CHAIRMAN COMMITTEE ON PUBLIC BUILDINGS AND GROUNDS,
House of Representatives, United States.

SIR: In response to your request of the 17th ultimo, the following report is submitted on H. R. 8021, which provides for the erection of a public building at Decatur, Ga.

The branches of the service to be accommodated, the space desired, and the rental paid at Decatur, are as follows:

Post office, 2,800 square feet, $600 rent.
Department of Agriculture, 320 square feet, no rent.

The population, according to the census of 1910, was 2,466. The postal receipts for the fiscal year 1915 were $7,230.65, and for the fiscal year 1905 were $2,515.67.

It is estimated that a one-story building, with a ground area of 3,500 square feet, will be required, and that the cost of such a building will be $40,000, and that a suitable site can be purchased for $8,000 additional.

Upon the above basis the estimated fixed annual cost of this project would be as follows:

* Interest on total investment of $51,000, at 4 per cent	$2,040.00
* Depreciation and repairs, at 2½ per cent on $43,000	967.50
Janitor service	960.00
Supplies, etc	900.00
Total	4,867.50

Items marked * include an estimated cost of $3,000 for furniture and safes, which would be paid for out of the annual appropriations for these purposes.

Respectfully,

_____,
Secretary.

This list contains less than one-half of many objectionable items, and in this list are a few of unquestioned necessity.

Postal receipts for all places where sites for Federal buildings are provided under section 5, H. R. 1899.

[1] Post office not established until Mar. 8, 1905.

The following list handed me of the geographical distribution of sites is interesting, even if valueless:

Locality of sites for public buildings in the 1917 bill.

The present public-buildings bill, which has been reported to the House for passage, carrying $38,000,000, provides sites for several States, as enumerated below:

States.	Sites.	State.	Sites.	State.	Sites.
Colorado	0	Illinois	1	Louisiana	1
Connecticut	0	Oregon	1	Alabama	2
Idaho	0	South Dakota	1	Arkansas	3
Maine	0	Indiana	2	Florida	4
Maryland	0	Iowa	2	Texas	4
Montana	0	Wisconsin	2	Kentucky	4
Minnesota	0	Massachusetts	3	Mississippi	6
New Hampshire	0	Michigan	3	North Carolina	7
New Jersey	0	West Virginia	3	Tennessee	7
North Dakota	0	Arizona	3	South Carolina	8
Rhode Island	0	Ohio	3	Oklahoma	6
Vermont	0	Nebraska	4	Missouri	11
Utah	0	New York	4	Georgia	15
Washington	0	Pennsylvania	5		
Wyoming	0				
Total	0		37		78

This obligates the United States Government in such a way that it will be necessary in the future to build public buildings at each point where a site is now authorized.

The State of Georgia leads all others, securing 15 sites.

Missouri second, with 11 new sites.

South Carolina comes next, with 8 sites.

North Carolina and Tennessee, 7 each.

Public buildings are generously distributed by the 1917 pending bill among these States.

Under the present practice over 2,000 towns, cities, and villages are entitled to new buildings, and the number is rapidly increasing, whereas not more than 100 buildings are provided annually by existing legislation. These buildings are placed wherever the committee decides. The absurdity of facing such a proposition answers itself.

—

UNPROFITABLE INVESTMENTS.

Places where sites and buildings authorized in public-buildings bill, 1916, could not probably be built with profit to the Government.

[The last column, "Maintenance," indicates the approximate cost of the maintenance of a building constructed in accordance with proposed legislation in the bill. Where site only is authorized the estimate is, of course, based upon the supposititious cost of a building which will probably be subsequently authorized.]

Places.	Population.	Receipts.	Present rent.	Bill.	Section.	Maintenance.

[1] The conditions here are peculiar, and while as a simple business proposition it is not advisable to erect a building, the facts may appear to warrant it. The place is a summer resort and the competition for the advantages accruing to the business firm housing the post office are considered so great by the citizens that an offer has been recently made and accepted by the Post Office Department to provide post-office quarters after Dec. 1, 1916, for $1 per year. The receipts for the fiscal year ending June 30, 1916, were $109,303.21.

Places where sites and buildings authorized in public-buildings bill, 1916, could not probably be built with profit to the Government—Contd.

Nebraska	4,682,808.98		

[1] Includes $20,937.10 income tax on Alaska railroads.

[2] Of this amount $373.34 was collected from the sale of stamps affixed to Philippine products at the port of San Francisco and returned by the collector of the first district of California.

NOTE.—Alabama and Mississippi comprise the district of Alabama; Colorado and Wyoming, the district of Colorado; Connecticut and Rhode Island, the district of Connecticut; Maryland, Delaware, District of Columbia, and the counties of Accomac and Northampton, Va., the district of Maryland; Montana, Idaho, and Utah, the district of Montana; New Hampshire, Maine, and Vermont, the district of New Hampshire; New Mexico and Arizona, the district of New Mexico; North Dakota and South Dakota, the district of North and South Dakota; Washington and Alaska, the district of Washington; and Nevada forms a part of the first district of California.

The collections accredited to Porto Rico were returned from the following districts, viz:

First district of New York	$98,995.71
Second district of New York	489,556.07
Total	588,551.78

The High Cost of Living.

EXTENSION OF REMARKS
OF
HON. MARTIN DIES,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 22, 1917.

Mr. DIES. Mr. Speaker, the present high prices are the effect of a number of well-known causes, chief of which may be mentioned cheap gold, the war in Europe, and the drift of population from the farm to the city.

As to the first of these causes, cheap gold, the world's production of gold is enormously greater than ever before. Indeed, the world's production of gold in the past 25 years has been of greater volume than for the previous 400 years. That is to say, the world has produced more gold in the past 25 years than was produced in the 400 years preceding. Prices are measured in terms of gold, and therefore cheap gold is but another way of saying high prices. The second cause, the European war, not only resulted in the importation of a large amount of gold into the United States, but shifted many millions of men from the ranks of the producers into the ranks of consumers, thereby curtailing the supply and increasing the demand for farm and factory products and all other articles of commerce. The third fundamental cause of high prices may be found in the drift of population from farm to city. That such has been the movement of population is conclusively shown by the census reports for a great number of years, which movement has become more intense in the past 20 years.

As to the first of these causes, gold, it may be remarked that there is nothing which the lawmaking body can do about it. Cheap gold, or, as Dr. Adam Smith puts it, the fertility of the mines, relieves the debtor class by making it easier to pay debts, and burdens the creditor class by reducing the purchasing power of money. Depreciating money is not so much an evil as appreciating money, because if fixed obligations are to be disturbed by the fluctuating value of money it were better to pinch the lender than the borrower, seeing that he is likely to be better able to stand it. Safe reliance may be had upon the laws of nature and the wisdom of Providence against an overproduction of gold.

As to the war in Europe, whereby millions have ceased to produce and have become consumers, there is unfortunately no hope for its termination by an act of Congress.

But the drift of population from farm to city is a matter which statesmen can profitably employ their minds upon. The effect is very plain. The farm no longer attracts the farmers' children, and at the first opportunity they fly to the city. The farmer himself often follows his children to the city, and thus whole families forsake the farm, as producers, and become consumers in the city. Every such remove decreases the food supply and increases the demand. What is the cause? What the remedy? It is vain to cry against the high cost of living, if that condition results from an overproduction of consumers and an underproduction of producers. Men can not be compelled by law to raise beef and pork, chickens and eggs, bread and butter, and other articles necessary to the life and comfort of those who eat and wear. There is something wrong in a system that makes it worth while for the farmer and his family to migrate to the city. There is something wrong when men and women and children dread the farm and sigh for the bright lights of the metropolis. Let us examine some of the objections popularly urged against farm life and see how real they are and whether they are capable of remedy.

The country is lonely, particularly for women and the young folks. Very often schools and churches are not accessible. These are real objections, and may not be lightly cast aside. Man is a social being. It is not in the nature of things for human beings to bury themselves in a neighborless wild. The worship of God is the sweetest solace to many, and only necessity can force such an one to live away from access to church. Education is more and more essential to the rising generations, and parents are quite right in demanding that their children shall have an even chance in the race of life. These objections to country life are real. The remedy lies principally with the people themselves, although the Government can help. Cooperation among farmers and would-be farmers is essential. So long as one farmer insists upon owning hundreds of acres, he may not expect close neighbors, schools, and churches. Land ownership is to be commended. Every man should own land. It is

better for the man and it is better for the Government. But to build up an ideal rural community each family should own a small rather than a large farm. The man who wants schools and churches must have neighbors, and if he would have neighbors he must give others a chance to own land. Otherwise a hateful system of tenantry will fasten itself upon the country. So I may say that cooperation begins with land ownership, for if one man insists upon owning all the land, or a lion's share of it, he can only have landless neighbors, and these will not be permanent. Therefore I would say to those who seek to build up rural communities, begin at the beginning, and forbid excessive land ownership. That can be accomplished in two ways—by a voluntary association of men into communities, where each member shall own a small quantity of land, or by a statute of the State limiting ownership. Both plans could be profitably worked upon. Land monopoly is the deadliest of all monopolies. We are beginning to approach the question, and when we come face to face with it limited ownership will be written upon the statute books.

MONEY AT USURIOUS RATES.

With the question of land and isolation and schools and churches out of the way, there are other problems to be dealt with. The farmer, like every other business man, sometimes finds it necessary to operate on borrowed capital. He may need money to buy land or to build and improve land already owned. No legitimate business can pay a high rate of interest. Farmers in my section have been compelled to pay from 10 to 50 per cent interest, and the result has been that farming has languished and banking flourished. Who cares to embark his capital in the doubtful enterprise of farming when he can become a money lender and be sure of large gains? Has your local bank not been paying dividends of 10 per cent or more and laying up a surplus? Is its stock not far above par? If the business of farming is to attract men, it must not be made the constant victim of usury. Farming is a legitimate business. The farmer is entitled to a reasonable rate of interest. That can be accomplished in part by cooperation and in part by law. If small loans made for the purpose of buying farm land or stocking and improving a farm, at a moderate rate of interest, were exempt from taxation, much good would result. The State legislatures would do well to work out some such plan. The Federal farm loan banks will do good. Some competent man in every community should thoroughly inform himself as to the Federal farm loan law and call a meeting of farmers and explain it to them, to the end that associations may be formed to take advantage of the opportunity it affords to get cheap money with which to acquire or improve farm lands. Farmers should organize and put a stop to the practice of usury at the local bank whenever possible. I do not mean to say that all banks exact usury, but many of them do; and wherever that is the case their customers ought to band together and put a stop to it. Husbandry and usury can not flourish side by side. The usurer must go.

COOPERATIVE MARKETING.

The farm marketing system in my section is woefully deficient. In some cases farmers produce a surplus and have no market, or else they fear to produce largely of certain crops lest there be no market. Take, as example, sweet potatoes. The crop is harvested within a short space of time each year. Those who eat potatoes want them all the year round. Some one must keep them in storage, to be handed out as wanted. The city man can not store them. He has no such facilities, and a few bushels will supply him. He prefers to buy as he consumes, in small quantities. Potato-storage houses are a success, but the individual farmer has no need for a storage house all to himself, even though he were able to construct it. So cooperation is again indispensable. The same is true of peanuts. It is a very profitable crop in my country. But a peanut thrasher costs a large sum, and one farmer's crop does not require the exclusive services of a thrasher. Cooperation is again necessary. Moreover, the Government should constantly make it easier for the farmer and city man to do business together. The parcel-post system should be adjusted to this end. The farmer's produce often passes through the hands of so many middle men and is so price marked up and shopworn down that the ultimate consumer gets but the frazzled remains at a ruinous price. If a farmer in the community where I live has a dozen fat hogs in excess of his own needs he is at a loss how to reach the consumer. Cooperation among farmers would supply the full carload. Collective bargaining would eliminate the waste of numerous middle men and give a profit to the farmer and a reasonable price to the consumer. These, Mr. Speaker, are some of the difficulties that confront farmers and those who wish to become farmers. There must be a spirit of cooperation on all hands or farming will continue at a low ebb in that delightful land I love to call home. It is not enough for the large landowner to cut his acres up and sell it out to farmers in the wild state. The farmer thus attacking a wilderness single handed must needs have a stout heart. There must be a spirit of cooperation all along the line. Nature has done her part. In my section of this empire State of Texas is to be found a good climate, an abundance of pure water, plentiful fuel, cheap land, and a soil which yields abundantly a great variety of those articles which provide mankind with the necessities and the luxuries of life.

In all my travels about I have never seen a fairer and a better home land than east Texas. Let some genius for organization, some friend of his people arise and lead the way to a solution of this problem. Such a man would be honored and rewarded while he lives. Let homeseekers band themselves together to the end that they may live in God's open country without living a life of loneliness, without schools, churches, and markets.

Mr. Speaker, I have briefly outlined some of the disadvantages of country life. These can be overcome. There is another side to the picture. The open country has many advantages. Freedom is there. Pure air and independence is a heritage of the farmer. Deadly disease germs can not thrive in the pure air of the open country. Life lasts longer in the country and it is sweeter while it lasts. The dread and fear of poverty in old age is not so great in the country, for who that is proprietor of a few acres of land need fear the gaunt hand of starvation? The open country has always been the breeding ground for the great men of the land. There is something about a crowded city which seems to stifle genius, contract the mental vision, and turn the genial currents of the soul into sordid channels. Cultivated fields, woodland stretches, expansive prairies, growing grain, ripening fruit, lowing herds, singing birds, the prattling of children—these are the scenes which quicken genius, warm the heart, toughen the body, and strengthen the mind. The summers are cooler in the country and the winters more comfortable. There a neighbor has time to talk with you. There one can tell a story without being forever haunted with the doubt of its freshness. Patriotism hath her seat in the country. The very safety of the Republic demands that the hegira from the farm to the city should cease. The Government is doing much to arouse an interest in agriculture. Lecturers are being sent to the remotest regions to speak to the people. Millions of pieces of farm literature are being printed at Government expense and placed in the hands of the people in the effort to arouse an interest in farm life. A list of farmers' bulletins should be placed in the hands of every man, woman, and child in the United States. No Member of Congress should feel it beneath his dignity to send out these bulletins upon request. The rainy days and wintry weather can be profitably spent by the farmer "studying up" on his business. His son can gather wisdom in the study of plant life and his daughter can find profit in a study of the art of canning.

The high cost of living works many hardships no doubt, but it is the purse which a compensating Providence hangs up to counteract the lure of the city. It is not an unmixed evil. Those who grumble at high-priced cold-storage eggs, which are "stale, flat, and unprofitable," should remember that the country hen is cackling a welcome back to the farm. The neglected cattle are lowing for the master's care, and for the want of it beef is high. The pigs need slop, and if the owner has moved to town they will not get it and pork will come high. The earth demands the touch of the husbandman and is barren without it. There is the open country—broad, fresh, fertile. Nature stretches out her arms in welcome to the overcrowded cities and bids the weary ones find peace and plenty on the farm. It is not a place for idle hands. It is not a place for the money mad. The land must be tilled and farming yields no golden store for Midas or the miser. But toil and frugality will usually be rewarded with plenty on the farm, and who has more than plenty has trouble for his pains.

Universal Military Training.

EXTENSION OF REMARKS

OF

HON. EDMUND PLATT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 17, 1917.

Mr. PLATT. Mr. Speaker, the sentiment for what is generally, though somewhat inaccurately, called universal military training has undoubtedly gained rapidly among all classes of people in all parts of the United States and is steadily growing

stronger as it comes to be better understood. It appeals to more and more people every day as thoroughly democratic and as fair to all. We at first recoiled against it as the acme of militarism, but many of us have come to the conclusion that such systems as the Swiss and Australian systems are not militaristic; that they prepare for peace more than they prepare for war; that they do not create or foster a desire for war, while they do provide adequately for national defense. In order to promote the spread of information as to just what these systems of training require, I desire to insert the following brief statement, prepared by Maj. Francis J. Landon, a National Guard officer of the State of New York, who has given much thought and study to the subject:

A NATIONAL CITIZEN ARMY.

[By Francis G. Landon, major, Reserve, National Guard, New York.]

There is so much misinformation abroad about universal military service, especially as to the amount of time required, that this statement has been issued, giving the time required for such service in Switzerland and Australia, with suggested periods for this country, based upon their experience and on what is believed to be practical for us.

It is well under the fact to say that at least 500,000 physically and mentally fit men reach the age of 18 every year.

If 50 per cent of them were enrolled, or 250,000, it would not be long before we would have in training a large number of men, fit and efficient.

Too many of us have been trying to get something out of the country and too few of us have been trying to serve it.
Our minds have been filled with the assertion of our rights, and we have thought little of our duties. (Root, Aug. 30, 1916.)

Every male citizen has three duties to his country: First, his education, compulsory without pay; second, his military service, compulsory without pay; third, to vote, compulsory without pay. These are not privileges or rights but duties. Being physically fit, unless he fulfills these three obligations he fails absolutely in his duty as a loyal citizen.

The time required, as herein outlined, based upon the experience of Switzerland and Australia, comes at a time in life when the young man has little or no responsibilities (if, as occasionally happens, a young man of this age has positive responsibilities, he would be exempt), and also when he is physically and mentally fit.

That his principal training should be in the open and not in armories is because the open is the best place to train a soldier, and also because the open appeals more to the young man's enthusiasm and imagination. (It is the only way to train the men who live in the country, as they live so far away and so far apart that it is impossible for them to attend night drills.)

To train this citizen army you must have professional soldiers, Regulars. You must have enough, especially officers, to keep both the Regulars and the citizens in the highest state of efficiency.

SWITZERLAND.

AGES 7 TO 15.

Compulsory gymnasium drill and physical training, without arms, in schools 4 to 8 hours a week.

AGES 15 TO 20.

Voluntary work in military preparation companies, or cadet corps, 100 to 200 hours during summer. Then enrollment and recruit school.

AGE 20.

Recruit school, 60 to 90 days, according to branch of service.

AGES 20 TO 32.

Two weeks every year in camp.
In winter, schools.

AGES 32 TO 40.

Two weeks every other year in camp. In winter, schools.

AGES 41 TO 48.

Are not called into service during ordinary times.

AUSTRALIA.

AGES 12 TO 13.

Junior cadets: Physical training every day in school, not less than 15 minutes, 90 hours a year.

AGES 14 TO 17.

Senior cadets: Elementary naval and military exercises and musketry. Annually, 64 hours; 4 whole days, 12 half days, 24 night drills (quarter days).

In some cases night drills are being abandoned as unsatisfactory. Suggested two continuous periods of daylight drills, not camp. Musketry.

AGES 18 TO 25.

Citizen forces: Annually, 16 whole days, of which at least 8 must be in camp and musketry. In winter, schools.

AGE 26.

Only registration and muster.

AGES 27 TO 60.

Arranged in classes for duty in war times.

NOTE: This system only started in 1911, so was hardly under way when war broke out.

UNITED STATES CITIZEN ARMY.

AGES 12 TO 13.

Compulsory gymnasium drill and physical training without arms in schools, 15 to 30 minutes each school day.

AGES 14 TO 17.

Two weeks each year in camp.
Elementary naval and military exercises.
In winter, schools.

AGES 18 TO 20.

One month each year in camp.
In winter, schools.

AGES 21 TO 22.

Two weeks each year in camp.
In winter, schools.

AGES 22 TO 30.

One week every other year in camp.
Annual inspection and rifle practice.
In winter, schools.

AGES 31 TO 45.

Annual inspection and rifle practice.

The Government should supply uniforms and equipments, should lodge, feed, and transport them when on duty, but there should be no pay.

NOTE.—Following the Argentine system, at the age of 30 years, they would be turned over to the States for duty as a State force, National Guard, in such numbers as each State desired.

Post Office Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. ALLEN T. TREADWAY,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

Monday, January 22, 1917.

Mr. TREADWAY. Mr. Speaker, when one stops to think that for nine years of service for the United States Government, the average remuneration per year is but $742, he can not help but carefully consider any increase that is proposed for such employees. That fact, which is brought out in the committee report on the Post Office appropriation bill, together with the personal knowledge I have of the faithfulness, integrity, and positive loyalty of post-office clerks and letter carriers in my own district, makes me all the more heartily in favor of the item contained in this bill for promotions and advancements for these employees. There are none who show more tenacity and who are to be found more steadily at work throughout the year than our letter carriers and post-office clerks. The rush seasons are trying times for them and especially is this true at Christmas. While others are enjoying the holiday spirit, the carriers and clerks, like the department store workers, are doing their utmost to take care of the enormous increase of business and to see that others are made happy by their efforts.

Up in western Massachusetts the weather at this time of the year is unusually severe, and I read only a day or two ago that the mercury dropped to 20° below zero. Our letter carriers, however, are compelled to brave the elements and make their daily rounds twice or three times a day, and I can assure you these are not pleasure trips in such weather.

These employees are obliged to serve an average period of four years of apprenticeship at about $35 a month, or $420 a year, until they are given a regular appointment. Then they start at $800 a year, and, provided they serve satisfactorily, it takes five years before they arrive at the $1,200 a year grade. This top figure is not reached until after nine years of service. In my opinion, the increases recommended are most meritorious in their character, and will not only aid in improving the post-office service in a general way but will more adequately compensate this capable and valuable class of Government labor.

I sincerely hope this provision in the bill, which gives the men $1,000 per year when they are first regularly appointed, increasing the amount automatically to $1,100, $1,200, and up to $1,500 in the succeeding years, will become law.

All the postal employees throughout my district are, of course, vitally interested in this proposition. I have heard from practically every organization of post-office clerks and carriers in my section of the State, and they unanimously urge the increases recommended on the ground of the high cost of living and because a dollar will not go as far now in the purchase of necessaries of life as it would 10 years ago.

Before closing, I wish to give a list of the organizations that have sent representatives to see me or that have mailed me petitions and letters. They include the following: Branch 286, National Association of Letter Carriers, Pittsfield, Mass.; Branch 379, Holyoke Post Office Employees; Branch 1840, United National Association of Post Office Clerks, Adams, Mass.; Greenfield Post Office Employees; Branch 128, National Association of Letter Carriers, Westfield, Mass.; Westfield Post Office Clerks; Branch 149, United National Association of Post

Office Clerks, Westfield, Mass.; Williamstown Letter Carriers' Association; North Adams Post Office Employees; Branch 261, National Association of Letter Carriers, Greenfield, Mass.; Branch 615, National Association of Letter Carriers, Adams, Mass.; Railway Postal Clerks of the First Division, and others.

I heartily approve the salary features in the Post Office appropriation bill.

Public Buildings.

EXTENSION OF REMARKS

OF

HON. FRANK CLARK,

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 22, 1917.

Mr. CLARK of Florida. Mr. Speaker, under the general leave to print remarks on the omnibus public-buildings bill granted all Members I desire to place in the RECORD an editorial contained in the Manufacturers' Record, of Baltimore, Md., under date of January 11, 1917. The Manufacturers' Record is one of the ablest and most conservative publications in the United States, and I commend this article to the consideration of those diminutive souls who can not see beyond the confines of their own "little pent-up Uticas."

The editorial is as follows:

[From the Manufacturers' Record, Baltimore, Md., Jan. 11, 1917.]

IT IS A PITY FOR THE NEW YORK SUN'S HAPPINESS THAT NATURE DID NOT MAKE THE SOUTH A BARREN LAND.

In its bitter sectional campaign against the South in its fight against what it calls the "pork barrel" the New York Sun seems to be doing its best to destroy the reputation which it once had for honesty and accuracy.

That some of its statements against the construction of public buildings in small towns are justified we freely admit, as we stated last week, but many of the statements which it is publishing are absolutely inaccurate, and are either willfully published for the purpose of misleading the public, or are due to a degree of ignorance which puts to shame all of the Sun's supposed knowledge on business matters.

The Sun undertakes to criticize southern Congressmen, not only for some of the unwise proposals in regard to post-office appropriations in small towns, but it denounces them for the decision to enlarge the navy yard at Portsmouth, Va., as though this decision was simply due to the fact that the present administration is in power. It entirely overlooks the fact that long before this administration existed the naval authorities had recognized the superiority of the naval site at Portsmouth, and desired that it should be made one of the greatest naval bases, if not the greatest, in the United States.

It is possibly unfortunate, from the Sun's point of view, that Nature placed Hampton Roads in the South, but in doing so Nature gave to this section one of the most remarkable harbors to be found in the world, and all naval men have for generations recognized this. If the Sun could have its way we presume that it would have the Government blot out Hampton Roads or fill it up and thus destroy one of the Nation's greatest assets.

The Sun, we believe, in old times was ever a great admirer of the remarkable business acumen of Collis P. Huntington. Now, it so happened that Mr. Huntington, with a full knowledge of every part of the United States, from the Pacific coast to the Atlantic, selected Hampton Roads as a site for building the greatest shipyard in America—a yard which now has under contract $50,000,000 worth of work, and which, since it was established by Mr. Huntington, has nearly always been able to underbid every other shipyard in the country on Government ships, from small boats to great battleships.

The development of the naval yard at Portsmouth, a few miles away from this Newport News shipyard, is merely the carrying out of plans long formulated by the Navy. And this work is only being done now because, while its importance was recognized in the past by other administrations, the country would not support Congress in voting appropriations sufficiently large for the building of a real Navy.

As C. P. Huntington recognized the superior advantages of the Hampton Roads region, so did H. H. Rogers, who deliberately set out to build a low-grade road from that point to the West Virginia coal fields, and this road to-day hauls the largest average trainloads of any railroad in the United States.

In the Sun of December 30 is this vicious sneer: "Several of the other preparedness measures, such as the nitrate plant, the armor-plate plant, and the naval laboratory, have also found a home in the South."

Now, no one knows, unless it be the committees having the matter in charge, where either the nitrate plant or the armor-plate plant will go. The armor-plate-plant board has recognized that this plant should be built somewhere in the interior, and it has named a number of cities in the West as well as in the South as meeting the conditions required; but no decision has yet been made, and the subcommittee which is to undertake to decide the final point of location has not even investigated the different points named, and therefore has not reached any conclusion. This plant will, we are sure, be located at the point recommended by the subcommittee and approved by the board as the best point for its location; and men who are familiar with the life of Admiral Dewey and his associates on the board are not likely to charge them with being controlled by politicians and selecting a location merely to accommodate politicians.

So far as the location of the nitrate plant is concerned, no final decision has been reached; and if this plant should go to a point in the South its location there would be for the simple reason that a board of experts, moved only by their expert knowledge of the subject, have accepted Nature's decision and selected the point where Nature has given the greatest advantage. There are points in the West vigorously contesting with the South for the location of the plant. The final decision, we are sure, will be made purely from the standpoint of the experts who have been appointed to consider the question, and they will not be controlled by the politicians, nor will the effort of the New York Sun to discredit the South be permitted to influence these experts for or against this section.

If we may judge by the viciousness of the way in which the Sun is carrying on this campaign, it looks upon the South as an unfortunate incumbrance to the Nation rather than as the Nation's greatest asset. It overlooks the fact that Nature has more richly endowed this region with coal and iron, with oil and gas and sulphur and salt, with water powers and timber and agricultural capabilities than it has given to any other part of the United States. There are other sections that have some one of these advantages perhaps in excess of the South, but there is no other section that has such a combination. Indeed, there is no other section of the world that can match the South in this respect.

If the Sun were patriotic, if it looked beyond the provincialism of New York, if it saw with a broad vision, as the whole country is beginning to recognize, that there can be no national safety without the largest development of the South, it might get a new vision of things. It might become a power for good instead of degenerating, as it is now doing, into a common scold, apparently moved by a spirit of mean viciousness to the South.

It is unfortunate for national welfare that at this late date such a spirit should be found ruling in the office of any American newspaper.

What a pity that nature did not deny the South any natural advantage! Then indeed might the Sun have been happy. It is a thousand pities, so far as the Sun is concerned, that this section has three-fifths of the Nation's coast line, with many magnificent harbors; that it has limitless stores of ore and coal; that it has great water powers, including one which surpasses in potentiality all of the power thus far developed at Niagara Falls, and that it produces the cotton crop which for generations has been the basis of the Nation's international trade relations.

How gloriously happy, drunk with the joy of the occasion, would the Sun be if nature had denied to the South these rich resources and made it a land barren of advantages, as barren, indeed, as the vicious attacks which the Sun is now making upon the South are barren of fairness and truth!

Unfortunately, however, nature gave to the South this matchless combination of advantages and unfortunately for its own happiness the Sun can not suppress them, nor can its slanderous attacks completely obliterate their relation to the Nation's welfare.

If New York and Boston and the rest of the East are prosperous it is largely because they have had the South as the producer of the raw materials which have furnished the basis for a very large proportion of our manufacturing industry and of our foreign commerce, including all our cotton, more than 50 per cent of our lumber, all our sulphur, more than 50 per cent of our oil, all our cottonseed products, most of our early vegetables and fruits, most of the coal which runs the factories of New England and many of New York's, all of our rice, all of home-produced cane sugar, much of the granites and marbles that go into the greatest buildings of New York and the East, all of our naval stores, and many other products essential to national progress. Blot out the South and the country's prosperity would be destroyed.

If New York and the East want to be safe against danger in time of war, there is no possible way in which this can be secured except through the utilization of the raw materials and the natural advantages of the South for the production of explosives, of iron and steel and munitions of war, and for the men who would be a vital part of any army of defense to protect every part of the country.

But the Sun utterly ignores these facts and raises the cry of sectionalism as it has not been raised for a generation because, forsooth, it finds in some of the bills now before Congress for public buildings proposed appropriations for small southern towns which should not at present be crowded into the list. And it finds some rivers, about which it knows nothing, which it lightly esteems because of this superfluity of ignorance. When it finds that a river has been used for carrying logs it seems to be bereft of ordinary reason and not to know that the rafting of timber is an essential element in supplying the lumber needed by the country, for it is timber which could not be reached or marketed by railroads. When it finds a projected improvement on a river which has as yet no commerce it ignores the fact that facilities for commerce must be created before commerce can develop.

Its display of ignorance on all of these points is a sad reflection upon the intelligence which once prevailed in the office of the Sun.

The attack on the proposed Mississippi River levee work again displays the hopeless ignorance and the bitter prejudice alike which prevail in the Sun office. The Mississippi River drains the richest valley on earth. The fullest utilization of all the land in that valley is essential to the highest national development.

This river, running its course from the extreme northern limit of the country, passing through many States to the Gulf, can only be adequately handled by the National Government. Leveeing and drainage work must go together.

Roosevelt recognized this situation, as have all other intelligent men who have studied it, and vigorously advocated the drainage of the overflowed lands along the Mississippi and the adequate leveeing of the river to make these lands available.

The cotton manufacturers of New England, knowing what the reclamation of these lands would mean in increased production of fine grades of cotton, have been eager for this work to be done by the National Government.

Great trade organizations in the North and West, like the cotton manufacturers of New England, appreciate this situation and have urged that this bill should be passed.

The Mississippi River levee bill is a measure for national improvement, in its scope infinitely beyond all of the irrigation work that has been done by the Government in the semiarid regions of the West. The land that would be reclaimed would add immensely to the wealth of the country. If put into corn, it could produce a crop greater than the total corn yield of the United States at present.

Neither individual landowners nor States can do this combined drainage and levee work, for the Federal Government controls the management of every river which is navigable, and therefore the responsibility of keeping the Mississippi River within its bounds is a national work, so recognized by public men for a generation, as well as by business men, who certainly have had patriotism as broad as that of the Sun, and whose knowledge of the conditions have been so vastly beyond the Sun's knowledge of the subject that theirs might be counted as a mountain beside a mustard seed as representing the Sun's.

The Rainey Mixed-Flour Bill or an Embargo on Wheat.

EXTENSION OF REMARKS

OF

HON. HENRY T. RAINEY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 23, 1917.

Mr. RAINEY. Mr. Speaker, under the permission granted me to-day to extend my remarks in the RECORD I print herewith certain correspondence with Albin E. Plarre, chairman of the United Bakers of Greater New York and Vicinity. The matter referred to is as follows:

COPY OF LETTER FROM MR. RAINEY TO NEW YORK BAKERS.

DECEMBER 31, 1916.

ALBIN E. PLARRE,
Chairman United Bakers of Greater New York and Vicinity,
61 Broadway, New York City.

DEAR SIR: I am in receipt of your circular letters of recent date in which you discuss the alarming bread situation in the United States, and in which you insist that the way to remedy the situation is to "stop the export leak." In other words, your theory is that there should be no further exportations of wheat. A very striking postal card you send out contains the following language printed in red, "Wheat famine an actual fact!" "Feed America first!" "Why shall the people starve?" "O Lord, give us this day our daily bread!" The figures you submit in your various statements indicate a wheat shortage in this country of a little over 10 per cent.

I have been trying now for nearly two years to repeal the old Spanish-American war tax on mixed flour, which, with its moonshine-whisky regulations, prevents the mixing of corn flour, whether made by the dry or wet process, with wheat flour. It has been demonstrated that a mixture of 20 per cent corn flour or cornstarch and 80 per cent wheat flour produces an excellent bread mixture. I have a bill pending which a number of organizations of bakers and millers in the country are fighting bitterly. It provides not only for the repeal of the Spanish-American War tax and the regulations which go with it, but it provides that mixed flour shall only be composed of the ground product of wheat or corn or some other cereal mixed. It absolutely prevents adulteration of flour, and adulteration is possible under the present mixed-flour law. It requires that each package shall be marked with the names and the percentages of the ingredients contained therein. The present mixed-flour law does not so require. The present mixed-flour law yields a revenue of $2,000 or $3,000 a year, and it costs $25,000 or $30,000 a year to collect this small revenue. The bakers in the country who are fighting my bill insist that they want to keep up the purity of the bread they manufacture, and some of these organizations are contributing large sums for the purpose of defeating my bill. The millers' organizations of the country are contributing still larger sums for the same purpose. Just how these large contributions are to be used I do not know. Whenever there is any likelihood of my bill coming out of the committee Members of Congress are flooded with protests from millers and bakers throughout the country. One Member of Congress told me that he received from millers and bakers 200 telegrams of protest in one day against the food measure I propose.

The United States is a great corn-raising country. It is not a particularly great wheat-raising country. They raise three times as much wheat in Europe as we raise in the United States, but we raise more corn than all the rest of the world. We are at the present time the only Nation in the world which prohibits the mixing of corn flour and wheat flour. An order has just been issued in England requiring that the flour imported into England shall contain not more than 76 per cent of pure wheat flour. Bread made out of pure wheat flour has always sold in Europe cheaper than it sells here, and it is selling there to-day, notwithstanding the great war which prevails, cheaper than it sells in this country. The passage of my bill would add at once 20 per cent to the amount of bread flour in the United States and would more than meet the conditions to which you refer in your communications. An embargo on wheat is a legislative impossibility. It can not be accomplished, and even if it were possible to procure such legislation, would it not be a better plan to remove the tax and the restrictions which go with it upon mixed flour and permit this great industry to assume the position it ought to have in this country?

The great commercial bakers are mixing cornstarch with wheat flour at the present time. With power mixers they are prepared to do it. They are also able to buy cornstarch in carload lots. Small bakers are not able to do this, and, of course, the cornstarch which reaches the retail trade in small packages costs just as much as wheat flour. In a recent issue the Milling and Grain News of St. Louis called attention to the fact that "the largest bakers in the leading centers of this country are using a bread mixture containing as much as 30 per cent cornstarch. Other bakers are using only 10 per cent, but the amount varies from 10 per cent to 30 per cent." This article proceeds to call attention to the fact that a representative of one of the largest corn products manufacturers in the country recently reported that he had sold 50 cars of cornstarch to bakers on a 10-day trip. Commenting upon cornstarch as an ingredient in bread making this article proceeds as follows:

"Cornstarch is now selling around $5 per barrel, Mississippi River points, while flour is worth from $8.50 to $9 per barrel. Figuring flour at $8.75 and cornstarch at $5 a baker can save $111 on every 100 barrels of the mixture he uses. Bakers prefer cornstarch to corn flour, because the starch is a lighter product and mixes better with the flour. However, there are some bakers who are using corn flour. How generally starch is being used by bakers can not be determined as there is a tendency on the part of bakers to keep that information to themselves."

Just at the present time cornstarch can be purchased for $5.97 per barrel. Twenty per cent of the same equals $1.19. Straight flour costs $8.75. Eighty per cent of that equals $7, making the total cost of a barrel of this mixture $8.19. The price of patent flour at the present time is $9.60 per barrel. This means a saving per barrel of $1.41. There would, therefore, be available for all bakers, if the mixed-flour law were repealed, a bread material costing $1.41 less per barrel than the material they now use. A barrel of flour will make 4,900 ounces of dough. It takes 16 ounces of dough to make a 14-ounce loaf. Therefore each barrel of flour will make 306 14-ounce loaves. If these loaves reach the ultimate consumer at 5 cents a loaf the finished product of a barrel of flour costing $9.60 would bring in $15.30. I am aware that in this country we have an unusually expensive system of distribution as applied to bread. The commissions, sales accounts, advertising, overhead expenses, and especially the returned "stales" amount in the aggregate to a considerable sum. You, however, do not use patent flour at $9.60 per barrel, but the cheaper grades, and you are not now selling a 14-ounce loaf, but a loaf that weighs considerably less. Therefore, the difference between the cost of a barrel of flour and the completed product when delivered to the producer is considerably more than I have indicated above.

I am not aware that your organization has taken a position yet on my mixed-flour bill. I am sending you some copies of a speech I made on the subject on the 25th of August in the House of Representatives. Inasmuch as the larger bakers of your city, of Boston, and other cities are now mixing cornstarch or corn flour with their flour I desire to submit that it would solve the problem to which you call attention absolutely if the restrictions on the business of mixing flour were removed and if mixed flour was permitted to go on sale in New York and throughout the country. I am calling attention to this situation hoping to obtain the support of your organization for my bill, which secures for the country, if it passes, a purer and a more wholesome flour than anything now on the market, and which supplies absolutely the shortage in bread-making material in this country to which you call attention in your communications.

Very truly, yours,

HENRY T. RAINEY.

REPLY OF NEW YORK BAKERS.

UNITED BAKERS OF GREATER NEW YORK AND VICINITY,
61 Broadway, New York, January 20, 1917.

Mr. H. T. RAINEY, M. C.,
Washington, D. C.

DEAR SIR: I am in receipt of your letter of December 31 and have noted its contents. I am in favor of your bill and so are most of the retail bakers throughout the country. We believe that the old Spanish-American War tax on flour should be repealed, and also that a correct statement of the contents of a loaf should be made on the wrapper. Opposition seems to come mostly from mills and from the wholesale bakers for obvious selfish reasons. The mixing of wheat with corn, however, would not solve the problem as it presents itself to-day. In the first instance, there is a shortage of corn just as well as of wheat. In the second instance, the wheat shortage will become aggravated as time goes on throughout the world on account of lack of labor, fertilizer, and also a lack of wheat seed of good quality. Another thing, we believe that if the people decide to eat bread composed of mixed flour, say, 80 per cent wheat and 20 per cent corn, they should do so voluntarily and not under compulsion—this country does not want compulsion in any form—public or private, general or special; it wants freedom to eat wheat bread or corn bread just as it likes, and the country is right. Why should the wheat of this country be exported to foreign countries and we go short? If the export is stopped, and then it is found that there is still a shortage, it will then be time to recommend a mixture of wheat and corn.

I hope you will see the fault of your argument and assist in the stopping of the export of wheat.

Yours, very truly,

ALBIN E. PLARRE, *Chairman.*

REPLY OF MR. RAINEY TO NEW YORK BAKERS.

JANUARY 23, 1917.

Mr. ALBIN E. PLARRE,
61 Broadway, New York City.

DEAR SIR: I greatly appreciate your letter of January 20, in the matter of the repeal of the old Spanish-American War tax on mixed flour. Your position is absolutely correct. Opposition to my bill comes mostly from the large millers and from the wholesale bakers for reasons that are entirely selfish.

I would be very glad indeed to have your cooperation in my efforts to get this tax removed, and I ought to have the cooperation of bakers generally throughout the country. The large commercial bakers are using starch to-day in enormous quantities, and consumers of their products do not know the difference. Their position, however, in opposing my bill, which would permit placing on the market a product composed of wheat flour and corn flour, or cornstarch, while they are using cornstarch surreptitiously, is indefensible. The bread they make, of course, is just as good as pure wheat-flour bread; in fact, there are many people who think it is better.

There may be at the present time a slight corn shortage in the country, and that, together with the upward tendency of prices, has brought about the present high price of corn. The fact remains, however, that even at the present high price of corn and wheat a mixture of 20 per cent corn flour or cornstarch with 80 per cent wheat flour will produce a bread mixture which would make it possible for the ultimate consumer to get a 16-ounce loaf for 5 cents, and still preserve the present profit margins for wholesalers and retailers. Of course the people should use mixed flour voluntarily, and there is no possible way of compelling them to use it.

My bill provides for the marking of packages containing mixed flour with the words "mixed flour" and with the percentages of all ingredients also plainly marked on the package. It would be impossible to put mineral substances or any substances other than the ground product of grains in a package of mixed flour under my bill. Under the present laws mineral substances can be mixed with flour, whether pure wheat flour or mixed flour, provided they are not deleterious to health, and one of the largest baking concerns in this country at the present time is placing plaster of Paris in the flour out of which they make their bread, and is brazenly admitting that they are doing so, and while this company is also using at the present time cornstarch in enormous quantities, they are opposing my bill, which would permit small bakers and housewives to purchase mixed flour on the market. Of course the large bakers are able to buy cornstarch in carload lots, and they are doing it. With power mixers they can do their own mixing.

I am not making any argument for corn bread or for corn meal. Corn meal and corn bread has its place in the country. Corn flour, however, whether made by the dry or the wet process, is a different proposition

from corn meal. Very few people in this country ever saw corn flour made by the dry process. Our laws enacted in the interest of the northwestern millers and the large bakers have absolutely killed this industry.

I have no objection to marking the loaves of bread as you suggest, so as to indicate the contents of the package. This, however, would be a matter for local legislation, just as wrapping the bread is a matter for local legislation.

I desire to again repeat that an embargo on wheat is a legislative impossibility. Farmers through the country will not stand for it, and a great majority of the Members of Congress represent farming constituencies. I know of no more reason why there should be an embargo on wheat, because wheat commands to-day a high price than that there should be an embargo on shoes because shoes command a high price. All products produced in this country for exportation are higher to-day than they have been in recent years. If the embargo principle you advocate is to be applied to all articles which have increased in price, the end of our prosperity would come and a period of depression would ensue unparalleled in the history of nations, and there is absolutely no reason why the embargo principle should not be employed as against all articles if it is to be employed as against one. The principle you advocate carried to its legitimate conclusion would end our participation in international trade and commerce. In a half a year from now the new crop of winter wheat will be coming on the market. The winter so far has been mild. There are no reports from the winter-wheat belt of injuries to wheat by freezing. In less than 60 days we will be able to determine with reasonable accuracy the magnitude of the winter-wheat crop of the country, and the situation of the winter-wheat crop soon will affect in all probability to a certain degree the price of wheat. It may go lower or it may possibly go higher; but no matter what the price is, my bill should be passed and a cheaper bread material should be placed upon the market. There is no danger of a surplus of bread products—no nation in the world ever had too much bread.

Inasmuch as your proposition is absolutely impossible, I ought to have, I submit, the active support of your organization and of the small bakers throughout the country for my bill.

Yours, very truly,

HENRY T. RAINEY.

The Public Revenues Should Come From a Natural Fund Resulting From Social Growth and Not From the Earnings of Those Who Toil.

EXTENSION OF REMARKS

OF

HON. WARREN WORTH BAILEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 24, 1917.

Mr. BAILEY. Mr. Speaker, the question of revenue is paramount at this time. Never before in the history of this country in time of peace have the demands upon the Federal Treasury been even approximately what they are to-day. We are confronted with a deficit estimated at almost half a billion. We are proposing to increase taxes before the close of the present session by no less than $200,000,000, yet this will leave us facing the necessity of an increase of more than that a year hence.

It is not necessary for me to repeat what has been said by me on this floor so often before, that I regard the tremendous expenditures to which we have committed and are still committing ourselves as utterly without warrant. They are in response to a mere craze, which has been skillfully and sedulously worked up by those who have profited or who hope in some way to profit. The people whose fears have been played upon are honest enough. They have merely been deceived into an acceptance of the idea that their future safety depends upon the building of a great Navy and the creation of a huge standing Army. If they once become aroused to the deceit to which they have been subjected, they will make short work of the deceivers.

But while the revenue question is the overshadowing one, and while the country is considering taxation with a view to determining what new forms shall be adopted or what new subjects shall be resorted to in meeting a manufactured emergency, may I not venture to invite attention to a fundamental discussion of the matter by presenting in this connection a short article from the pen of the late Henry George, setting forth his philosophy of taxation in clear outlines and enforcing the proposition that there is a natural resource in obtaining public funds in disregarding which society makes itself responsible for a train of evils it seeks in vain to overcome by palliative means?

There is a growing interest all over the world in Henry George's economic philosophy, and for this reason I feel that I am justified in presenting here a short extract from his writings, which I am sure will appeal to thoughtful men of all classes who may to-day be studying the immediate problem confronting this Government. I therefore make no apology for laying before the House and before the country the following:

THE SINGLE TAX—WHAT IT IS AND WHY WE URGE IT.

[By Henry George.]

I shall briefly state the fundamental principles of what we who advocate it call the single tax.

We propose to abolish all taxes save one single tax levied on the value of land, irrespective of the value of the improvements in or on it.

What we propose is not a tax on real estate, for real estate includes improvements. Nor is it a tax on land, for we would not tax all land, but only land having a value irrespective of its improvements, and would tax that in proportion to that value.

Our plan involves the imposition of no new tax, since we already tax land values in taxing real estate. To carry it out we have only to abolish all taxes save the tax on real estate, and to abolish all of that which now falls on buildings or improvements, leaving only that part of it which now falls on the value of the bare land, increasing that so as to take as nearly as may be the whole of economic rent, or what is sometimes styled the "unearned increment of land values."

That the value of the land alone would suffice to provide all needed public revenues—municipal, county, State, and National—there is no doubt.

To show briefly why we urge this change, let me treat (1) of its expediency, and (2) of its justice.

From the single tax we may expect these advantages:

1. It would dispense with a whole army of tax gatherers and other officials which present taxes require, and place in the Treasury a much larger proportion of what is taken from the people, while by making Government simpler and cheaper it would tend to make it purer. It would get rid of taxes which necessarily promote fraud, perjury, bribery, and corruption, which lead men into temptation, and which tax what the Nation can least afford to spare—honesty and conscience. Since land lies out of doors and can not be removed, and its value is the most readily ascertained of all values, the tax to which we would resort can be collected with the minimum of cost and the least strain on public morals.

2. It would enormously increase the production of wealth—

(a) By the removal of the burdens that now weigh upon industry and thrift. If we tax houses, there will be fewer and poorer houses; if we tax machinery, there will be less machinery; if we tax trade, there will be less trade; if we tax capital, there will be less capital; if we tax savings, there will be less savings. All the taxes therefore that we should abolish are those that repress industry and lessen wealth. But if we tax land values there will be no less land.

(b) On the contrary, the taxation of land values has the effect of making land more easily available by industry, since it makes it more difficult for owners of valuable land which they themselves do not care to use to hold it idle for a larger future price. While the abolition of taxes on labor and the products of labor would free the active element of production, the taking of land values by taxation would free the passive element by destroying speculative land values and preventing the holding out of use of land needed for use. If anyone will but look around to-day and see the unused or half-used land, the idle labor, the unemployed or poorly employed capital, he will get some idea of how enormous would be the production of wealth were all the forces of production free to engage.

(c) The taxation of the processes and products of labor on the one hand and the insufficient taxation of land values on the other produce an unjust distribution of wealth, which is building up in the hands of a few fortunes more monstrous than the world has ever before seen, while the masses of our people are steadily becoming relatively poorer. These taxes necessarily fall on the poor more heavily than on the rich; by increasing prices they necessitate a larger capital in all businesses, and consequently give an advantage to large capitals; and they give, and in some cases are designed to give, special advantages and monopolies to combinations and trusts. On the other hand, the insufficient taxation of land values enables men to make large fortunes by land speculation and the increase in ground values, fortunes which do not represent any addition by them to the general wealth of the community but merely the appropriation by some of what the labor of others creates.

This unjust distribution of wealth develops on the one hand a class idle and wasteful because they are too rich and on the other hand a class idle and wasteful because they are too poor. It deprives men of capital and opportunities which would make them more efficient producers. It thus greatly diminishes production.

(d) The unjust distribution which is giving us the hundredfold millionaire on the one side and the tramp and pauper on the other generates thieves, gamblers, and social parasites of all kinds, and requires large expenditures of money and energy in watchmen, policemen, courts, prisons, and other means of defense and repression. It kindles a greed of gain and a worship of wealth and produces a bitter struggle for existence which fosters drunkenness, increases insanity, and causes men whose energies ought to be devoted to honest production to spend their time and strength in cheating and grabbing from each other. Besides the moral loss, all this involves an enormous economic loss which the single tax would save.

(e) The taxes we would abolish fall most heavily on the poorer agricultural districts and tend to drive population and wealth from them to the great cities. The tax we would increase would destroy that monopoly of land, which is the great cause of that distribution of population which is crowding the people too closely together in some places and scattering them too far apart in other places. Families live on top of one another in cities because of the enormous speculative prices at which vacant lots are held. In the country they are scattered too far apart for social intercourse and convenience, because, instead of each taking what land he can use, everyone who can grabs all he can get, in the hope of profiting by its increase of value, and the next man must pass farther on. Thus we have scores of families living under a single roof and other families living in dugouts on the prairies afar from neighbors—some living too close to each other for moral, mental, or physical health, and others too far separated for the stimulating and refining influences of society. The wastes in health, in mental vigor, and in unnecessary transportation result in great economic losses which the single tax would save.

Let us turn to the moral side and consider the question of justice.

The right of property does not rest on human laws; they have often ignored and violated it. It rests on natural laws—that is to say, the law of God. It is clear and absolute, and every violation of it, whether committed by a man or a nation, is a violation of the command, "Thou shalt not steal." The man who catches a fish, grows an apple, raises a calf, builds a house, makes a coat, paints a picture, constructs a machine, has, as to any such thing, an exclusive right of ownership, which carries with it the right to give, to sell, or bequeath that thing.

But who made the earth that any man can claim such ownership of it, or any part of it, or the right to give, sell, or bequeath it? Since the earth was not made by us, but is only a temporary dwelling place, on which one generation of men follow another; since we find ourselves here, are manifestly here with equal permission of the Creator, it is manifest that no one can have any exclusive right of ownership in land, and that the rights of all men to land must be equal and inalienable. There must be an exclusive right of possession of land, for the man who uses it must have secure possession of land in order to reap the products of his labor. But his right of possession must be limited by the equal right of all, and should therefore be conditioned on the payment to the community by the possessor of an equivalent for any special valuable privilege thus accorded him.

When we tax houses, crops, money, furniture, capital, or wealth in any of its forms we take from individuals what rightfully belongs to them. We violate the right of property and in the name of the State commit robbery. But when we tax ground values we take from individuals what does not belong to them, but belongs to the community, and which can not be left to individuals without the robbery of other individuals.

Think what the value of land is. It has no reference to the cost of production, as has the value of houses, horses, ships, clothes, or other things produced by labor, for land is not produced by man; it was created by God. The value of land does not come from the exertion of labor on land, for the value thus produced is a value of improvement. That value attached to any piece of land means that that piece of land is more desirable than the land which other citizens may obtain, and that they are more willing to pay a premium for permission to use it. Justice, therefore, requires that this premium of value shall be taken for the benefit of all in order to secure to all their equal rights.

Consider the difference between the value of a building and the value of land. The value of a building, like the value of goods or of anything properly styled wealth, is produced by individual exertion, and therefore properly belongs to the individual; but the value of land only arises with the growth and improvement of the community, and therefore properly belongs to the community. It is not because of what its owners have done, but because of the presence of the whole great population that land in New York is worth millions an acre. This value, therefore, is the proper fund for defraying the common expenses of the whole population; and it must be taken for public use, under penalty of generating land speculation and monopoly which will bring about artificial scarcity where the Creator has provided in abundance for all whom His providence has called into existence. It is thus a violation of justice to tax labor or the things produced by labor, and it is also a violation of justice not to tax land values.

These are the fundamental reasons for which we urge the single tax, believing it to be the greatest and most fundamental of all reforms. We do not think it will change human nature. That man can never do, but it will bring about conditions in which human nature can develop what is best, instead of as now, in so many cases, what is worst. It will permit such an enormous production as we can now hardly conceive. It will secure an equitable distribution. It will solve the labor problem and dispel the darkening clouds which are now gathering over the horizon of our civilization. It will make undeserved poverty an unknown thing. It will check the soul-destroying greed of gain. It will enable men to be at least as honest, as true, as considerate, and as high-minded as they would like to be. It will remove temptation to lying, false swearing, bribery, and lawbreaking. It will open to all, even the poorest, the comforts and refinements and opportunities of an advancing civilization. It will thus, so we reverently believe, clear the way for the coming of that kingdom of right and justice, and consequently of abundance and peace and happiness, for which the Master told His disciples to pray and work. It is not that it is a promising invention or cunning device that we look for the single tax to do all this, but it is because it involves a conforming of the most important and fundamental adjustments of society to the supreme law of justice, because it involves the basing of the most important of our laws on the principle that we should do to others as we would be done by.

The readers of this article, I may fairly presume, believe, as I believe, that there is a world for us beyond this. The limit of space has prevented me from putting before them more than some hints for thought. Let me in conclusion present two more:

1. What would be the result in heaven itself if those who get there first instituted private property in the surface of heaven and parceled it out in absolute ownership among themselves, as we parcel out the surface of the earth?

2. Since we can not conceive of a heaven in which the equal rights of God's children to their Father's bounty is denied, as we now deny them on this earth, what is the duty enjoined on Christians by the daily prayer, "Thy kingdom come, Thy will be done, on earth, as it is in heaven"?

THE SPIRIT OF HENRY GEORGE.

I propose to beg no question, to shrink from no conclusion, but to follow truth wherever it may lead. Upon us is the responsibility of seeking the law, for in the very heart of our civilization to-day women faint and little children moan. But what that law may prove to be is not our affair. If the conclusions that we reach run counter to our prejudices let us not flinch; if they challenge institutions that have long been deemed wise and natural let us not turn back. (Henry George in "Progress and Poverty.")

Post-Office Building, Claremont, N. H.

EXTENSION OF REMARKS

OF

HON. EDWARD H. WASON,

OF NEW HAMPSHIRE,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 19, 1917,

On the bill H. R. 18994, the public-buildings bill.

Mr. WASON. Mr. Speaker, in order that any person who desires to know the facts relative to the item in the so-called "omnibus public-buildings bill," authorizing the purchase of a site and the erection thereon of a post-office building at Claremont, N. H., and appropriating for said purpose the sum of $55,000, I desire to say:

The present post office is centrally located in the thickly settled part of this progressive and enterprising town, and its present location has been the location of the office for the last 20 years.

The furnishings thereof are the same furnishings that were installed with the opening of the office at that time, and with the exception of the carriers' cases, which were installed 16 years ago, no changes have been made. The equipment to-day is inadequate and insufficient to meet the needs of the office. Part of this equipment was cheaply constructed and poorly finished in the beginning, and usage all these years have made it rickety and inconvenient for use.

The portion of the room used by the officials and employees of the office is dark and artificial light is necessary all the time while work is being done. The only means of ventilation is by open doors and windows, and the doors and windows are not screened, so that it is unsafe to have any of them open in the portion of the room where the post-office work is being performed.

The sanitary conditions are imperfect and would be condemned by any expert inspector.

In 1900 the post-office force included the postmaster and four clerks. Now it includes the postmaster, assistant postmaster, and seven clerks, with no increase of floor space. In 1901 city delivery was established, and three carriers and one substitute employed. Now, there are five regular carriers and three substitute carriers; two of the substitutes working nearly all of the time and the third works a large portion of the time. A few years ago rural free-delivery service was established, covering 60 miles of highway, consisting of three routes, requiring three carriers. With this addition the office became more congested.

There are no provisions for lockers for carriers and their wardrobes consist of the floor and hooks or nails on the walls. The carriers' delivery window is so far from their cases that every evening the cases have to be moved to the window for delivery service. This delivery window is within 3 feet of the stamp and general-delivery window; the two windows being in such close proximity, does not afford sufficient room for patrons at either window, and on the inside the clerk at the stamp and general-delivery window is crowded by carriers, which encroaches upon the room that each ought to have for the convenient performance of their respective duties.

The postal business is transacted through two stamp windows occupying a shelf space only 21 inches wide and 60 inches long.

The money order, registry, and savings business is conducted through two windows side by side, and occupying shelf space 21 inches wide and 72 inches long.

In 1900 the number of money orders issued was 3,479 domestic orders and 137 international orders. In 1916 the orders issued had increased to 18,396 domestic orders and 330 international orders.

In the postal savings branch of the service there are daily transactions with $16,836 on deposit.

Another activity, the parcel post, has added work and requires additional space, but still the office room is the same as it was 20 years ago. With the rush of extra business at Christmas time it is now necessary to use the whole basement or cellar for parcel-post matter. This basement is without conveniences; is a very cold place to work in at this time of the year, and is poorly ventilated and artificially lighted.

In addition to the foregoing activities there are two star routes from this office, which serve four post offices, which means a large amount of extra work in the distribution of transit mail.

In the storing of the office records the only available place is a small room partitioned off from the workroom; it is not fireproof, is congested, and is an unsafe place for keeping permanent records. Current records are kept in a small safe, that is not large enough for all, and only a small portion of the stock of postage stamps can be kept in this safe in the office. From ten to fifteen thousand dollars' worth of stamps have to be kept in the vault at one of the national banks. All other stamped papers, envelopes, and wrappers are carried in wooden closets, without protection from destruction by fire.

Some indication of the steady and consistent growth of the work necessary for the maintenance of this office will be seen by a glance at the postal receipts: In 1900 they amounted to $10,895.53, in 1910 to $19,142.85, in 1916 to $25,428.09. Thus it will be seen in a period of 16 years the postal receipts of this office have increased nearly 250 per cent, and yet with the increased force to perform the work, with the increase in the volume of business transacted, the quarters and equipment have remained practically unchanged.

There is no building other than the present location that is available or obtainable in the central part of the village suitable for the accommodation of the post office in case it should attempt to change its present quarters.

Can any candid person reason that this office of to-day, thus equipped and maintained, can conveniently, properly, and adequately serve a growing and progressive community like the enterprising town of Claremont?

The population of this town is stable, its growt is normal; it possesses a fine Carnegie library building, eight churches, a modern town hall and auditorium building, suitable school buildings, including a large, modern high-school building, and many substantial business blocks occupied by stores, offices, and lodges, also a splendid hotel structure, with modern conveniences, and this is a very popular and convenient hostelry.

I desire to call your attention to the substantial business and manufacturing establishments: The Sullivan Machine Co., with a capital of $2,000,000, doing a large manufacturing business in iron and steel products, employing more than a thousand skilled mechanics. The Monadnock Mills, a large manufacturing plant, producing cotton and woolen goods and employing nearly the same number of men and women. There are three paper mills—the Claremont Paper Co., the Jarvis Paper Co., and the Coy Paper Co. John Roberts, who operates a woolen mill; Rolla Barney, who owns and operates a shoddy plant. There are two shoe shops—the McElwain Co. and the Maynard Shoe Co.—and three woodworking establishments, all active and furnishing employment to a large number of persons. The pay rolls of these establishments amount to more than $35,000 per week.

Two prosperous national banks and one savings bank are located here.

Claremont is served by two railroad lines, it being the junction of the Concord & Claremont road and the Connecticut River System. An electric street railway was installed a few years ago and is operated the year round in the thickly settled portion of Claremont.

In 1900 the official census showed 7,529 inhabitants. A recent canvass, taken for directory purposes, indicates a population of 10,000 inhabitants.

From the foregoing items I believe that the honorable Committee on Public Buildings and Grounds of this Congress were well within the rule of reason and fair play when they unanimously reported this item in their bill; and critics, if any there are, who may desire to cast reflections upon the judgment of the committee for any portion of this bill I trust will be fair enough to give the committee credit with reference to this item and many others, if not all, of exercising sound judgment and fairness to the appeals from the inhabitants of this enterprising, progressive, substantial, and patriotic town, situate on the southwestern slope of Croydon Mountain, resplendent with the reflected rays of the setting sun upon the waters of the Connecticut River. Here we find the population enjoying the rewards of modern agriculture and industries, a prosperous, contented, loyal people, firm believers in America, her people, her institutions, and her future; and may this slight token of recognition by the Government continue to instill in the hearts and minds of the inhabitants and their successors the love and loyalty to our Government that always has and does exist to-day.

Public-Buildings Bill.

EXTENSION OF REMARKS

OF

HON. BENIGNO C. HERNANDEZ,

OF NEW MEXICO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 19, 1917.

Mr. HERNANDEZ. Mr. Speaker, the bill under consideration contains an item for a public building at Silver City, N. Mex., which State I have the honor to represent in this august body. This is a very meritorious item, which was asked for in a bill introduced by me in the House on March 28, 1916, in which I asked for $100,000, and the committee in its consideration of the various items allowed $60,000, which had been agreed upon.

Silver City is a town of about 5,000 or more people and is growing very fast. It is the county seat of Grant County and is the headquarters of the United States Forest Service for the Gila Forest Reserve. The post-office receipts for the past year

were close unto $18,000, and it is the headquarters and trading center of a very large and wealthy mining district, covering some of the largest mines in the country. The bank deposits for the past year were over $2,500,000, and its mercantile and banking business is as large, if not larger, than any other city in the State.

The State of New Mexico has now two Federal buildings, one in Santa Fe, which was erected in the early eighties and is very small, now used as a land office, United States Surveyor General's office, and the United States court, and one in Albuquerque, used as a post office. Congress in its third session of the Sixty-third Congress provided in its public-building bill for other post-office buildings throughout the State, namely, one in Santa Fe, with an appropriation of $295,000; one in Las Vegas, with $125,000; one in Raton, with $75,000; and one in Las Cruces, the site for which has been provided and accepted by the Government, but all the others are awaiting the action of the Supervising Architect's Office.

I voted for this bill not only for the reason that it carries an appropriation for my State but because I think its provisions are commendable. People living in small towns and cities are entitled to have their post offices and other Government business properly attended to, and in order to have the proper room and accommodations they feel that this class of buildings should be as good and better than any other class of buildings, so that they can point with pride to the homes of the United States officials.

It instills in the citizen a sentiment of patriotism as well as pride—proud of their city and proud of their Government.

The term "pork" in an appropriation bill similar to this one does not appeal to the people.

What is meant by "pork" in an approriation bill like this? If by that term it means the improvement of our seaports, the improvement of a Government building in Washington, or for our public parks, and such like, then I say that it is a mistaken term to use, because Government properties have specific values, besides making a home for the officials, with comfort during their working hours.

I will not say that the term "pork" can not be used in any sense, but most certainly it is not applicable in a meritorious measure like this.

It is high time to call a halt on this absurd cry whenever a measure is introduced for public improvements in the Congress of the United States.

It is also absurd to believe that with an insignificant appropriation of from $50,000 to $200,000 for the erection of a public building here and there for the housing of Government officials the term "pork" would or could be applied.

We are willing to tax ourselves, so that we can construct ships, improve our seaports by building beautiful customhouses, improve our harbors, erect magnificent monuments, and so forth, and we do not begrudge these improvements for the betterment of the service, and we have voted to have these appropriations made, and will vote for the revenue to meet them, but we expect that we of New Mexico should also be assisted in getting sufficient revenue for the erection of our own buildings and improvements of which we are in so much need.

Because certain newspapers are severe and unfair in their criticism, and raise the cry whenever a bill for improvements is presented, insinuating by inuendo that it is legislation of questionable character and not for the benefit of the public at large, are we for this reason going to show our weakness and one-sidedness by trying to defeat measures that are for the good of the public at large, in the communities where such improvements will be had, and for the Government employees in particular? No.

We are all aware of the immense demands now made upon the Treasury from all sources, but this piece of legislation can not cause an immediate demand upon the Treasury of the United States, because the items authorized herein will not be reached in all probability within 18 months to 2 years, although it obligates the Government in a way to comply with the letter of the bill just passed, and we can certainly raise sufficient revenue by that time to cover the authorizations made in this bill and others of like nature.

The cry of "pork" should not frighten us; we have heard the cry before and will hear it again and many times when appropriations are made for such measures as this one.

We are living in a large country, and we must expect to have many millions of dollars in appropriations, in order to handle the business of the Government and beautify our cities and our country.

Public-Buildings Bill.

EXTENSION OF REMARKS
OF
HON. CLEMENT C. DICKINSON,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 24, 1917.

Mr. DICKINSON. Mr. Speaker, I move to strike out the last word. I have no desire to take up the time of the House at this time in discussing this bill that provides for the purchase of post-office sites in three cities in the district which I have the honor to represent, to wit, El Dorado Springs, Rich Hill, and Windsor, being cities of about 3,000 inhabitants and the postal receipts of about $8,000 and over—all three thriving, growing, industrial centers, and up-to-date cities, with many business activities therein, and each one surrounded by thickly populated rural communities that are supplied with mail facilities by the post offices therein. Each post office therein is a clearing house for the respective communities and yields revenues far beyond the expenses of said offices, and it is but natural that the people of these communities should desire a public post-office building erected from the surplus postal receipts of said office.

It is not sufficient to say that the Government can rent a storeroom at less expense than it can maintain its own public building. The same argument would hold against the erection of a courthouse building or a public hall or a church or any other building erected to meet the demands and wishes of any community. The same argument would hold against the expenditure of millions of dollars for the erection of public buildings, Federal and municipal, in the great cities of the country. The same argument would hold against the erection of a capitol building in the several States of the Union; against the erection of public-school buildings and of homes, because the costs thereof and maintenance is greater than would or could be expended by the renting of cheaper buildings and rooms for such purposes.

The criticism against this bill is not directed against the appropriation of large sums running into the millions of dollars for the erection of magnificent buildings in the great cities, but is directed against the erection of Federal buildings for comparatively moderate amounts to meet the necessities and conveniences of the rural cities and communities, who daily transact an immense business through these Federal post offices.

Those who are attacking this measure and charge it as a "pork-barrel" measure, because it provides throughout the United States for moderate-sized Federal post-office buildings at possibly a greater price for maintenance than rooms to be rented for the transaction of this business, forget apparently that the same argument could be used against the erection of enormous Federal post-office buildings in great cities, against which they offer no objections whatever.

This bill authorizes the expenditure of a little over $30,000,000, of which about $6,000,000 go to the small cities and towns throughout the United States, or about one-fifth of it. It is the first omnibus public-buildings bill within four years, or about one and a half million dollars a year for each of the four years to the rural communities of this Republic—not now appropriated for, but only authorized and to be appropriated for in the future, when the time comes for the erection of said buildings.

A million and a half dollars annually for rural purposes out of a billion and a half dollars annually for all the demands of Government means $1 contributed to the rural districts out of $1,000 appropriated annually for all other expenditures; and the attack upon it as a "pork-barrel" bill comes largely from the metropolitan press located in the great cities, where millions of dollars are spent for the upbuilding of the great cities and for military and naval preparedness.

They would take all the surplus revenue of the country, gathered from the post offices of the small cities and towns, and spend them in the great cities. They would encourage the upbuilding of the cities, to the detriment of the country districts. They would drive the population from the country into the cities. I believe in the internal development of our country, and particularly of the agricultural sections; Federal buildings of reasonable expense in small cities, to meet the demands of those communities, as well as large buildings at greater expense, to meet the demands of the great cities and the country tributary thereto. Let all develop together and neither unduly at the expense of the other.

If the Government of this country will care for the agricultural sections to the extent that it has cared and is caring for the great cities, and do and aid in the building up and protection of the interests of the farming communities to the extent that it has in the great cities of our land, there would be less centralization and more prosperity throughout the length and breadth of our country. The cities can not live without the farms. The prosperity of the cities depends upon the prosperity of the rural sections.

In every city of $10,000 receipts there ought to be a Federal post-office building where the post-office activities can be handled with more facility and with less congestion than where a rented storeroom is unable to meet the demands and necessities and conveniences of the people. The Post Office Department is the greatest business department of the Government, yielding annually over $300,000,000, and self-supporting. Its receipts come from all sections of the country. Let all sections be treated alike, as far as can be.

While the great cities are being beautified by the lavish expenditures of millions of public money in the erection of magnificent buildings, ornamental as well as useful, spend a fair share of the enormous postal receipts to meet the reasonable necessities of the smaller cities and towns. While spending hundreds of millions of dollars for battleships, mighty engines of war, to protect the great coast cities from possible destruction, let us not forget that agriculture is the chief and most necessary industry of this Nation, and that the life of the Nation depends upon the prosperity of the farm. Internal improvement should not be forgotten amid the cry of preparedness against wars that may never come.

Both in peace and in war the Nation must look to the farm for the necessities of life. If you would avoid the dangers that come from centralization of wealth and power, look to the development of the agricultural sections, and revolutions will be less frequent and the Nation will live longer and be happier and more prosperous.

River and Harbor Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. BROWNING,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 22, 1917.

Mr. BROWNING. Mr. Speaker, an objector to practically every item in an omnibus bill serves a very good purpose indeed, for he calls to the attention of the country the character of the items carried in the measure, and I am sure the individual sponsors for these items welcome the opportunity of rising in their places to defend them.

It is quite an easy matter to stand off and criticize this rivers and harbors bill, and it has grown to be the fashion to do so, to dub it the "pork barrel," and to seek to bring discredit upon Members introducing the bills and upon the splendid committee who thrash them out, assemble them, and bring them into this House.

Now, there is never a single item reported that is not fully explained by the various experts who have investigated it, and these explanations are set forth in printed reports, accessible to all Members who desire information concerning them. One might almost believe, from the charges brought by critics of this measure, who spring up from time to time and flourish temporarily in the limelight, that all a Member of Congress has to do is to whisper to the Committee on Rivers and Harbors that he desires an appropriation for a river or rivers in his district, and, presto, out rolls the money. As a matter of fact, there is no legislation so well safeguarded as that for river and harbor improvement. First and foremost, a petition for this assistance must come from responsible people of a location, and they must show conclusively the soundness of their claim for Federal help; their claim and prayers must be presented to the Committee on Rivers and Harbors by the Member introducing the bill, and, provided the necessities of a sufficiently large number of residents seem to warrant an investigation, the committee reports favorably a preliminary survey. The Congress then authorizes and directs the War Department to make the survey, and engineers and experts of the Government proceed with that work. Upon their report, which is submitted to Congress by the Secretary of War, it is decided whether or not an appropriation will be considered for the project. If such report is favorable, a second bill must be introduced, proposing that the appropriation be made. Again the whole matter is thrown upon the Committee on Rivers and Harbors, and they consider and weigh the report or reports of the various War Department officials and submit their report to the House. Now, these Army officers have no connection with the Congress—they are not political appointees—and it is inconceivable that they, together with the people asking for the project, the Member who introduces the bill, and the gentlemen of the Rivers and Harbors Committee are all in collusion and keep the facts out of sight and state conditions which do not exist, for the purpose of wringing money from the Treasury for an unworthy object.

So far as I am concerned, Mr. Speaker, I am proud to stand here and support an appropriation for the deepening of the Delaware River in front of the city of Camden, and I invite all who are skeptical or critical or enterprising to go up there and look from shore to shore of the Delaware River at that point. The skeptical and critical will be convinced of the absolute worthiness of the project, and the enterprising will be mightily tempted to drive stakes there and seek to improve their opportunities along with the developments that are bound to come to Camden as a great port of this country. She is now a city with a population of nearly 103,000. Her manufacturing establishments number about 350, in which are made almost everything wearable, edible, useful, and luxurious. Nobody asks where Camden is located. Everybody knows, for her fame is abroad. "His Master's Voice" has carried far. The little steel pen found on the desk of almost every business man, in countinghouses, on boudoir desks, and in schools and colleges proclaims its birthplace. Campbell's soups—"six plates for 10 cents"—the food that has not "gone up," is familiar refreshment all over the civilized world. Many of the greatest battleships of our Navy slid down "the ways" from the New York Shipbuilding Plant in Camden while being christened. Yes; the enterprise and business activities centered in that city on the Delaware have advertised her broadly.

Camden has a water-borne traffic of three and a quarter million tons of freight, valued at nearly $26,000,000, and this traffic will be wonderfully increased when we have a sufficient depth of water to permit deeper draft vessels to land at our wharves. The water front of Philadelphia, just opposite, is almost beyond expansion, and Camden is bound to become to that great metropolis what Jersey City and Brooklyn are to the city of New York. We have a frontage on the Delaware River of 6 miles, plentifully strewn with large business establishments, dealing in lumber, cork, licorice, chalk, soap, metal polish, whiting, Paris green, ranges and heaters, and talking-machine works, and numerous ship building and repair yards. Flowing through the center of the city, in confluence with the Delaware, is the Cooper River, navigable 9 miles, and likewise dotted with numerous and thriving manufacturing establishments.

The industries of Camden, which are widely diversified, include the most important of the country, some of them the largest of their kind. There are machine shops, large foundries, woolen and worsted mills, leather manufactories, shoe factories, chemical works, candy factories, cigar factories, paint and varnish laboratories, and in fact almost every article known to productive industry has its representative establishment in this wide-awake and enterprising city.

Until 1885 the natural channel of the Delaware River was on the Camden side, but in carrying out the Government project for the improvement of the Philadelphia Harbor a dike was built from Fishers Point, on the Jersey shore, to the eastern point of Pettys Island, a distance of 3,500 feet. This dike, with an opening of only 300 feet, was built notwithstanding the protests of Camden interests, and those of the governor of New Jersey, the State legislature, and the riparian commission. The result of the diversion of the water from its natural channel has been shoaling all along the Camden water front, and the relief by the Government of this condition is not only logical but is really only an act of justice long deferred. The necessities for deeper water are great and pressing.

The city, realizing the importance of developing its commerce, has secured the passage of State laws under which the development of its water front may be carried out; bonds may be issued for the acquisition of water-front property and for the building of docks and other harbor facilities. Pettys Island, a part of New Jersey, situated at the upper end of the Philadelphia Harbor, and partly bordering on the upper portion of the proposed 18-foot channel, has recently been purchased by two very large concerns—the Crew-Levick Co. and the Wm. Cramp & Sons Ship & Engine Building Co. Extensive plans for its development have been made, which will involve an outlay of several million dollars. The island will be connected with the main New Jersey shore by a railroad bridge, and thus

directly link rail and water transportation at this point. The Crew-Levick Co. has announced that they propose to use this property as their principal export station in this country, and as the company is one of the largest engaged in refining and shipping oil and petroleum products, it means the building up of a large export-trade center. Warehouses, wharves, and docks will be built, and as the channel on the Pennsylvania side of the island is none too wide, it is reasonably certain that these piers will have to be erected on the side facing the New Jersey Channel. Vessels going to and from these docks will want to use the east side of the river. and the channel provided for will come none too soon.

Mr. Speaker, I hope and believe that this item will meet with the approval of every Member of the House.

Memorials From the Legislative Assembly of the State of Oregon.

EXTENSION OF REMARKS
OF
HON. WILLIS C. HAWLEY,
OF OREGON,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 24, 1917.

Mr. HAWLEY. Mr. Speaker, under the leave granted to extend my remarks in the RECORD I include two memorials from the Legislative Assembly of the State of Oregon:

The memorials are as follows:

Senate joint memorial 4.

To the honorable the Senate and the House of Representatives of the United States of America in Congress assembled:

Your memorialists, the Legislative Assembly of the State of Oregon, respectfully represent that—

Whereas it is proposed that the Congress of the United States submit to the various States of the Union a constitutional amendment forever prohibiting the manufacture, sale, and importation within the United States and their dependencies of intoxicating liquors for beverage purposes; and

Whereas it is known that the traffic in intoxicating liquors results in great industrial, economic, and moral loss and greatly increases human suffering without compensatory benefits; and

Whereas the abolition of such traffic has, wherever fairly tried, brought about great improvement in the moral and economic condition of mankind; and

Whereas 23 States of the Union have by constitutional amendment or legislative enactment abolished such traffic: Therefore be it

Resolved by the Senate of Oregon (the House of Representatives concurring), That the Congress of the United States be, and it is hereby, memorialized to submit to the States, as soon as practicable, the said proposed amendment of the National Constitution; and be it further

Resolved, That after concurrence of the house of representatives herein the chief clerk of the senate shall transmit copies of this memorial to the Senators and Representatives from Oregon in the Congress of the United States.

Adopted by the senate January 11, 1917.

GUS C. MOSER,
President of the Senate.

Concurred in by the house January 16, 1917.

R. N. STANFIELD,
Speaker of the House.

STATE OF OREGON,
SENATE CHAMBER.

I, John W. Cochran, chief clerk of the Senate of the Twenty-ninth Legislative Assembly of the State of Oregon, do hereby certify that I have carefully compared the annexed copy of senate joint memorial No. 4, Twenty-ninth Legislative Assembly, State of Oregon, with the original thereof as adopted by the senate January 11, 1917, and concurred in by the house January 16, 1917, and that the same is a full, true, and correct transcript therefrom and of the whole thereof.

In witness whereof I have hereunto set my hand this 18th day of January, 1917.

J. W. COCHRAN,
Chief Clerk Senate,
Twenty-ninth Legislative Assembly of the State of Oregon.

Senate joint memorial 5.

To the honorable Senate and the House of Representatives of the United States of America in Congress assembled:

Your memorialists, the Twenty-ninth Legislative Assembly of the State of Oregon, respectfully represent that—

Whereas there is now pending in the Congress of the United States Senate bill 392, introduced by Hon. CHARLES E. TOWNSEND, known as the Civil War Volunteer retired-list bill, to authorize placing thereon, with retired pay, certain surviving officers who served in the Army, Navy, or Marine Corps of the United States in the Civil War; and

Whereas the Committee on Military Affairs have reported the same to the Senate with amendments, and as thus amended the committee recommended that the bill do pass; and

Whereas the provisions of said bill are as pledged by Congress and President Lincoln at the opening of the Civil War to the several States and to the volunteers furnished by them; and

Whereas the present policy of the Government is to retire all surviving officers of the Regular Army and Navy at half pay for life, at ages less than any of those who will receive the recognition accorded by this act; and

Whereas full retired pay for life to all survivors of the Revolutionary War, the War of 1812, and Indian wars in accordance with rank have been granted and furnishes a commanding precedent; and

Whereas public sentiment of the Nation is shown by the unanimous action of the legislatures of 13 States, speaking for approximately 50,000,000 of our people, recommending the enactment of such a measure: Therefore be it

Resolved by the senate (the house of representatives concurring), That our Senators and Representatives in Congress and the entire Congress of the United States of America be, and are hereby, memorialized and requested that said bill, known as the volunteer retired bill, be speedily taken up and put upon its final passage, and which will give the same aid according to rank as that given to the retired officers of the Regular Army, deducting any pensions that they now receive.

Resolved further, That the chief clerk of the senate is hereby directed to transmit certified copies of this memorial to the President of the Senate and Speaker of the House of Representatives of the National Congress and to each of the Oregon Representatives and Senators in Congress.

Adopted by the senate January 12, 1917.

GUS C. MOSER,
President of the Senate.

Concurred in by the house January 16, 1917.

R. N. STANFIELD,
Speaker of the House.

STATE OF OREGON,
SENATE CHAMBER.

I, John W. Cochran, chief clerk of the Senate of the Twenty-ninth Legislative Assembly of the State of Oregon, do hereby certify:

That I have carefully compared the annexed copy of Senate joint memorial No. 5, Twenty-ninth Legislative Assembly, State of Oregon, with the original thereof as adopted by the Senate January 12, 1917, and concurred in by the House January 16, 1917, and that the same is a full, true, and correct transcript therefrom and of the whole thereof.

In witness whereof I have hereunto set my hand this 18th day of January, 1917.

J. W. COCHRAN,
Chief Clerk Senate,
Twenty ninth Legislative Assembly of the State of Oregon.

National Prohibition.

EXTENSION OF REMARKS
OF
HON. MARTIN A. MORRISON,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 24, 1917.

Mr. MORRISON. Mr. Speaker, it is often said that "the obvious is the last thing to be seen and the first to be forgotten." I find a perfect illustration of this truth in the current history in the Congress of the Hobson resolution, now referred to as the Sheppard resolution in the Senate and as the Webb resolution, or the Smith resolution, pending in the House.

When he first read its provisions every student of the temperance question in America recognized at once that the proposed amendment to the Federal Constitution is not a genuine temperance measure in any sense, much less is it a prohibition measure. Professional reformers on the pay roll of the congressional lobby in charge of the resolution persistently refer to it as "national prohibition." So perniciously active have they been in their campaign of misinformation that thousands of earnest temperance workers have been led to assume that it provides for national prohibition of the manufacture, transportation, importation, exportation, gift, sale, barter, exchange, or other traffic in intoxicating alcoholic liquors. Of course no one who has any knowledge of its language can deceive himself into such an opinion, and yet those who know the truth are liable to be swept along by the full tide of persistent public misrepresentation until they begin to assume what they actually know to be untrue.

The proponents of the Hobson resolution justify their claim to its right to be called "national prohibition" by the fact that far down beneath its mass of distractive and sugtractive words and phrases is found the word "prohibited." It would be as logical to assert that every horsefly is by force of its very name a horse. If a few more words had been added to the first section of the Hobson resolution, they would have completely nullified each other and no subject matter whatever would have been left within its purview.

It is probable that there was a time when the members of the congressional lobby and the friends of the distillers and brewers held diametrically opposite views as to the best legislative remedy for the evils of intemperance. They stood back to back and started to walk away from each other, both in deadly earnest and with sincere purpose of adverse advocacy and action. They

became leaders of the two extreme organized temperance activities of the country, and are generally so recognized to-day. One party is now regarded as the champion of the cause of temperance, and the other is universally assumed to be the relentless foe of the cause, and yet so far have these two forces traveled back to back that they have met each other face to face. To-day they stand on common ground, believe in a common legislative creed, and are working hand in glove for the accomplishment of a common purpose. They are a beautiful and touching example of "two souls with but a single thought, two hearts that beat as one."

So far as the Hobson resolution is concerned, the apparent contest between these two contending parties has descended into a "friendly suit" or a sham battle. Both sides desire to be well rid of the licensed saloon, but neither side is willing to permit the abolition of the licensed saloon to include in its sweep the destruction of alcohol itself.

There is a small but respectable group of total abstainers who believe that it is the consumption of alcohol by men that has wrought such frightful disaster to men, women, and children, and to civilization itself. They regard the sale of alcohol by a licensed dealer in a legalized dramshop as an efficient instrumentality for bringing the producer and consumer into convenient business relations, but that it is still the manufacture and use of alcohol that bring sorrow and misery into the world. They believe that alcohol, together with all its agents and instrumentalities, should be banished beyond the pale of the law. As might have been expected, both parties to this perennial sham battle have turned their batteries upon this small but respectable group of strictly nonprofessional, nonprofit-sharing temperance workers. Here, again, the hostile forces occupy common ground and wage a common battle, and it is the only real fighting in which they are now engaged.

In the Literary Digest of March 27, 1915, I find that Mr. T. M. Gilmore, publisher of Bonfort's Wine and Spirit Circular, and who is recognized as authority among the makers of wet goods, used this language:

> This so-called prohibition movement is not prohibition at all, and the millions behind it do not intend to be prohibited, but it is a mighty protest, a blind striking out, and the object aimed at is the saloon.
> The saloon is doomed, and liquors must seek new channels.
> To save the business, we must let go of the saloon.

In the National Enquirer of August 31, 1916, I find a quotation from Mr. Gilmore's paper, Bonfort's Wine and Spirit Circular, in these words:

> The modern saloon has been getting worse instead of better. It has been dragged in the gutter; it has been made the cat's-paw for other forms of vice; it has succumbed to the viciousness of gambling; and it has allowed itself to become allied with the social evil.

Mr. W. H. Austin, secretary of the Wisconsin Brewers' Association, delivered an address before a legislative committee in that State. In that same issue of the National Enquirer I find the following quotation from his address:

> The retail liquor dealers are not worthy of consideration. They are bums and beggars and are not fit to associate with yellow dogs. They go on a drunk and blow in their money every time they get a few hundred dollars and then complain about the high price of beer.

I might multiply such quotations, but every student of the temperance question knows that the distillers and brewers are anxious to be rid of the licensed saloon, which long since became much more a means of competition than a medium of distribution. It is too expensive, and the distillers and brewers have been hunting for some effective organization of reformers that would help them let loose of the licensed saloon without incurring the wrath of the bartenders and bar flies, who might undertake to drag down the distillers and brewers with them. They must have been as greatly amazed as delighted when they found the Hobson resolution and the congressional lobby.

The more secret attitude of the distillers is fairly well understood, while the entirely manifest and indisputable attitude of the congressional lobby, with its sacred and unalterable Hobson resolution, has strangely escaped the attention of many sincere, earnest, money-contributing adherents of the organization.

The language of the resolution leaves no room for doubt. The right to make, transport, barter, exchange, traffic otherwise than for money consideration, to have, to use, and to give away intoxicating liquors for beverage purposes is guarded as tenderly as a mother guards her only child. It seeks to write into the Federal Constitution the doctrine of home manufacture—now outlawed by Federal statute—and the doctrine of "personal liberty" to make, to possess, and to use alcoholic liquors for beverage purposes, an ancient doctrine which finds no support in our present Federal Constitution.

In the light of this manifest truth it requires no superhuman wisdom to discover why the apparent opponents of the Hobson resolution exercised more than one-half the energy and industry required to procure a House committee report on the Hobson resolution in the Sixty-third Congress and a special rule for its consideration. The supreme purpose of the distillers and brewers was to commit the temperance workers of America to the language of the Hobson resolution as the basis for their permanent plan of campaign. It is a pathetic fact that they seem to have succeeded in their sly, selfish, and devilish scheme. If they have, from now on until the plan shall be abadoned the friends of alcohol can not lose.

It is impossible to overestimate the advantage which the distillers and brewers are to reap as their share of the spoils of the bloodless victory which these contending forces have agreed mutually to win each over the other.

They know that there is to-day a dependable public sentiment in this country in favor of effective temperance legislation sufficient to enact and enforce organic and statutory laws for the complete destruction of all liquors available for beverage purposes. They know that such destruction can be averted only by capturing, controlling, and misguiding the organized temperance workers of the country.

They know also that the lawlessness of the licensed saloon is largely responsible for the present attitude of the public mind toward alcohol, and that the abolition of the saloon, with alcohol left unscathed, would take from the temperance forces their most valuable asset and effective weapon. If the distillers and brewers can eliminate the saloon, which no man defends, and force the temperance workers into the appearance of assailing "personal liberty" and "the sanctity of the home," which everyone stands ready to defend, the possibility of a successful legislative campaign against alcohol for beverage purposes will have been postponed at least beyond the life of this generation. Indeed, the leaders of the so-called "dry" organization frankly declare that the "antialcohol fight" is to be waged solely on the basis of "voluntary persuasion," and thereby hangs a tale.

The enemies of alcohol are plainly notified that they are soon to be compelled to turn back to the old days of oratorical crusaders, declaiming portions of "Ten Nights in a Barroom," and begging men to sign the pledge and wear the blue ribbon. Incidentally, of course, the new program will furnish constant demand and liberal compensation for professional reformers and public entertainers until they shall die of old age on the pay roll.

Capt. Hobson never seeks to mislead the public. He believes religiously in his own resolution. He believes that every man ought to have the right to make, have, and use intoxicating liquor within "the sanctity of his own home." He is opposed to "sumptuary legislation." He favors "individual liberty" and stands for the inherent and inalienable right of every man to drink intoxicating alcoholic liquors. Of these seductive but unsound doctrines he is the ablest and most influential of modern advocates. All other professional reformers are to him as mere understudies to their star and chief.

On the evening of December 10, 1915, Capt. Hobson delivered an address in advocacy of his resolution in Tomlinson Hall, Indianapolis, Ind. It was the culmination of a State-wide rally by the local representatives of the congressional lobby. One of my constituents had asked him to read his resolution to the audience. I had asserted that he could not be induced to do that. And he was not. In lieu of such reading he gave a clear statement of its purport and purpose in these words:

> Now, what is the proposition we bring to you? I wish each one of you would make it a point to read for yourself the proposed amendment to the Constitution of the United States. If you will read it, you will find there is not a word in that amendment that would prohibit a man from drinking liquor. There is no desire to have the Federal Government try to coerce the individual in what he does with himself—eat, drink, and wear; no desire to have any sumptuary legislation; no desire to have the Federal Government invade any man's individual liberty—not at all. There is no word in the amendment that would prohibit a citizen from having intoxicating liquor in his home. We do not wish the Federal Government to be placed in the attitude of invading the sanctity of the home. You will find the language very plain and very simple. It provides that the Constitution shall prohibit the sale, manufacture for sale, of intoxicating liquors for beverage purposes. Sale is a transaction between citizens. It is a matter of your own affair as to what you shall drink. You have an inherent right to drink, but not to sell, liquor.

On October 14, 1913, Hon. Eugene W. Chafin, as the last nominee of the Prohibition Party for the Presidency, was its recognized leader and spokesman. On that day and in that capacity he delivered an address at Chicago, which was published in full in the Vindicator, the then official organ of the Prohibition Party, in its issue of October 24, 1913.

In his address he read a copy of the Hobson resolution and denounced it in strong and cutting terms. Among other things, he said:

> Of all the foolish and impossible schemes devised to destroy the liquor traffic, this is certainly the worst. Every minute of time and every dollar expended on this scheme is criminally wasted.
> Such an amendment as that would perpetuate the liquor traffic forever in this country and each home could be a saloon.

Hon. J. Frank Hanly, ex-governor of Indiana, as the last nominee of the Prohibition Party for the Presidency, is now its official head and representative. He is editor in chief of the National Enquirer, which is now the official national organ of that party. He is a man of great ability, is perhaps the most powerful public speaker the Republican Party in Indiana has produced in this generation, and has more courage than any other professional reformer now before the country. Indeed, his courage sometimes leads him dangerously near to an open breach with the congressional lobby. His one weak spot is the fact that he remained in the soap-box primary, or secret caucus, organized in Washington City on July 10, 1915, to seal the lips of temperance workers who were known to be unwilling to advocate the Hobson resolution. That robbed him of a portion of his intellectual independence and moral courage. He still has more than any other man of his profession, and is rendering services of tremendous value to the cause of temperance. He is not, however, completely courageous. If he were, he would write in his editorials what he knows down in the bottom of his heart, to wit, that the Hobson resolution is a trick and a cheat, a delusion and a snare. He regards himself as in honor constrained from doing that. He compromises with his conscience by writing editorials made up of well-balanced sentences in perfectly good English, in the first half of which he condemns the Hobson resolution, and in the second half he condemns all Members of Congress who do not give to the resolution blind but enthusiastic and boisterous support. In spite of the trick he permitted the lobby to play upon him, he is easily the biggest, bravest, and best of them all.

On January 1, 1917, Hon. William A. Brubaker, of Chicago, wrote to the editor in chief a splendid letter, which appears in full in the National Enquirer, under date of January 11, 1917. It is published in these words:

BRUBAKER HITS HOBSON MEASURE—SAYS IT WOULD PUT RECOGNITION OF "PERSONAL-LIBERTY" DOCTRINE IN CONSTITUTION.

CHICAGO, *January 1, 1917.*

Hon. J. FRANK HANLY,
Editor National Enquirer, Indianapolis, Ind.

DEAR MR. HANLY: I have just read your excellent editorial in the Enquirer of the 28th ultimo on the Senate resolution. It is admirable, *with one* exception. You say, "We would favor it (the Hobson amendment) now if it were the best and highest form of prohibition attainable."

But your splendid logic in the preceding paragraphs ought to convince any candid mind that were the Hobson bill placed in the Constitution our condition would be worse than it is now, because, as you clearly show, it would put the liquor in the homes of the people more widely than now, a larger number of children would become familiar with its use, and we would soon have a larger crop of drunkards therefrom.

You also show, and truthfully, that cooperative breweries and distilleries could be established and liquor transported from one end of the land to the other if for personal use. Yuu further show that the enforcement would be exceedingly difficult, because the burden of proof of supposed violations would be upon the Government.

There is another phase of the matter that must not be overlooked. Let us suppose that the Hobson amendment is in the Constitution. Under its provisions I have a legal right to make liquor for my personal use, as your editorial truthfully declares. But it is a principle of law that whatever I may legally do by myself I may legally do conjointly with others. I join with a hundred thousand stockholders for the establishment of a cooperative brewery in Topeka, Kans. The State officials bring action against us under the prohibitory laws of Kansas. But we appeal to our constitutional rights, guaranteed to us in the Hobson amendment, and carry the case to the Supreme Court of the United States. And that court will, of course, decide that no State law or constitution can contravene the Constitution of the United States. Result: The practical nullification of every local, county, and State prohibitory law from one end of the land to the other. Any man who wants liquor may purchase stock in a cooperative brewery or distillery or join a club for the importation of whisky from Scotland, champagne from France, and beer from Bavaria. And the last state of the temperance cause will be worse than the first.

More than all this even: The last argument of the liquor men, as you know, is "personal liberty." The Hobson amendment recognizes such right and places a recognition thereof in the Constitution of the United States. To dislodge it from there will require a struggle of from 50 to 100 years. Of all the schemes proposed for the removal of the curse of drink, the Hobson bill is, far and away, the most iniquitous and diabolical.

I trust that you will devote your great abilities and the influence of your great paper not only to the support of the Senate resolution, but to the defeat of the Hobson bill, because it is worse even than our present license system.

With kind regards and best wishes, I am,

Cordially, yours,

WM. A. BRUBAKER,
6114 Greenwood Avenue, Chicago.

In the same issue of the National Enquirer the editor in chief published a signed editorial in these words:

A JUST CRITICISM.

Among Mr. Brubaker's criticisms of the House resolution for the amendment of the Federal Constitution prohibiting the liquor traffic there is one, which is peculiarly forceful and eminently just. He puts it well:

"The last argument of the liquor men, as you know, is 'personal liberty.' The Hobson amendment recognizes such right and places a recognition thereof in the Constitution of the United States."

The doctrine of "personal liberty" is one which the temperance people are constantly compelled to meet. It can be met and is met daily. We believe it better that any amendment submitted should *squarely face the personal-liberty* argument instead of giving it recognition and *embedding it in the Constitution.*

This, to us, is one of the strongest reasons why the Senate resolution should be submitted instead of the House amendment. The battle must ultimately be fought out on this line. Why not rise to the occasion now, meet the issue squarely, and fight it out?

We are not only opposed to the gainful or commercial traffic in alcohol; *we are opposed to its use as a beverage.* The House resolution meets in an imperfect way half our desire. The Senate resolution meets it all. Once submitted and ratified, it will require no apology and no subsequent amendment. It will stand the test of time and square itself with the years. The fight should be made for it and not for the House measure.

I am heartily glad that this great lawyer realizes the incalculable advantage which alcohol is to derive from the writing of the Hobson resolution into the Federal Constitution. I am taking the liberty of indicating in the several quotations I am using such italics as will be helpful in calling attention to particular parts thereof. I ask as careful second consideration of this sentence from the editorial just read:

We believe it better that any amendment submitted should squarely face the personal-liberty argument instead of giving it recognition and embedding it in the Constitution.

It is manifest that Mr. Hanly agrees, with the attorneys of the distillers and brewers, that the Hobson resolution gives constitutional recognition to the doctrine of "alcoholic personal liberty" and "embeds in the Federal Constitution" by necessary implication the doctrine of the inherent right of man to drink, and therefore to make and have, intoxicating liquors.

Little wonder that the friends of intoxicating liquors are willing to exchange the expensive, uncontrollable, and unpopular licensed saloon for a constitutional guaranty of the right to make, to have, and to use intoxicating liquors for beverage purposes. In the good old days of Blackstone every man's house was his castle. In the still better days that are to come every man's house will also be his distillery. And men are drawing princely salaries out of the eranings of the friends of temperance for their part in this legislative horseplay that would be comic if it were not so sadly tragic.

On the moring of January 8, 1917, there came to the desks of the Members of this House sealed letters and accompanying circulars, issued in behalf of an official National Temperance Council, composed of the official leaders of all well-known temperance societies "and other organizations of social uplift." It came as in the nature of sealed sailing orders from this strictly unofficial body to the chosen representatives of a hundred millions of free and self-governing Americans. The letter announced that this supreme council has unanimously indorsed the Hobson resolution and determined that it shall be left for "moral suasion" to deal with the "personal use" of intoxicating liquors. The following language taken from the circular referred to is more explicit, to wit:

Whether a man who, on his own motion, buys liquors at a distance shall drink them at his own home is left in the realm of moral suasion.

This doctrine is the vital cord that unites the Liquor League and the Antisaloon League into a oneness of vitality and activity like unto that of the Siamese twins.

The first sentence of this circular is illuminating and almost brutally frank. Any minister of the gospel that is deceived thereby is not wise, nor would it be possible by any means or process to put him wise. It reads as follows:

Prohibition is simply no license made more effective by wider application.

That will be startling news to nonprofessional temperance workers. They understand local option in a license State to mean "simply no license," but they have long believed that prohibition is a vastly broader, deeper, and more drastic remedy.

In West Virginia and other serious-minded States the leaders of temperance organizations regard prohibition as an "antialcohol" legislative program. They have not learned that prohibition is exclusively "antisaloon," "simply no license," and that the promised "antialcohol" crusade must rest solely upon oratory and "voluntary persuasion."

If the congressional lobby is to be permitted to continue to exhibit the brazen effrontery of referring to the Hobson resolution as "national prohibition," West Virginia will be compelled to find a new name for its legislative policy. It might be designated as "State abolition." Some new name must be adopted to indicate that it is not a fake and a fraud.

It is evident that professional temperance reformers have decided to hasten the final victory of the legislative campaign for "national prohibition" by writing a new definition that excludes from its very terms every element of the program that has not received the cordial indorsement of the distillers and brewers. Under this definition of terms the advocates of "national prohibition" may easily win complete and final victory with the prayers and ill-concealed assistance of the champions of alcohol. The end of the fight for "prohibition" is in sight, won by the

adroit process of defining it to be an "antisaloon" legislative program as distinguished from a nonlegislative "antialcohol" campaign, to be based solely on fervid oratory and signing the pledge.

The conclusion I have just reached is not a guess or an inference. It is a fact, plainly set forth in this circular in these words:

And the writer thinks that after every antisaloon victory there should be an antialcohol campaign of voluntary persuasion.

It is manifest that temperance programs may be defined and redefined, may begin and end, but that the professional reformer, like the brook, goes on forever. We can not lose him.

The religious press of the country stand unitedly behind the Hobson resolution. It has not been an easy task for them. It has required great will power and much devilish ingenuity. They have chafed under the difficulties and embarrassments of their self-imposed necessities and limitations. Some days ago the daily press carried a story that the Senate Committee on the Judiciary had reported a substitute for the Hobson resolution, which is antialcohol as well as antisaloon. It brought happy relief to the pent-up convictions of many able and conscientious editorial writers. One of the strongest and bravest of them immediately wrote into his editorial columns his personal convictions on the temperance question. In his edition of January 4, 1917, under the caption, "No loopholes in prohibition," this editor published an editorial, both indorsing the Senate substitute and demolishing completely the Hobson resolution. I quote from it the more pertinent portion, to wit:

The only effective enforcement of prohibitory laws in any State has always been and always must be on the principle that drinkable liquors, wherever found, are in and of themselves contraband, and may be destroyed by officers of the law, upon discovery, without need of paltering over intricate doubts in law. And citizens who are determined to deliver this Nation from the handicap of the drinking habit can not be content to put in the hands of the Federal Government any less formidable weapons than have proved necessary in the dry States.

The friends of prohibition therefore should hasten to impress on Congress that they want the Senate form of amendment passed, not the House form. The latter is an inheritance from the sophomoric statesmanship of Richard P. Hobson, who unfortunately had the leadership of the temperance wing in the lower House of Congress when the question of national prohibition was up before. But Mr. Hobson has now gone his way to other occupations, and his overshrewd idea that nominal prohibition could be more easily secured if there was opened through it an obvious loophole for evasion will hardly appeal longer to those who have seen thoroughgoing and decisive prohibition win its tremendous victories in the past autumn.

Even if a lax and apparent suppression of the liquor-traffic business could be more quickly accomplished, discreet tactics would prefer to wait a little longer for really efficient results. And just now the temper of the country indicates that it will adopt the real thing sooner than a half-way measure. It is doubtless to Senator SHEPPARD, of Texas, the temperance leader of the Senate, that the better formula of the upper House is owing, and it will be no misplaced confidence which induces the prohibition forces of the country to trust in him as the wisest and broadest of their champions in Congress.

The language I have just quoted illustrates three facts well known to every man who has been long in public life:

First. That editors of the religious and moral uplift press of the country sometimes catch a true vision of the meaning and merits of pending legislation.

Second. That they have no power to discern the true inwardness of legislative activities in the Congress.

Third. That they are incapable of discovering the attitude of public men toward the fundamental principles involved in the legislative propositions they have in charge, however clearly they may state and restate their opinions and purposes. For that reason they often do unconscious injustice to many public men.

It is probable that the injustice unwittingly done to a public man in the last sentence of the foregoing editorial was directly responsible for a news item published in the Indiana Daily Times, 11 days later, in its issue of January 15, 1917. It is unfortunate that a public man should be compelled to spend so much of his time issuing formal disclaimers and denials to correct inaccurate and misleading editorials in the religious press. The news item referred to is as follows:

SHEPPARD CLAIMS ENOUGH VOTES FOR HIS DRY MEASURE—WORDING OF RESOLUTION FOR CONGRESS TO CONSIDER CAUSING DELAY.

WASHINGTON, *January 15.*

After a careful canvass of the Senate, Senator SHEPPARD, of Texas, announced to-day the prohibitionists have sufficient strength to force consideration at any time of his resolution proposing a nation-wide prohibition amendment to the Constitution. This will be done at this session, he declared, just as soon as the prohibitionists agree on the language of the resolution. The Senate Judiciary Committee has reported the resolution with an amendment designed to make prohibition "air tight" throughout the country by prohibiting the sale, manufacture, and the importation of alcohol. Senator SHEPPARD says he believes the amendment is against the resolution's chance of passage, because it makes it too drastic for acceptance in some of the liberal parts of the country. He declares he will lead a fight to strike out the committee amendment and restore the original language, or its equivalent, to the measure.

In explaining his position on the prohibition question, Senator SHEPPARD says: "I am not a prohibitionist in a strict sense of the word. I am fighting the liquor traffic. I am against the saloon. I am not in any sense aiming to prevent the personal use of alcoholic beverages. I am opposed to the committee amendment which prevents the manufacture and importation of alcohol. I think it goes so far that it is doubtful whether the country would accept it. For instance, it would prevent a farmer from having a little hard cider. I don't think we care to go as far as that. That is too much of an invasion of personal liberty."

Senator SHEPPARD'S resolution requires a two-thirds vote in both Houses. Prohibitionists claim to have the necessary number and wet leaders admit they will come dangerously near it.

Lest anyone shall fear that the friends of alcohol are likely to suffer by being unequally yoked with unbelievers in the joint enterprise of securing the adoption of the Hobson resolution, I call attention to one outstanding, indisputable fact.

In the parlance of professional reformers, who believe that "prohibition" is simply "no license," territory in which there is no licensed saloon is called "dry." In that sense of the term more than 86 per cent of all the counties in the United States have been made "dry." Less than 14 per cent remain "wet." In the meantime there has been no substantial decrease in the production of alcoholic liquors in the United States, no appreciable decrease in its total consumption, and no calculable decrease in its per capita consumption. One who has studied arithmetic "as far as the rule of three" may easily calculate the full result of the complete success of this "antisaloon" program. The total final diminution of the production and consumption of alcohol that is to be is to the total diminution that already has been as 100 is to 86. Of a truth the cause of prohibition can not stand many such victories, but the champions of alcoholic personal liberty can survive an endless series of such defeats.

If the proponents and the pretended opponents of the Hobson resolution are out of harmony on any material question, I have not discovered that fact.

In the Sixty-third Congress they cooperated to procure a report of the Hobson resolution by the House Committee on the Judiciary, and also to procure a special rule from the House Committee on Rules for its consideration.

They all regard the temperance workers of the country as irrevocably committed to the Hobson resolution as the basis of its permanent plan of campaign, and would regard any change of the plan as a breach of good faith.

They all desire to destroy the licensed saloon, without destroying the right to manufacture, procure, possess, and use alcoholic liquors for beverage purposes.

They are all opposed to "sumptuary legislation."

They agreed that "prohibition means simply no license."

They agree that the legislative program of the temperance forces should be limited to "antisaloon" legislation, and should in no event include "antialcoholic" tendencies.

They all agree that, in the language of the National Temperance Council, "whether a man who, on his own motion, buys liquors at a distance shall drink them at his own home is left in the realm of moral suasion."

They agree that, after the "antisaloon" victory has been won, a new "antialcohol" crusade may safely be started, based exclusively on "voluntary persuasion."

They agree that the Government has no right to dictate to the citizen what he shall eat, drink, or wear.

They all dote upon the "sanctity of the home" and resent its invasion by prohibition or other excise laws.

They all agree that an antialcohol legislative program involves a violation of the sacred principle of personal liberty.

They all agree that a man has, in the language of Capt. Hobson, the "inherent right to drink but not to sell liquor."

They are all impatient to write into the fundamental law of the land the language of the Hobson resolution, which will, in the language I have quoted from the editorial of ex-Gov. and Presidential Nominee Hanly, "give recognition" to the principle of alcoholic "personal liberty" and "embed in the Constitution" of the United States a perpetual guaranty of the sacred, inherent, inestimable, inalienable, and inviolable right of the citizen to make, to procure, to possess, and to use intoxicating liquors for personal beverage purposes, as an expression of the genial spirit of genuine hospitality or as an aid to domestic conviviality.

The allied armies of the two belligerent powers lie over against each other in true modern fashion. Their first-line trenches are sinuous, but run in parallel lines, and so close together that the soldiers are able easily to swap tobacco and yarns across the neutral zone.

I marvel that these hostile armies have not before this time mutually wrested from each other the dual victory for which they jointly strive. Why not end the struggle by writing these seductive, deceptive, and disastrous political and moral heresies into the Federal Constitution by unanimous consent?

I know of but one body of men whose influence is effectively adverse. I have in mind that same comparatively small but entirely respectable group of total abstainers who still believe that it is the use, and not merely the licensed sale, of alcohol that is vicious. They are in fighting condition. They have enlisted during the war. They are encamped on a near-by hill equidistant from the contiguous and overlapping camps of the two belligerents, whence they may observe the mysterious movements of both.

Daily this small group draws forth upon itself the gunfire of both hostile camps. Indeed, this is the only genuine fire that issues from either trench. The members of this small group are content, however, to maintain their present position, to remain steadfast, unmoved and immovable under constant fire. They accept their daily punishment as one of the fortunes of war and are inspired and sustained by an unfaltering faith that the time shall yet come when all men, ministers of the Gospel as well as laymen, will again "endure sound doctrine," when the temperance workers of the land will be ready to "see the obvious," when manifest and vital truth will get a hearing, and when untruth will be unhorsed and shorn of its present leadership and well-nigh irresistible power. As long as this their present courage shall abide with them, these men will continue to fight the good fight and to keep the faith.

"Solomon, in All His Glory, Never Made a Raid Like This."

EXTENSION OF REMARKS

OF

HON. WILLIAM P. BORLAND,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 24, 1917.

Mr. BORLAND. Mr. Speaker, the taxeaters have formed a union. It includes in its membership the Government clerks employed in the executive offices of the Federal Government in the city of Washington. This organization is different from the associations which have heretofore existed among Government employees for mutual improvement and the good of the service. This new affiliation is frankly designed to bulldoze Members of Congress into granting to the employees in Washington greater pay and privileges regardless of the rights of the taxpayers or the treatment accorded other Federal employees outside of Washington. The way in which this is to be done is to "backfire" the Members—that is, to promise to punish with defeat those who protect the integrity of the people's Treasury and reward with political help those who are unfaithful to their trust.

The merits of the demands do not enter into consideration. It is purely a question of political fear and favor. They also attack all expenditures of money for national defense, or for public improvements of any kind outside the city of Washington, the argument being that the less the Government spends for legitimate activities the more it will have to squander on salaries in Washington. Of course this program has the hearty support of the merchants, the landlords, and the financial interests of Washington. Their interest lies in seeing that the Government spends as much money as possible in Washington and gets the smallest possible return for it. They would like to see the largest number of clerks employed at the highest salaries for the shortest number of hours. In fact, the main strength of this raid on the Public Treasury comes from people in Washington who are not in the Government service at all. The pay roll in the city of Washington is now $50,000,000 a year and is rapidly growing. The merchants and landlords get substantially all of this. The taxeaters' union is bitterly opposed to prohibition, so it must be assumed that the saloons are also valiant supporters of shorter hours, more Government clerks, and higher pay.

The taxpayers outside of Washington must pay the bills. It is high time they formed a union to protect their pocketbooks.

HERE ARE THE FACTS.

The Government clerks in Washington now have shorter hours, higher pay, and more privileges than any set of employees in the known world. This sweeping statement can be made without fear of contradiction.

First. They are paid from 15 to 30 per cent more than similar work commands in the best paid private employ. This is attested by repeated reports of Cabinet officers of both political faiths.

Second. They have 30 days' sick leave, 30 days' annual vacation, all the holidays, general and special, and Saturday half holiday for 13 weeks in the summer. They are paid for full time but may work but 228½ days out of the year. Contrast this with the postal employees all over the Union, who have only 15 days' vacation, no Saturday afternoons, and frequently work Sundays and holidays.

Third. Most of them work only seven hours a day, and with the aid of their financial and political allies have so far resisted any attempt to make them work a standard day of eight hours. This short day costs the Government annually at least $5,000,000 in the employment of extra people, besides incommoding the public business.

The civil-service employees outside of Washington work a minimum of eight hours, and often longer. Most skilled workers nowadays are glad to have a standard day of eight hours and consider it quite a concession.

WHAT DO THEY DEMAND?

What do these Government clerks now demand?

First. They want a horizontal increase of all salaries, aggregating in Washington alone about $15,000,000.

Second. They want Saturday half holidays all the year around. This means 39 half days, or 19½ full days taken off of their brief working time and will cost the Government at least $5,000,000 annually in increased pay roll to run the departments.

Third. They want a minimum wage of $3 per day for all Government employees. This entails another increase in the pay roll of $24,524,000. Every messenger who sits outside a door for seven hours a day is to receive $1,080, minimum. Let us contrast this with the wages of skilled union workmen. Let us take skilled workmen who get as high as $5 a day, working days. Most of such skilled workmen are in seasonal occupations, where they can not work steady time all the year around. They work at least eight hours a day; but if they get 200 days' work a year on the average they consider themselves very lucky. This gives them an average annual earning of $1,000. All lay offs and sick leaves are at their own expense. The average earnings of a head of a family in this country is less than $700. Heaven knows it is too low, but these are the men who must pay the taxes to support the Government clerks in Washington.

HOW PRIVATE EMPLOYERS ACT.

Do private employers in Washington grant to their employees the short hours and high pay they are now demanding from the Federal Government? Of course not. Read these significant statements of actual business conditions in Washington:

[From the Washington Herald, Dec. 24, 1916.]

WANT SHORTER HOURS—GROCERY CLERK SAYS THEY HAVE TO WORK 12 TO 16 HOURS.

Editor the Washington Herald: The lot of the store girls has been greatly ameliorated by the eight-hour law for women in the District of Columbia. It used to be that they worked from 13 to 15 hours a day during the holiday shopping season. Now they work 8 hours, feel better, and make more money for their employer.

There still obtains that deplorable practice of working the grocery clerks and market men to the limit of their endurance.

Can not some arrangement be made to secure for them a decent workday in place of their present 12 to 16 hours daily toil?

Haven't we got brains enough in our number to organize for humane conditions? Of course not! If we had any brains we wouldn't be grocery clerks.

ONE OF 'EM.

—

OUTSIDER SPEAKS IT—NOT A GOVERNMENT EMPLOYEE, BUT DRAWS SMALL PAY.

Editor the Washington Herald: I, an outsider, greatly admire your fight for underpaid Government clerks (those receiving less than $1,200 per year), but think your paper would be giving all a square deal if you would give a little space to the underpaid other workmen in our city.

I receive less than $50 per month and am compelled to make it go as far as the Government clerk, and get no vacation, no holiday, no half day, no half Saturday, no sick leave, and work 10 hours a day.

AN OUTSIDER.

HOW LABOR UNIONS ACT.

Has the American Federation of Labor ever treated its own employees as the Government is now asked to do? Of course not. Nobody has ever accused the union officials of not looking after their own interests. Here is another startling story on that phase of the question:

[From the Washington Times, Jan. 21, 1917.]

A. F. OF L. FACING THREAT OF STRIKE—DEMANDS MADE BY ITS OWN EMPLOYEES ARE REFUSED BY OFFICIALS.

The American Federation of Labor is threatened with a strike among its own employees.

Demands made by the bookkeepers, stenographers, and typewriters employed by the federation and by the International Association of Machinists for increased pay, a minimum-wage scale, a reduction in hours, and a change in the manner of adjusting differences between employers and employees have been refused by the federation officials.

The demands of the union will be laid before the executive council of the American Federation of Labor, in session here this week. If that body turns down the unionists the matter will again be taken before

the Stenographers, Typewriters, Bookkeepers, and Assistants' Union. The union then will call on President Gompers, of the American Federation of Labor, tell him that trouble has arisen between the employees and the federation, and he will be asked to use his good graces in adjusting the differences.

STRIKE VOTE WOULD FOLLOW.

If he is unable to do so the union then will take a strike vote. If President Gompers approves of the strike the curious spectacle of the federation paying out money for conducting a strike against itself will result.

Practically all of the demands of the union have been refused by the federation. A minimum wage scale of $3 a day, with a $200 horizontal increase for the employees of the federation and the International Association of Machinists, were the principal demands. These were refused by the federation.

The union asked for a seven-hour day, with a Saturday half holiday throughout the year. The federation agreed to give a seven-and-one-half-hour day with Saturday half holidays, which the employees say has been in effect for the last 13 years.

ASKED FOUR WEEKS' VACATION.

The proposed agreement submitted by the union asked for four weeks' vacation. The federation officials agreed to two weeks' holiday, which has been given in the past.

In framing its second revised demands upon the federation, the union asked for a horizontal increase of $100 a year instead of the original $200. This, too, was refused.

For the stenographers employed by the two organizations, a demand of $18 a week for persons with two years or more experience was refused by the federation, which agreed to the wages but stipulated that the stenographers must have had at least six years' experience, of which three should be in the service of the federation.

The typewriters, now receiving $12 a week, asked for $15 for members having had two years' experience. The federation insists on three years' experience. The federation also demands three years' experience of its bookkeepers, instead of two, as agreed upon by the union, if the raise from $15 to $18 is given.

ADJUSTING OF GRIEVANCES.

The matter of adjusting grievances between employers and employees formed another hitch. The union asked that in case of differences, a board consisting of one representative of the employer, one of the employee, and a third to be selected by this pair, be selected. The federation insists that the three arbitrators be trade-unionists exclusively.

HOW THE TAXPAYER SHOULD ACT.

Let the taxpayer hold Congress to a strict accountability for the expenditure of public funds, as strict as that to which the directors of a private corporation would be held by its stockholders. Of course, every Congressman ought to be big enough to do his duty without having a whip cracked over his head. Those who are afraid of the crack of a whip by some organization should be retired by their constituents.

William R. Hearst Pays High Tribute to Memory of Dewey.

EXTENSION OF REMARKS

OF

HON. MURRAY HULBERT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 22, 1917.

Mr. HULBERT. Mr. Speaker, under the leave granted me to extend my remarks I desire to put in the RECORD the following article which appeared in to-day's issue of the Washington Post:

WILLIAM R. HEARST PAYS HIGH TRIBUTE TO MEMORY OF DEWEY.

The prayers have been said. The hymns have been sung. The church bells have been mournfully tolled as the long line of Admiral Dewey's funeral cortège filed through the streets of Washington.

The cannons have boomed their solemn salute as the catafalque entered the military cemetery at Arlington.

The volleys of musketry have been fired over the grave.

The last call of the bugle has been sorrowfully sounded, and one of the greatest and truest of our national heroes has passed on.

PEOPLE'S TRIBUTE OF LOVE.

Throughout the long route of the funeral procession, from the Dewey house to the Capitol and from the Capitol along Pennsylvania Avenue, through Washington, through Georgetown, across the Potomac, to the cemetery at Arlington the streets were flanked and banked with great crowds of people, who had stood for hours in the cold of a winter day to render the last tribute of love and honor to the man who had served his country and his countrymen so faithfully and so well.

I have seen the funeral of an emperor, where marched the soldiers of a hundred nations, clothed in all the brilliant colors of the spectrum, shimmering in steel and blazing in gold, led by seven kings—and the people came out to see the show.

Saturday I saw the funeral of a plain American, whose worth was in his work, whose glory lay in duty simply, bravely, and nobly done.

A few regiments, drab-dressed, escorted his remains.

The President of the Republic, the courts, the Congress, the Diplomatic Corps in plain vehicles followed.

There was no pomp, no panoply, no vain display, yet the people came in thousands upon thousands, not merely to gaze but to give of honor, not merely to see but to show the deep and reverent respect in which they held the Nation's hero.

AS MAN AND OFFICER.

Admiral Dewey was undoubtedly the most loved of the popular heroes of our day, but in our affection for him as a man we must not forget a due meed of admiration for him as a captain.

Admiral Dewey possessed all the qualities of a great commander and conspicuously displayed them in his inspiring achievement at Manila Bay.

He was splendidly courageous and capable, admirably resolute and resourceful, quick in decision, prompt in action, superior to circumstances, equal to emergency. Above all, he possessed the supreme power of solving a situation by a master stroke.

It could never be said of Dewey, as was said even of Pompey the Great, that he knew not how to conquer. He knew how to conquer not only the opposition of hostile foreign fleets and forts, but the opposition, or at least the inanition, of the friendly roll-top desk forces at home.

MARK OF TRUE GENIUS.

Alexander cut the Gordian knot. Dewey cut the cable.

It is strokes like these that mark true genius, create heroes, decide the fate of battles and of nations.

A man who had waited for orders would have gotten them. And a man who got them under our republican system of political favorites and bureaucratic incompetence would have been told not so much what to do as what not to do. Thus there would have been no victory at Manila.

The distinguishing characteristics of genius is that it is not bound by the limitations of ordinary men.

The peculiar faculty of genius is to see how an enterprise can succeed while others see only how it can fail.

So Dewey won the battle of Manila when he cut the cable and liberated his own genius.

WHY PEOPLE LOVED HIM.

And the people loved him—loved him for his achievement, loved him for his boldness, loved him for his independence, loved him for his capability and his amiability, for his genius and his generosity.

May the Nation always have in emergencies heroes like Admiral Dewey, ready and able to serve it and protect it, and may every such hero have from the Nation, as Admiral Dewey had, the great and satisfying reward of popular affection and appreciation, for of such affection and appreciation are future heroes born.

WILLIAM RANDOLPH HEARST.

Omnibus Public-Buildings Bill.

EXTENSION OF REMARKS

OF

HON. HENRY BRUCKNER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 19, 1917.

Mr. BRUCKNER. Mr. Speaker, this item appears in the so-called "omnibus public-buildings bill":

United States post office at Borough of The Bronx, New York City, N. Y., $850,000.

Mr. Speaker, in order that any person who desires to know the facts relative to this item authorizing an appropriation of $850,000 for a post-office building to be located in the Borough of The Bronx, New York City, I desire to say that it is to provide for a building project to cover an entire city block, running from East One hundred and forty-ninth Street to East One hundred and fiftieth Street and from Mott Avenue to Spencer Place, in all above 22 city lots. The site has already been purchased by the Government for $283,000, so that the title rests in the Government at this time. It was selected after very careful investigation of this and other sites, for the reason that it will directly connect, by way of a subway, with the railroads coming from the West, and by so doing will save the time and expense of having the mail go direct to the heart of the city, there to be sorted and sent back to The Bronx.

The city of New York is composed of five counties, which are called boroughs. The Boroughs of Manhattan and Bronx were originally New York County. Owing to the enormous increase of population, and the necessity for having greater conveniences, a law was passed by the State legislature creating the county of The Bronx out of that section of New York known as the Borough of The Bronx. The Borough of The Bronx, now the county of The Bronx, is the only subdivision of the city of New York which has not the same postal facilities that all the other boroughs have.

The Borough of The Bronx has been accorded the title of "New York's fastest growing borough." How well this section has deserved this tribute may be better understood when it is considered that in 1895 its population was 33,000 and to-day the population numbers 750,000, a community if it were a separate municipality would be larger than the city of Cleveland, the seventh city in the United States, while the only cities that would be larger would be that of New York, Chicago, Philadelphia, St. Louis, and Boston. Mr. Speaker, The Bronx has a

larger population than the combined States of Arizona, Delaware, Nevada, and Wyoming, or the combined New England States of Vermont and New Hampshire.

One hundred and forty-ninth Street and Third Avenue, near which point the new post office building is to be located, is at present the very center of activity in the Bronx. The police department of New York City recently took a count of the number of pedestrians and vehicles passing that point, and reported that in 10 hours—from 8.30 a. m. to 6.30 p. m.—69,640 persons and 7,344 vehicles passed this corner.

According to the following figures we can see how the real estate valuations in The Bronx have grown during the past 15 years: In 1900 they were $123,702,050; in 1905, $274,859,593; in 1910, $493,757,919; and in 1915 grew to $658,632,013, indicating a healthy growth.

As to the postal facilities of The Bronx, I desire to submit some statistics given me by Hon. Edward M. Morgan, the postmaster of New York City:

The gross receipts of the branch post-office stations in The Bronx in 1907 were $376,000, while the total receipts for 1915 were $704,000, showing an increase of nearly 100 per cent in eight years.

The number of clerks and carriers employed in 1907 was 353, while in 1915, 674 were required to take care of the business—an increase of 100 per cent.

A one-horse wagon was used in The Bronx in 1907 in collecting mail from the street package boxes and numbered stations, while to-day seven 1-ton motor trucks are required to take care of the parcel-post delivery and collection service for The Bronx postal stations.

In 1907, 27,000,000 pieces were mailed in The Bronx postal stations, and in 1915 they exceeded 50,000,000.

The deliveries in 1907 for The Bronx numbered 36,000,000, while in 1915 they exceeded 65,000,000 pieces.

The registry division in 1907 showed that 85,000 pieces were sent by registered mail from The Bronx, and in 1915 this business grew to 125,000 pieces.

The record for the delivery of registered pieces in 1907 shows that 110,000 were handled, while in 1915, 210,000 were handled.

In the money-order section 6,000 money orders were issued in The Bronx in 1907, totaling in amount $56,000, while in 1915, 17,000 orders were issued, amounting to $135,000.

The postal savings business for the year ended December 31, 1915, showed that The Bronx people had 19,000 accounts, with deposits amounting to $2,157,000.

Besides using the building for the post office, it will accommodate the internal-revenue office now located at One hundred and forty-ninth Street and Third Avenue. The recruiting station of the Army and the recruiting station of the Navy, now located elsewhere in The Bronx, will be quartered in the building. It will also provide for accommodations for a Federal court and a United States district attorney's office.

The Department of Agriculture has requested space in the building, and the United States pension examining corps will also have space assigned them.

Mr. Speaker, I believe that the Committee on Public Buildings and Grounds of this Congress were well within the rule of reason and fair play when they unanimously reported The Bronx post-office item in the bill, and I sincerely trust that it will be enacted into law.

River and Harbor Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. FRANK CLARK,

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 25, 1917.

Mr. CLARK of Florida. Mr. Speaker, I desire to submit a few remarks with reference to the remarkable utterances of the gentleman from Wisconsin [Mr. FREAR] inserted in the RECORD under "leave to print."

Under the privilege granted him by unanimous consent of the House of Representatives on January 23, 1917, to extend his remarks on the subject of the Oklawaha River, in Florida, in the RECORD, Mr. FREAR, of Wisconsin, has made some statements so palpably at variance with demonstrated facts and statistics that are matters of record that it becomes the duty of any Member who knows the facts to see that the records of this House are not permitted to stand with such misstatements uncorrected.

First, as to the census figures for the towns of Leesburg, Eustis, Tavares, and Mount Dora, all located along this waterway under discussion, the gentleman from Wisconsin [Mr. FREAR] says the census of 1910 shows the following figures for those towns—page 2103, CONGRESSIONAL RECORD:

Leesburg	844
Eustis	529
Tavares	218
Mount Dora	150
Total	1,741

As a matter of fact and of undisputed record, the United States census of 1910 showed the following figures as the population of those towns:

Leesburg	991
Eustis	910
Tavares	175
Mount Dora	371
Total	2,447

Now, as a further fact and also a matter of record, we find that the State of Florida took a census in 1915, and this census shows:

Leesburg	1,360
Eustis	1,148
Tavares	449
Mount Dora	576
Total	3,533

But we still have not arrived at the basis which will "do justice * * * without fear or prejudice," as the gentleman from Wisconsin [Mr. FREAR] declares himself willing and attempting to do in this particular instance. The improvement of the Oklawaha River is not being planned for 1910, nor even for 1915. It is planned to begin in 1917 and to continue through to the next census time. We find that in the town of Leesburg there have been erected since the census of 1915 no less than 50 new homes; in Eustis, 30; in Tavares, 16; in Mount Dora, 20. With an average of five persons in a home we have an increase in population in the corporate limits of these four towns aggregating 580 persons. Then we find also that a much larger number of persons have established new homes along the shores of the lakes which this Oklawaha River improvement proposes to connect with tidewater, and they are just as much entitled to recognition in this project as if they resided within the borders of one or another of these towns. We find also that Leesburg's corporate limits are very greatly restricted and that the census report does not take into consideration the town of Newtown, peopled by negroes to the number of over 500, nor does it take in other contiguous suburbs with their elegant lakeside homes, such as Sunnyside, El Dorado, Esmeralda, Treasure Island, and Alta Vista. Nor does the census report include the hundreds of residents who own their homes in one or the other of these towns, but hold their citizenship in Northern States, some of them even in Wisconsin. Giving to each of these towns the present estimated population of itself and its immediate environs, and stating conservatively only such figures as are easily demonstrable, we find the following as the actual present population in the towns only upon which are based the benefits to be derived from the work proposed to begin now on the Oklawaha River and the lakes:

Ocala (about)	8,000
Leesburg	2,350
Eustis	1,700
Tavares	750
Mount Dora	875
Total	13,675

GEOGRAPHIC MISINFORMATION.

The gentleman's [Mr. FREAR'S] extension of remarks included an alleged statistical table, headed "Waterway projects credited to the second district," by which we presume the second district of Florida is meant. He has included in that table all of Florida except the Pensacola territory and part of Georgia.

He has charged this district with a waterway from "Savannah to Fernandina." It is 107 miles by rail from Savannah to the Florida State line.

He has included the harbor of Key West, which is over 300 miles from the nearest point, in the second district. And, further, he says Key West is in Dade County, when it is now, and has been heretofore, the county seat of Monroe.

He includes the Indian River, which is far down the east coast of Florida, fully 100 miles south of the second district, and he places it in "St. Lucia" County when there is, as a matter of fact, no such named county in the State of Florida.

This geographical misinformation is exactly on a par with the claim made a few lines further along when he claims "personal knowledge of the Oklawaha." That alleged personal knowledge is at direct variance with formal reports of Government engineers, after thorough and scientific investigation, which included levels, measurements, gradients, and volume of water, and it is contrary to and directly opposite to known and established facts never disputed by any official other than the Member from Wisconsin.

MISPLACED COMMERCE FIGURES.

He also states that the total commerce of the Oklawaha River for 1916, exclusive of logs, was 1,700 tons. These figures, like others in the same and other articles he has published in the RECORD, are absolutely incorrect, as is very easily and readily demonstrable.

Just as an indication of how misleading these figures are, compare them with the 3,400 tons of corn alone which we know went last year over the very portion of the river the proposed work is contemplated to improve. That tonnage existed. It was moved over the Oklawaha. There was no other way to move it.

But this is only a beginning. It has been shown on undisputed authority on the floor of this House within the past week, and was shown to the Committee on Rivers and Harbors when this project was placed in the bill by that committee, that the actual increase in tonnage over the portion of the waterway sought to be improved was over 20,000 tons in 1916. And not a splinter of a log was included in that, except it was in the form of finished lumber, plow handles, wagon wheels, or some other manufactured product.

But the gentleman from Wisconsin loses sight of his "justice and fairness" again, simultaneously with his losing sight of the very purpose of waterway improvement. We have shown that there exists a freight tonnage of not less than a million tons a year awaiting the improvement of this waterway.

We showed that to the Committee on Rivers and Harbors, of which the gentleman is a member, but he was not present, and he has since stated that he was busy working "on" the bill itself—not as a constructionist but as a destructionist.

FLAGRANT MISSTATEMENT OF RECORDS.

There is one point in the attack on the Oklawaha project by the gentleman from Wisconsin [Mr. FREAR] that is so clearly and flagrantly a deliberate misstatement that it can not be permitted to pass unchallenged in the manner it deserves.

On page 1866 of the RECORD are these words:

> And for this creek and commerce the Government must now pay $733,000 more, with the single condition that a "boat line" will be put in operation.

As a matter of fact, that statement is absolutely untrue, and anyone who has read House Document No. 514, from which that information was taken, ought to have known it was untrue. He says in the same issue of the RECORD that his attack is based upon the reports contained in this document.

Other conditions imposed are much greater burdens than the single condition cited by the gentleman. In the beginning, a right of way must be furnished and deeded to the United States. Then the United States must be protected against any liability for damages to land which may be overflowed as a result of this waterway improvement. It will be noted that here is something directly opposite to the statement of the gentleman that this is considered a reclamation scheme.

Another condition is that the city of Leesburg deed to the United States not only a right of way, but two canals that are already constructed and in daily use.

Still another condition is that in Leesburg the municipality must provide dock facilities so protected in a legal manner that access to the waterway will be assured to all persons on equal terms. This the city has voted bonds to do. It might be mentioned also that in Leesburg the zone of municipal control, subject to all Federal regulations, and therefore practically the zone of Federal control, is 300 feet in width for the entire length of the canal.

Two of these conditions are stated in the same paragraph as the one condition singled out by the gentleman from Wisconsin. (P. 2, H. Doc. 514.) The others his boasted "personal knowledge" of the Oklawaha should have revealed.

As to the comment of the gentleman from Wisconsin upon the editorial from the Leesburg (Fla.) Commercial, printed in the RECORD of January 3, he is very welcome to any enjoyment he may derive from twisting it to suit his own ideas of declamation. It is very noticeable that the gentleman did not attempt to controvert any statement of fact therein, except the one statement that the town of Kissimmee is not located upon the Kissimmee River, and in that he merely places his own statement against the physical contour of an inhabited, mapped, platted, and surveyed territory, and even admits that his whole source of geographic knowledge is a certain ambiguity in a statement contained in a engineering report. It is but natural to conclude, in view of the parallel misinformation which constitutes the gentleman's "personal knowledge" of the Oklawaha, that it, too, is based upon something equally as nebulous.

In conclusion, let us examine a statement from the gentleman's own extension of remarks. On page 2103 of the RECORD we find this paragraph:

> Any disinterested person who reads the engineer's report—No. 514, Sixty-third Congress—on the Oklawaha must inevitably come to the same conclusion, that the new project is indefensible.

Yet we find in that same document five indorsements of the project, from the local engineers on through all the red tape of the department, even with the signature and recommendation of the Chief of Engineers, and closing with this expressive indorsement:

> Approved.
>
> ROBERT SHAW OLIVER,
> *Assistant Secretary of War.*

Verily the mental processes of the gentleman from Wisconsin are past finding out. With this, Mr. Speaker, I shall dismiss consideration of the impossible gentleman from Wisconsin.

Public Buildings.

EXTENSION OF REMARKS
OF
HON. W. FRANK JAMES,
OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 26, 1917.

Mr. JAMES. Mr. Chairman, the gentleman from Kentucky [Mr. LANGLEY] has said that he has not been able to bring back any building or appropriation for his district. The gentleman from Kentucky has introduced 11 projects, and I take it for granted he would not introduce these projects unless he thought they were meritorious. The gentleman has introduced a good many pension bills, and they have gone to a committee of which I am a member. I do not think the gentleman would introduce a pension bill unless he thought it was meritorious, judging from my conversation with him and from letters. Here are the 11 bills he has introduced, and I judge the gentleman is of the opinion this kind of legislation should go through. It is simply a difference of opinion between the gentleman from Kentucky and some of the rest of us who happen to be opposed to the erection of public buildings in small towns, and towns where the postal receipts are small.

The matter of "sectionalism" has been brought up several times during this debate. Personally I have not raised that question and do not intend to do so.

I am not against the bill because it is from the North or the South, and since I have been in Congress I have never voted for or against a bill because it was from the North or South, and I never expect to draw that line.

Here are the bills which the gentleman has introduced:

Whitesburg, with 321 people; all that is asked for is $75,000, and all the rest are for $75,000: McKee, Ky., 146 people; Hindman, 370; Saylersville, 310; Jenkins, 1,897; Booneville, 236; Inez, Ky., not in the census of 1910; Hazard, 537 people; Pikeville, 1,280 people; Paintsville, 942 people; and Prestonburg, 1,120 people.

Mr. LANGLEY. They are not in this bill, if the gentleman will permit me.

Mr. JAMES. No; but it is not the fault of the gentleman from Kentucky.

Mr. LANGLEY. Oh, yes; it is. I only asked for what I regarded——

Mr. JAMES. I do not believe that the gentleman from Kentucky would introduce a bill, either for a pension or a building, that he did not think ought to go through.

Mr. LANGLEY. Ultimately, yes; but not all in one lump. [Laughter.] The trouble about the gentleman is that he has not been here long enough to know how business is run. He is wasting his time.

Mr. JAMES. I sincerely hope I shall be here long enough to see McKee, with its 146 people, with a population that will entitle it to a public building.

Mr. LANGLEY. By the time they erect a public building in some of the places——

Mr. JAMES. I refuse to yield.

The gentleman laid a good deal of stress on the fact a short time ago that Hazard was entitled to a building because they were going to use it for a mine rescue station. Now, they do not establish mine rescue stations as permanent propositions. It was so stated at the hearings in behalf of this bill. They are only put there until such time as the operators or the authorities themselves can take them over. So when you give a building for Hazard, Ky., because part of it is going to be used for a mine rescue station you are only wasting your time.

Mr. LANGLEY. Will the gentleman yield at that point?

Mr. JAMES. Not now.

Mr. LANGLEY. I just wanted to correct the gentleman. He is simply mistaken.

Mr. JAMES. The gentleman from Alabama [Mr. BURNETT] at a hearing some time ago on Marengo, Iowa, where the gentleman from Iowa [Mr. HULL] wanted a public building, said:

They have very small postal receipts and it is a very small town; $7,500 postal receipts and only 1,786 population. That was the population in 1910, of course.

And yet that town of Marengo is larger than the item which the gentleman from Iowa asked to be stricken from this bill.

Mr. HULL of Iowa said:

The population is 2,200 now. They claim 2,500, and, as the town is growing, they may have it.

Mr. BURNETT. But the postal receipts are only about $7,500?

Mr. CLARK of Florida. Did I understand the gentleman to say that some gentleman from Iowa asked to have an item stricken from this bill?

Mr. JAMES. I say that this is from the hearing on the bill for Marengo, Iowa.

Mr. CLARK of Florida. I thought he said some gentleman from Iowa asked to have an item stricken from the bill.

Mr. JAMES. I will quote further:

Mr. BURNETT. I notice that their postal receipts have increased only $2,000 in 11 years. In 1905 they were over $5,000, and this last year they were only $7,000. That does not seem to be a very great increase.

The CHAIRMAN. The time of the gentleman has expired.

The Clerk read as follows:

CARROLLTON, ILL.

United States post office at Carrollton, Ill., $25,000.

Mr. JAMES. According to the figures furnished by the Treasury Department, Mr. Chairman——

Mr. CLARK of Florida. Mr. Chairman, I make the point of order that unless the gentleman wants to make some motion——

Mr. JAMES. Mr. Chairman, I move to strike out the paragraph.

The population of Carrollton, Ill., according to the figures furnished by the Treasury Department, in 1910 was 2,323, and the postal receipts $7,854. The postal receipts were $8,324.13 in October last. The present rent is $500, interest at 3 per cent. And the Treasury Department figures that maintenance will be $500 a year.

I want to read how the Treasury Department figures on these small buildings of $25,000, and I will read a letter from the Treasury Department, as follows:

TREASURY DEPARTMENT,
OFFICE OF ASSISTANT SECRETARY,
Washington, December 15, 1916.

Hon. W. FRANK JAMES,
House of Representatives.

MY DEAR CONGRESSMAN: Referring further to your letter of the 17th ultimo, in regard to the pending public-buildings bill, and requesting information relative to the probable cost of maintenance, etc., of a Federal building in places similar in size to McKee, Ky., the following data is furnished you:

The department estimate for a building at a place of this size, and of similar postal receipts, for post-office purposes only, would probably be $25,000 for the building itself and $5,000 for the site. It is estimated that to furnish the building would require $3,000 additional, making a total outlay of $33,000.

Calculating 3 per cent on this investment, the interest charge would be $990. The yearly depreciation of the building and furniture, together with the approximate cost of annual repairs, would amount to 2½ per cent on the amount invested in the project, exclusive of cost of site, viz, on $28,000, which would be $700. Janitors are not provided for buildings of this size, but an employee known as fireman-laborer at $660 per annum, with a charwoman at $300 per annum, making a total expenditure for this service of $960. The cost of fuel, lights, and other supplies is estimated at $900 per annum.

Very truly, yours,

B. R. NEWTON,
Assistant Secretary.

I notice on page 4 of the report on the present bill the committee states in part that it is fixed in its opinion that "practically every item can be abundantly justified from the standpoint of economy, efficiency, and patriotism." Therefore, Mr. Chairman, as this particular item can not come under either class, I hope it will be stricken from the bill.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan [Mr. JAMES].

The question was taken, and the amendment was rejected.

The Clerk read as follows:

United States post office at Crockett, Tex., $25,000.

Mr. JAMES. Mr. Chairman, on October 1, 1916, the postal receipts of this town, according to the statement of the department, were $9,203. This is another item where the present rent is $632, and the cost to the Government to maintain will be $4,200. Of this, $900 will be for maintenance. I would like to read a letter regarding the cost of maintenance. It was stated on the floor the other day that $900 was for soap. I want to read this letter:

TREASURY DEPARTMENT,
Washington, January 8, 1917.

Hon. W. FRANK JAMES,
House of Representatives.

MY DEAR CONGRESSMAN: Referring to your recent call at the department and request for information as to what constituted the item of supplies amounting to $900, contained in reports recently submitted to Congress in connection with various contemplated buildings, the following information is furnished you:

From the experience of the department in connection with the maintenance of small buildings in various parts of the country costing approximately about $50,000 it is estimated that the average cost for supplies amounts to $900, as tabulated below:

Light	$250
Fuel	350
Water	120
Ice, washing of towels, removal of ashes and rubbish, and miscellaneous supplies	180
Total	900

In connection with this estimate there is inclosed herewith a statement comprising the actual experience of the department relative to five buildings located in various sections of the country. As it will be seen, the cost for heating, as well as other items, varies materially, according to whether the building is located in the North or South.

Very truly, yours,

B. R. NEWTON, *Assistant Secretary.*

Aiken, S. C.—Post office; completed in 1912; cost, $47,218.48; cubic contents, 172,320 cubic feet; cost per cubic foot, $0.274.

JANUARY 7, 1917.

Hon. B. R. NEWTON,
Assistant Secretary, Washington, D. C.

MY DEAR MR. NEWTON: In re public-buildings bill.

Kindly refer to your letter of the 15th of December.

You state that it costs about $900 for fuel, light, and other supplies. It occurs to me that this is rather high, and I should appreciate it very much if you will go into this matter more in detail.

Yours, very sincerely.

_____ _____.

The CHAIRMAN. The question is on the motion to strike out the item.

The question was taken, and the motion was lost.

The Clerk read as follows:

United States post office at Green River, Wyo., $25,000.

Mr. CLARK of Florida. Mr. Chairman, I move to strike out the last word. The town of Green River, Wyo., is a very prosperous place. There are many Federal activities there, and this post office is absolutely essential to that community. I move that all debate upon this paragraph and amendments thereto be now closed.

The CHAIRMAN. The question is on the motion to close debate upon the paragraph and amendments thereto.

The question was taken; and on a division (demanded by Mr. FREAR) there were—ayes 97, noes 5.

So the motion was agreed to.

The CHAIRMAN. The question now is upon the amendment offered by the gentleman from Florida to strike out the last word.

The question was taken; and on a division (demanded by Mr. JAMES) there were—ayes 0, noes 52.

So the amendment was rejected.

The Clerk read as follows:

United States post office at Greenville, Ala., $30,000.

Mr. CLARK of Florida. Mr. Chairman, I rise to discuss the item——

Mr. GARDNER. Mr. Chairman, I make the point of order that there is nothing before the House. What question is before the committee?

Mr. CLARK of Florida. The adoption of this item.

Mr. GARDNER. But the gentleman can not be recognized unless he has an amendment to offer.

Mr. CLARK of Florida. Then, Mr. Chairman, I move to strike out the last word. Mr. Chairman, I desire to say that many years ago I visited Greenville, Ala.——

Mr. GARDNER. Mr. Chairman, I make the point of order that the gentleman is not discussing his motion to strike out the last word.

Mr. CLARK of Florida. Yes; I am discussing it. This relates to Greenville, Ala. I want to say——

Mr. GARDNER. But the gentleman is discussing Alabama.

Mr. CLARK of Florida. Yes; Greenville, Ala. Having said what I did, that I visited this place several years ago, I can conclude my remarks by stating that it is rightly included in this bill. Mr. Chairman, I move that all further debate upon this paragraph and amendments thereto be now closed.

The CHAIRMAN. The question is on the motion of the gentleman from Florida to close debate on the paragraph and amendments thereto.

The question was taken; and on a division (demanded by Mr. JAMES) there were—ayes 83, noes 4.

Mr. GOOD. Mr. Chairman, I demand tellers.

The CHAIRMAN (after counting). Five gentleman have risen, not a sufficient number.

Mr. GOOD. Mr. Chairman, I demand the other side.

Mr. MANN. There is no other side to the Committee of the Whole House on the state of the Union.

The CHAIRMAN. The rule is one-fifth of a quorum may decide whether there shall be tellers or not.

Mr. GOOD. Mr. Chairman, I move to strike out "$30,000" and insert "$25,000."

Mr. CLARK of Florida. Mr. Chairman, I moved to close all debate on the paragraph and amendments thereto, and the motion has been agreed to.

The CHAIRMAN. The motion before the House is that of the gentleman from Florida to strike out the last word. That is the pending motion.

The question was taken, and the Chairman announced the noes appeared to have it.

On a division (demanded by Mr. JAMES) there were—ayes 6, noes 82.

So the amendment was rejected.

Mr. GOOD. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. GOOD. What has become of my motion to strike out $30,000 and insert $25,000?

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 12, line 4, strike out "$30,000" and insert "$25,000."

Mr. CLARK of Florida. Mr. Chairman, I move that all debate close on the paragraph and amendments thereto.

Mr. MANN. Mr. Chairman, I ask that I may proceed for three minutes.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to proceed for three minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. MANN. Mr. Chairman, under the rules of the House it is impossible to save time by attempting to stifle debate. Of the procedure of the gentleman from Florida I have no criticism to make. Under the rules the motion to close debate is subject to amendment ad libitum, and upon every one of those you can have a division. After debate is closed you can offer amendments until the Chair goes blind, and I have never seen the Chairman of this committee get blind. Now, two or three gentlemen are here who desire to discuss certain items. The only way to do, after all, will be for the House to let them discuss those items in accordance with the rules. The time is not very great for any one item, and then this body, if it is necessary, might have to sit at night in order to pass the bill. That has occurred frequently in the past and will occur in the future; and if the House becomes satisfied that some Members are attempting to debate purely for filibuster, they never make any progress by that, whereas a filibuster is always successful in the effort to get a chance to debate. Now, Members are pretty well worked up to-night, and I suggest to the chairman of the committee he move to rise, and if necessary sit all to-morrow and to-morrow night and let gentlemen debate if they want to be heard.

Mr. CLARK of Florida. I want to dispose of the pending proposition before taking any steps.

The CHAIRMAN. Does the gentleman insist upon his motion?

Mr. GOOD. I shall not only insist upon the motion but I shall make as many motions for each item as I can, as long as the chairman of the committee insists upon filibustering and preventing the committee from discussing these items as long as the committee is not filibustering.

Mr. CLARK of Florida. If the gentleman from Illinois will permit, I would like permission to proceed for about a minute.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. CLARK of Florida. Mr. Chairman, I want to make this statement: For the first time in the history of Congress we have brought in an omnibus public-buildings bill here and thrown it wide open to discussion, to amendment, and to consideration. Three or four gentlemen have shown a disposition absolutely to block the progress of Congress. They have gone through this matter and put their whole case in the RECORD——

Mr. LANGLEY. Several times.

Mr. CLARK of Florida. One gentleman persisted in making a tariff speech here for an hour or more by moving practically to strike out the last word at the end of every line——

Mr. CRAMTON. Will the gentleman yield?

Mr. CLARK of Florida. No; I will not—and undertook to make that kind of a speech for the purpose of delaying this bill. These gentlemen, as I say, have had ample opportunity to put their case in the RECORD. They have put it in the RECORD, they have seen the temper of the House, and they know that the House intends to pass this bill.

Now, they have made their arguments, they have presented their case, and why can they not in good conscience allow the

Congress to go forward with its work and do its work? I want to say this, that I am going in a moment to ask the committee to rise, but not out of deference to these gentlemen who have sought to filibuster. I prefer to sit here all night. But some things are bothering some other gentlemen, and out of consideration for them I intend to move to rise. But I want to say this, that we have been perfectly fair, we have opened this bill to amendment for these gentlemen, and if they would offer their amendments and discuss the actual questions involved in the amendments there would be no objection to having the five minutes' debate. But they go out and ramble all over the wide, wide world and talk about rivers and harbors, the tariff, and everything under the sun except the amendments they offer. And I want to put them on notice now that if the House will stand by the committee we will put this bill through to-morrow, if we have to get another rule. We did try to get, and did get, a fair rule and tried to act fairly and squarely, but if gentlemen will insist on filibustering we will try to bring in a rule here that will put this bill through, and, if necessary, we will stay here all night to-morrow night to do it.

Now, Mr. Chairman, I wish to ask the committee to dispose of this item.

Mr. JAMES. Will the gentleman yield for a question?

Mr. CLARK of Florida. No; I will not.

Mr. GOOD. I wish to say to the gentleman that I am perfectly willing, inasmuch as the gentleman has stated he is going to rise, and I think that he will permit a limited debate on these things to-morrow, to withdraw my amendment.

The Clerk read as follows:

United States post office at Havana, Ill., $40,000.

Mr. JAMES. Mr. Chairman, I move to strike out the section. This seems to be a post office the bill for which was introduced by the gentleman from Illinois [Mr. RAINEY]. I heard his very eloquent speech several days ago regarding economy, and the fact that the gentleman opposes any large appropriation at this session, I hope, will induce him to agree to my amendment and that it will prevail.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amend, on page 12, by striking out line 5.

The CHAIRMAN. The question is on the amendment.

The question was considered, and the amendment was rejected.

The Clerk read as follows:

United States post office at Lyons, N. Y., $40,000.

Mr. JAMES. Mr. Chairman, I move to strike out the paragraph. This is another item which the Treasury Department states will not appear to be of any profit to the Government. I want to call attention to the fact that in 1890 this town had a population of 4,475, 4,300 in 1900, and 4,460 in 1915, losing 15 in 20 years.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

United States post office at Marengo, Iowa, $30,000.

Mr. JAMES. Mr. Chairman, this seems to be another town where the population is less in 1910 than in 1900, having a population of 2,070 in 1900 and 1,786 in 1910. I would like to read from the hearings which took place on March 23, 1916, at which were present Mr. CLARK of Florida, chairman; Mr. BURNETT; and Mr. AUSTIN:

Mr. BURNETT. They have very small postal receipts and it is a very small town; $7,500 postal receipts and only 1,786 population.

Mr. CLARK of Florida. Will the gentleman permit?

Mr. JAMES. I will.

Mr. CLARK of Florida. I want to call the gentleman's attention to the fact that the postal receipts of this town increased over $3,000 in one year—in 1915. It is something over $7,000 in 1916. They have way over $10,000.

Mr. JAMES. I am talking about the time the gentleman from Iowa appeared before the committee.

Mr. CLARK of Florida. All right.

Mr. JAMES. And it is upon that information that the item for the public building was reported out in this bill.

Mr. CLARK of Florida. If the gentleman will permit me, I stated yesterday distinctly that we not only had that information but we looked into the prospects of the town where it appeared to be undoubtedly true that before this bill could be considered it would reach the limit, and allowed the item. I stated that several times.

Mr. JAMES. What did the gentleman do with the towns of Carlinville, Ill.; with Decatur, Ind.; Green River, Wyo.; with Greensburg, Ind.; with Linton, Ind.; with Newark, Del.; with Niles, Ohio; with Rogersville, Tenn.; where the postal receipts were less in the quarter ending September 30, 1916, than nine months before, January 1, 1916?

Mr. CLARK of Florida. We will answer that when we get to them.

Mr. JAMES. I notice further along Mr. BURNETT repeats:

I notice that their postal receipts have increased only $2,000 in 11 years. In 1905 they were over $5,000, and this last year they were only $7,000. That does not seem to be a very great increase.

And I want to say when $7,500 postal receipts with a population of 1,786 seems small in Iowa it is considered very large for some other State in the Union.

The CHAIRMAN. The question is on the motion to strike out.

The question was taken, and the motion was rejected.

The Clerk read as follows:

United States post office at Clare, Mich., $35,000.

Mr. JAMES. Mr. Chairman, I move to strike out the paragraph.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

On page 18, amend by striking out line 1.

Mr. JAMES. Mr. Chairman, I notice that this is a Michigan item introduced by one of my colleagues [Mr. LOUD]. The original amount of the bill as introduced was $50,000. The committee has allowed $35,000. Clare, Mich., only had a population of 1,174 in 1890 and 1,326 in 1900 and 1,350 in 1910. I think we ought to have a chance, Mr. Chairman, to criticize undesirable items like this, and I am glad therefore that resolution 400, sponsored by the Public Buildings Committee, and which would have prevented my offering this amendment, was not reported out by the Rules Committee. There is no reason that a town, whether it is in Michigan, Maine, Alabama, or Kentucky, or where it is located, and which only increased 24 in 10 years, that only had postal receipts of $8,590 at the time the bill was introduced by my colleague, is entitled to a $35,000 post office. The bill as introduced will cost $3,600 to maintain, including interest, depreciation of the building and furniture, janitor, heat, electric light, and so forth, or practically three-fourths of the postal receipts of that town. The rent now being paid is $549.

Mr. CLARK of Florida. What did the gentleman say the receipts were in 1915?

Mr. JAMES. Eight thousand five hundred and ninety dollars on January 1, 1916.

Mr. CLARK of Florida. I beg the gentleman's pardon; they were $10,017.88.

Mr. JAMES. The statement I hold from the Treasury Department——

Mr. CLARK of Florida. I got mine from the Post Office Department.

Mr. JAMES. Yes; and when the gentleman's hearings were held, and when Congressmen appeared before the committee on behalf of any item, they quoted to you figures furnished them by the Treasury Department.

Mr. CLARK of Florida. These were the exact figures we had.

Mr. JAMES. So, according to the figures prepared by the Treasury Department, this town only had postal receipts of $8,590.91 on January 1, 1916. I do not believe the people of Clare themselves want a post office of that kind—$35,000.

As I stated, the rent is now only $549. The interest on the proposed $35,000 at 3 per cent would be $1,050. Judging from the experience of the Government, it will cost $960 for janitor-fireman and scrub woman. In addition, it would cost $900 each year for fuel, electric light, and so forth. And judging from the experience of the Government at Newark, N. Y., these figures are correct. For the fiscal year of 1916 at Newark, N. Y., the expenses were as follows:

Light	$303.43
Heat	438.31
Water	24.38
Miscellaneous items	80.92
Ice	15.25
Removing ashes and rubbish	21.75
Washing towels	9.37
Total	893.41

Mr. KELLEY. Mr. Chairman, I notice that my colleague from Michigan [Mr. LOUD] is not on the floor. This town is in his district, and as Mr. LOUD is not here I want to say to my colleague [Mr. JAMES] that I know something about the village or city of Clare, which, I think, perhaps might throw a little light upon the subject of its population. The city of Clare lies partly in Isabella County and partly in Clare County. Now, as I recollect it, only that portion of the city that lies in Clare County is included in the city limits. There are some five or six hundred people who are actually inhabitants of the city of Clare living just across the county line in Isabella County, but are not included in the census for the city of Clare. I think

perhaps that will explain the matter of population. This is quite a rapidly growing, flourishing community in the central part of Michigan. I know if my colleague [Mr. LOUD] were here he could give the House more exact information, but a good many years ago I used to teach school at Mount Pleasant, which is a near-by city, and I know quite a bit about the locality and the location of the town. I particularly recall that it is partly in one county and partly in another, and the portion in Isabella County does not lie within the corporate limits of the city.

Mr. MOORE of Pennsylvania. Does the gentleman say the population of Clare has increased?

Mr. KELLEY. Oh, yes; I am sure it has increased, but what I am saying particularly is that the figures given by my colleague [Mr. JAMES] may mislead the House as to the actual population of Clare, because perhaps five or six hundred people live across the county line who are not included in the figures which he gave.

Mr. MOORE of Pennsylvania. The gentleman from Michigan is a highly respected Member of this House and I would take his word on the question. Does the gentleman think there is a necessity for a new post office?

Mr. KELLEY. I would not go as far as to say that. I have not been in Clare for a good many years. I am only directing my remarks to the question of population, which I wanted to state correctly as I understand it.

Mr. MOORE of Pennsylvania. The rest of the Members are not informed in this matter. Does the gentleman think that item ought to be stricken out?

Mr. KELLEY. I do not. The chairman of the committee [Mr. CLARK] has stated that the receipts of the office of Clare are above $10,000 and I do not see any reason why the item should be stricken out, if other towns where the receipts are no greater are left in the bill.

The CHAIRMAN. The question is on the motion to strike out.

The question was taken, and the motion was rejected.

The Clerk read as follows:

United States post office and other Government offices at Morgan City, La., $40,000.

Mr. JAMES. Mr. Chairman, I move to strike out the paragraph. Morgan City, La., seems to have postal receipts, October 1 last, of $8,370.63. It costs $3,800 to maintain this building. This is another building which the Treasury Department states will not be profitable to the Government. The rent now paid is only $960. Interest alone will be $1,200 per annum on the proposed new building.

The CHAIRMAN. The question is on agreeing to the amendment.

Mr. KELLEY. Mr. Chairman, may I ask the gentleman one question?

Mr. JAMES. Yes.

Mr. KELLEY. I understand that my colleague's objection to various items in this bill is to those where the receipts are less than $10,000. Is that correct?

Mr. JAMES. That is partly the reason; yes; partly the fact that we are facing a deficit of over $300,000,000, and also the fact that I am not in favor of erecting public buildings or buying sites in dead, dying, or decadent towns.

Mr. KELLEY. I would like to ask my colleague whether or not he has made a list of all of such cities included in the bill; and if so, what the aggregate appropriations for these places would be?

Mr. JAMES. I will take each item as we come to it. While I have not made such a list, the Treasury Department has.

Mr. KELLEY. I am asking you if you have made a list and if you have made an aggregate? I would like to know the sum total.

Mr. JAMES. If the gentleman would like to know the list of the different projects that the Treasury Department does not recommend, and which they state could not be built with profit to the Government, I shall be pleased to put it in the RECORD.

Mr. KELLEY. You have not the information?

Mr. JAMES. I have a list of what they consider undesirable items, and of which they do not approve. The officials of the Treasury Department are in position to know whether or not these items are desirable.

Mr. KELLEY. I want to know what the aggregate expense provided in this bill for such projects as you are objecting to amounts to.

Mr. JAMES. I shall be pleased to put in the RECORD the different items criticized by the Treasury Department, and the gentleman can figure up the total amount.

Mr. KELLEY. My colleague has not added these items together?

Mr. JAMES. I shall be pleased to put these items in the RECORD. In the meantime I expect to call attention of the House to each undesirable item as we reach it, and will show why a public building should not be built in the town mentioned, or why a site should not be purchased.

Mr. CLARK of Florida. Mr. Chairman, to show the indiscriminate objection to these items I want to call attention to this one. Here is a town shown by the census of 1910 to have a population of 5,477 people. The amount being paid for rent is $960 a year. There is to be taken care of the post office, the civil service, and the customs service. There is a customs office at Morgan City. The population is vastly more now, and the receipts are $8,700, in addition to the customs, with a population of more than 5,000. And yet gentlemen object. As to these maintenance charges, I think I covered that in my original argument, in which I showed the employment of janitors was folly; that these supplies were folly.

Mr. JAMES. Will the gentleman yield?

Mr. CLARK of Florida. No. It is simply ridiculous. There are no such maintenance charges as the gentlemen are talking about here.

I ask for a vote on the amendment.

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was rejected.

The Clerk read as follows:

United States post office at Mount Olive, N. C., $30,000.

Mr. JAMES. Mr. Chairman, I move to strike out the paragraph.

The chairman of the committee states that the maintenance charges are folly. I wish to show from quoting Rochester, Minn., that $900 and more is paid on buildings of this kind. The light at Rochester, Minn., was $231.57; heat, $435.50; water, $132.11; miscellaneous supplies, $74.69; removing ashes and rubbish, $32.96, which shows that $900 is being paid in small buildings of this kind.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan [Mr. JAMES].

The amendment was rejected.

Mr. JAMES. To show that it is costing this Government $900 in many cases for fuel, light, water, and so forth, I give the following additional figures furnished by the Treasury Department, as per the letter.

TREASURY DEPARTMENT,
Washington, January 11, 1917.

Hon. W. FRANK JAMES,
House of Representatives.

MY DEAR CONGRESSMAN: The department is in receipt of your inquiry in regard to the cost of maintenance of buildings the construction cost of which was $25,000.

The department has only recently undertaken the construction of buildings having a ground area of less than 4,000 square feet. No such buildings have been in service for any length of time, and it is impossible to give any figures based on actual experience as to the cost of their maintenance.

It may be briefly stated that a cost value of $25,000 does not necessarily indicate a building of smaller capacity than one costing $40,000, the difference being possibly due to a cheaper method of construction or the use of less expensive materials. Because, therefore, a building may cost approximately half the amount of another building, it could not be stated that the cost of maintenance would be accordingly decreased one-half.

Plans are now under way looking to the construction of buildings having a lesser ground area than that given above, and an effort has been made to prepare an estimate as to probable cost of their maintenance. As will be noted, the figures do not differ materially from those given you as the result of actual experience in certain buildings, and it must be understood, as stated, that the figures are simply estimates.

	South.	North.
Janitor service	$660	$960
Light	150	200
Heat	300	400
Water	75	100
Miscellaneous repairs	80	75
Ice	50	50
Ashes and rubbish	40	50
Total	1,355	1,835

In regard to the rental of post-office quarters in small towns, in some cases amounting to $1 per annum, it may be stated that this is undoubtedly due to competition among merchants for the advantages in the way of trade accruing to those who set apart a portion of their structures for post-office uses. This is especially illustrated in the case of Long Beach, Cal., to which you refer. This place is a summer resort, and a rental of $100 per annum has been paid, but recently the Post Office Department, as the result of competition among merchants for the advantages as noted above, has accepted a proposal to rent quarters from December 1, 1916, at $1 per annum.

Very truly, yours,

B. R. NEWTON.
Assistant Secretary.

JANUARY 17, 1917.

The Clerk read as follows:

United States post office at Union Springs, Ala., $25,000.

Mr. JAMES. I move to strike out the paragraph.

The CHAIRMAN. The gentleman from Michigan offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 16, strike out lines 8 and 9.

Mr. JAMES. On October 1, 1916, the postal receipts of Union Springs, Ala., were $7,005.01. On January 1, at the time the bill was introduced, the postal receipts were $7,027. The Government is now paying no rent at all at Union Springs, Ala., and this is one of the items condemned by the Treasury Department, which estimates that it will cost the Government $4,800 a year to maintain the proposed structure.

The CHAIRMAN. The question is on the amendment.

The amendment was rejected.

The Clerk read as follows:

United States post office at Blakely, Ga., $6,000.

Mr. JAMES. Mr. Chairman, I move to strike out the paragraph. The population of Blakely, Ga., in 1910 was 1,838. The postal receipts on January 1, last were $6,327.50. At present the Government is paying nothing for rent. The cost of maintenance of the new building will be $4,400. I wish to read regarding this matter of buying sites, from page 68 of the report of the Public Buildings Commission. This Public Building Committee was a very distinguished commission, consisting of the following:

PUBLIC BUILDINGS COMMISSION.

Hon William G. McAdoo, Secretary of the Treasury, chairman; Hon. James C. McReynolds, Attorney General; Hon. Albert S. Burleson, Postmaster General; Senator CLAUDE A. SWANSON; Senator GEORGE SUTHERLAND; Representative FRANK CLARK; Representative RICHARD W. AUSTIN; Sherman Allen, assistant to the chairman; Jay F. Durham, secretary.

In many instances the authorization for the purchase of the site has been made a commitment——

Mr. CRAMTON. If I may interrupt the gentleman at that point. A few minutes ago the gentleman referred to a rule, sponsored by the Committee on Public Buildings and Grounds, with reference to debate upon the bill. Was that a different rule from the rule under which we are proceeding?

Mr. JAMES. It was.

Mr. CRAMTON. I would ask if the gentleman would, in extending his remarks, insert the rule to which he referred. I am not asking him to read it here.

Mr. JAMES. The rule, as introduced by the committee, provided for two hours' debate to be controlled by the gentleman from Florida [Mr. CLARK] and two hours by the gentleman from Tennessee [Mr. AUSTIN], at the end of which time general debate would close, and the only amendments which may be offered may be committee amendments. There would be no discussion of other amendments, and no one but a member of the committee could offer an amendment or even talk on any amendment proposed by the committee.

Mr. CRAMTON. Will the gentleman kindly insert the rule in his extension?

Mr. JAMES. I shall be pleased to do so. The full rule, which is House Rule No. 400, reads as follows:

Resolved, That immediately upon the adoption of this resolution the House shall resolve itself into Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 17052) to increase the limit of cost of certain public buildings, etc.; that in the committee the first reading of the bill shall be dispensed with; that there shall be not to exceed two hours of general debate to be under the control of the gentleman from Florida [Mr. CLARK] and two hours of general debate to be under the control of the gentleman from Tennessee [Mr. AUSTIN], said debate to be confined to the subject matter of the bill; that at the conclusion of the general debate the bill shall be read by paragraphs for committee amendments and no others; that at the conclusion of such reading the committee shall rise and report the bill to the House, whereupon the previous question shall be considered as ordered upon the bill and amendments to final passage.

Page 68 of the report of the Public Buildings Commission goes on, as follows:

In many instances the authorization for the purchase of a site has been made as a commitment on the part of the Government to the ultimate erection of a public building. Since towns and cities often change rapidly, especially in the West, in increase or decrease, this has many disadvantages. This was the case at Goldfield, Nev., where a site and building was authorized May 30, 1908, at a cost of $75,000, but has not yet been erected—

At that time Goldfield had a population of about 18,000, and in 1910 it had, I understand, about 5,000. And, I may say, the Government has not even seen fit to buy the site—

There can be scarcely any advantage in the practice to the Government unless it be that the early authorization permits the acquiring of title in ample time for building operations. The acquiring of the title by the Government takes an average of six months to nine months.

Sometimes this period is much shorter and at other times considerably longer. The site for the public building at Passaic, N. J., was acquired in about one month. The site for the building at Palatka, Fla., has been two years in an attempt to furnish title.

Under present conditions, with the work in the Supervising Architect's Office far back of the authorizations for public buildings, there can be no real public gain, through the authorization and acquiring of sites before a building is authorized. It is quite possible that there may be public loss. It is recommended, therefore, that this practice be abandoned and that sites for public buildings be authorized only when the authorization for the building itself accompanies the legislation.

It is recommended that sites for public buildings be not authorized in advance of the authorization for the buildings. The estimated cost of sites now authorized is $11,847,492.30, of which amount there has been appropriated $5,758,992.30. It is estimated by the Supervising Architect that should buildings be authorized for the sites for which none have yet been provided, at a time which would enable the construction work to be continued without break, that at a rate of progress of 75 buildings per year the last of the sites authorized will not be improved until about 1922. The adoption of the recommendations of this report will, however, materially increase the present yearly output of buildings.

There were authorized in the act of 1910 sites for 143 buildings, but buildings were not provided for upon 114 of these sites until the act of 1913. Nineteen buildings were authorized in the act of 1913 to be placed upon sites authorized prior to 1910. There are now 29 sites, the purchase of which was authorized in 1910, for which no buildings have been authorized.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan.

The question was taken, and the amendment was rejected.

Mr. JAMES. Section 15 of the bill provides for the display of the American flag on all secular days. It is not necessary to pass a $38,000,000 public-building bill in order that the flag shall float on our public buildings. The following letter from the Treasury Department explains itself:

TREASURY DEPARTMENT,
Washington, January 10, 1917.

Hon. W. FRANK JAMES,
United States House of Representatives.

MY DEAR CONGRESSMAN: Referring to your letter of the 6th instant relative to the use of flags on Federal buildings, the regulations of the department for many years have required the daily display of flags on its public buildings, and flags have been furnished for this purpose. The following is an extract from the addenda to printed "Instructions to custodians, 1905," a copy of which has been furnished to each custodian:

"Flags will be supplied as follows: National ensigns through the Office of the Supervising Architect, Treasury Department, and revenue flags through the Customs Division, Treasury Department. National ensigns should be hoisted 'during the hours of business, except when stormy weather prevents its display.' When stormy weather or high winds prevent the flying of the large flag, the small storm flag should be hoisted, unless the velocity of the wind is such that it is considered inadvisable to do so. Employees in charge of hoisting and lowering flags should be instructed to fold same when not in use and place them where they will not be soiled or torn. If flags are wet when taken down, they should be spread out and thoroughly dried be-

fore being folded and stored. When the flags show signs of wear and tear they should be repaired. When they become so worn and whipped out as to be beyond repair and no longer serviceable, they must be burned, either in the furnace in the building or other available place."

In addition to the above regulations, the building inspectors of this department have instructions to explain to custodians that the flag is to be taken down at sunset and stored for the night, to be hoisted again at the resumption of business on the following workday; also that in addition to being displayed on all working days when the weather permits, it is to be hoisted on holidays (not including Sunday, except on the second Sunday in May, designated as Mothers' Day), and on Memorial Day it is to be half-masted. These inspectors are furthermore instructed to see that the regulations referred to are closely observed.

New national ensigns are furnished by the department to its Federal buildings as frequently as may be necessary to replace those worn out.

Very truly, yours,

B. R. NEWTON,
Assistant Secretary.

The present bill includes buildings or buildings and sites which the Treasury Department states "could not probably be built with profit to the Government" and where the postal receipts were less than $10,000 on January 1, 1916:

WHERE POSTAL RECEIPTS WERE LESS THAN $5,000.

Name of place.	Postal receipts.	Present bill allows—	Population in 1910.	Present rent.	Treasury estimate of maintenance of new building.

The last column, "Maintenance," indicates the approximate cost of the maintenance of a building constructed in accordance with proposed legislation in the bill. Where site only is authorized the estimate is, of course, based upon the suppositious cost of a building which will probably be subsequently authorized.

A Code Suggested by the American Institute of International Law to Secure the Freedom of the Seas.

EXTENSION OF REMARKS

OF

HON. HENRY W. TEMPLE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 26, 1917.

Mr. TEMPLE. Mr. Speaker, in the President's address on "A league of peace," delivered before the Senate on January 22, the following paragraph occurs:

> And the paths of the sea must alike in law and in fact be free. The freedom of the seas is the sine qua non of peace, equality, and cooperation. No doubt a somewhat radical reconsideration of many of the rules of international practice hitherto thought to be established may be necessary in order to make the seas indeed free and common in practically all circumstances for the use of mankind, but the motive for such changes is convincing and compelling. There can be no trust or intimacy between the peoples of the world without them. The free, constant, unthreatened intercourse of nations is an essential part of the process of peace and of development. It need not be difficult either to define or to secure the freedom of the seas if the Governments of the world sincerely desire to come to an agreement concerning it.

In considering this paragraph a question must arise concerning the code which might be offered to the nations for their adoption in lieu of the rules hitherto thought to be established. Perhaps light may be thrown on this question by an examination of the code printed below, which has been proposed by the American Institute of International Law, and which is intended to state in a new way the rights and duties of neutrals on the high seas from the point of view of the neutrals.

The seas are already free in time of peace. The new code provides for the freedom of the seas in time of war. It abolishes blockade entirely, forbids interference with the mails, declares that merchant ships of the enemy, as well as those of neutrals, shall be free from capture and abolishes the right of visit and search. Even vessels carrying contraband may in no case be confiscated or sunk under any pretext whatever, though the contraband itself may be confiscated or destroyed by the captor.

This code was prepared at the suggestion of the Hon. Robert Lansing, Secretary of State, and was submitted to the American Institute of International Law at its meeting in Habana, Cuba, last Monday (January 22, 1917), the day and almost the hour at which the President was delivering his address before the Senate.

The American Institute of International Law is a body of 105 members, made up of delegations of five men chosen by each of the national societies of international law in the 21 American Republics. Its governing board consists of its officers and two elected members and is composed as follows: Honorary president, Elihu Root; president, James Brown Scott; secretary general, Alejandro Alvarez, Chile; elected members, Antonio Bustamente, Cuba; Joaquin de Casasus, Mexico.

The proposed code grew out of a suggestion made to the institute by Mr. Lansing more than a year ago in the following memorandum:

JANUARY 3, 1916.

At the first meeting of the institute I had the honor to direct attention to the imperfect code or rules which define and govern the relations between belligerents and neutrals. These rules, which have grown up during the past 125 years, and have been in some cases differently interpreted by courts of different countries, have been frequently found inadequate to meet new conditions of warfare, and as a result every war has changed, modified, or added to the rules, generally through the process of judicial decisions.

The prize courts of belligerents have thus become the interpreters of belligerent rights and neutral obligations, and their interpretations evidence an unconscious prejudice arising from overappreciation of the needs of the belligerent. Writers on international law have relied upon the prize-court decisions in dealing with the subject of neutrality, so that they have laid down rules formulated indirectly from a belligerent's point of view.

In addition to these influences affecting a code to govern the conduct and treatment of neutrals, international conferences and congresses have generally confided the drafting of rules relating to belligerent and neutral rights to military and naval experts, who naturally approach the subject from the belligerent's standpoint. Thus judicial decisions, text writers, and international agreements have given all the advantage to the belligerent and have shown little regard for the rights of neutrals.

It would appear that it is time to reverse this process of treatment of the subject of neutrality and to deal with it from the point of view of the neutral.

I would, therefore, suggest that a committee be appointed to study the problem of neutral rights and neutral duties, seeking to formulate in terms the principle underlying the relations of belligerency to neutrality, rather than the express rules governing the conduct of a nation at war to a nation at peace.

I would further suggest that the subject might be advantageously divided into two parts, namely, the rights of neutrals on the high seas and the duties of neutrals dependent upon territorial jurisdiction.

In view of the past year and a half of war the present time seems particularly opportune to study this question, and this institute, being composed of members from neutral nations, is especially fitted to do this from the proper point of view and with the definite purpose of protecting the liberty of neutrals from unjustifiable restrictions on the high seas and from the imposition of needless burdens in preserving their neutrality on land.

Mr. Lansing's proposal was accepted by the institute at its meeting in Washington in January, 1916. The code has been prepared and was submitted to the institute at its meeting in Habana, Monday, January 22, 1917. It will be referred to the National Society of International Law in each of the 21 American Republics in the hope that the code may be ready for indorsement by the institute at its annual meeting in 1918.

The code follows as it appeared in the New York Times of January 23, 1917:

CHAPTER I.

GENERAL DECLARATIONS.

ARTICLE 1. Neutrality is the situation of States which, in the course of a war, are not participants therein.

Neutrality, especially maritime neutrality, must hereafter be regulated not merely on the basis of the rights of the belligerents, but

especially on that of the rights of neutrals, by safeguarding commercial liberty and releasing neutrals from the useless burdens resting on them with a view to observing neutrality. This new conception of neutrality is demanded by reason of the bonds of solidarity which exist between all the members of the society of nations.

ART. 2. In case of war between two or more countries, the rest of the States must refrain from increasing the number of belligerents.

If not able to prevent the conflict, they must do all they can to put an early end to it, neutrality not merely being an impartial duty between belligerents equally respectful of right, but a duty of pacification toward mankind.

CHAPTER II.

THE CONFERENCE OF NEUTRALS.

ART. 3. When war is declared, the neutral States of the entire world shall, upon the request of the administrative council of the permanent Hague court, meet in conference in order:

1. To take all necessary measures to maintain the freedom of commerce and navigation of the neutral countries.

2. To determine the list of articles to be regarded as contraband.

3. To see, especially, to the observance of all neutral rights and duties established in these present rules, and to exercise any other powers granted them by the said same rules.

ART. 4. The conference of neutrals shall gather in The Hague Peace Palace, unless the council directs otherwise.

The belligerents shall be invited to send representatives, who may take active part in the discussions and have the right to vote.

Resolutions shall be adopted by a majority vote and bind the minority.

ART. 5. In important cases the conference may authorize severe measures against the belligerent or against the neutrals refusing to respect the rights and duties of neutrality.

Such measures may be public blame, pecuniary indemnity, commercial boycott, and even the use of an international force, to be determined by the conference.

ART. 6. The conference of neutrals may organize in any number of commissions thought necessary, one of these commissions to be especially designated to consider such pecuniary indemnities as are referred to in these rules.

CHAPTER III.

FREEDOM OF COMMERCE IN TIME OF WAR.

ART. 7. The commercial blockade, both of the belligerent ports and the maritime zones along belligerent coasts, is formally forbidden, no matter what the means by which the blockade is to be effected.

ART. 8. Private property in the open sea is inviolable. Belligerent and neutral merchant vessels may in no case be confiscated, nor sunk, under any pretext whatever.

If carrying contraband, this may be confiscated or destroyed by the captor.

ART. 9. The right of search is abolished.

The local authorities of each country shall visé the papers of merchant vessels leaving port for a belligerent port.

Belligerent vessels may not stop neutral merchant vessels or merchant vessels belonging to the other belligerent, except to demand examination of the vessel's papers. Despite the regularity of the said papers, they (belligerent vessels) may proceed to the search of merchant vessels. If shown that the vessel does not carry contraband, the searching vessel shall be condemned to pay to the vessel searched a fine to be determined by the conference of neutrals; and in case the vessel searched carries contraband, the country whose authorities viséed the false passport shall be condemned to pay an indemnity to be determined by the said conference of neutrals.

Vessels not carrying duly viséed papers may be searched conformably to present international practice without the right to an indemnity.

ART. 10. Belligerent merchant vessels may not refuse to carry from one neutral port to another neutral port persons or merchandise under pretext that they (persons or merchandise) belong to a nation with which their (belligerent merchant vessels) country is at war.

Exception to be made regarding persons who by reason of their age or condition might serve their country and who might be presumed to leave in order to join the enemy forces of the country to which the vessel belongs.

ART. 11. The official or private postal correspondence of neutrals or belligerents found in the open sea on board a neutral or enemy vessel is inviolable. It may not be seized, even under the pretext of the police right of warships over merchant ships of their own nationality.

CHAPTER IV.

RIGHTS AND DUTIES OF BELLIGERENTS.

ART. 12. Belligerents are held to respect the sovereign rights of neutral powers and to refrain, within neutral territory or neutral waters, from committing acts which, if tolerated by neutral powers, would constitute a breach of neutrality.

ART. 13. Belligerents are especially forbidden to make of neutral ports and waters the base for naval operations against their adversaries, and particularly to install therein wireless stations or other apparatus intended as a means of communication with belligerent land or naval forces.

ART. 14. Regarding the sojourn, victualing, and provisioning of belligerent vessels in the neutral ports, roadways, and jurisdictional waters, distinction must be made between warships and merchant vessels.

The following dispositions concerning warships are also applicable:

(1) To ordinary auxiliary vessels.

(2) To merchant vessels transformed into war vessels, conformably to convention 7 of The Hague.

(3) To merchant vessels giving continuous or occasional aid to the war vessels of their country, if they have not been transformed into war vessels according to the said convention.

(4) To neutral vessels giving continuous or occasional aid to belligerent vessels, and the following dispositions regarding merchant vessels are likewise applicable to vessels which have been auxiliary vessels, but retransformed into merchant vessels according to article 18.

ART. 15. Belligerent warships shall not have access to the ports, roadways, and territorial waters of neutral powers, except in the duly justified case of force majeure.

They may not there repair beyond what is indispensable to the safety of their navigability, and not in any manner whatever to increase their military capacity. The neutral authorities shall establish the nature of repairs to be effected, and these must be carried out as rapidly as possible. They must depart immediately after the force majeure has ceased to exist.

It is especially forbidden said war vessels to renew or to increase their military provisions or armaments or to complete their crews.

The need of revictualing, of fuel, or provisions does not constitute a force majeure permitting a warship to enter the ports, roadways, or territorial waters of neutral powers.

ART. 16. Belligerent merchant vessels may take fuel and provisions on board in neutral ports subject to the conditions especially determined by the local authorities, or, wanting these special conditions, in the same manner as in time of peace.

ART. 17. If proven that the merchant vessel taking fuel or provisions on board in a neutral port has passed all or part of such provisions to a belligerent warship within or without the territorial waters of the neutral power, no fuel or provisions shall thereafter be furnished in such country to any ship of the company to which belongs the vessel committing such infraction.

ART. 18. If ascertained by its installations or other facts, a merchant vessel is suspected of furnishing to the warships of its country, provisions it asks for, the local authorities may, according to the circumstances, regard it as a naval auxiliary, and on this account refuse to it any provisions, or request the agent of the company to which the vessel belongs to furnish bail guaranteeing that the said vessel will neither help nor assist the belligerent.

When a vessel is suspected, the case must be notified at once to all other countries, through the medium of the conference of neutrals, especially so if the vessel has furtively left a port of the country.

ART. 19. Belligerent auxiliary vessels retransformed into merchant vessels shall be admitted as such into neutral ports, provided:

"1. That the retransformed vessel has not violated the neutrality of the country where it arrives;

"2. That the retransformation has been effected in the ports or in the jurisdictional waters of the country to which the vessel belongs, or in the ports of its allies;

"3. That such retransformation be effective; that is to say, that the vessel, neither through its crew nor through its installations, shows that it can, as an auxiliary, as before, give aid to the armed fleets of its country;

"4. That the Government of the country to which the vessel belongs notify to all the nations interested, through the medium of the conference of neutrals, the names of the auxiliary vessels which shall have lost this quality, to resume that of merchant vessels; and

"5. That the said Government agree that in the future the said vessels shall not again, as auxiliaries, be destined to the service of the armed fleet."

ART. 20. Aeroplanes, dirigibles, or airships of the belligerent countries may not fly over the territory or over the jurisdictional waters of the neutral powers. Infraction of this rule entitles to the confiscation of the craft, if possible, and, at any rate, to an idemnity to be determined by the conference of neutrals.

CHAPTER V.

RIGHTS AND DUTIES OF NEUTRALS.

ART. 21. In a war distinction must be made between the acts of aid on the part of neutral States and acts of commerce on the part of the individual; the former only are contrary to neutrality.

Conveyance, on whatever ground, made directly or indirectly by a neutral power to a belligerent power, of warships, munitions, or war material, is forbidden.

ART. 22. If a neutral power, notified of the opening of hostilities, learns that a belligerent warship is within one of its ports, roadways, or within its territorial waters, it must inform the said vessel that it must clear within 24 hours or within the time prescribed by the local law.

ART. 23. The neutral Government must use all available means to prevent within its jurisdiction the equipping or arming of any vessel which it has reason to believe is intended for cruising purposes or for aiding in hostile operations against a power with which it is at peace. It is likewise bound to exercise the same care in order to prevent the departure from its jurisdiction of any vessel intended for cruising purposes or for aiding in hostile operations, and which vessel, within the said jurisdiction, might have been adapted, in part or in its entirety, to war purposes.

ART. 24. Neutral powers are not bound to prevent the exportation or the transit, for the account of the one or the other belligerent, of arms, munitions, and, in general, of anything that may be of any use to an army or to a fleet.

ART. 25. Neutral Governments must prevent agents of the belligerent Governments from enrolling, within their territory, their (the belligerents') nationals, and especially to prevent their (the nationals) being summoned under the penalty of being declared deserters, should they not answer the summons.

They shall not, however, prohibit the voluntary departure of the nationals of the belligerent States, even when organized on a large scale.

Neutral Governments might, however, forbid the voluntary departure for the purpose of joining the forces of one of the belligerents of persons who, being its (the neutral's) nationals, are also nationals of one of the belligerent countries, except by declaring that in enrolling they intend to lose the nationality of the country from which they leave.

ART. 26. In war time the use of the telegraphs or cables of neutral powers by the nationals of the belligerent powers shall be subject to measures edicted by the local authorities.

ART. 27. Neutral powers must use all available means to prevent violation of their neutrality within their ports or roadways and within their territorial waters.

ART. 28. Belligerent war or merchant vessels entering the ports, roadways, or jurisdictional waters of a neutral country without the right to do so according to the provisions of these rules may be interned by the neutral country.

A vessel shall be deemed interned from the moment it is ordered interned by the neutral local authorities, even in case a request to reconsider is made by the infracting vessel.

ART. 29. Interning of a vessel and of its crew must be effected in the place and in the manner deemed most appropriate by the interning country.

The costs of internment are borne by the infracting vessel.

The country which interns a vessel is not responsible for injuries sustained by the interned vessel, except in the case of gross negligence.

ART. 30. When a merchandise-bearing vessel is to be interned in a neutral country the part of the merchandise destined for the neutral country must be unloaded, and the part destined for other ports must be transshipped.

ART. 31. In case where, in consequence of naval operations taking place without the jurisdictional waters of a country, there should be killed or wounded provisional hospital vessels, under the control and watchfulness of the neutral Government, may be sent to the scene of the action, and the said vessels shall to the end of their mission enjoy absolute inviolability.

The said wounded or wrecked shall not be interned, but given their freedom as soon as possible.

CHAPTER VI.

OBSERVANCE AND SANCTIONS OF THE LAWS OF NEUTRALITY AND BELLIGERENCY.

ART. 32. The belligerent who violates the rights of neutrals established by these rules or by the conference of neutrals shall pay to the State interested a pecuniary indemnity to be determined by the said conference.

In case a belligerent commits at the same time and against the same country several infractions of neutrality, each of such infractions must be indemnified separately.

The conference of neutrals shall determine the manner of payment of the amount of the indemnity, and in case of need determine the measures and means to which neutrals may resort to secure payment of the amount due by the infracting belligerents.

ART. 33. In case of war the local authorities of neutral countries are especially charged with:

(1) Seeing to the observance, within the territory of the country, of the resolutions of the conference of neutrals.

(2) Settling provisionally all controversies of an urgent character that may arise between the belligerents and the country where reside the authorities, especially controversies concerning the interning of vessels, without prejudice as to what may be finally decided by the said authorities.

(3) Viséing the papers of merchant vessels leaving the port of the country. The said documents shall certify as to the nature of the merchandise carried by the vessels, so as to liberate them from the right to search.

(4) Deciding questions concerning requests for the embarkation on board a merchant vessel of a belligerent country of nationals of the other belligerent country or countries, according to article 10.

ART. 34. The conference of neutrals referred to in chapter 2 might appoint commissions composed of neutrals, whose duty it would be to watch in each belligerent country over the manner in which the laws and customs of war are there observed.

Upon the basis of the information and reports of these commissions the said conference, in the name of all the neutral countries, may, if deemed appropriate, protest against the violation of the laws and usages of war.

Omnibus Public-Buildings Bill.

EXTENSION OF REMARKS
OF
HON. FRANK CLARK,
OF FLORIDA,—
IN THE HOUSE OF REPRESENTATIVES,

Friday, January 26, 1917.

Mr. CLARK of Florida. Mr. Speaker, the Florida Times-Union, a morning daily newspaper published at Jacksonville, Fla., and which for many years has been the leading newspaper published in that State, in its issue of January 24, 1917, contains an editorial on the omnibus public-buildings bill which so effectually answers the miserable twaddle lately filling the columns of the New York Sun and other such unreliable sheets that I want the country to read it. The editorial is as follows:

AS TO THE PORK BILL.

From many sides comes the charge that the South is in the saddle and is determined to loot the Treasury. For this we would not care, but that some of our friends who should know better are joining in the cry and pour out the vials of their wrath on a Floridian who has become by virtue of long service the chairman of the committee which has charge of the bill, and does not shrink from the responsibility of advocating the measure, prepared with the sanction of the majority, very largely to supply the demands made by the executive departments. Let us go a little into the situation as it exists.

For the first term of President Wilson Congress has made no general appropriation for Government buildings and grounds. Democrats have attempted in good faith to obey the demand of the party for a decrease of national expenses. For this term the bill carries a proposed appropriation of $32,000,000 for buildings and grounds. Is this sum too large? Does it show that the South is trying to loot the Treasury? Let us make a comparison.

For the years from 1906 to 1910 Presidents Roosevelt and Taft approved appropriations made by a Republican Congress of $94,000,000, wherein the South had only such interest as might be accorded her by her political opponents. In view of the fact that her interests had been neglected for 50 years, her share was much less than just. Were the Republicans "looting the Treasury" when they were in the saddle?

The whole sum carried by the bill now under discussion is $32,000,000. Of this, ostensibly, the 11 States of the Confederacy get $6,367,000. But from this provision must be subtracted $1,000,000 to be received from the sale of Government property at Dallas, Tex.; $50,000 is to come from the sale of property in Columbia, S. C.; $500,000 is to be spent for a quarantine station at New Orleans, which is a national affair entirely. Thus the 11 States usually made responsible for a southern policy will get $4,817,000. Is that extravagant? Let us go further:

The same bill carries an appropriation for the State of Illinois alone of $5,210,000—more than the 11 Southern States will get which are accused of "looting the Treasury" by taking something of what the Government should provide for their Government business after 50 years of neglect. Of the whole sum appropriated by the bill of $32,000,000, the 11 Southern States and the border States, including Oklahoma and West Virginia, get $7,143,000, from which should be taken the half million for the New Orleans quarantine station, while the North and West get $25,000,000, New York and Illinois get $7,478,000, which is $335,000 more than the 16 States usually included in the South.

It is charged that the South gets more than her share in the bill—the charge is made by prejudice and accepted by ignorance or carelessness. It is urged that the South pays little of the income tax, but she contributes her full share and more to the income which under Republican rule have taxed her production and consumption most heavily.

Now, what of the "pork" in pension legislation? The South has made no war on this outlay—partly because her motives would have been criticized. But Gen. Bragg, who was a distinguished Union soldier, said in Congress that the most of it was pure graft—he was Gen. Edward S. Bragg, who commanded "the Iron Brigade." The South's attitude was expressed by her Senator, John T. Morgan, who said in the Senate: "I'll vote for any pension bill you bring in here. That of it which is just is a monument to southern valor that withstood overwhelming numbers, though we were clad in rags and hungered for food. That of it which is mere gratuity, granted for no service, is your disgrace, not ours; I am for the bill."

The proposal to reclaim the swamp lands in the South should be discussed exhaustively, but the cry of southern pork will be a boomerang while the South waits in vain for the return of millions illegally taken from her, and declared to be taken illegally by the courts; what if the South asked for justice?

Vocational Education.

EXTENSION OF REMARKS
OF
HON. BENJAMIN K. FOCHT,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, January 26, 1917.

Mr. FOCHT. Mr. Speaker, as the broad, humanitarian purposes of vocational education are becoming better understood the subject is being discussed with enthusiasm by teachers and educators everywhere. As an evidence of the comprehension of the purport of the new phase of training for useful occupations, so that the boys and girls of our land may get a fair start in life and understand how to make an honest and honorable living with no place too high to aspire to, I submit the following letter received from one of Pennsylvania's leading educators, Prof. A. B. Hess, superintendent of the public schools of Chambersburg, Pa.:

CHAMBERSBURG SCHOOL DISTRICT,
Chambersburg, Pa., December 14, 1916.

Hon. B. K. FOCHT, *Washington, D. C.*

MY DEAR SIR: In reference to vocational education: This phase of public-school education demands a thorough and intense study of the future effects on American industries, the efficiency of American workers, a full realization of their prosperity. When we consider the fact that a large percentage of our boys and girls must become wage earners, and that they are forced to begin the battle of life at an early age, then some truths must stare us in the face:

(a) The higher the skill possessed by the mechanic, the more valuable his labor both to himself, his employer, and his community.

(b) The more efficient labor becomes, the higher wages it should command.

(c) A large percentage of our students never graduate. Has the public-school system been inadequate?

(d) A large percentage of our graduates have been misfits industrially, socially, economically, and professionally. Would not vocational or industrial training have opened up to them avenues of acquiring a higher elevation of skill and efficiency?

(e) The real object of our system of education—the preparing of all our students for useful citizenship, recognizing no caste or class, but training them for continued growth and increasing efficiency.

(f) Is there a growing need for the vocational schools in the United States? Study the list of graduates from our schools, and above all those children who leave school at the age of 14 or 15 years. We have considered this class but partially, and whether we view it from the standpoint of the child or the State it is of infinite consequence. It is the right of these children to be given an education that will make them efficient and reasonably happy, able properly to maintain themselves and meet the various obligations of life and citizenship. Shall we longer continue to deprive a single child of an education, the fundamentals of right living, accomplishment, and social service?

(g) Modern processes have left our children almost wholly out of touch with practical life. The new conception places the child back into practical life, but retains the cultural, the abstract instruction, and aims to send him out, not hating school, shirking, learning to evade and to fail, but rather to accomplish and succeed. Our public schools must be systematized thoroughly, comprehensively, and with the sole view of utmost efficiency; efficiency in every direction to the last degree and for the last child.

(h) With these thoughts and problems before us, this new conception of public-school education, shall we plan our courses so that we shall become a leader in industrial as well as cultural education, go with the procession, or follow in the wake?

Federal aid will assist tremendously in bringing about better results. The passage of House bill No. 11250, as amended, will be a distinct forward step. With State and Federal aid the individual school district will be enabled to accomplish much for the vast number of boys and girls—the Americans of the future, the immortals of eternity.

Sincerely, yours.

A. B. HESS.

Organizing a New Congress.

EXTENSION OF REMARKS
OF
HON. CHARLES H. SLOAN,
OF NEBRASKA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 27, 1917.

Mr. SLOAN. Mr. Speaker, the approaching end of the Sixty-fourth Congress, the impending question of an extra session, the close race of the two leading parties in the House of Representatives, the important position occupied by Members of minor parties, and the passing of Members elected to the Sixty-fifth Congress all make the organization of the next House of Representatives an interesting subject to the membership and the country at large.

A well-written article, covering the closely contested organization battles of the House since the beginning of the Government, has been written by Hon. E. C. Snyder, Washington correspondent of the Omaha Bee, and was recently published in that great newspaper. It will be of interest to many readers of the RECORD. I therefore submit it:

ORGANIZING A NEW CONGRESS.

[Edgar C. Snyder, Washington correspondent of the Bee.]

For the fifth time in the history of Congress the office of Clerk of the House of Representatives becomes of supreme political importance.

No party has a majority in the House elect of the Sixty-fifth Congress. The process of organization of the new House must begin with the Clerk of the present House presiding until a Speaker is elected. By time-honored practice, fashioned after the rule of the British Parliament, the Clerk in the next former Congress takes the chair and holds it until the Speaker is chosen. That practice, with one exception, has been followed in the American House ever since the first Congress.

Congress had been running along smoothly for 50 years on this understanding when, in 1839, a House was elected which was politically so heterogeneous a mass that just what were the duties of the Clerk as presiding officer came seriously into question. The first Clerk to be entangled by difficulty was Hugh A. Garland, of Virginia, in the Twenty-sixth Congress, 1839. A House had been elected without any party having a majority, the parties then contending for power being Whigs and Democrats. It proved to be the most disorderly and uncontrollable House that had met in the history of Congress. Garland, who had been Clerk in the preceding Congress, according to custom, took the chair at the opening of the Twenty-sixth Congress and proceeded to call the roll. The call had got as far as the State of New Jersey when the Clerk stopped, calling attention to the fact that the claims of five of the seats from that State were in dispute, and saying it was for the House to decide what action should be taken as to them. The Members of the House had been expecting trouble over New Jersey's representation. That State had a law providing for the election of its six Members en bloc, the six receiving the highest number of votes being elected. It had been a very close election, with both Whigs and Democrats claiming victory and charging fraud against each other. One party brought certificates from the governor and the other certificates from the secretary of state. The Whigs had the governor, and when the Clerk failed to call the names of the five Members who had the governor's certificates there was an angry protest from the House Whigs. The Clerk refused to proceed until the House decided the question for itself. The Democrats were quite as insistent and vehement as the Whigs, charging fraud and declaring the Clerk had no right to yield to the dictation of the Whigs. Thereupon arose a long and acrimonious debate as to the duties of the Clerk. It continued 10 days. At times it was characterized by the wildest disorder. The Sergeant at Arms was kept busy with his mace, trying to restore order and prevent Members from riotous conduct. Words led to blows, and there were not a few fisticuff fights.

It was the venerable John Quincy Adams, then in his seventy-second year, and serving his third term in the House since he had been President, who led the way to a settlement. Eloquently rebuking the House for the conduct which destroyed its usefulness, he ventured to put a question to it which called for a vote. Representative R. Barnwell Rhett, of South Carolina, offered a resolution that Mr. Adams preside until a Speaker was elected. The resolution was adopted, and that, after some days of debate, let to the election of Robert M. T. Hunter (Democrat), of Virginia, who had evinced a fair disposition toward the Whigs, on the eleventh ballot.

The next close contest over the organization of the House occurred in the Thirty-first Congress, when Clerk Thomas J. Campbell, of Tennessee, had to preside and Robert C. Winthrop, of Massachusetts, was chosen Speaker, and again in the Thirty-fourth Congress, when Clerk John W. Forney, of Pennsylvania, presided until Nathaniel P. Banks, of Massachusetts, was chosen Speaker. Another political conglomerate composed the House. The Whig Party was about to break up, the Republicans were growing, and northern and southern Democrats were at odds, though together they had a plurality of strength. Banks was finally elected after a struggle from early in December until February 1. The next and last great struggle over organization, and the most seriously exciting to the entire country, was in the Thirty-sixth Congress, when James C. Allen, of Illinois, had to preside as Clerk until a choice of Speaker.

In each of the last prolonged contests for Speaker over a hundred different Members received votes in the balloting. In the Thirty-sixth over half the Members were voted for. A resolution to vote for all the Members alphabetically to try out their strength was seriously considered. One Member thought the House ought to resolve to have no light, fuel, or food until a Speaker was elected. On January 30 John Sherman, the Republican candidate, who had been receiving the votes of his party all along, while the Democrats were voting for first one and then another of their leaders, withdrew. On February 1 William Pennington (Republican), who had been governor of New Jersey, was elected Speaker. Then the much-tried Clerk, James C. Allen, found relief. It was some time in April before the other officers of the House were elected. It is a singular fact that Pennsylvanians have held the office of Clerk during half the life of Congress, with Kentucky next in possession.

South Trimble, present Clerk, due to preside at the opening of the next Congress, should approach the ordeal with no misgivings. He has been three terms a Member of the House and has had an experience presiding over a legislative body amid tragically troublous times unequaled by any living man. He was speaker of the Kentucky Legislature during the Goebel contest for governor, when not only Goebel lost his life by assassination, but within a month over 30 men were killed in and around the State capital, when the State militia, backed by 2,500 armed mountaineers, sworn to prevent Goebel's seating, precipitated a period that tried the souls of all Kentuckians. Speaker Trimble so well acquitted himself that his people elected him to Congress. Retiring at the end of his third term, he was elected Clerk in the Sixty-second Congress, a post in which he has more than met the expectations of his Democratic supporters and won the approbation of all parties.

Whether Clerk Trimble will succeed himself largely depends upon himself. Barring death or resignation, he will be confronted with a House composed of 215 Democrats, 215 Republicans, and 5 belonging to neither party. The five not elected by either party and who defeated regularly nominated candidates of both parties are A. V. Fuller, ninth Massachusetts, Independent Republican; THOMAS D. SCHALL, tenth Minnesota, Progressive; MEYER LONDON, twelfth New York, Socialist; CHARLES R. RANDALL, tenth California, Prohibitionist; and WHITMELL P. MARTIN, third Louisiana, a "Progressive Protectionist."

According to expectations of the leaders of the two parties, it is regarded as likely that SCHALL and Fuller will support the Republicans, while LONDON and RANDALL will vote with the Democrats. So the question arises and will grow in importance, What course will MARTIN take?

What "Judge MARTIN," as he is familiarly called, will do he has not given the slightest indication, nor is there any hint as to what side will have his vote on the election of Speaker and the subsequent organization. The Republicans earnestly point to the fact that he has a serious grudge against the Democrats, and that, as given in his biography in the Congressional Directory, he is the "first non-Democratic Congressman to be sent from Louisiana in over 25 years." On the other hand, Democrats claim that Judge MARTIN, coming of Democratic antecedents, from a district and State overwhelmingly Democratic, and himself long a Democrat, will not likely depart from affiliation in their hour of need with his former party associates. Thus the office of Clerk, held by Mr. Trimble, assumes a power and significance it has not had occasion to exercise in nearly 60 years.

Rivers and Harbors Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. WILLIAM KETTNER,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 27, 1917.

Mr. KETTNER. Mr. Speaker, yesterday I was called away from the House for a short time, when I was in attendance at the office of the Secretary of the Navy, with Mr. Rufus Choate, representative of the San Diego Chamber of Commerce, at the ceremony of the opening of the radio station at San Diego, the largest in the United States, and where I had the pleasure of sending the following message:

Washington salutes San Diego, first port of call, by wireless. Felicitations extended through you to people on completion greatest radio station in United States, made possible by our esteemed friends, Secretary Daniels and Admiral Griffin.

On my return to the House I found that Mr. STAFFORD had made a point of order on an item in the rivers and harbors bill reading as follows:

"SEC. 4. That the Atchison, Topeka & Santa Fe Railway Co., of Kansas, a corporation created under and by virtue of the laws of the State of Kansas, be, and it is hereby, granted authority to maintain its wharf, known as Long Wharf, in the harbor of San Diego, Cal., where the same extends across certain submerged lands of the United States, ceded to the United States by act of the Legislature of the State of California, approved March 9, 1897, which said submerged lands lie in front of certain upland property of the United States described as lots 1 to 19 of block 18 of the city of San Diego, upon the following conditions and limitations: That the United States shall have free use of the so-called 'west wharf' of the said railway company, adjoining and connected with the said 'long wharf' in the harbor of San Diego, under such rules and regulations as may from time to time be agreed upon between the local representatives of the railway company and the commanding officer of Fort Rosecrans, Cal.: *Provided*, That if, at any time, the said parties shall fail to agree as to said rules and regulations, the then existing status of the occupancy and use of said wharf shall not be disturbed until the controversy shall be referred to the general manager of the railway company and the department commander, Western Department, United States Army, for decision, and an agreement shall have been reached by them in the matter: *Provided further*, That the United States shall have the right to make such improvements to the said 'west wharf' at its own expense as may be necessary to give the United States adequate and reasonable accommodations, provided such improvements shall be made without unnecessary interference with the operation of the railway company in its relations to the public as a common carrier and in its use of the said wharf as such common carrier: *And provided further*, That the railway company shall not be required to add to or alter the

said 'west wharf' or to add to or alter the warehouse and storeroom accommodations connected therewith. The right to alter, amend, or repeal this section is hereby expressly reserved."

The Chairman in sustaining the point of order makes the following statement:

"The Chair understands that the jurisdiction of this committee is over rivers and harbors. This proposition is to grant the use of this wharf as a railroad terminal. The point of order is sustained. The Clerk will read."

The facts of the case are as follows:

The wharf as built under a 20-year franchise, granted in 1878 to Messrs. Babcock & Story, was assigned to the Atchison, Topeka & Santa Fe Railway Co. in 1886, and upon the latter's application the franchise was renewed in 1905 for a further period of 20 years.

A strip of land belonging to the United States extending out into the bay some 2,000 feet, a corner of which is crossed by this wharf in 30 feet of water, was ceded by the State of California to the United States in 1897.

The following is a letter from Mr. A. G. Wells, general manager of the company, dated October 7, 1915, addressed to the Secretary of War:

Had the provisions of the California statute of 1897 been brought to our notice, we would in 1905 have sought the consent of the United States Government to occupy this land when application was made for the extension of the franchise. Until our conference with Capt. Quinlan we were under the impression that the acts of the Secretary of War and Chief of Engineers, taken in conformity with the law authorizing them to control navigation under the commerce clause of the Constitution, gave implied authority to occupy the national-defense land so long as the interests of the military were not disturbed.

Understanding that it is not the present desire of the War Department to require the removal of this wharf, application is hereby made in behalf of the Atchison, Topeka & Santa Fe Railway Co. for a license to occupy, with the wharf, that portion of the land in question, subject to the approval of Congress at its next session, which approval will be sought by this company through a Member of Congress as soon as notice of the grant of the revocable license by the Secretary of War is received.

The Atchison, Topeka & Santa Fe Railway Co. in consideration for this grant agrees, in return for the privilege sought and for the period during which it shall enjoy same, to permit the free use of its west wharf in the Bay of San Diego for the accommodation of and without expense to the Federal Government in accordance with such rules and regulations as may be entered into from time to time by the local representatives of the railway company and the proper bureaus of the Federal Government, it being understood that in case of failure of such to agree the status quo shall not be disturbed until decision is made by agreement of the general manager of the railway company and the commanding general of the Western Department of the United States Army.

Further, that nothing shall preclude the Federal Government from, at its sole expense, improving or adding to the accommodations furnished by the railway company upon said west wharf; that the spirit of all arrangements made for the use of the said west wharf and measures thought necessary to be undertaken by the Federal Government for improving such accommodations are to be understood as intending to secure to the Federal Government reasonable accommodations and to permit it to add, at its expense, such necessary and reasonable improvements as will make such accommodations adequate; and all are to be made and used without unnecessary interference with the activities of the railway company in its relations to the balance of public as a common carrier and its use of said wharf.

It is, however, understood and agreed that the railway company shall not be required by anything herein contained to add to or alter the said wharf or to add to or alter the warehouse and storeroom accommodations used in connection with said wharf.

In answer to this letter the Secretary of War granted a revocable license until such time as the Congress should take action, as per the following:

The Atchison, Topeka & Santa Fe Railway Co. is hereby granted a license, revocable at will by the Secretary of War, to maintain its wharf, known as Long Wharf, in the harbor of San Diego, Cal., where it extends across certain submerged lands of the United States, ceded to the Government by act of the Legislature of the State of California, approved March 9, 1897, said submerged lands lying in front of certain upland property of the United States described as lots 1 to 19 of block 8 of the city of San Diego, upon the following provisions and conditions:

That the United States, in consideration of the privilege granted by this license, shall have the free use of the west wharf of the licensee, the said railway company, in the harbor of San Diego under such rules and regulations as may from time to time be agreed upon between the local representatives of the railway company and the commanding officer of Fort Rosecrans, Cal., it being understood that if at any time the said parties shall fail to agree as to such rules and regulations the then existing status of the occupancy and use of the wharf shall not be disturbed until the subject in controversy shall have been referred to the general manager of the railway company and the department commander, Western Department, for decision, and an agreement shall have been reached by them in the matter.

That the United States shall have the right to make such improvements to the said west wharf at its own expense as may be necessary to give the Government adequate and reasonable accommodations, said improvements to be made without unnecessary interference with the activities of the railway company in its relations to the public as a common carrier and in its use of the said wharf.

That the railway company shall not be required by anything contained in this license to add to or alter the said west wharf or to add to or alter the warehouse and storeroom accommodations connected therewith.

That this license is granted with the understanding that the licensee will seek to obtain from Congress during its next session its approval of the same, and with the further understanding that it will be subject to such conditions and restrictions as may be imposed in said approval.

When this matter was submitted to me I referred it to the officials of the city of San Diego, and received a letter from the Hon. Edwin M. Capps, mayor of the city of San Diego, addressed to the city attorney of the city, copy of which follows:

In the matter referred to this office concerning my objection, if any, in connection with the application of the Santa Fe Railway Co. to the honorable the Secretary of War for the right to maintain a wharf across certain submerged lands of the United States in the harbor of San Diego, Cal., and all in accordance with a bill to be introduced in the Senate and House of Representatives of the United States entitled "A bill granting to the Atchison, Topeka & Santa Fe Railway Co. the right to main a wharf across certain submerged lands of the United States in the harbor of San Diego, Cal."

I desire to say that after examining the application and a copy of the bill referred to I can not see any objection to granting the application.

I also received the following letter from Mr. T. B. Cosgrove, city attorney of the city of San Diego:

Further replying to your esteemed favor of the 29th ultimo, in the matter of the bill submitted by the Sante Fe granting right to maintain a wharf across certain submerged lands of the United States in the harbor of San Diego, Cal., I desire to hand you herewith copies of communications from Mayor Edwin M. Capps and Manager of Operations F. M. Lockwood. In addition to the sentiments expressed by these two gentlemen, I desire to state that from a legal standpoint I can see no reason for making any objection on behalf of the city of San Diego to the permit sought.

I then took the matter up with the Rivers and Harbors Committee and they had it referred to the War Department, and I herewith attach a copy of letter from the Secretary of War on this item:

Referring to your letter of the 26th ultimo, with which you forwarded to this department a copy of H. R. 14790, Sixty-fourth Congress, first session, providing for "granting to the Atchison, Topeka & Santa Fe Railway Co. the right to maintain a wharf across certain submerged lands of the United States in the harbor of San Diego, Cal.," and requested to be furnished with the opinion of the War Department on the measure, I have the honor to inform you as follows:

The accompany bill (H. R. 14790) proposes to grant, under certain conditions contained therein, permission to the Atchison, Topeka & Santa Fe Railway Co. to maintain its existing "long wharf" in San Diego Bay, a portion of which, in its present location, occupies certain land under water belonging to the United States and forming a part of the San Diego Barracks Reservation.

The matter of securing permission to continue the occupancy of this land was presented in a letter of the railway company dated October 7, 1915, and forwarded to this department by the district engineer officer at Los Angeles on October 13, 1915. In pursuance of this, and in accordance with recommendations of the department commander, a license was granted by the War Department, subject to the action which might be taken by Congress.

The bill to which you refer is drafted substantially in accordance with the conditions heretofore approved by the War Department, but it is understood that the word "eight," in line 1, page 2, should be changed to "eighteen"; and that the word "manner," in line 16 of the same page, should read "matter."

It does not appear that the interests of navigation will be materially affected by the enactment of the proposed legislation, and no objection to its enactment is apparent to this department.

The Government never has used this strip of land; has absolutely no use for it at the present time, as it is submerged 30 feet in water where the wharf crosses the corner of it.

The bill which I have introduced is designed to furnish the necessary ratification by the Congress of the United States, and, as I understand it, is entirely within the province of the Rivers and Harbors Committee.

Wheat and Flour.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 27, 1917.

Mr. MOORE of Pennsylvania. Mr. Speaker, consumers in the large cities view the question of the food supply from various angles. Some think the high cost of living is due to a scarcity of farm products; others think the supply is ample for domestic purposes, but that prices are being kept up because of European war demands, while others insist there is manipulation somewhere between the farm and the city. That the city people have been paying good prices for farm products goes without saying. That the farmer is getting good prices for what he has to sell is also an undisputed condition.

The problem of costs is always acute in the cities, because, whether times are good or bad, the average city dweller is dependent upon the daily wage to keep the larder going. If the wage fails, he has no storehouse of food supplies to fall back upon, and if the prices rise in good times it is necessary for him to spend for food about as much in proportion as he would have to spend if the prices should fall when times are bad.

IS THE PRICE OF BREAD UNDULY HIGH?

The price of bread has been discussed recently as much as any other question, and an understanding of the bread question necessarily involves the question of the wheat supply. Certain bakers' associations have been contending that we are exporting too much wheat, and that the price of bread to the American consumer is raised because the supply of wheat for domestic use is being curtailed by our exports. Our colleague, the gentleman from Illinois [Mr. RAINEY], has taken cognizance of the statement of certain New York bakers, and has suggested that the passage of the Rainey mixed-flour bill might relieve the American situation and give the American consumer cheaper bread. The views of the gentleman from Illinois will be found in the CONGRESSIONAL RECORD of January 23, in a letter addressed by him to Albin E. Plarre, chairman of the United Bakers of Greater New York and Vicinity. Mr. RAINEY's remedy would be to repeal certain laws requiring a careful inspection of wheat flour so that corn might be mixed with wheat for the production of a "mixed flour." The Rainey idea is seriously combated by most of the millers of the country, and would doubtless have rough sledding as a legislative proposition; but as the Rainey bill has not yet been reached, I shall not attempt a further discussion of it at this time. I do recall, however, some of the New York correspondence to which Mr. RAINEY refers in the extension of his remarks January 23. The United Bakers of New York had sent out a statement to Members of Congress calling attention to an apparent shortage in the wheat crop. The letter appealed to me as worthy of careful consideration, and I forwarded it to the Commercial Exchange of Philadelphia, an organization which deals heavily in wheat and corn, in order that it might be commented upon by those who are recognized as experts. The letter of the bakers and the reply thereto from the Commercial Exchange viewpoint contained so much information that I incorporate them in these remarks, as follows:

STATEMENT OF NEW YORK BAKERS.

UNITED BAKERS OF GREATER NEW YORK AND VICINITY,
New York, December 7, 1916.

To the UNITED STATES SENATORS AND THE
MEMBERS OF THE HOUSE OF REPRESENTATIVES,
Washington, D. C.

GENTLEMEN: Will you please verify, through the Department of Agriculture, the fact that the surplus of last year's billion-bushel wheat crop was 162,000,000 bushels, of which about 37,000,000 bushels are not millable?

Will you please verify, through the Department of Agriculture, the fact that this year's wheat crop was only 605,000,000 bushels—less than 60 per cent of last year's crop?

Will you please verify, through the Department of Agriculture, the fact that the deterioration of this year's wheat crop amounts to 20,000,000 bushels, thus leaving only 585,000,000 bushels, or barely 50 per cent of last year's crop?

Will you please verify, through the Department of Agriculture, the fact that the yearly wheat consumption, including the necessary quantity for seeding, is 659,000,000 bushels?

Will you please verify, through the Department of Commerce, the fact that over 75,000,000 bushels of wheat and flour have so far been exported since July 1?

Will you please verify the fact that over 50,000,000 bushels of this year's wheat supply have already been sold for future delivery?

Will you please verify the fact that this year's supply, which was barely sufficient for the needs of this country, has thus already been shortened over 74,000,000 bushels?

Will you please verify the fact that for lack of an adequate supply of a good quality of wheat for seeding purposes, for lack of labor, for lack of fertilizers, and other causes, the crop prospects for next year are anything but encouraging?

Shall the United States meet the possibility of another crop failure with no reserve stock in the country?

Will you please bear in mind that the crop of Argentina is a bad failure, leaving nothing for export, and that that country is even contemplating an embargo on all foodstuffs?

Will you please bear in mind that the crop of Canada has only produced 50 per cent of last year's crop?

Will you please bear in mind that Europe, on account of bad crops, expects 450,000,000 bushels of wheat from the United States?

Will you please consider what effect all these facts will have on the daily bread of the American people?

Shall the United States be like Russia, when the ukase promulgating the prohibition of the export of grain in the hunger year 1891 was issued only after all the grain had been exported? The sufferings of the Russian people were terrible. Shall the United States have the same experience?

Gentlemen of the Senate and the House of Representatives, feed America first.

Yours, very respectfully, ALBIN E. PLARRE, *Chairman.*

REPLY OF THE COMMERCIAL EXCHANGE.

The reply of the Commercial Exchange of Philadelphia, embodying an analysis of the points made in the statement of the New York bakers, was as follows:

THE COMMERCIAL EXCHANGE OF PHILADELPHIA,
Philadelphia, December 27, 1916.

Hon. J. HAMPTON MOORE,
House of Representatives, Washington, D. C.

DEAR MR. MOORE: Referring to the inclosed letter from the United Bakers of Greater New York and Vicinity, dated December 7, which we received from you last week, we beg to call to your attention the fact that since that letter was written the United States Department of Agriculture has discovered that we raised about 10,000,000 bushels more wheat in 1915 than had been previously placed to the credit of that year's crop; therefore at the time Mr. Plarre wrote his letter the surplus or carry over of last year's wheat crop was 162,000,000 bushels, but since that time, the Department of Agriculture having raised that amount by 10,000,000 bushels, the surplus would be 172,000,000. As to the 37,000,000 bushels of not-millable wheat, mentioned in the first paragraph of his letter, that is really an unknown quantity, some of it at first considered as not millable having been found millable by proper admixture.

Regarding paragraph 2 of his letter, at the time Mr. Plarre wrote the same his figures of 605,000,000 bushels for the wheat crop of 1916 were in accordance with the Department of Agriculture's figures, but within the past week the department has raised that estimate 33,000,000 bushels by reason of a greater acreage than heretofore estimated for the 1916 crop. You will observe these increased figures added to the 10,000,000 bushels additional surplus make a total of 43,000,000 bushels of wheat since the time of Mr. Plarre's writing.

Regarding paragraph 3, we doubt there has been a deterioration of 20,000,000 bushels in the 1916 crop; at any rate it is an unknown quantity.

In reference to paragraphs 4 and 5, the amount as stated for our yearly consumption and for seed, also the amount of wheat and flour exported since the 1st of July, are approximately correct, with the exception of the consumption, which is greatly reduced under high-price conditions, as referred to below.

As to Mr. Plarre's prediction in paragraph 6, that over 50,000,000 bushels of this year's wheat supply have already been sold for future delivery, it is impossible for anyone to verify this assertion; exporters do not disclose the amount of their contracts, neither do the agents of the foreign governments; however, we would suppose it to be a reasonable guess.

In regard to paragraph 7, according to Mr. Plarre's figures there would be a shortage of 74,000,000 bushels, but deducting the Government's estimated increase of last year's surplus, amounting to 10,000,000 bushels, together with the Government's increased estimate of the 1916 crop, amounting to 33,000,000 bushels, would leave a net shortage of 31,000,000 bushels, and we believe this shortage will be more than wiped out and leave an exportable surplus by considering the following facts:

First. That the bulk of the 37,000,000 bushels referred to in his statement as being not millable is actually millable through the process of an admixture with choice wheat.

Second. The deterioration in the 1916 crop of 20,000,000 bushels referred to in paragraph 3 of Mr. Plarre's letter, as previously mentioned, is a very questionable and doubtful estimate and probably would amount to much less than this figure.

Third. High prices are always conducive to conservation on the farm and economy by the consumer, which together will greatly reduce the estimated requirements for consumption.

In regard to his statements in paragraphs 8 and 9, we believe Mr. Plarre is taking a pessimistic view of the crop prospects for next year, from the fact that according to the Government Crop Report issued December 18, 1916, there is an increase in the winter wheat acreage of 887,000 acres over last year; and, for your information, I might say there has also been an increase over last year in the rye acreage of 740,000 acres. In addition to this, if high prices continue the acreage of spring wheat will also undoubtedly be increased very materially.

The statements in paragraphs 10 and 11 we presume are substantially correct.

Regarding the estimated requirements by Europe in paragraph 12, amounting to 450,000,000 bushels of wheat from the United States, we believe this to be absolutely incorrect, from the fact that during the first five months of the present crop year 75,000,000 bushels of wheat and flour have been exported, and it would be a physical impossibility to export during the balance of the crop year, or seven months, the difference between 450,000,000 bushels and 75,000,000 bushels, or 375,000,000 bushels.

Referring to paragraph 13, I would call your attention to the fact that the bread of the American people is costing them a great deal more than it would otherwise, because they prefer buying their bread ready-made and delivered at their doors. Bakers make from 1 barrel of flour 300 loaves of bread, for which they are charging 6 cents per loaf, or the equivalent of $18 per barrel, and the housewife can buy flour to-day for less than $10 per barrel, even in small quantities, or at a saving of $8 per barrel, but as a large majority of them persist in buying ready-made bread it would therefore seem that the American people do not care enough about the high cost of living to economize in this manner.

In view of the foregoing facts we believe there is still quite a considerable amount of exportable surplus of wheat left in this country and that Mr. Plarre's alarming views are without foundation.

Very truly, yours,

L. G. GRAFF, *President.*

On the appearance in the RECORD of the interesting letter of the gentleman from Illinois [Mr. RAINEY], I invited the Commercial Exchange of Philadelphia to comment upon the suggestions therein made to the New York bakers, with the following result:

THE COMMERCIAL EXCHANGE OF PHILADELPHIA,
Philadelphia, January 26, 1917.

Hon. J. HAMPTON MOORE,
House of Representatives, Washington, D. C.

DEAR MR. MOORE:

* * * * * * *

In re the Rainey bill and Mr. RAINEY's remarks on page 2115 of the RECORD, issue of January 23, I would say that I will stand by my letter of December 27, 1916, and in addition thereto, I find the wheat-flour manufacturers of the city of Philadelphia consider the Rainey bill a most pernicious document, which would, if enacted into law, compel a citizen of the United States to buy something against his wish and desire; an admixture of corn flour with wheat flour is properly prohibited at present, unless it is so branded when offered for sale. The consumer will not buy corn flour mixed with wheat flour; if they were satisfied to do so it would be on the market branded "As Is." The Rainey bill would permit the manufacturer and dealer in flour to fool the public by selling them a counterfeit.

In re my letter of December 27, 1916, the passing of a month's time toward another crop of wheat has substantiated my statement; wheat is not going out of the country as fast at this time as last year. The weekly shipments have dropped from the 10,000,000 mark per week to 7,000,000 bushels, and it is quite apparent that foreign countries have bought sufficient to meet their requirements until the new crop is available, which they expect to buy at very much lower prices.

Please refer to the first paragraph of my letter of December 27: Much unmillable wheat referred to by Mr. Plarre is being made into flour of a bakable quality and is finding a market at lower prices than the higher grades, being sold "As Is"—a low-grade article.

Furthermore, as to carry over from former crops, the Canadian Government to-day made it known that the Canadian wheat crop of 1916 is now known to be 220,367,000 bushels, instead of their former estimate, 159,123,000 bushels; and the crop of 1915 was 426,746,000 bushels, instead of 376,303,000 bushels, as formerly estimated—thus giving Canada 111,587,000 bushels more than former estimates; and as our millers of the United States are buying millions of bushels from Canada, the importance of this increase is obvious.

Since Mr. Plarre wrote his letter early in December, the United States Government has found we raised 10,000,000 bushels more in 1915 than formerly estimated; and the crop of 1916 was found to be 33,000,000 bushels more than the earlier estimates. This 43,000,000 bushels increase in the United States and the 111,000,000 bushels increase in Canada making 154,000,000 bushels more wheat than formerly was supposed to exist in the two countries.

The marketing of wheat this month (January, 1917) reveals the fact that the Government was correct in increasing its estimate of the crop, and personally I have found farmers owning three crops of wheat. I reiterate that there will be enough surplus wheat and flour in this great land of ours for the starving in Europe, whom we have been charged to give of our bountiful supplies by the Provider of all Nations.

Very truly, yours, L. G. GRAFF, *President.*

Rural Credits and Loan Sharks—How the Latter are Striving to Discredit the Farm-Loan Act With the Farmers.

EXTENSION OF REMARKS

OF

HON. GUY T. HELVERING,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 29, 1917.

Mr. HELVERING. Mr. Speaker, from the time when the Congress of the United States started out in an endeavor to secure a system of rural credits which would give the farmers of this Nation equal opportunities with their competitors in other countries there had been a systematic endeavor on the part of those who have profited at the expense of the farmers to prevent the passage of such legislation, and, failing in that, the same interests are now striving to discredit the law which we have enacted.

In the stress of the recent political campaign our political opponents lent themselves to some extent to the same purpose. Literature was circulated with the intent of showing that the law would be inoperative, and even if it were tried out it would bring no relief to those who wanted to secure money on fairer terms. I paid but little attention to that sort of campaigning. Much is to be overlooked in the heat of political battle, and besides, if we were to grant all that was claimed by the authors of the literature circulated it would be a reflection upon the minority party in this House as well as upon the majority. No excuse could be offered by those who sat silent and permitted the agricultural interests of the country to be buncoed and no excuse need be offered for those who were here and participated in the passage of this legislation knowing that the minority party as well as the majority were sincerely interested in shaping this legislation so that it would bring the maximum amount of benefit to those who were so sadly in need of relief, and if any attempt had been made here to destroy the effectiveness of the bill it would have been resented by the honest membership on both sides of this Chamber.

Recently my attention has been called to literature which is being circulated by the money lenders in the district which I have the honor to represent. In this literature an attempt is made to discredit the farm-loan act. This end is sought by telling half truths with relation to some of the provisions of the act, by deliberately misrepresenting others, and by insidiously striving to convince those who might be tempted to take advantage of the act that the difficulties in the way of securing a loan are so great that it would be far better to ignore it and continue to do business with the "six, eight, and ten per centers." I propose to call attention to these statements as they are set forth in a circular which has just reached me and see if they are intended to enlighten or to deceive.

In detailing the steps needed to secure a loan, the author of the circular says:

1. Go out and see your neighbors and find nine other farmers who also want to borrow money and are ready to say just how much they need and what they want the money for.

The point to be noted in connection with the preceding and with many of the numbered steps which we propose to reproduce is the stress laid upon the necessity of having nine partners before a loan can be secured. The intent seems to be to impress the man who seeks information as to the means to be employed to secure a loan that he must be a member of a society of 10; no mention is made of the fact that it can be an association of any number more than 10, and, as it is unreasonable to assume that few, if any, of the associations will have the minimum number, it begins to look as if the writer of the circular was trying to deceive by the sin of omission as well as that of commission. Furthermore, if the writer had been acquainted with the practical workings of rural-credit systems the world over he would know that the associations are to be found in practically every hamlet in Germany and in other countries where they have an effective rural-credit system. There has been no difficulty in forming these associations abroad, and it is reasonable to assume that there will be no difficulty in the United States.

When we had this legislation under discussion in Congress we desired to protect all classes who would have the wish to secure relief under this law. We realized that at times and under certain conditions it might be impossible to form a local association, and we felt that we should do everything possible to protect the farm owners who might have to face such a contingency. Therefore we wrote into this bill section 15, the first paragraph of which reads:

That whenever, after the act shall have been in effect one year, it shall appear to the Federal Farm Loan Board that national farm-loan associations have not been formed, and are not likely to be formed, in any locality, because of peculiar local conditions, said board may, in its discretion, authorize Federal land banks to make loans on farm lands through agents approved by said board.

All of which goes to prove how earnestly it was the desire of Congress to bring relief to all.

But the circular continues:

2. These nine neighbors and yourself must agree to borrow a total of $20,000. Remember that unless it is that much none of you can borrow a cent—

Which is true, as far as it goes, but that means that in an association of 10 there would be an average loan of $2,000 to each member. And if the association numbers more than 10 the average would be accordingly diminished, no member being able to borrow less than $100 nor more than $10,000.

3. Call a meeting of these 10 farmers who need money, organize yourselves into a "national farm-loan association," and elect officers.

There is nothing wrong about that, but it was evidently put in so as to discourage the would-be borrower by laying stress upon the difficulties in the way. And as in all probability these associations will soon be in full swing all of this preliminary work will be done by the time the great majority are ready to apply for a loan, so that all that will be required will be an application to join the association as formed.

4. You then appoint a committee of three to appraise the 10 farms—

Which is not only a natural step to take but a wise one and one which will tend to facilitate rather than delay.

5. The committee reports its appraisement, and the various blanks are filled in and sent to the farm-loan bank.

All of which will not consume the time now experienced where the local representative has to take up the details with his principal before a loan can be made.

6. Remember that if your farm is appraised at $4,000, you can borrow $2,000; and if the insured improvements are worth $1,500, you can only borrow $300.

That will not impress the borrowers who have had dealings with "loan sharks." In my own section of the country I am familiar with the procedure followed by one of the largest companies which make a practice of loaning eastern money on farm mortgages. The maximum amount of these loans is limited to 40 per cent of the actual value of the land and that is, I understand, the general rule. So it will be seen that what the critic points out as an objection and seeks to create prejudice over is in reality plain proof that the loaning features of the bill are liberal.

7. No; this appraisement doesn't settle it. In due course of time a Federal appraiser, a slick-looking gentleman, will come out and make a second appraisement.

You will notice that the critic is gifted with an extraordinary power to see into the future. He knows that the Federal appraiser will be a "slick-looking gentleman," but the farmers

remember quite well the many "slick-looking gentlemen" with whom they have had to deal when they needed the funds to carry on their business, and in all probability they will prefer to deal with a Federal appraiser, because even if he is "slick looking" they know that he is responsible to this Government of ours and that this Government stands behind to see that he gives a square deal.

8. Perhaps, after driving around and viewing the 10 farms, this Federal appraiser finds that one of the farms was appraised too high.
9. That being the case, under the law, the committee must meet again and make a new appraisement, bringing the amount down to the limit set by the Federal appraiser.

We will consider these two paragraphs together. You will notice how the critic is laying stress upon the number 10. It is significant and is best understood when you consider the next two paragraphs.

10. Perhaps just at this time one of the 10 men dies. This is hard luck all around, for 9 men can not form one of these associations, and so you must go and find another man who wants to get a loan, and the whole process must be repeated.
11. But wait a minute. The Federal land bank sends word that their attorneys find a defect in the title to Bill Jones's land. The title must be corrected through the court or else you must find another man to take Bill Jones's place, for you can not get your loan unless all 10 of the titles are perfect.

Now, you can see the reason why the writer of the circular quoted has harped so constantly on the 10 members of an association and has never even intimated that the association can have more than 10. As we all know, 10 is but the minimum, as we had to have associations to utilize the machinery of this law, and 10 members would be as low as it would be practicable to operate. But we all expect that the number of minimum associations will be negligible, and all indications are that 25, and even more, will be the ordinary membership.

Let us see now what will happen if the initial membership is 20 and the applications for the loans is sent to the farm-loan bank. The appraiser decides that one piece of land is appraised too high. Very well; the owner of that land must wait and have the appraisement corrected before he can get a loan, but that does not delay the other 19 whose appraisements have been approved. They can get their loans at once. Perhaps, as the writer states, 1 may die. Very well; the 18 can get their money on their mortgages. Perhaps there is a flaw in Jones's title. Jones knows that no "loan shark" under the sun would give him a loan on that land until the title is perfected, but that does not interfere with the 17 qualifying and getting the money needed. But, to quote further from the circular:

12. But be patient. In a few more weeks the matter is straightened out and your loan of $3,000 on your $6,000 farm, and your loan of $400 on your $2,000 improvements—this is the limit you can get—are approved. You are to get a loan of $3,400.

And if you had to deal with the "loan shark" you would get a loan of $2,400 on the same $6,000 farm. You would pay 6 or 10 per cent in interest, and with the commissions it would sometimes reach 12. Under this legislation which we have enacted we are assured that at the outset the interest rate will not exceed 5 per cent, and we expect that this will be materially reduced. The law specifies that the interest rate shall not exceed the interest rate on the land bonds by more than 1 per cent, and everyone who has made a study of rural credits knows that such bonds are considered unusually gilt-edge securities. In Germany the Landschaften bonds command a higher premium than Government bonds on many occasions, and it is safe to assume that the bonds to be issued under the terms of the farm-loan bill will be eagerly sought and will command an unusually low interest rate, all of which insures a minimum interest rate to the borrower on land mortgages.

13. But you understand you don't get the $3,400 in cash. No; you are required to subscribe 5 per cent of it for stock in the farm bank. So you only get in cash $3,230.
14. You understand that this $170 in stock in the bank may or may not draw interest—that all depends upon whether the stock earns anything.

But at that you are getting 45 per cent of the appraised value of your land in cash, which is 5 per cent more than the "loan shark" would give you; and he fails to state that when you have complied with the terms of your mortgage and have liquidated your debt you will have the $170 returned to you. He conveniently forgot to speak of that, while he did try to cast doubts on the chances of your $170 earning interest. If these banks do any kind of a business, and the history of the farm-mortgage business assures us that they will, then your $170 is certain to earn for you, and, as stated, you receive the entire sum when your contract is complete and you withdraw from the bank.

15. You also understand that this $170 in stock has a "double liability," just like other bank stock. If your neighbors fail, you may not only have to lose the $170 but you may have to dig up $170 more. But cheer up; the probability is that won't happen.

What if the neighbor fails? Surely his land will not be destroyed, and his land is worth twice the amount of the money he owes the bank. What are the chances of failure to those associated with him in the bank in such a contingency? The writer of that paragraph evidently did not think there was any chance of loss to the association, as he shows in the concluding lines of the paragraph, but just the same it was written with the intent to create suspicion and doubt.

16. As to the rate of interest, there is nothing in the law to show that it is to be below 6 per cent. There is no assurance that it will be below that.

We have the assurance of common sense, which is something that the writer of the preceding seems to lack. The law has placed the maximum rate that can be charged at 6 per cent, but it also provides that the rate can not be greater than the interest rate on the bonds by more than 1 per cent. As we have pointed out, there is every likelihood that these bonds will sell at a very low rate, owing to their solidity and their advantage to investors, and already the Farm Loan Board assures us that the initial interest rate will not exceed 5 per cent. Compare that with the 6 and 10 per cent of the "loan sharks" and it is easy to see why they are trying to bring this legislation into disrepute.

17. No; you can not put a second mortgage on the farm, and you can not sell it unless the Farm Loan Board grants special permission to you to do it.

There is nothing in the legislation which will in any way interfere with the placing of a second mortgage. The assertion that there is has no foundation in fact. As to selling the mortgaged property, the language of the bill is: "In case of the sale of the mortgaged land, the Federal Land Board may permit said mortgage and the stock interests of the vendor to be assumed by the purchaser." There is nothing in that to prevent you from disposing of the mortgaged property, as the writer of the preceding paragraph asserts, but if the mortgage is to be assumed by the party who intends to make the purchase from you then permission must be obtained. Is there anything wrong about that? Is it not liberal in the opportunities it gives? What would happen if you were in the clutches of the "loan shark" and attempted to dispose of the mortgaged property without his knowledge or consent?

18. You must pay off the loan in regular installments, and can not make any payments before five years.

All of which is true. The borrower has a terrible burden placed upon him to the extent that he can, if he desires, secure a loan for 40 years, and by making small payments, much less than the amount which he now pays in straight interest for short-time accommodation, he will at the end of the 40 years have paid off both principal and interest. As it is now, he has to pay exorbitant interest rates during the life of the mortgage, and when it matures he still owes the full amount of the principal. And as to the limitation that the loan can not be paid off inside of a term of five years, where is there any hardship in that? It is but a safeguard to protect the entire system. Everyone knows that in making loans the initial cost of investigation and of safeguarding is the heavy one. Hence the loan should pay interest for a period of time long enough to insure the payment of that initial cost. A five-year loan at 5 per cent or less is certainly more desirable than a similar loan costing 10 per cent, even if the borrower has the privilege of paying it off at will.

19. If you should die, your heirs must assume the obligations in 60 days or the mortgage will be foreclosed.

What is wrong about that? The heirs have 60 days in which to elect whether they care to assume the mortgage or not. Is it the contention that death should wipe out the obligation? And where, under any system of private loaning, could better terms be expected by the heirs?

20. In case of default in payment the mortgage will be foreclosed in 30 days.

That statement is made in defiance of the facts. When we had this bill under consideration many of you will remember that we discussed this very proposition. We remembered that in the past the tillers of the soil on many occasions were overwhelmed by plagues of grasshoppers and of locusts and by periods of severe droughts during which it was impossible to secure a revenue from the land to meet current expenses. We remembered that, and we provided for it. We wrote into the act, section 12, article 8, the following language:

Every borrower shall pay simple interest on defaulted payments at the rate of 8 per cent per annum.

Which means that in case of calamity and inability to pay interest when due the bank will give the borrower time to recover and time in which to win back from his land the means

to protect himself, and during that time the amount of interest due—not the principal, mind you—will bear a rate of 8 per cent. All of which goes to show that the critic in making the assertion quoted either was inexcusably ignorant of the facts or else willfully and deliberately misstated them.

> 21. And you say you want the loan in order to buy feed for your stock? Well, there is nothing doing. The money can not be used for that purpose no matter how good the security you offer may be.

That assertion is intended to deceive. Let us see what the law has to say. Section 12, article 4 (b), reads, in stating the purposes for which loans can be made:

> To provide for the purpose of equipment, fertilizers, and live stock necessary for the proper and reasonable operation of the mortgaged farm; the term "equipment" to be defined by the Federal Farm Loan Board.

Has the Farm Loan Board defined "equipment" as not to mean feed for stock? If not, what right has the critic to assume that the law prohibits a loan for such a purpose? No other meaning can be read into the law than that it is the intent not only to provide for loans to purchase necessary stock, as noted, but also to provide that the loan can be used to purchase feed for that stock. So it was that without going into needless details that the Congress gave to the Farm Loan Board the power to define the term "equipment," and it is an insult to the intelligence of the people to assume that there is anything in the law to bear out the contention of the author of the criticism quoted.

In closing, this man, who is so evidently trying to arouse prejudice against the new law, has this to say:

> And what's your guess? How many farmers of this country are going to avail themselves of its wonderful provisions?

The hope of the "loan sharks" is that none of them will. But the farmers of the United States are not to be swayed by prejudice nor are they to be led astray by those who would keep them in bondage. With the new system in operation and with the organization of each unit the campaign of education will go forward with leaps and bounds. If there are faults in the new system time will develop them, and this Congress will be eager to perfect the legislation in accordance with our sincere desire to bring relief to the agricultural interests of the Nation. We have entered upon the work of emancipating those who have been crushed down under the unjust exactions of those who made profit out of their necessities, and we will take no backward step. And when we find the men whose practices became so obnoxious that we had to stop them in the interests of the public weal, now engaged in the work of misrepresenting the facts, striving to create prejudice, and endeavoring to prevent those we would help from taking advantage of the law, then we know that we must have builded well indeed. The yelp from the dog is proof that the blow must have landed upon him.

Statement of Hon. Zebulon Weaver.

EXTENSION OF REMARKS

OF

HON. EDWIN Y. WEBB,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 29, 1917.

Mr. WEBB. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a statement by Hon. Zebulon B. Weaver, giving his side of the election controversy between himself and the Hon. J. J. Britt, Representative Britt having made a statement.

The statement is as follows:

STATEMENT OF HON. ZEBULON WEAVER.

In the Greensboro Daily News, under date of December 24, 1916, there appeared a statement from Hon. J. J. Britt relating to the recent election in the tenth congressional district of North Carolina. This statement, with some modifications, has recently, upon the request of Mr. Britt, been printed in the CONGRESSIONAL RECORD. The allegations in this statement are the same that Mr. Britt and his attorneys recently urged in the courts of North Carolina, where the decision each time was against him, both upon the law and the facts.

This controversy arose over the question as to whether or not certain congressional ballots cast for me and referred to by Mr. Britt as unmarked ballots should be counted. Mr. Britt claims that these were illegal. His whole argument is based upon the assertion that these unmarked ballots should not have been counted. His contention that these unmarked ballots were illegal was overruled by the Supreme Court of North Carolina in the case of James J. Britt *v.* Board of Canvassers of Buncombe County. As to his personal imputations, if I shall content myself here with mere statements of fact, let no man misunderstand me or conclude that I do not resent with every fiber of my being any intimations of wrongful conduct on my part.

In the congressional contest in the tenth North Carolina district separate ballots were provided for the Republican and Democratic candidates. The Democratic ballot had printed thereon my name only for Representative in the Sixty-fifth Congress; the Republican ballot had printed thereon Mr. Britt's name only. Opposite the name of the candidate there was placed a small square, and it is contended by my opponent that to make these ballots legal the voter was required to make a cross mark in the square. He argues this at great length, citing a provision of the primary law, not the general election law, of North Carolina. As a matter of law, under the act of Congress a congressional ballot may be written or printed, and a ticket, either for Mr. Britt or myself, written with a pencil would have been a legal ballot.

He states that I had held the view that an unmarked ballot of this character was illegal. I have never held such view, and on the contrary, prior to the election, when my attention was called to the form of the ballots which had been sent out, I expressed the view that such a ballot, with only one name thereon, deposited by an elector was legal, whether cast for Mr. Britt or myself. But this question has been decided by our Supreme Court. When Mr. Britt inserted in the CONGRESSIONAL RECORD his statement declaring that 27 unmarked ballots had been counted for me, and that they were illegal, he had before him the opinion of the Supreme Court of North Carolina, rendered in the case of James J. Britt against the Board of Canvassers of Buncombe County. In that decision it is distinctly held, in construing the statute of North Carolina in regard to these identical 27 ballots, that they were legal and ought to have been counted. And yet so important a decision is not referred to in his statement. The supreme court held, in the opinion rendered on the 19th day of December, 1916, as to the congressional ticket, which had only one name on it, that—

> All unmarked ballots ought to be counted for the respective candidates, because the purpose of an election is to ascertain the will of the voter, and the marking of a ballot can only serve a useful purpose in ascertaining this will when there are more names than one upon a ballot.

The Court further said:

> The voter is interested in the question as well as the candidate, and when his will is expressed it ought not to be set aside on light grounds, and no one can doubt what his purpose and intention was when he voted a congressional ticket with only one name on it.

This decision against Mr. Britt, rendered in an action in which the identical ballots to which he referred in his statement were considered, brought and prosecuted by himself, and to which I was not even a party, determines the validity of these ballots. I hold my certificate of election with the personal consciousness that a majority of the ballots cast, not only in Buncombe County, but in the 13 counties comprising the tenth district, were cast for me.

After the election in the tenth district it was ascertained that the judges of the various precincts in the district exercised their own judgment in counting or rejecting unmarked ballots. In some precincts they had been counted, in others they had not been counted and were not included in the returns. When I had learned of this situation I made a written statement in the press in regard to the unmarked ballots. A portion of this statement is as follows:

> I have read Mr. Britt's statement in regard to the unmarked ballots. I gave as my opinion before the election that a ballot deposited for Mr. Britt or myself with one name only thereon was a legal ballot. I think so now. If I have received a majority of the votes, including these unmarked ballots, there can be no doubt of the intention of a majority of the people of this district to elect me. If Mr. Britt has received a majority, including these unmarked ballots, there can be no doubt of a similar result in his favor. These unmarked ballots have been counted in some places and not counted in others. They should either be entirely rejected or they should all be counted. If they were all counted I do not know how the result would stand. My only desire is that the officers holding the election, and not outsiders, should state upon their oaths how this is. By ascertaining this fact we could then tell who had a majority.

With the purpose of settling any contest, I later made the further proposition in a written statement either to count all the unmarked ballots in the district or reject all, and that he might select which of these propositions he wished. This statement concluded as follows:

> As a matter of law, the act of Congress prescribes what a congressional ticket shall be, and no voter ought to be disfranchised. I merely ask that all unmarked ballots shall be counted or all shall be rejected. It would be comparatively easy to determine by accurate

evidence how many unmarked ballots were thrown out for each in the district. But I am willing to let what Mr. Britt calls the face of the returns be determined, either by rejecting all unmarked ballots or by counting all unmarked ballots.

I never appeared before the Buncombe County canvassing board at any of its meetings. I never suggested to an individual upon the board what he should or should not do. My party was represented by such men as Hon. Julius C. Martin, Judge J. D. Murphy, Marcus Erwin, Esq., and others, whose characters are absolutely above reproach, either as men or as attorneys. Mr. Britt and his counsel were at all of the meetings of the board. They addressed the board time and time again. The board met on November 9. They continued in session on the 10th and 11th canvassing the results of the State, county, and presidential tickets. When the board first met on November 9 the congressional vote from three precincts had not been returned. Mr. Martin on that day stated to the board that it appeared that unmarked ballots had been counted in some precincts and not in others. The board adjourned on the 11th of November until the 16th, the returns from one of these precincts still not being before the board.

The board reconvened on November 16 pursuant to adjournment, and took up the congressional returns and the returns upon certain constitutional amendments. Mr. Britt and his counsel were present. They addressed the board upon the question of the legality of the unmarked ballots from 10 o'clock until 12. Mr. Britt then asked an adjournment until 4 o'clock in order to further consider what position he would take as to the counting of the unmarked ballots. The board patiently waited for him until 4 o'clock, thus giving him the entire day, and at 4 o'clock he returned with a writ of mandamus which he had in the meantime secured from a judge holding court in an adjoining county, and served it upon the board in an attempt to compel the board to count a certain number of votes for him and a certain number of votes for me, or show cause why this should not be done. Cause was shown why this should not be done and the writ later was dismissed.

On November 16 the returns before the board showed that in five precincts, in addition to the marked votes which had been counted, there were 27 unmarked votes for me and 6 for Mr. Britt which had not been counted. These facts had been certified to the board by a majority of the election officers holding the election. Their truth was not contested. The board was then confronted with a legal proposition as to whether or not such ballots were valid or invalid. The writ of mandamus had also been served upon the board. When this situation arose the board refused to act upon Mr. Britt's contention that these ballots were illegal or upon the contention that these ballots were legal and employed independent counsel of its own. The counsel so employed were Hon. Theodore F. Davidson, a former attorney general of North Carolina; Mr. Louis M. Bourne, former city attorney of Asheville; and Mr. A. Hall Johnston, a former solicitor, all men of the highest standing professionally and otherwise. These gentlemen filed a written opinion with the board that these ballots were legal and should be counted. This opinion has been sustained by the Supreme Court of North Carolina, and yet this board, which refused to act until it had employed independent counsel, not connected with either of our claims, is held up in the CONGRESSIONAL RECORD and to the people of the tenth district as a set of men deliberately bent upon defrauding Mr. Britt.

Let us take the second precinct in Asheville, one of those complained of by Mr. Britt. There were five unmarked ballots cast for me and one for Mr. Britt. The corrected returns showed merely that these unmarked ballots were cast as returned. The judges did not undertake to say whether they were legal or not, but left that to the canvassing board. Mr. Britt asked at whose instance these returns were made. The registrar and one of the judges both stated, and it was not denied, that when they counted this box these unmarked ballots appeared and it was agreed that upon the returns they should be noted and certified; but in their haste to finish their work they failed to make the certification as to the unmarked ballots and that they made their complete returns merely for the purpose of fully performing their official duty. They merely certified to the facts.

In the four other precincts complained of by Mr. Britt the officers merely certified to actual ballots found in the boxes, and returned them to the canvassing board in order that their legality might be determined there. No ballots were so returned that were not actually found in the boxes. The board held that they were legal, and the decision of the supreme court upon the legality of these ballots is decisive, and confirmed their judgment.

But it is contended by Mr. Britt that in precincts other than the five mentioned in Buncombe County there were unmarked ballots for him which the board refused to count. He states that the uncontradicted affidavits showed this fact, and one would infer from his statement that these affidavits, at least, were presented to the board of canvassers. But this is most emphatically not the case. The board of canvassers acted, and could act, only upon returns and not upon affidavits of bystanders and others, even if they had been presented. Certainly, so far as the board of canvassers was concerned, there was not the slightest evidence before them at any time of any unmarked ballots, except the returns from the five precincts mentioned. Mr. Britt was contending that these unmarked ballots were entirely illegal. The board gave him the whole day of November 16 upon this question. He obtained an adjournment at 12 o'clock, after having addressed the board for two hours, openly stating his desire to be allowed time to further consider the question of unmarked ballots. He used this time by rushing to an adjoining county, securing a writ of mandamus in an attempt to prevent the board from counting any unmarked ballots at all; and yet he states that this board openly refused to count unmarked ballots in the remaining 23 precincts in the county. The affidavits which he refers to were not presented to the board, but were presented upon the hearing upon the writ of mandamus, which took place nearly a week after the canvassing board had adjourned.

In a sworn complaint Mr. Britt alleged that the canvassing board had canvassed the returns on November 9 and refused to certify the result. The board denied this, and after a full hearing of the facts Judge Adams found that the facts alleged in the complaint were not true, and this record stands unreversed against Mr. Britt in North Carolina to-day. Instead of asking the canvassing board to consider any other precincts, he undertook to compel the board to count a result predetermined by himself upon facts sworn to by himself, which facts were found against him and his writ of mandamus dismissed.

Every vote to which either was entitled, both marked and unmarked in Buncombe County shown by the returns, was counted by the board. The board did not consider returns as to unmarked ballots from five precincts and refuse to consider similar returns from other precincts. The sworn evidence of the 28 members of this board and of other witnesses contradicts any such absurd contention. The returns are recorded and show for themselves. There was no vote arbitrarily added in Asheville No. 1 or elsewhere.

Mr. Britt attempts by incorrect figures to find for himself a majority of six, but in the mandamus proceeding Mr. Britt asked Judge Adams to find the identical figures set out in his statement upon the very affidavits referred to. The court, while stating that he had no right to add to the returns in Buncombe County, said:

> Moreover, I would not find the facts to be as above stated, even if I were to reread the affidavits, all of which were carefully considered upon the hearing.

But Mr. Britt hastens to close the case outside of Buncombe. He pretends to accept a challenge by me to show that he was elected. The challenge made by me was to show that he was elected by all the votes in all the boxes in the whole district. He says there was no question as to the returns in other counties. But this again is not true. At one precinct in an adjoining county there were nine unmarked ballots for me and one for Mr. Britt not included in the returns. When this box was counted the judges did not know whether to count them or not, and they agreed to label them, put them in the box and hold them until the county canvassing board or the State canvassing board determined their legality. The affidavits in my possession show these facts. The Supreme Court of North Carolina in Mr. Britt's own case has said they ought to be counted and are legal. I am therefore entitled, both legally and morally, to have them added to my vote. These votes in law and in morals, even with the utmost claims of Mr. Britt as to Buncombe County, entitle me to the certificate of election.

In other counties there are still other unmarked ballots which were not counted for me, and these, too, in excess of the unmarked ballots not counted for Mr. Britt. With all of these unmarked ballots in all of the counties included my majority, instead of being nine, will be much larger, and this will be shown by proper evidence at the proper time, and I shall ask Congress in any contest with Mr. Britt to credit me with these ballots actually deposited for me.

Again, many unmarked votes had already been counted in several counties for Mr. Britt. While denouncing unmarked ballots as illegal, he has so far not agonized over those safely included in the returns in these counties.

His talk of messages sent to other counties is idle. He can not show a single vote fraudulently changed. His attack upon the 28 members of the Buncombe County Board in the CONGRES-

SIONAL RECORD is unfair and unjust. In the courts of North Carolina, where both were heard, the facts were found with the board and against Mr. Britt.

I was elected by a majority of all the votes cast in the tenth district. I was elected by a majority of all the ballots, both marked and unmarked. I was elected by a majority of the unmarked ballots alone. I offered to let the result be determined either way and avoid a contest, and he refused to do either.

The congressional vote in Buncombe County was not changed, altered, or considered in any secret meeting. Everything was done in legal sessions of the board, held in the manner provided by statute.

Mr. Britt lost in the courts of North Carolina. The facts sworn to in his complaint were found against him, and the law decided adversely to him. He now seeks to prejudice any further hearing by his ex parte statements.

Rivers and Harbors Bill.

EXTENSION OF REMARKS
OF
HON. H. GARLAND DUPRÉ,
OF LOUISIANA,
IN THE HOUSE OF REPRESENTATIVES,

Monday, January 29, 1917.

Mr. DUPRÉ. Mr. Speaker, under leave to print obtained by me on January 26, when the rivers and harbors bill was under discussion, I insert herewith entire correspondence, both by letter and telegram, between Mr. Robert R. Barrow, general superintendent of the Barataria & Lafourche Canal—known locally in Louisiana also as the "Company Canal"—and myself. The correspondence appears in the exact form in which it was received and transmitted.

The item in the rivers and harbors bill to which this matter has pertinence reads as follows:

Waterway from Mississippi River to Bayou Teche, La.: For improvement in accordance with the smaller project submitted in House Document No. 1610, Sixty-third Congress, second session, $100,000: *Provided*, That no expense shall be incurred by the United States for acquiring any lands required for the purpose of this improvement: *Provided further*, That this provision shall not be construed as authorizing the purchase or improvement of any privately owned canals or waterways.

[Telegram.]

WASHINGTON, D. C., *January 6, 1917.*

R. R. BARROW,
4938 St. Charles Avenue, New Orleans, La.:

Please wire me by Monday estimated tonnage and value thereof passing through company canal during the years 1915 and 1916, giving separate figures. Important in connection with my effort to obtain appropriation for intercoastal link from Morgan City to New Orleans.

H. GARLAND DUPRÉ.

—

[Telegram.]

NEW ORLEANS, LA., *January 8, 1917.*

Hon. H. GARLAND DUPRÉ,
House of Representatives, Washington, D. C.:

We keep no records of tonnage value from Morgan City to New Orleans by this canal. The Harvey people claim to keep records as far as Lafourche, their terminal, which record I presume you have. You will be safe to figure two-thirds more by this canal to Morgan City and intermediate points, there being four sections to this canal from New Orleans to Morgan City, its terminal. Letter will follow.

R. R. BARROW.

—

[Barataria and Lafourche Canal, Jefferson Parish (opposite New Orleans). R. R. Barrow, general superintendent; H. H. Ogborn, assistant superintendent. Phone, Algiers 9134. Walnut Street Ferry.]

WESTWEGO P. O., LA., *Jan. 7th, 1917.*

Hon. H. GARLAND DUPRÉ,
House of Representatives, Washington, D. C.

MY DEAR SIR: Your telegram Dec. 6th, received. Replying thereto we wired you as follows: "We keep no records of tonnage value from Morgan City to New Orleans by this canal. The Harvey people claim to keep records as far as Lafourche, their terminal, which records I presume you have. You will be safe to figure two-thirds more by this canal to Morgan City and intermediate points, there being four sections to this canal from New Orleans to Morgan City, its terminal. Letter will follow." It would be impossible almost for us to have an actual record kept of the value of the different tonnage using this waterway; sugar, molasses, cane in bulk, and oil in bulk, lumber, logs, moss, and miscellaneous freights of all kinds passing through this canal in its different sections both day and night, and any estimate made along these lines would be guesswork. This canal, as you will see by the reverse side of this letterhead, runs through the heart of the cultivated country from New Orleans to Morgan City, almost due west, almost an air line, taking advantage, as it does, of the several natural watercourses, and was built and is now operated as a private enterprise. It is possible by this watercourse, as it now is, to leave New Orleans after an early breakfast in a motor boat, have your lunch in Morgan City, and return to New Orleans for dinner the same day, and yet we find our competitor, the Harvey interests, advocating the cutting of a canal practically paralleling us from Des Allemands to Bayou Black in Terrebonne Parish, giving them an outlet to Morgan City at the expense of the Government, and, strange to say, are receiving the support of some of our public officials in their efforts.

Yours, very truly, (Signed) R. R. BARROW.

—

JANUARY 9, 1917.

Mr. R. R. BARROW,
Genl. Supt. Barataria and Lafourche Canal,
Westwego, Louisiana.

MY DEAR MR. BARROW: I received in due course your recent telegram and your letter of the 7th instant written in response to my telegraphic inquiry for information regarding the tonnage and value thereof which had passed through the company canal during the last two years, which information I desired to present to the Rivers and Harbors Committee in support of an appropriation for the inland waterway between the Mississippi River and the Teche.

I do not care to discuss the matter with you further in view of the statement contained in your letter as follows: "* * * We find our competitor, the Harvey interests, advocating the cutting of a canal practically paralleling us from Des Allemands to Bayou Black in Terrebonne Parish, giving them an outlet to Morgan City at the expense of the Government, and strange to say, are receiving the support of some of our public officials in their efforts." Suffice it to say that in my effort to obtain an appropriation for the Mississippi-Teche section of the Intercoastal Canal I have no interest in or hostility to either the Harvey Canal or the company canal, and if you mean to include me in those "public officials" who, you say, are trying to help the Harvey interests at the expense of your own, your insinuation to that effect is entirely gratuitous, wholly unfounded, and gives me no concern. Regardless of what you think on the subject, I shall continue to agitate the question for an appropriation for this canal which the people of my district have long been asking for. I reserve the right to make this letter public.

Very truly, yours, (Signed) H. GARLAND DUPRÉ.

—

[Barataria and Lafourche Canal, Jefferson Parish (opposite New Orleans). R. R. Barrow, general superintendent; H. R. Ogborn, assistant superintendent. Phone, Algiers 9134. Walnut Street Ferry.]

WESTWEGO P. O., LA., *Jan. 14th, 1917.*

Hon. H. GARLAND DUPRÉ,
House of Representatives, Washington, D. C.

MY DEAR SIR: Your favor of the 9th inst. reaches me only this morning upon my return to my office after several days absence therefrom.

I have never heard you mentioned as one of the public officials assisting the Harvey interests in their efforts to secure, at the public expense, a paralleling line in competition with our own, and hence the discourtesy of your letter, resulting from your utterly unwarranted offense at a perfectly legitimately statement of mine, is as astounding as it is incomprehensible to me.

I never deal in insinuations.

I make specific charges.

In making public your letter to me, I am sure you will do me the justice to make equally public our entire correspondence.

Respectfully,

(Signed) R. R. BARROW.

—

JANUARY 17, 1917.

Mr. R. R. BARROW,
Gen. Supt. Barataria and Laufourche Canal,
Westwego, Louisiana.

DEAR SIR: I am this day in receipt of your letter of the 14th instant. I note that you state therein that you have never heard me "mentioned as one of the public officials assisting the Harvey interests in their efforts to secure, at the public expense, a paralleling line in competition with our (your) own."

I have no intention or desire to do you any injustice, and so when I give publicity to this matter I shall, as requested by you, make public our entire correspondence. Possibly in that way it may be ascertained what "public officials" you have reference to in your letter of the 7th instant, where you say. "* * * We find our competitor, the Harvey interests, advocating the cutting of a canal practically paralleling us from Des Allemands to Bayou Black, in Terrebonne Parish, giving them an outlet to Morgan City at the expense of the Government, and, strange to say, are receiving the support of some of our public officials in their efforts."

Possibly, too, the correspondence may be of interest to those who have been long working to improve the intercoastal canal between the Mississippi River and Bayou Teche, as disclosing the attitude which you, as one of the owners of the privately owned Barataria and Lafourche Canal, have assumed thereto.

Yours, truly,

(Signed) H. GARLAND DUPRÉ.

"Stop-Watch Days Past."

EXTENSION OF REMARKS
OF
HON. JOHN I. NOLAN,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

Monday, January 29, 1917.

Mr. NOLAN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following article:

[From the San Francisco Bulletin, Jan. 17, 1917.]

"STOP-WATCH DAYS PAST," BIG EMPLOYERS TOLD BY EFFICIENCY EXPERT—MONTESSORI SYSTEM, AS APPLIED TO LABOR, IS HIS THEME.

The time has come when a boss can't stand over a man with a stop watch.

Efficiency is attained by making it possible for labor to have a modern, comfortable, happy home. This is really the Montessori system applied to work, making play of it.

There is music in the lowest form of work, if we will but recognize the fact and make it true.

The real problem of efficiency is the organization and mutual working together of employer and employee—a real appreciation of the man at the machine as a human being.

Sabotage is wrong, both for employer and employee. The man who throws a monkey wrench into a machine, no matter if he be labor or capital, will find in all instances that his chickens will come home to roost.

The employer who slaves his men will lose in the end.

OAKLAND, *January 17.*

Miner Chipman, an efficiency expert of New York and Boston, told Oakland's biggest employers of labor, members of the chamber of commerce, at a meeting late yesterday, that the day had arrived when capital and labor must cooperate; that "the time has come when a boss can't stand over a man with a stop watch."

Chipman's address was delivered to a crowded meeting, held under the auspices of the advertising bureau of the chamber of commerce. He said in part:

"When Henry Ford made $5 a day the minimum wage in the factory of the Ford Motor Co. he swept away all the orthodox theories of economics. He believed that a man's value could not be measured upon the basis of production alone. He had proven that our bonus, premium, and profit-sharing plans have been mere palliatives—have only gone half way—and that a direct wage as an incentive to the highest possible human efficiency is a producer of profits and a promoter of dividends.

"Argument, strikes, lockouts, and long-drawn-out discussions concerning wage scales, the creation of boards of mediation and arbitration, are all symptoms which indicate that arbitrary wage adjustments are temporary in character and merely put off until to-morrow the settlement demanded to-day.

"I do not claim to have discovered any secret potion which will soothe the pain of our industrial unrest, but I do say that scientific methods of thought and scientific methods of investigation will lead us to a better and clearer understanding of the wage problem in its relation to efficiency and mutual prosperity.

"The employer lacks an intimate appreciation of the worker, and the worker lacks an intimate appreciation of the employer. Both envy the snap enjoyed by the other. The spirit of neighborliness is lacking, and a fictitious and superficial organization spirit is depended upon to bring about a oneness of ideal and a oneness of spirit.

"Efficiency is the ratio existing between an equitable standard and an actual achievement. We have the efficiency of employment and the efficiency of management. In each case the fundamental principle of measurement must be the personal equation. As a man thinks so he works, and as a man works and thinks so shall we measure his efficiency."

Letter From Arthur N. Sager to George W. Perkins.

EXTENSION OF REMARKS

OF

HON. THOMAS S. WILLIAMS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 30, 1917.

Mr. THOMAS S. WILLIAMS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following letter:

NEW YORK, *January 24, 1917.*

Mr. GEORGE W. PERKINS,
71 Broadway, New York City.

MY DEAR MR. PERKINS. I am in receipt of your circular letter of the 17th instant, inclosing copy of "Statement of George W. Perkins and Everett Colby," all relating to your opposition to the election of Mr. John T. Adams as vice chairman of the Republican National Committee, and in compliance with your request to let you have my views "as quickly as possible," I am writing you this letter.

I need not remind you of the circumstances which resulted in the birth and growth of the Progressive Party or of those under which I joined it and contributed my small measure to whatever success it achieved, for all this is well known to you, but as I intend to make this letter public, I will recount them.

The Progressive Party was born of a revolt against the action of the Chicago convention in 1912 when the claims of a candidate for nomination before that convention, who was the preponderant choice of the Republican rank and file, were cynically gagged and denied. There was nothing new in this procedure. It was not different, except in degree, from the action of the convention of 1908 which nominated Mr. Taft or the many other national conventions in which contests were close and spirited, and it never would have caused a ripple of more than temporary excitement or resentment had it not been for the extraordinary personality of the defeated candidate and his vigorous protest against the methods which brought about his defeat. Had he accepted the result in the conventional manner, there would have been no break—no Progressive Party—and Mr. Taft would have been reelected. Not that I approve of the methods employed (I vigorously opposed them in 1908) or criticize Mr. Roosevelt for what he did. He did exactly right, for it was time that such methods be protested regardless of the fact that they had been practiced against that time the memory of man runneth and that indignant and drastic public disapproval such as he, and he alone, could arouse be set against them.

I was not one of those who were brought into the movement because of the outrage against the Colonel's ambitions. I belonged to the great majority of those who comprised our party and made it possible, who were not as much concerned in the wrong done the Colonel as they were in aspirations for the betterment of our social, industrial, and political conditions, so long delayed and denied by the two old parties. Our enlistment was not temporary—to be chilled by a single defeat or abandoned for mere expediency or advantage. We went in, consecrated to our great purpose, fully alive to the sacrifices involved and the hardships entailed. We belonged to those who have been accurately, as events have abundantly proved, designated "the lunatic fringe." We were happy in our delusions and faith, and despite the surrender at Chicago, we are none of us poorer in spirit for the bitter experience. We had our Elysium, and it did our souls good, although the price paid was great to many of us.

Victor Murdock, Henry J. Allen, John W. Parker, Albert J. Beveridge, Joseph M. Dixon, Francis J. Heney, Ben Lindsay, Henry F. Cochems, Francis McGovern, J. A. Falconer, Albert D. Nortoni, Bainbridge Colby, Hal P. Gardner, George Record, Gifford Pinchot, Charles S. Bird, Matthew Hale, Frazer Metzer, and many others cast their lots and their brilliant and assured prospects with the movement, and all lost. No regret is expressed over the wreck of their personal political fortunes, but nothing can atone for their betrayal. It was the spirit of these men and their followers who comprised the great body of the Progressive Party that couldn't be delivered in 1916, and can't be delivered in 1920. Make no mistake about that. The Progressive Party is dead—dead as a dried herring. There are no Progressives, except the hyphenated—"Progressive-Democrats" and "Progressive-Republicans." In dealing with future political events and with political parties we must reckon with either the Democratic or Republican Party.

You and I have elected to work with the Republicans. We differ radically, though, in our attitudes. You cooperate ostensibly as a Progressive ready to break with the organization if its management becomes distasteful. I operate as a regular.

When the Progressive Party was stilled at Chicago I went back home in a spirit of humility. I went back because I realized the Progressive Party was dead, and because I knew that in my days and yours it would be impossible to rally and delude such another gallant membership in the name of reform or behind any leadership however brilliant and commanding.

I was solaced by the thought that our principles, largely concerned with internal affairs and regulation, had been impressed upon the thought of the country and crystallized to large extent into law. We were facing new world problems and issues, calling for the highest quality of statesmanship and soundest business policy. The Republican Party had shown its capacity to govern in many a crisis. Its patriotism had been demonstrated. It was the instrument or vehicle with which to rally the forces and encompass Democratic defeat. This was your judgment and mine, and we cast our lots with the Republicans. You think you have an anchor to the windward. I have none and want none. I am content to go in and work out political salvation from within the party, subject to party organization and discipline, with abiding confidence in the morality, honesty, and patriotism of the great body of Republicans. Having unconsciously lent my aid to a revolt and a bolt, the dire consequences of which can not be even remotely calculated, I felt that my part, when permitted to return to the fold, was a silent one, so I am in the ranks—"a rear private," so to speak, willing to base my claim to recognition solely upon merit and party service. I certainly can not bring myself, in good conscience, to the position you have assumed, that if we don't get what we want we won't play. Then I am not going to be a party to a threat that can't be made good. Who would rally the Progressives? Under what pretense and behind what personality could it be done?

Is it not futile to expect the Progressives to return to their folly? Matthew Hale, John W. Parker, Bainbridge Colby, and Judge Nortoni have been running an auxiliary to the Democratic Party. Victor Murdock, our chairman, delivered Kansas to Mr. Wilson and went to Japan. Hiram Johnson is now the Republican Senator-elect of his State. You and your friends have been cooperating with and assisting in the management of the Republican Party. I can not bring myself to believe that these elements can be reconciled or that you seriously consider it possible to do so. Mr. Hale and his associates claim to be the Progressive Party, and it appears to me, from the point of personnel, organization, and the vote they took to Mr. Wilson, they have decidedly the best of the argument, although we all know they can never accomplish anything as an independent organization.

In the statement of Mr. Everett Colby and yourself, you summarize your objections to the selection of a vice chairman by the executive committee by charging that committee with a two-fold sinister purpose, as follows:

"First, these men wished to keep the control of the machinery of the Republican Party, present and prospective, in the hands of their own little coterie. Second, they wished to shift the responsibility for Mr. Hughes's defeat from their own shoulders, where it rightfully belongs, to the shoulders of Mr. Willcox."

With the first objection, I might be concerned, and I will advert to it later. With the second, I have little interest, although candor compels me to differ with you as to the reasons for the defeat of Mr. Hughes. Mr. Hughes was as good as elected when he was nominated. He was the Progressive-Republican candidate. The causes of his defeat are too numerous to catalogue. Fixing and charging responsibility serves no useful purpose now, but is it not entirely unfair to charge it to men who had no part in the management of the campaign and whose counsel was not heeded? The enumeration of a few of the mistakes of the campaign will fix the responsibility if we are advised as to who is responsible for them. If you will learn who it was that was responsible for the premature tour of Mr. Hughes, you will have one. If you will find the name of the political genius who sent the "Women's Special" to the coast, you will have another. If you ascertain who permitted Mr. Hughes to go to California during a bitter primary fight, and why, when he did go, he was not advised to at least pay Hiram W. Johnson, the governor of a great Commonwealth, the courtesy of a call or greeting, you will have another. If you will place on some one the responsibility for hampering and throttling the speakers' bureau for lack of funds, when funds were so plentiful, you will have another. If you will explain why the Progressive vote went to Mr. Wilson, you will have the best of these few which I have mentioned, any one of which in itself will account for the tragedy of last November.

With respect to the charge that certain members of the executive committee, responsible for the selection of Mr. Adams as vice chairman, seek thereby to "keep the control of the machinery of the Republican Party," I am deeply concerned, but what I would like to know is just who is to take charge of the party machinery in the interim between campaigns if these gentlemen whom you have denounced are not to be intrusted with the responsibility? Just what are your plans with reference to the control of the Republican Party? Personally, I hold no brief for Messrs. Crane, Hemenway, Warren, or Estabrook, and I would like to see the control of the party in the hands of men who are more progressive in their tendencies than these gentlemen have been in the past. On the other hand, I do not believe, and I say this in all kindness, that a man who has been as conspicuously identified with the Progressive Party and the action taken at its convention in Chicago, as yourself, should be conspicuous in the management of the Republican Party or

the dictation of its policies if we are to expect to get back the large element of Progressives who voted the Democratic ticket last fall.

I believe it would be better for the Republican Party if the Progressive members of that party who maintained their allegiance to the organization at all times would be placed in power. I believe that that is the tendency, and that when accomplished we will have no difficulty in uniting the forces necessary to encompass Democratic defeat.

You have pointed out from time to time in most cogent and convincing language, in letters and in interviews widely published, the perils and menaces of the present Democratic administration. You have denounced it as un-American and inefficient, and in your past and present activities, the ardor of which can not be impeached, you have striven according to your lights to bring about its defeat. I, with many others, have been in entire sympathy and accord with you, but at this time I feel that we can best serve that purpose and our country and the party with which we have worked by prompting harmony rather than discord and by striving strictly within the ranks of the party to bring about the reforms which we think necessary in the party organization.

This is going to be my course, in any event, and I have reached this decision after careful consideration of every phase of the matter.

Respectfully, yours,

ARTHUR N. SAGER.

National Defense.

EXTENSION OF REMARKS

OF

HON. AUGUSTUS P. GARDNER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 29, 1917.

Mr. GARDNER. Mr. Speaker, under the leave granted me January 29, 1917, I reprint a part of the remarks made by me on the national-defense bill on March 17 and March 27, 1916.

[Extract from remarks on national-defense bill on March 17, 1916.]

Mr. Chairman, this bill makes a noise like preparedness; but it is not a noisy noise.

SUITS ALL THE NEAR PACIFISTS.

It is almost as still and almost as small as the still, small voice of the human conscience. This bill has not even awakened Henry Ford, and it has not brought a dissenting voice from a single one of the near-pacifist members of the Committee on Military Affairs. It seems to suit the pacifists all right.

Plenty of words, but a scarcity of Regular Army men; and yet Regular Army men are exactly what we want and need.

THE REGULAR ARMY MAN.

There is nothing on earth that comes within gunshot of being "practically as good" as the Regular Army man. No amateur soldier can any more compare with a professional soldier than an amateur plumber can compare with a professional plumber. The lawyer who spends six days a week lawyering and one day a week soldiering is pretty certain to be six times as good a lawyer as he is a soldier. That is the fundamental trouble with our militia. Furthermore, I have not yet been carried away with this idea of an army of "has beens," or reserves, as they are called; that is to say, an army largely made up of men who once upon a time have done a turn at soldiering. It may be all right to have a supplementary army of ex-soldiers, but I have a notion that the cheapest thing in the long run will be to maintain a good-sized regular force of about 300,000 men, and then train our boys so that they will all know something about how to fight if need be.

I believe in compulsory military training for every young man, be he the son of a beggar or the son of a multimillionaire. I mean real, hard military training under real, hard military discipline, day in and day out, for a substantial period of time. I do not mean high-school drill and I do not refer to armory evolutions once a week in the long winter evenings. That kind of thing is military drill, not military training, where every youth is compelled to learn to subordinate his will to that of his officers.

* * * * * * *

NEAR FEDERALIZATION.

I think nothing at all of the alleged federalization of the militia provided in the Hay and the Chamberlain bills. You can not really federalize your militia so long as the States appoint the officers, and I confess that I do not see the logic of Uncle Sam paying soldiers that some one else commands. Think of it. This Hay bill, and the Chamberlain bill also, for that matter, actually proposes that the State governors shall continue to command these 48 little armies while the Nation pays a big share of the bill. Suppose that some governor, of Massachusetts, for instance, were to order out his army to suppress a strike, do you not think that Uncle Sam ought to have the right to say "Halt" if he did not approve of the governor's order of "Forward, march"? Well, if you pass either one of these bills, Uncle Sam will not have a word to say about it. He can pay the piper, but he can not name the tune.

WHY NOT LISTEN TO THE WAR COLLEGE?

What in the world is the use of having an elaborate War College here in Washington if we refuse to pay the slightest attention to anything which it says? Last summer the President asked for a report as to our needs in the way of an army. The War College replied that we needed an army of 280,000 Regulars and 380,000 reserve regulars, not reserve militiamen, to make us safe against invasion in case our Navy were unable to retain control of the seas.

* * * * * * *

IN THE SPANISH WAR—EX-REGULARS DID NOT FLOCK TO THE COLORS.

Let us not fool ourselves into thinking that former Regulars will flock back to the colors in time of war. Has-been Regulars will not tumble over themselves in their anxiety to get killed any quicker than the rest of us. I hold in my hand a letter from Secretary of War Garrison, dated February 17, 1915. In it he informs me that in the Spanish War only 974 former Regulars returned to the Regular Army from civil life. It is true that many Regulars in all probability returned to the colors in the ranks of the Volunteers. Statistics are incomplete. Unfortunately, they were compiled only for the First Army Corps and for the second division of the Third Army Corps. A liberal estimate based on these incomplete figures would show that about 2,300 former Regulars, coming from civil life, enlisted in the volunteer service at the time of the Spanish War. This makes in all about 3,300 former Regulars who enlisted either in the Regulars or in the Volunteers.

And yet somewhere about 25,000 ex-Regulars who had been in the Army within the preceding 10 years were available for military service.

Here is an extract from Secretary Garrison's letter:

WAR DEPARTMENT,
Washington, February 17, 1915.

Hon. A. P. GARDNER,
House of Representatives.

MY DEAR MR. GARDNER: I have the honor to furnish you with the following information bearing upon the queries set forth in your letter of the 10th instant:

* * * * * * *

2. How many former Regular Army soldiers reenlisted for the Spanish War either in the Regulars or Volunteers?

The records of this department show that during the 10 years ending June 30, 1898, 53,399 men had been honorably discharged from the Army for causes that would not render them ineligible for further military service. Of this number 26,271 reenlisted so as to make their service in the Regular Army continuous, thus leaving at large in civil life 27,128 men for the entire 10-year period. Of course, this number must have been reduced somewhat by casualties prior to the beginning of the War with Spain.

The records show that from April 1 to August 31, 1898, both dates inclusive, 3,162 men, who had had previous service in the Army, Navy, or Marine Corps, enlisted in the Regular Army, but 2,188 of these enlistments were continuous-service reenlistments of recently discharged men, leaving 974 as the number of former enlisted men of the Army, Navy, and Marine Corps who entered the Army from civil life during the period from April 1 to August 31, 1898.

The foregoing data, it will be observed, relate solely to reenlistments in the Regular Army and were ascertained only after a protracted examination of the official records. No compilation of data showing the exact number of former Regular Army soldiers who enlisted for the War with Spain in volunteer organizations has ever been made, but assuming that the data set forth in the inclosed table are representative of conditions among all the volunteer forces of the War with Spain, it will be seen that the percentage of men in volunteer organizations who previously served in the Regular Army was approximately a little over 1 per cent.

* * * * * * *

Very truly, yours,

LINDLEY M. GARRISON,
Secretary of War.

* * * * * * *

THE RECRUITING PROBLEM.

I believe that we are going to have the very greatest difficulty in the future in recruiting a Regular Army, and no wonder. We do not pay our soldiers enough. Fifteen dollars a month

and all found, including quinine and coffins, does not offer men much inducement to hunt Mexican murderers where the ambushing is good. If we want good men for a good Regular Army, we must go right into the labor market and compete for them. By the way, we voted the other day to increase the Regular Army 20,000 men, so that we could meet the Mexican crisis. If we need 20,000 more Regulars to fight Villa, how many more Regulars would we need to fight a real enemy?

DOES THIS BILL FEDERALIZE THE MILITIA?

Not being a lawyer, I do not propose to discuss the constitutional questions in this bill. As far as I can judge from the report made by the chairman, the committee feels that in its near-federalization plan a successful scheme has been hit on for circumventing that clause in the Federal Constitution which reserves to the States the appointment of officers and the training of the militia under Federal regulations.

The Missouri Military Council, whatever that may be, agrees with the committee, and so the committee quotes the council in Chairman Hay's report. On the other hand, Secretary Stimson and Secretary Garrison insist that the Constitution can not be buncoed; and, by the way, Secretary Garrison underlined his opinion by resigning his seat in the Cabinet of the President of the United States.

Each side marshals the decisions and the views of the bigwigs. No one knows what the Supreme Court of the United States will think when it is called upon to decide the question. One man's guess is as good as another's, and my guess is that any plan for federalizing the militia under which every private carries a lawsuit in his knapsack is a pretty good plan to avoid, the executive council of the National Guard Association to the contrary notwithstanding.

[Extract from remarks on national-defense bill on March 27, 1916.]

All through our history there has been a divided control over our militia. When war has come upon us both the Nation and the various States have claimed jurisdiction. When Uncle Sam has given to the militia the order, "Forward, march," it has too often been the case that the States or the militiamen themselves have cried "Halt!" Such was notably the case in the War of 1812.

* * * * * * *

My objection to the Hay plan of building up a national citizen army upon the basis of the National Guard, under the militia clause of the Constitution, is that it results in two great handicaps to efficiency. One of them is the divided control and the other is the constitutional limitation on the use of the citizen army so organized. The divided control results from the fact that the Constitution reserves to the States the right to choose the officers for the militia, and also reserves to the States the right to train the militia under regulations to be prescribed by Congress. Moreover, in times of peace a National Guard made up of the so-called federalized National Guard of the 48 different States will be commanded by 48 different governors, and must therefore consist of 48 different armies. So much for divided control.

Now, as to the limitations on the uses to which the militia may be put in case the Nation seeks to use it in time of danger or stress.

Under the Constitution the Congress of the United States can call out the militia to suppress insurrections, to execute the laws of the United States, and to repel invasions; but the Constitution gives us no power to call out that militia to invade a foreign country, such as Mexico or Canada or Cuba. The Hay bill ingeniously endeavors to obviate that constitutional difficulty of divided control and also that constitutional difficulty of limited use. I shall explain all that presently; but, first, I wish to say a word about the results of divided control and limited use in the past. Probably you all know that in the Revolution it was very hard to get volunteers to serve outside the States from which they came, but in the War of 1812 matters came to a head. I am sorry to say that my own State of Massachusetts and the State of Connecticut behaved in a highly hyphenated way. They would not, either of them, furnish troops to fill their quota to fight Great Britain. The militia of various States on several different occasions, when ordered to invade Canada, refused to do so, resting on their constitutional rights.

Now, of course, the Hay bill undertakes, as much of our legislation has undertaken in the past, to obviate the difficulties arising from the conflict between National and State control of our militia. The framers of the Hay bill feel that a refusal of the militia to obey orders will never occur again, because they have inserted a provision directing a draft of these militiamen into the service of the United States in the event of war.

Now, I think that many good lawyers believe this particular feature of the Hay bill is constitutional. That is a good deal more than can be said about the other features of the bill which undertake to obviate the difficulties arising from divided control in time of peace. Be that as it may, when Uncle Sam gives the order to march in time of war it is a little late in the day to decide constitutional questions. I should a good deal rather have an army of trained citizens whose constitutional status was not a subject of controversy. That is why I introduced the Chamberlain amendment.

When Uncle Sam wants troops in time of war, I do not want his summons to the colors to be answered by an alibi and a search warrant or by a mandamus or by quo warranto proceedings, or whatever the legal processes are—not being a lawyer I do not know. As to the training of militia in time of peace, that is still left with the States under the Hay plan for near federalization. To be sure, it is left to the States under such regulation as the Nation may lay down; but nevertheless the responsibility rests with 48 different States. I admit that in the Hay bill there are provisions which are intended to make it impossible for a State to select an unfit officer; but there is necessarily a very great latitude in determining the fitness of an officer. It can not always be ascertained by a written examination. The framers of this bill hope to compel efficiency by the power of the pocketbook. By money payments they expect to force the various States of the Union to drill, discipline, and maintain their troops in accordance with the ideas of the National Government as to how a citizen army ought to be drilled, disciplined, and maintained. This bill, in effect, says to the 48 States: "We will not pay you a single cent if you do not come up to the national standard which we shall set for you." I do not believe that any such plan will prove effective so long as the commander in chief of each one of these small armies is a different governor and so long as all of the officers are State controlled.

Uncle Sam may scold, Uncle Sam may threaten to fine, he may, as a last resort, order that some State shall be deprived of ordnance or of artillery or of military supplies of some sort. How many of us who have had practical experience of Uncle Sam's relations with the various States honestly believe that those threats will be carried out?

If Uncle Sam really started to punish your State or mine, Mr. Chairman, how quickly we should start a scramble to prevent our States undergoing treatment which probably they might richly deserve. The proof of all this is that to-day, in spite of all our laws designed to bring up the standard of our citizen soldiery, there are only eight States in the Union which have anywhere nearly an efficient National Guard.

* * * * * * *

BOUNTIES IN THE CIVIL WAR.

The gentleman from Illinois [Mr. CANNON] on March 21 presented us with figures prepared by the Commissioner of Pensions, Mr. G. M. Saltzgaber, estimating that there were about 2,213,365 different individuals who enlisted in the Northern Army in the Civil War. Of course the total Union enlistments ran a good deal higher than that in actual numbers, because in many cases there were reenlistments. Livermore, in "Numbers and Losses in the Civil War in America," reckons the total Union enlistments, counting duplicates, at 2,898,304. I hold in my hand a letter from The Adjutant General, which shows that out of those soldiers in the Northern Army in the Civil War no less than 1,722,690 received a bounty from the United States, without reckoning the State and local bounties. The amount of bounty paid out by the United States was $300,223,500. Here is the letter:

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
Washington, December 4, 1915.

Hon. A. P. GARDNER,
House of Representatives.

SIR: In further response to your letter of the 27th ultimo, in which you request to be furnished with any information which would indicate the numbers of northern and southern soldiers who received pecuniary inducements to enlist, either in the form of national bounties, State bounties, or substitute money, and of the number of men who were drafted to serve as soldiers, the number who responded to the draft, and the number who furnished substitutes, I am directed by the Secretary of War to submit for your information the following statement:

SOLDIERS OF THE UNITED STATES ARMY—NATIONAL BOUNTIES.

In an estimate of the number of men to whom United States bounty has been paid from May 3, 1861, to the end of the war, printed in the final report of the Provost Marshal General (Ex.

Doc. No. 1, House of Representatives, 39th Cong., 1st sess., vol. 4), the total number of such men is given as 1,722,690 and the total amount of bounty paid to them as $300,223,500.

STATE AND LOCAL BOUNTIES.

This department has no data regarding State and local bounties prior to 1863. Such information as the department has been able to obtain from the State and local authorities on the subject is contained in the Official Records of the Union and Confederate Armies, Series III, Volume V, pages 740–749.

DRAFTED MEN AND SUBSTITUTES.

The records show that the number of men drafted from the States and Territories during the Civil War under the enrollment act of March 3, 1863, was 776,829, and that this number is accounted for as follows:

Failed to report	161,244
Discharged, quota full	46,101
Discharged by order	47,297
Exempted	315,509
Furnished substitutes	73,607
Paid commutation	86,724
Held to service	46,347

It appears from the above table that 73,607 substitutes were furnished by persons drafted in the Civil War, but no data are in the possession of the department showing the amounts paid to these substitutes.

SOLDIERS OF THE CONFEDERATE STATES ARMY.

Such information as is in the possession of the department in regard to bounties paid to Confederate soldiers has been published in the Official Records of the Union and Confederate Armies, Series IV, Volume I, pages 825–827, 903, 944, and 1096; Volume II, page 205; Volume III, pages 184 and 1000. From what is there shown it appears that a bounty of $50 was provided for in an act of the Confederate Congress, approved December 11, 1861, and that in another act approved February 17, 1864, it was provided that at the expiration of six months from April 1, 1864, a bounty of $100 in 6 per cent Confederate Government bonds was to be paid to every enlisted man then in service, or, in case of his death previous to such payment, to his legal heirs.

The publications hereinbefore referred to are no doubt readily accessible to you in the Library of Congress.

Very respectfully,

HENRY P. MCCAIN,
The Adjutant General.

[Extract from a letter written by former Secretary of War Henry L. Stimson to the New York Times on March 21, 1916.]

* * * * * * *

In September, 1814, a British force invaded New York and began an attack on Plattsburg. The American commander, Gen. Macomb, called upon the governor of Vermont to send troops to his assistance from across the lake. This governor, Martin Chittenden, was an opponent of the war. He declined to comply. The Vermont militia were anxious to go to the help of their compatriots but could get no order to do so. In the language of the historian Ingersoll:

An officer of the militia, Gen. Newell, tendered his brigade to the governor to repair to Plattsburg or anywhere else to oppose the enemy, to which the governor's cold-blooded answer was that he had no authority to order the militia to leave the State. On the 6th day of September the cannonade then begun was distinctly audible at Burlington and at Gov. Chittenden's residence at Jericho. But housed and recreant there, the chief magistrate still held off when the people on their own spontaneous motion in numbers crossed the lake and following the cannonade hurried to Plattsburg without distinction of party to tender their services for their country.

Unfortunately the militia were not always as patriotic as these men of Vermont. On October 13, 1812, Gen. Van Rensselaer had assembled a force consisting of about 900 Regulars and 2,270 militia on the New York side of the Niagara River for the purpose of attacking a British fort across the river on Queenstown Heights. Early in the morning he sent over the Regulars and a few of the militia to surprise the British. The attack was completely successful, and the Americans took possession of the fort. Later in the day the British commander assembled reenforcements and began an attempt to retake it from the Americans. Gen. Van Rensselaer then sought to bring over the rest of his force to the rescue of the sorely beset advance guard; but in the language of Gen. Upton:

The rest of the militia on our side of the river, although ordered and implored by their commander, absolutely refused to cross over under the plea that, according to the Constitution of the United States, they could only be called out to resist an invasion.

During the rest of that day these men stayed on the bank on the American side and watched their comrades driven out of the fort, down to the river's bank, until they were killed or captured to the last man. Gen. Van Rensselaer, in his report of the action, said:

I can only add that the victory was really won, but lost for the want of a small reenforcement; one-third part of the idle men might have saved all.

In precisely the same way during the same year a body of Ohio Militia refused Gen. Hull's order to cross the boundary at Detroit, "alleging as a reason that they were not obliged to serve outside of the United States." Still another force of militia under Gen. Dearborn refused to cross the line at Plattsburg for the same reason, and still another force acted in the same way under Gen. Smyth.

It is idle to say that such things could not happen to us to-day. These incidents were not the result of chance; they were the fruits of faulty methods. American soldiers in 1812 were no less brave and patriotic than they are to-day. The American people to-day contain within them many more discordant elements than they did a century ago, and the governors of our States in the twentieth century will be quite as quick to listen to local political considerations as those New England governors were during the War of 1812. Indeed, it was less than two years ago when the governor of South Carolina disbanded his entire militia force in order to block the attempts of the National Government to restore discipline out of chaos in those South Carolina Mifitia. It is as true to-day as when Washington was writing from Valley Forge that the safety of this country as a Nation can only be maintained by national forces under undivided national control.

HENRY L. STIMSON,
Former Secretary of War.

Panama Canal.

EXTENSION OF REMARKS

OF

HON. WILLIAM C. ADAMSON,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 30, 1917.

Mr. ADAMSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following letters:

WAR DEPARTMENT,
Washington, January 23, 1917.

Hon. W. C. ADAMSON,
Chairman Committee on Interstate and Foreign Commerce,
House of Representatives, Washington, D. C.

MY DEAR JUDGE ADAMSON: With reference to House bill 9818, providing that the Panama Canal rules shall govern in the measurement of vessels for imposing tolls, which bill has been committed to the Committee of the Whole House on the state of the Union and is now No. 9 on the Union Calendar, I desire, in view of the great need of this legislation and of the urgent necessity for its early passage, to review briefly the existing situation in respect to the levying of Panama Canal tolls and to urge upon Congress the importance of taking action in regard thereto during the present session.

Briefly, the situation is this: The Panama Canal Act, approved August 24, 1912, authorized the President to prescribe the tolls to be levied by the Panama Canal within certain limits, and to decide upon the measurements to be adopted, but provided that "when based upon net registered tonnage for ships of commerce the tolls shall not exceed $1.25 per net registered ton."

This provision was interpreted by the Panama Canal authorities to mean the net tonnage of vessels as determined by the Panama Canal rules of measurement. These rules had been formulated by an authority on transportation matters who had been engaged by the Panama Canal authorities for this purpose, and they were based on the fundamental principle that commercial vessels should be taxed in accordance with their earning capacities.

The Attorney General, however, when the question was submitted to him, held that the words "net registered tonnage" as used in the Panama Canal act must mean the net tonnage under the United States rules of measurement, and it was decided that if the toll rate established at $1.20 per net ton, when multiplied by the tonnage as ascertained by the Panama Canal rules, exceeds the amount produced by multiplying the net registered tonnage as measured by the rules prescribed in the United States statutes by $1.25, the excess thus produced is uncollectible.

The effect of this ruling has been to vitiate the principle established that vessels should pay tolls according to their earning capacities, to discriminate against certain ships, to decrease materially the revenues of the canal, to increase the difficulties of administration through the measurement of ships under both sets of rules, and (as a large percentage of tolls previously collected were in excess of the amount collectible under the decision) to require the rechecking of all ships' measurements to ascertain the excess.

Practically all countries charge port and light dues, wharfage, etc., on the basis of net tonnage. In view of the fact that these dues are only a few cents per ton, a number of the leading maritime nations, including the United States, have entered into reciprocal relations whereby they recognize each other's tonnage certificates for levying

these dues, notwithstanding the discrepancies in the different rules of measurement. The laws of the United States designate the Commissioner of Navigation as the official who shall prepare the necessary rules and regulations for the measurement of vessels of the United States. Such rules are naturally fixed so as to give our merchant vessels all the benefits possible in the reduction of any dues that may be imposed, and the rules are changed from time to time with this purpose in view. Hence, in a great majority of cases the net tonnage of vessels under United States measurement rules is less than under the Panama Canal rules. Furthermore, the Commissioner of Navigation, in a circular dated March 16, 1915, exempted from measurement under certain conditions shelter-deck and closed-in spaces. These changes, when taken into account in the levying of Panama Canal tolls, still further deviate from the principle that vessels using the canal shall be taxed according to their earning capacities.

The Panama Canal rules, following strictly the principle that the earning capacity of a ship should determine its tolls, take cognizance of the deck spaces utilized for the carrying of cargo, and charges are provided for deck loads, which are not computed in fixing the United States tonnage, as well as all passenger spaces. The exemption of practically all shelter-deck spaces and deck loads of vessels using the canal (deck loads not being included in the United States measurement rules) has resulted in discrimination against most of the United States vessels transiting this waterway, owing to the fact that almost all United States vessels are so constructed that they are unable to take advantage of shelter-deck space, while a large proportion of the foreign ships have been so constructed that they can take advantage of these exemptions. On the other hand, the United States rules provide for the exemption of certain cabin spaces above the upper deck that is not a deck attached to the hull, which would in most cases result in discrimination against foreign vessels in favor of United States passenger steamers if the national register of the vessel were recognized as a factor to be considered in the levying of tolls.

As time goes on and traffic increases, with a resulting increase in the number of classes of vessels using the canal, it becomes more evident that it will be absolutely necessary to adopt some one rule for the levying of tolls, and experience has demonstrated beyond a doubt that the fairest rules for determining the tonnage of a vessel, in order that tolls may be assessed without discrimination, and on a just basis, are the Panama Canal rules for measurement. Furthermore, the Commissioner of Navigation has stated that the Panama Canal rules of measurement are without doubt the most exact application of the scientific principles governing the measurement of vessels yet prepared.

While the monetary loss to the Panama Canal during the fiscal year 1916 due to the Attorney General's ruling, amounting to $390,714.05, or 16.3 per cent of the amount actually collected, is considerable and jeopardizes the success of the canal from a financial standpoint, the present unsatisfactory condition also results in discrimination for and against ships, which discrimination is in violation of our treaty obligations. This condition also results in difficult, as well as unsatisfactory, administration, which, in my opinion, should be promptly remedied by appropriate congressional legislation.

While you are, of course, familiar with the conditions herein described, I have thought it advisable to again emphasize the necessity of securing congressional relief. I am sure you will agree with me that there is every need of this, and I sincerely hope that it will be possible for you to bring the matter before Congress in such a way that it may realize the gravity of the situation and speedily enact appropriate remedial legislation.

Will you kindly advise me as to whether, in your opinion, anything can be accomplished along this line during the present session of Congress?

I am inclosing herewith for ready reference a copy of a letter which I addressed to you under date of April 5, 1916, in connection with House bill 13845, which bears upon this general subject, and I understand that you have already been advised of the views of the Panama Canal officials regarding this matter.

Sincerely, yours,

NEWTON D. BAKER,
Secretary of War.

(Inclosure.)

WAR DEPARTMENT,
Washington, April 5, 1916.

Hon. W. C. ADAMSON,
Chairman Committee on Interstate and Foreign Commerce,
House of Representatives, Washington, D. C.

SIR: I have the honor to acknowledge the receipt of your letter of the 30th ultimo, inclosing copy of bill H. R. 13845, pending before the Committee on Interstate and Foreign Commerce. You ask for my views concerning this bill, which proposes to amend section 5 of the Panama Canal act by authorizing the President, by proclamation, to make, and from time to time amend, rules for the measurement of the gross and net tonnage of vessels as a basis for tolls which will correspond to and follow similar rules for measurement prevailing at the Suez Canal.

I am advised by the Panama Canal authorities in Washington that when the question of formulating measurement rules for the Panama Canal came up for consideration Dr. Emory R. Johnson, an authority on transportation matters, was employed to make a careful study of the subject and formulate rules that would be fair to all and result in avoiding the difficulties encountered by the Suez Canal authorities when, during the earlier years of its use, the Suez rules were such that steps were taken to so construct ships that exemption from tolls could be claimed for spaces in which cargo could be carried. Dr. Johnson's exhaustive and comprehensive report was published under the title of "Measurement of Vessels for the Panama Canal," a copy of which is being forwarded to you under separate cover. This report, which has been conceded to be the most thorough treatise on admeasurement in any language, sets forth clearly the reasons for the Panama Canal rules which were formulated as a result of these studies. The rules for the measurement of vessels for the Panama Canal recommended by Dr. Johnson were promulgated by the President in a proclamation dated November 21, 1913. The fundamental principle adopted as the basis of these rules was that commercial vessels should be taxed in accordance with their earning capacity.

On pages 7 and 8 of Dr. Johnson's report will be found a statement as to the main reasons why it was not advisable to adopt for the Panama Canal one of the existing measurement codes. It was deemed wise, however, to base the Panama rules upon the principles that underlie those of the Suez Canal Co. and to make the main provisions of the two measurement codes as nearly alike as was warranted by the changes that had been made during recent decades in ship designs, navigation laws, and maritime practice. The two sets of rules correspond closely in their main provisions, although they differ in detail. The variations in the two measurement codes are due chiefly to the fact that the Panama Canal rules were drafted 40 years after the Suez rules were formulated. During that time the progress in shipbuilding has brought about great changes in the designs of ships and entirely new types of vessels have come into existence. The Panama Canal rules, naturally, have been framed with present-day shipbuilding and navigation practices in mind, and, therefore, are up to date in every respect.

The Commissioner of Navigation in his annual report to the Secretary of Commerce for the year ended June 30, 1913, stated (see p. 36) that—

"The system of measurement which has been prepared by Prof. Johnson for the Panama Canal is the result of careful study and investigation and of extended conference with the most competent authorities in England, Germany, and France. It is without doubt the most exact application of the scientific principles which should govern the subject yet prepared."

In view of the foregoing, there would be absolutely nothing to gain on the part of the United States if the Suez rules were adopted as a standard. In fact, such action would be a distinct backward step, whereby the United States would be placed in the position of not taking advantage of the 40 years' experience of the Suez Canal authorities and voluntarily making the Panama Canal rules subordinate to the Suez rules, formulated in a foreign country. Furthermore, if bill H. R. 13845 were enacted into law, it would mean that every time the Suez rules are changed it would also be necessary to change the Panama Canal rules. Any plan which would require the United States Government in operating the Panama Canal to follow rules promulgated in any foreign country is inadvisable. Under these circumstances I do not recommend favorable action by your committee on bill H. R. 13845.

In connection with your consideration of this matter, I would invite your attention to chapter 13 of Dr. Johnson's report, entitled "Comparison of the Panama and Suez measurement rules," which shows that one of the principal differences between the two systems is that the Suez rules exempt from measurement and from the payment of tolls the spaces occupied by deck loads, while the Panama rules require the measurement of such spaces and the addition of the tonnage of such spaces to the net tonnage upon which tolls are imposed. I would also state that I am forwarding a copy of bill H. R. 13845, together with a copy of this letter, to the Governor of the Panama Canal, at Balboa Heights, Canal Zone, requesting that he make additional comments on the bill in question if he so desires.

Referring to the question of measurement rules for the Panama Canal, I wish to take this opportunity to invite your attention to bill H. R. 9818, which was favorably reported from the Committee on Interstate and Foreign Commerce under date of February 11, 1916 (see Rept. No. 173, 64th Cong., 1st sess.). I trust that the introduction of bill H. R. 13845 will not delay the consideration of bill H. R. 9818 when the same is reached on the House Calendar, as there is urgent need of this legislation, for reasons which you fully understand.

Very respectfully,

NEWTON D. BAKER,
Secretary of War.

Speech of Hon. William R. Wood, of Indiana, Before the Pittsburgh Tariff Club.

EXTENSION OF REMARKS

OF

HON. WILLIAM H. COLEMAN,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 31, 1917.

Mr. COLEMAN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a speech delivered by Representative WILLIAM R. WOOD, of Indiana, before the Pittsburgh Tariff Club, on Monday of this week, on the subject, "William McKinley."

The speech is as follows:

Mr. Toastmaster and members of the Young Men's Republican Tariff Club, I wish to congratulate the members of this club for their annual observance of this day. By so doing, you not only pay just tribute to the memory of a great man, but you also provide an occasion at which matters of moment in the affairs of the country may be discussed and the future welfare of the great political party to which you belong considered.

Every mountain range has a few lofty peaks that tower high above the mean level. So also has every nation of the world a few great characters who, by reason of the impress made by them in their lifetime, survive the ages. If I were called upon to name three such characters from the Presidents of the United States, I would name Washington, Lincoln, and McKinley.

It is necessary in order that the name of a man may long survive in any country that there be a national crisis of which he makes himself the master. We had our Revolutionary crisis, out of which the Nation was born, and of which Washington was the master. Then, there came a time when that Nation, which was wrought for liberty and dedicated to freedom, was on the verge of destruction and ruin. In that, the

darkest hour of our country's history, there emerged from the prairies of Illinois that great, good man, Abraham Lincoln, who was destined to be the savior of the Union.

In 1896 when the financial condition of this country had reached such a plight that national bankruptcy and dishonor were staring us in the face, and when a very large per cent of our so-called statesmen was advocating that we pay our indebtedness, public and private, with a debased currency; and when the political party then in power, true to its past traditions and present practices, had depleted the Public Treasury and was piling up millions in deficit by reason of its ever destructive policy of a tariff for revenue only, then it was that the country turned to that master mind, William McKinley. McKinley had long stood preeminent as the champion of an honest currency and for a protective tariff that would not only raise revenue to meet all the current expense of government but which would at the same time build up American industries and give employment to American workmen at splendid wage. To carry out these principles William McKinley was chosen as President, and that he performed well his part, the greatest era of real prosperity this country has ever known may be called upon to attest.

It is not my purpose to-night to review the personal or private side of William McKinley's life, interesting as that is and as much as we should desire to see it emulated. But it is my purpose, briefly as I can, to compare some of the political and economic conditions existing at the time he became President with some of the political and economic conditions existing now, that we may see whether like causes produce like effects, and whether the remedies applied then are not just as essential now.

When McKinley became President, the mills and factories of this country were for the most part closed. Men and women who had once found employment therein were idle. Evidences of hunger and want were seen everywhere. The United States Treasury was empty. Bonds had to be issued to pay the current expenses of government. The Democratic majority then in Congress had repealed the McKinley protective-tariff law and had given us in its place a tariff law for revenue only that had proven most disastrous to our industries.

Compare this condition with that which prevailed in 1914, immediately before the war in Europe began, when there were 4,000,000 wage earners in the United States who could find nothing to do. This army of the unemployed was far greater than it was in the nineties when Coxey marched his horde of idle men from the Missouri River to the very steps of the Capitol in Washington, as a protest against the then existing condition of affairs. Soup houses and bread lines were the order of the hour, and the charitable societies and institutions everywhere were taxed to their uttermost to care for those who were actually hungry. Our balance of trade had entirely disappeared. Our imports were many millions in excess of our exports. The surplus which the Taft administration had left in the Treasury had entirely disappeared and we found ourselves again sliding down the deficit plank at the rate of $10,000,000 per month.

In order to meet the current expense of government, the present administration was compelled by special enactment to levy onerous war taxes at a time when we had no war and when we were at peace with all the world. This administration will go down in history with this unique but unenviable distinction. It was the first, and I hope the last, to raise revenue by war taxes in time of peace.

Just at the time when this country was witnessing the most painful demonstration that it has ever had of the baleful influences of a Democratic tariff for revenue only upon the industries of our country, the greatest war in all time broke out in Europe, which was destined to be the good angel of the Democratic Party.

Strange as it may seem, the apologists for the administration for months after this war began attributed our deplorable financial and industrial condition to this war; but after a while when the war was well advanced and the necessities of the warring nations made demand upon every resource that we had or could provide to supply them with all the implements and incidents of warfare; when the blood money of Europe began to pour into our coffers to pay for all this, then all of a sudden these same apologists of the administration discovered that we were in the midst of a most wonderful prosperity that was due entirely to the economic policy of the Democratic Party. But these claims can not long survive under the light of the figures furnished by our customhouse and United States Treasury reports.

It is true that our balance of trade has been retrieved and is greater to-day than it ever was since the beginning of our Government; but what made it so and what is keeping it so? Within the last 12 months I have heard a number of Democratic Congressmen declare in public debate on the floor of the House, that not to exceed 3 per cent of our increased exports is due to the war. But when they made this declaration, if they were honest, they had in mind but two items, gunpowder and cannon balls. We can not maintain armies and conduct warfare with gunpowder and cannon balls alone. These are now and always have been the smallest items of expense in such conduct. The soldier has to be fed and clothed and shod. Transportation facilities have to be furnished, and all the implements and incidents of war have to be had. When we consider all these as being essential to the conduct of this European war, and all of which items we have been furnishing in such large quantities, we find that they make up more than 70 per cent of our exportations. We will also discover that of the articles that are not used either directly or indirectly in the war our exports have decreased nearly 12 per cent.

While we are considering the enormous increase in our exportations, let us look for a moment at the enormous increase of our importations since the adoption of the present tariff schedules, and especially those increases since this war commenced. Our importations in 11 months of 1914, one-half of which time was before the war and one-half after the war commenced, amounted to $1,674,619,456. Our importations for the same 11 months for the year 1916 amounted to $2,186,821,703. The increase of importations of the last 11 months over the first 11 months referred to amounts to $512,202,247. This increase was made possible in spite of the extraordinary obstacles placed in the paths of the sea by reason of the war. What it would have amounted to had there been no war in Europe no one can even conjecture.

We do not get any revenue from our exports, as everyone knows, but we should get quite one-half of the revenue necessary to defray our expense of government from our imports. We are not doing it, even as large as our imports are as compared with what they were under the Taft administration, when we did derive from this source half of the revenue necessary to defray the expense of our Government. Our total imports for the entire year of 1916 was $2,391,716,335. The revenue derived therefrom was $217,589,766.54. It should have been more than twice as much. The increase of imports for the calendar year 1916 exceeds any previous corresponding 12-month period by $571,000,000. Yet the customs receipts collected on these increased imports is a hundred million dollars less than was collected during any 12-month period under the Payne tariff law when the maximum imports for any one year did not exceed three hundred and thirty millions. If the same rate of duty had been applied to the dutiable imports of 1916 that was applied under the Payne law, our revenue derived therefrom instead of being two hundred and seventeen and one-half millions would have amounted to nearly five hundred millions, and there would have been no necessity for the unjust, onerous, and troublesome special taxes resorted to by this administration.

At no time since this Government was founded, either in peace or in war, was the burden of taxation directly levied upon the people as great as it is to-day.

Notwithstanding the extraordinary amount of money that is being raised by reason of this direct taxation, we have a bankrupt Treasury and no money to discharge our current indebtedness. One of the best evidences of this is to be found in the fact that when the revenue bill was enacted into law at the last session of Congress the stamp tax on bank checks and other instruments was repealed and provision made for the redemption of the unused stamps held by the various banks and other institutions throughout the country. This law went into effect in September. Immediately these stamps began to pour into the United States Treasury for redemption, but not a single cent's worth has been redeemed since October, and the Treasury Department does not now even acknowledge receipt of these stamps, for the reason that to acknowledge them would be to confess that they had no money with which to redeem them; and there is now accumulated in the Treasury of the United States nearly $5,000,000 worth of these unredeemed stamps.

The actual deficit in the United States Treasury on the last day of December was $22,000,000. It is practically $50,000,000 to-day. We are creating a deficit at the rate of nearly a million dollars every day.

How does this administration propose to meet this deplorable condition? They propose, first, to increase the inheritance tax 50 per cent. They propose to confiscate practically all the earnings of copartnerships and corporations in excess of 8 per cent. From these sources of increased direct taxation they expect to realize $236,000,000.

They propose to have authorized for sale three hundred million of short-time certificates or bonds. They propose to

authorize and sell one hundred million of long-time bonds; and, in addition to all this, they will use the $240,000,000 of Panama bonds already authorized, and for the sale of which no additional legislation is required. Thus they expect to raise $876,000,000.

That will stop, for a time at least, the leak in the United States Treasury. It has already been admitted that unless this amount of money is raised the deficit in the Treasury on the 30th day of June, 1918, will amount to $382,000,000. How much more than this it will really amount to the Lord only knows; but it is safe to say that they have made it no smaller than it will really be.

It was charged during the recent campaign by the Republican Party that there would be a deficit in the United States Treasury before the close of the Sixty-fourth Congress on March 4 next, and that bonds would have to be issued to meet the current expense of government. Mr. McAdoo, Secretary of the Treasury, who knew then the exact condition of our finances and what that condition would be by the 4th of March, boldly refuted this charge, declared it was untrue, and that it was gotten up merely for political effect. His statement was published broadcast throughout the country.

When all this money raised by these extraordinary methods is swallowed up by the insatiate maw of this extravagant administration what then are we going to do? How, then, are we going to pay off this bonded indebtedness? There is but one way, and that is by reinstating the Republican Party and reinstalling its policy of protection to American industry. This was the cure that was applied by McKinley in 1896. It worked like magic then, and we will find that there is greater need for this remedy when this European war is over, for the patient will be sicker than it was then. When the 20,000,000 men who were drawn from the factory and farm into this war, and who thereby became consumers entirely, return to their pursuits of peace and become producers again, then we will realize as never before the absolute necessity of a tariff that will protect our manufactures and our farms from the cheap products of foreign factory and farm and our workingmen from the cheap labor of Europe and the Orient.

President Wilson said, just a few days before the last election in one of his Shadow Lawn speeches, that we need give ourselves but little concern about all this, that it would take the nations now engaged in war a decade and perhaps longer to rehabilitate their factories which have been destroyed and to repair their waste places. How he could have made this statement in the light of the then and now existing facts is a mystery to me, for there has not been a factory destroyed in all Germany, Austria, Hungary, or Great Britain, and less than 20 per cent of the industries of France have even been affected. All of the factories in these countries that I have named which are unaffected have been and are running day and night, piling up their surplus products against the coming of the end of this war. In Germany alone 3,000,000 prisoners are engaged in these factory pursuits. All the maimed and crippled who can work at all are contributing their share. If this war should end to-morrow, we would find these factories better equipped than they have ever been in the world before and being operated with greater efficiency.

When the last shot is fired in this war it will be a signal for thousands of interned merchant vessels in our harbors and the harbors of other neutral nations to commence plowing the open seas, going to every trading port in the civilized world, freighted with manufactured goods of all kinds, and in the sale of which we can not hope to compete.

What have we done to help it? What have we done to protect ourselves against this rising storm? Absolutely nothing. When the day comes, as it certainly must come, the millions who were out of employment when this war commenced will be idle again, plus millions more. Then the cup, now filled with the blood-red wine of this war prosperity, will be empty, and we will only taste the lees, the bitter lees. Then again, as in 1896, will there be need for the Republican Party and another McKinley with his policy of protection to save the country from financial disaster.

It seems that the Republican Party was born to save. It saved the Union in 1861, the country's credit in 1876, and the Nation's honor in 1896, and all of its potency to save must be invoked in the months that are shortly to come.

Now is a good time to compare the attitude of William McKinley as President with the attitude of President Wilson in reference to the matter of his own succession. The first term of President McKinley had proven a success even greater than his most sanguine friends had anticipated. The promises made in his party platform had been kept. Mills and factories, long closed, had been opened. The wheels of industry were busy everywhere, giving employment to every person who desired to work, at good wages. Business confidence was restored and capital was seeking investment in business enterprises. Our foreign trade was extended by leaps and bounds. Our increase of exports over imports during McKinley's first term amounted to $2,354,442,213, nearly seven times greater than it had been for the whole period from Washington to McKinley. So colossal these figures that they astounded the world and forever put to rest the fallacy that in order to extend our trade among the nations of the earth we must have free trade with those nations. During these four years we successfully fought the Spanish War, gave Cuba her freedom, and thus proved to the world that there is at least one nation which is not altogether selfish in the prosecution of a war. As McKinley truly said, it was a triumph of American civilization. So universal was the satisfaction of our countrymen with the conduct of public affairs and so great was the prosperity and contentment of all our people that there was little doubt as to President McKinley being reelected, but his majority was far greater than was expected. It was overwhelming. Not long after the commencement of his second term it began to be whispered about in high official circles, and even suggested through the public press, that inasmuch as we now have a President in whom the great masses of our people have the utmost confidence, and who, by reason of his wise and far-seeing statesmanship in so short a time, brought our Nation out of bankruptcy practically and made it one of the largest creditor nations on the face of the earth, he was again to be his own successor. But immediately when the President saw that this scheme was taking definite shape he declared in no uncertain terms, "It must not and it shall not be." And the people knew he meant what he said. Thus by his example did he reaffirm the wise admonition of Washington, that no man should be President more than two terms.

Contrast this conduct of President McKinley with the conduct of the present incumbent of the White House. True, President Wilson has just been elected for his second term, but this is one more term than he should in honor have asked for or accepted. The first platform upon which he was elected contained these positive and definite words:

> We favor a single presidential term, and to that end urge the adoption of an amendment to the Constitution making the President of the United States ineligible for reelection, and we pledge the candidate of this convention to this principle.

William Jennings Bryan, who was responsible for the nomination of Mr. Wilson by the Baltimore convention, and who was his chief spokesman during the campaign of 1912, while discussing this plank of the platform at a great meeting held at Indianapolis on October 17, 1912, said:

> We present him (Mr. Wilson) not only qualified in every way, but we present him pledged to a single term, that he may be your President and spend no time dividing patronage in order to secure delegates; that he need spend no time in planning for reelection; that he may give you all his thought and all his heart and all his energy. I believe that when a man is lifted by his countrymen to this pinnacle of power he ought to tear from his heart every thought of ambition, and on his bended knees consecrate his term to his country's service. That is our ideal President, and we present to you a man who measures up to that ideal.

Mr. Wilson not only accepted this plank and permitted his spokesman to assure the people of the country of his acceptance of the same, but he did all he could himself to impress the people of the virtue of the principle involved therein. As it turned out, however, this plank was just used by him on which to get in, for immediately after the election he repudiated it in toto and commenced paving the way for his own succession. Instead of using his influence to help in carrying out the pledge contained in that plank—to amend the Constitution limiting the President to one term—he set about actively to defeat it, and did defeat it. That he did defeat it is abundantly proven by indisputable evidence. Mr. Wilson was elected President in November, 1912. He was inaugurated March 4, 1913. On February 1, 1913, one month and three days before he was inaugurated, a resolution to amend the Constitution by limiting the President to one term of office passed the Senate of the United States by the necessary majority—17 Republicans voting for it and only 1 Democrat voting against it. The sentiment in the House at the time was overwhelmingly in favor of this resolution and it would have passed that body in short order had it not been for the intervention of Mr. Wilson himself. On the 12th day of February, 1913, 11 days after this resolution had passed the Senate and before there was time for its consideration in the House, he addressed an open letter to A. Mitchell Palmer, a member of the Democratic national committee and a Representative in Congress, in which he said:

> A fixed constitutional limitation to a single term of office is highly arbitrary and unsatisfactory from every point of view. I believe that we should fatally embarrass ourselves if we made the constitutional change proposed.

This letter was immediately brought to the attention of the Democratic committee having the bill in charge in the House. The fact is it was written for that purpose, and it had the desired effect. The bill was put to sleep and still slumbers in the hands of the committee, and the President is elected for a second term.

In the letter above referred to, from Mr. Wilson to Mr. Palmer, the author also said, in substance, that in his opinion a man should be permitted to be President as long and as often as the people want him to be. If the surmises of many who are watching the actions of the President at close range are correct, he is doing his utmost to convince the people that they should want him again, and that he should be his own successor for a third term. Thus has he stultified not only his own but his party's pledge to the people. And he has also demonstrated his willingness to trample in the dust the great example set by Washington and which was so nobly emphasized by McKinley.

There is another comparison between President McKinley and President Wilson that I desire to make. President McKinley believed with the fathers that for a government democratic in form and republican in character to survive the shocks of time and not fall decadent as its predecessor republics had, it should be divided into three separate and distinct parts—the executive, the legislative, and the judicial—each with duties and functions clearly defined, each independent of the other, and without the right of one to encroach upon the others. And from the beginning of his administration to the day of his death he strictly adhered in practice to this principle. He contented himself with the exercise of the prerogative given him under the Constitution by advising Congress, through stated messages, as to what he thought concerning the needs of the country and the desires of its people. In this way he gave to the representatives of the people his recommendations, to be acted upon and determined by them after due deliberation and consideration. At *no time did* he threaten them or cajole them. He respected the Congress and the rights of the Congressmen, and in turn he was respected by Congress and Congressmen, irrespective of party, as few other Presidents before or since have been respected. To this mutual respect of the rights of the two departments of our Government more than to any other cause may justly be attributed the rare good feeling that prevailed throughout the country during the period of the McKinley administration. No one ever heard of President McKinley threatening a Congressman that his patronage would be withheld unless he voted for this bill or against that. No one ever heard of his going to the Capitol and peremptorily demanding that Representatives and Senators of his political faith should surrender their judgment to his will. Such action was not only foreign to his nature, but would have been violative of his sense of duty.

Not so with the present incumbent. He has neither respect nor regard for the constitutional rights of the Congress or of Congressmen, except as the mere instruments to carry out his dictates; and when he changes his mind on any proposition, which is not uncommon, he expects his party adherents in Congress to change their minds with him, and without asking any questions. Thus far they have done it, with here and there only a little rumble of dissension, but never amounting to serious opposition.

By way of example, let us look for a moment at his Panama Canal episode. The Democratic platform of 1912 contained the following plank:

> We favor the exemption from tolls of American ships engaged in coastwise trade passing through the canal.

The Republican platform and the Progressive platform in that campaign contained a similar plank. There was no opposition apparently to this eminently fair discrimination in the United States, and in conformity with this unanimous desire of the people a law was passed exempting American ships engaged in coastwise trade from the payment of tolls. Very soon after Mr. Wilson was inaugurated he sent a message to Congress in which he demanded that this law be repealed. He did not then give, and up to this day has not given, any reason for this extraordinary action on his part. Upon the President's demand Democratic Members in the House and Senate, who not only supported this measure by their votes but also spoke in favor of the same, blindly voted for its repeal. Those Members of Congress who were slow to act to his dictates for the repeal of this law were soon made to understand that if they continued in their opposition they would suffer all the consequences that it was within the power of a President to inflict, and they yielded their own opinions and surrendered their own judgment.

The so-called warning resolution considered at the last session of Congress affords another striking example of the dictatorial manner of our President. More than 90 per cent of the Members of the House and Senate were in favor of passing a resolution to warn Americans to stay off of the armed merchantmen of belligerent nations, feeling that this warning was justified not only for the protection of Americans themselves but above all to protect the United States from becoming involved in this European war. The President himself at one period was in favor of this resolution, but, as in the case of the Panama Canal tolls, for some unexplained reason he changed his mind, and demanded that this warning resolution should be killed. Leading Senators and Representatives were sent for who had expressed themselves openly in favor of this resolution and some of whom had made speeches in their respective bodies in favor of it, and they were plainly informed that this resolution must be defeated, and that no matter what they thought about it as individuals, as Members of Congress they must vote against it. This they did, and the resolution was killed.

When the present Democratic tariff bill was under consideration in the Congress the President demanded that both sugar and wool should be placed upon the free list, and this, too, against the judgment of the leaders of his party in both branches of Congress. On the floor of the House and Senate this remarkable spectacle was presented in the consideration of this bill, Members openly stating that the placing of sugar and wool upon the free list would be destructive and ruinous to these industries in this country, and that in their judgment such action should not be taken, yet they were surrendering their own convictions and their own judgment at the behest of the President. And both of these items were put upon the free list, costing the Government in consequence more than $75,000,000 in revenue, and but for the war and the subsequent action of Congress in placing the tariff back on sugar these industries would have been absolutely ruined.

Another striking example of the President's dictation is afforded by his action with reference to the child-labor bill that passed the House early in the last session, and which passed the Senate but a few days before final adjournment. The Democratic steering committee of the Senate, with the knowledge, consent, and approval of the President, formulated a program and placed thereon the bills that should be taken up for consideration during the remaining days of that session. The child-labor bill was not included in this program. When it became known that it had been omitted criticism was heard generally throughout the North because of its omission. It was not many weeks before the election. The President heard the rumble, and notwithstanding the fact that he was opposed to the child-labor bill himself and had frequently in public speeches and written articles declared it to be unconstitutional, and notwithstanding the further fact that he had agreed with certain southern Senators and Representatives who were opposed to the child-labor bill that the same should not be considered during the first session of the Sixty-fourth Congress, yet when it became apparent that if it was not considered it would be the means of losing him some votes in certain of the Northern States, he, without notice, came out on the Hill, sent for the Democratic leaders in the Senate and demanded that their program of procedure be opened up and the child-labor bill be included therein. When confronted with the promises that he had made these southern Senators and Representatives, and also with his former position with reference to this character of legislation being unconstitutional, he brushed those who had the temerity to speak to him about it aside and informed them that no matter what he had promised or what he had said previously on this subject, this bill must be passed, and it was passed.

The last exhibition of this character that he gave before the adjournment of the first session of the present Congress was with reference to the so-called railroad men's eight-hour bill. His intermediation was not solicited in this matter at any time by anyone. The gentlemen who represented the railroad brotherhoods did not want his interference and those who represented the railroads did not want it. But he took it upon himself, thinking that by so doing he could materially enhance his chances for reelection. The bill that was formulated and presented to Congress did not embody the ideas or desires of the railroad men, and it was opposed by those representing the railroads. He sent it to the House of Representatives and demanded that it be passed within 48 hours. Six months' time was occupied in public hearings on the naval appropriation bill, yet this eight-hour law legislation, which concerned a hundred million people, was not considered for six seconds; it was not considered at all by any committee of the House. It is a mistaken idea to say that this bill was forced through Congress by the railroad men. They had nothing to do with it. It was

forced through Congress by the President himself, and whatever blame should attach for this outrageous piece of business should be laid at the door of the President himself.

The presidents of these railroad brotherhoods are now saying, before the committee hearing with reference to further proposed legislation concerning strikes, that they reluctantly submitted their case to the President at his behest and that what they obtained was a mere shell, empty of any good purpose, and that they now regret that they were duped by him into submitting to his proposal. Everybody now knows that this whole scheme was for the purpose of getting votes and was never intended to afford permanent relief either to the brotherhoods, to the railroads, or to the public.

I have called your attention to but a few of the many examples that might be cited of the President dictating legislation and preventing legislation, but they are certainly sufficient to convince anyone that Mr. Wilson has no respect whatever for that portion of our Constitution which declares in favor of separate and distinct branches of Government and that one shall not encroach upon the duties or deliberations of the other.

I wish that every voter, every schoolboy and schoolgirl in this country could be made to realize and appreciate the enormity of this action of the President of the United States and what it means to the future of this Government if its practice is to be persisted in. I wish that every voter, every schoolboy and schoolgirl would read and conjure what was said by Washington in his farewell address upon this proposition, which is as follows:

It is important, likewise, that the habits of thinking in a free country should inspire caution in those intrusted with its administration, to confine themselves within their respective constitutional spheres, avoiding in the exercise of the powers of one department to encroach upon another. * * * The necessity of reciprocal checks in the exercise of political power by dividing and distributing it into different depositories and constituting each the guardian of the public weal against the invasions of the others has been evidenced by experiments, ancient and modern, some of them in our country and under our own eyes. To preserve them must be as necessary as to institute them. If, in the opinion of the people, the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designates; but let there be no change by usurpation, for though this in one instance may be the instrument of good it is the customary weapon by which free governments are destroyed.

Was there ever a time since these words of wisdom were spoken when there was greater need that they should be considered and sink deep into the hearts of every lover of his country and his country's institutions than there is now?

If we are to submit to a continuation of the practices of the President of the United States dictating absolutely to Congress what bills it shall pass and what bills it shall not pass, the time is near at hand when the Congress of the United States will be a useless thing. And if the people submit to this thing with reference to the Congress, how long will it be until they will submit likewise to presidential dictation to the Supreme Court of the United States as to what interpretation that body shall give to the laws which were passed under and by virtue of his dictation? When that time comes this Government of ours, which was established by the fathers as an asylum of liberty, will be a depotism pure and simple.

I ask you, therefore, if it is not high time that we pay heed to the wholesome advice of Washington and to the precepts and example of McKinley?

President McKinley was a partisan in the truest sense of that term. He believed in political parties, and that political parties are essential to the very existence of our kind of government. He believed thoroughly in the fundamental principles of the Republican Party, and that these principles are the best that have ever been administered for the greatest benefit of the greatest number. He believed in party organization; that party organization is the only reliable agency through which representatives of party policy can be selected, and that such selections so made can best be depended upon to fully carry out party policies. But he was not a spoilsman. He believed in the fitness of things. He believed in rewarding men for party service and loyalty, but he always required that men so rewarded should measure up to the place they were appointed to fill. In making political appointments he adhered closely to the idea that he could serve his party best by building up the public service rather than by crippling it through mere political expediency. In this sense he was a partisan. But as President and in his treatment of all public questions he occupied the plane of a statesman, and never did even the suspicion of partisan purpose attach to his action with reference to these questions. He was the President of all the people in the broadest possible sense, without distinction as to section or class.

Fortunate would we be in this crisis of our country's history if we had another McKinley, and better far would it have been if we had had a President like him during the last four years. Such a President would have known our whole country and been acquainted with its diversified interests. Such a President would be responsive to the best interests of all our people, and at no time would he resort to mere academic subterfuge.

With the ship of state under the command of such a captain, our people would feel safe from the dangers of shipwreck that have been besetting us and are gravely besetting us to-day. McKinley would never have sailed this ship into the uncertain seas that President Wilson did last week. Rather would he have used the chart and compass left by Washington in his Farewell Address, when he bade us under all circumstances keep ourselves free from all foreign entanglements and alliances, from even the possibility of such.

If we had had a President like McKinley during these last four years and had such a President now, he would be looking to the future welfare and development of our commercial possibilities. He would take advantage of the present war situation to provide better industrial conditions for our people when this war is over. He would put into practice that portion of the last public utterance he ever made to the American people, in which he said:

Our capacity to produce has developed so enormously and our products have so multiplied that the problem of more markets requires our urgent and immediate attention. Only a broad and enlightened policy will keep what we have. No other policy will get more. In these times of marvelous business energy and gain we ought to be looking to the future, strengthening the weak places in our industrial and commercial systems, that we may be ready for any storm or strain.

And a most fitting time this is to have sunk deep in the heart and memory of every loyal American these memorable words of admonition given us by this martyred President:

Let us ever remember that our interest is in concord, not conflict, and that our real eminence rests in the victories of peace, not those of war.

Revenue Bill.

EXTENSION OF REMARKS

OF

HON. WHITMELL P. MARTIN,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 31, 1917.

Mr. MARTIN. Mr. Speaker, I believe that the method of raising the revenues for this Government provided for in this bill will prove a distinct disappointment to the American people.

The people of this country are patriotic and are prepared to make any sacrifice and pay any reasonable and just tax to the end that all governmental activities may be wisely and economically administered and at the same time carry out a "preparedness program" by which we hope to uphold the dignity of and respect for this great country in time of peace and to give a good account of ourselves if war should come.

But, Mr. Speaker, even those who are left untouched by this method of taxation are moved in a spirit of fairness to protest against legislation that, though apparently aimed at the great industrial centers of this country, will in my opinion prove a "boomerang," and the South will be the first to feel the adverse effects of this measure.

The South is now in course of development and needs only capital to build up its industries, exploit its great resources, and make if it a section of this country that nature, by reason of its climate and great fertility, destined that it should be.

Those who seek to invest their money in the South have heretofore been attracted by our liberal corporate laws, purposely enacted in order to attract foreign capital and encourage local capital to venture into new enterprises, and such investments are almost invariably made through the formation of stock companies. Investments in new enterprises are often hazardous, and are made because the investors are not content to accept a minimum return on their money, and are willing to take a chance of either losing or of reaping more than an ordinary profit on their investment.

If no profits are realized or if their entire capital is wiped out they are in no way compensated therefor, but if perchance the investment is successful and a profit is realized then such investors must lose no time in preparing to meet the "tax-gatherer." They must not only pay the corporation tax of 2 per cent assessed by the act of 1916, but they must also pay the additional tax of 8 per cent on all profits over and above 8

per cent, in excess of $5,000, as provided and assessed in this act.

It may be that most of this tax will be paid by the great industrial and manufacturing centers, but it will at the same time prove a great hardship to the South, in that it will discourage the investment of capital and arrest the development of our great resources.

Legislation that is both class and discriminatory can not help but create widespread resentment, and this will be followed by well planned and studied attempts to evade the tax. The "tax dodgers" will now proceed to multiply and water will be in great demand in the stock market.

The party responsible for this legislation can not be censured for its efforts to raise revenue, because all parties have indorsed the program of preparedness and have voted millions of dollars to provide for the increased appropriations for the Army, Navy, and fortifications, and it falls to the majority party to devise ways and means to raise the necessary funds.

But the method proposed in this bill is not only un-American in that it is class and discriminatory legislation, but it is a departure by the Democratic Party from the doctrine that is most conspicuously set forth in the Democratic platforms. The Democratic platform of 1912 contains this plank:

We recognize that our system of tariff taxation is intimately connected with the business of the country, and we favor the ultimate attainment of the principles we advocate by legislation that will not injure or destroy legitimate industry.

It is true that in the light of the Underwood bill that was passed a few months after the adoption of this platform it would seem that this plank was either forgotten or ignored, but certainly some attention will be paid the platform of 1916, which contains this plank:

We reaffirm our belief in the doctrine of a tariff for the purpose of providing sufficient revenue for the operation of the Government economically administered. * * *

Mr. Speaker, I am not looking at this matter from the standpoint of a partisan, as I am prepared to support meritorious measures fathered by either of the dominant parties, but it does strike me that if this plank in the Democratic platform means *anything*, it means that this party believes in a tariff for the purpose of providing the necessary revenues for this Government.

Never in its history has this Government been in such absolute need of revenues, and yet the dominant party now seems about to again abandon its platform and enter upon a method of taxation which, if persisted in, means that all protection to American industries, incidental or otherwise, will under Democratic rule be a thing of the past.

The doctrine of a "tariff for revenue with incidental protection" could be invoked at this time to good purpose. It would do much toward raising the revenue which is now so much needed, and it would at the same time prepare us to meet the struggle for industrial and commercial supremacy, which is sure to follow the restoration of peace in Europe, when our country will be flooded with the products of poorly paid foreign labor, with which we can not successfully compete without a fair and adequate tariff, whether it be imposed for "incidental protection" or for protection pure and simple.

I have voted for and supported all of the measures looking to preparedness, and I now regret that I can not vote for the measure that will finance this program.

I believe the method of taxation proposed in this bill to be un-American, undemocratic, and unpatriotic, because all classes and all sections should contribute toward the support of this Government and should deem it a great and proud privilege to be able to participate in the maintenance of the dignity, honor, and glory of this great Republic.

Memorial of the Massachusetts Mutual Life Insurance Co.

EXTENSION OF REMARKS

OF

HON. FREDERICK H. GILLETT,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 31, 1917.

Mr. GILLETT. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a memorial of the Massachusetts Mutual Life Insurance Co., of Springfield, Mass., protesting against this bill (H. R. 20573) as applying to mutual life insurance companies.

The memorial is as follows:

Memorial of the Massachusetts Mutual Life Insurance Co.

The memorial of the Massachusetts Mutual Life Insurance Co., of Springfield, Mass., is presented to the Congress in protest against the provisions in the pending bill, H. R. 20573, entitled, "A bill to provide increased revenue to defray the expenses of the increased appropriations for the Army and Navy and the extensions of fortifications, and for other purposes," which proposes to increase the Federal tax upon mutual life insurance companies including your memorialist. The mutual life insurance companies of the United States are the outgrowth of the old-time voluntary associations of individuals for the purpose of contributing to repair the misfortunes and losses inflicted upon the dependents of deceased persons through their deceases. These companies have no capital stock and pay no dividends to stockholders from the operations of such companies. All the property and assets belong to the respective policyholders thereof, and any excess of income over expenses and funds necessarily retained, as required by law to safeguard and guarantee the fulfillment of the policy obligations of such companies, are distributed to the policyholders pro rata in accordance with the conditions of their contracts of insurance. Such companies are not conducted for the profit or advantage of any particular individual, or set of individuals, but the business of such companies is purely cooperative and is managed and conducted solely for the purpose of furnishing to the respective policyholders thereof the greatest possible amount of individual benefit in return for the deposits or premium payments received from them.

The bill relieves from this tax all cooperative or mutual savings banks, savings and loan associations, and many other organizations, including hail, cyclone, and fire insurance companies of a local character whose income is used to meet expenses and which are not conducted for the profit, or whose net income does not inure to the benefit of any private stockholder or individual. Apparently the only reason why other mutual insurance companies, whose scope may have extended beyond the limits of the town, city, county, or State where organized, are not likewise exempted from the tax, is not because of the lack of the cooperative or mutual method of conducting business, but rather on account of the larger amount of business done and correspondingly greater amount of gross income received therefrom. Surely if the principle of exempting cooperative or mutual companies transacting business of this character is correct for the purpose of encouraging and building up the practice of forethought and prudence in protecting the individual interest of the insured in the smaller companies, then it should likewise be extended to the larger companies of the same character who, by reason of their wider field of action, do so much more to promote these praiseworthy ends. It is true that the bill proposes to grant to mutual, fire, marine, casualty, employers' liability, and workmen's compensation insurance companies and to all life insurance companies distributing among policyholders any excess premiums that may have been collected, the right of not reporting as income for taxing purposes the amount of deposits or premiums so returned to their policyholders. It is universally recognized at the present day that mutual life insurance companies are preferred to savings banks by many thoughtful and prudent persons as depositories for the fruits of their energy, thrift, and self-sacrifice. This plan for the accumulation of savings, coupled with the provision for death benefits, has far outstripped the savings banks in the opinion of the public, as is clearly evidenced by the larger amounts paid the life insurance companies of our country. Why, therefore, should not all life insurance companies, operated on the mutual plan and not for the benefit or profit of stockholders or other private persons, be placed in the class with cooperative savings banks and savings and loan associations and the other mutual insurance companies whose territory is confined to their local limits?

The great economists of the world have agreed that each progressive and well-intentioned government should encourage its citizens in providing by some kind of insurance against their future misfortunes and losses, as this means distributes these calamities over such a wide circle that the immediate loss to the individual or community is vastly minimized.

Germany has long been recognized as the leading national investigator of the economic conditions and advantages of its people. The attitude of the Imperial German Government is equally well known toward voluntary and involuntary life insurance as an alleviation of public misfortunes and as a preventive of the need for old-age pensions and other similar philanthropies at public expense. Germany, England, France, Switzerland, and several other Governments have recognized the utilitarian character of life insurance, and have fully considered it in their adjustments of the burdens of taxation for the support of their respective Governments.

The State, county, and local taxation of insurance companies in the United States has increased to such a degree that a very substantial portion of the premiums for life insurance is diverted from the purpose for which it was paid by the policyholders in order to meet the demands for taxes made upon such companies. As the policyholders have paid their money for the purpose of protecting themselves by distributing their losses over a large number of individuals in order that each individual portion of such loss might thereby become greatly lessened, so great a portion of their money being required to pay the local taxes demanded, to a corresponding degree this has defeated the purposes and benefits sought by their participation in life insurance greatly to the public disadvantage and consequently to that of the Government.

The National Convention of Insurance Commissioners of the United States in 1914 in the resolution relating to this question of taxation, which was unanimously adopted, used the following language:

"The States should not place a burdensome rate of taxation on the insurance business, which, while not philanthropic in its character, is yet of great importance to the business world, and of immense value to our Government and its citizens in the distribution of the misfortunes and losses of life."

It has frequently been argued with great force that the Government which taxes the insurance business transacted within its territory at any greater rate than is needed to defray the expenses of the proper regulation and supervision of such business is committing a most serious economic error because of the great benefit which its people derive from such business. A tax upon the income of life insurance companies is a direct burden upon the most substantial and valuable citizens of our Government solely because of their prudence and careful forethought in order to be prepared to meet the misfortunes and losses which must inevitably come to all mankind, without the necessity for depending upon public or private charity in their time of distress.

Even the strain and stress of the terrible war now raging in Europe have not seemed to justify the Governments of those countries in multiplying the burdens of taxation under which those nations are now laboring by the imposition of a greatly increased tax upon those insurance companies which are relieving the State through private means of the expense for the care and support of those deprived by the war of their natural supporters and of the cost of the education of their children. Surely conditions in the United States have not reached such a pass that it is necessary for this Government to now increase its tax upon its domestic life insurance companies to the extent of 100 per cent in order to provide means for its necessities during this period of peace and apparent prosperity. If the present need for additional Government revenue is so urgent as to demand the imposition of such a large increase in the tax upon life insurance, then it is urged that for mutual life insurance the tax should be laid upon the policyholders as the direct and immediate owners, to the extent of their policy rights, of all the assets and property of every kind and description held by such companies.

We take the liberty of quoting here in full, as a part of our protest against this large increase in the tax burdens upon this memorialist and the other mutual life insurance companies of the United States, a letter from the Penn Mutual Life Insurance Co. to the chairman of the Senate Committee on Finance, under date of August 1, 1916, as follows:

"Hon. FURNIFOLD McL. SIMMONS,
"*Chairman Senate Committee on Finance, Washington, D. C.*

"DEAR SIR: The Penn Mutual Life Insurance Co. desires to enter its respectful protest against the imposition of an income tax upon the operations of a life insurance company conducted upon the mutual plan, and especially against the increase from 1 to 2 per cent contemplated in House bill 16763, which is now before your committee for consideration.

"As you are doubtless aware, when the insurance departments were organized in the various States—some 50 years or more ago—it was with the purpose of supervising the business and safeguarding the interests of policyholders, but with no intention to impose upon them more than the actual cost of such supervision, and this was the original practice. It has long been recognized that those who carry life insurance are the best citizens of this country, having voluntarily taxed themselves to the extent of their premium payments in order to provide for the welfare of their dependents.

"In the year of 1862 the subject of taxing the funds of life insurance companies was brought before Congress, and, notwithstanding the pressing need for revenue, was defeated after mature consideration by both the Senate and House of Representatives. Mr. Sumner spoke, in part, as follows:

"'The business of life insurance, as it seems to me, is peculiar. It differs from others in being not strictly, if I may say so, a money-making business. I know that persons get up insurance companies in order to advance their own interests, but the primary object of the insurance office is to protect other people, particularly the poor; it is to help the poor. I say, therefore, it is not primarily, as compared with many other businesses, a money-making business. On that account, as it seems to me, it has a title to certain consideration. Now, what is proposed? A tax on premiums. What are the premiums? The premiums are themselves a tax. The premiums constitute the tax which the person insured pays for his insurance. That is the precise case. I state it in this way in order to reduce it, if I may say so, to its most naked form.'

"In 1888 this company's counsel, in successfully opposing an effort to impose additional taxes, used the following argument, which has equal force at the present time:

"'We contend that a purely mutual company, such as this, can not have any net earnings or income; that it is not a corporation for profit, and can have no profit. It has no stockholders among whom any profit can be divided. It is simply an association of individuals, not for the acquiring and distribution of profits but rather for the distribution of losses.

"'Some mutual companies do business upon what is called the mutual assessment plan. That is to say, whenever a member dies each surviving member is assessed a certain amount. It is manifest that such a company can have no net earnings or income. It collects just sufficient to pay the death losses and the attendant expenses. Theoretically, that is insurance pure and simple. Practically, it is seldom successful, for the reason that representatives of the insured are dependent entirely upon the collection of assessments upon surviving members, which is usually a slow and uncertain process, there being no sufficient security that the assessment will be paid.

"'The Penn Mutual does business upon what is termed the "level premium plan," each member being, by the terms of his policy, which must be read in connection with the company's charter, required to pay a certain premium annually, or so much thereof as may be required by the company. There being a fixed rate for all the years of a man's life, it results that those which he pays in the earlier years of his insurance are more than are required to carry his insurance, while those which he pays in later years are less than would be required. The premium is arranged upon a sort of leveling-up process, from which it derives its name, whereby the earlier and later premiums balance each other, the company being required to keep on hand as a reserve fund such a proportion of the earlier premiums as, at 4 or 4½ per cent, interest compounded, will, with the further premiums, suffice to pay his policy at maturity, assuming that he will die, as he ought to die, according to the experience tables of mortality.

"'By this plan the insurance is just as mutual as upon the assessment plan. The difference is that this sort of insurance actually insures, which the other does not. As the members are required to contribute from year to year, there is always on hand a fund from which a death loss can be paid.'

"It has been well said that the Government should insist upon the faithful conservation of life insurance funds and the application to their intended use. It should be as reluctant itself to reduce or divert them as to permit individuals to employ them for political purposes or in extravagance of management.

"Life insurance taxes either increase the cost of insurance or diminish the amount of it. In the one case they fall on the policyholders; in the other, on the beneficiaries of the insurance.

"Having taxed the real estate and other property of these corporations on the same basis as other property is taxed, and imposed upon them in the form of fees the payment of the cost of their own supervision, further and additional taxation is unjustifiable. The mere desire to raise revenue does not warrant imposing upon life insurance conducted upon the mutual plan a special form of premium or other income tax.

"Notwithstanding the original intention of the various legislatures with respect to the supervision of the business of life insurances, additional taxes have been imposed from time to time until esteemed one of the sources of revenue of the various States and of the Federal Government, with little, if any, thought of the effect upon policyholders.

"Mr. John Stuart Mill, in his Principles of Political Economy, says that a tax upon life insurance 'is a direct discouragement of prudence and forethought,' and the magnitude of the present burden is evident, when it is considered that the aggregate fees and taxes paid by the insurance companies annually approximates $15,000,000, while the cost of maintaining the insurance departments in the various States does not exceed $2,000,000. As this vast sum is in the last analysis paid by policyholders, being merely collected by the companies, the result, as stated, is to increase the cost of their insurance or to diminish the resulting benefits.

"Mr. Frederick L. Hoffman, in writing upon this subject, expressed himself as follows:

"'Life insurance is a present means of obtaining a certain advantage of an uncertain event, and it is on this ground, though not on this ground alone, that life insurance or the premiums paid for insurance protection should not be considered a subject of taxation. If we inquire into the objects and nature of life insurance and the relation of life insurance to the State, we find that the primary object of this form of thrift is to provide for dependents, for widows and orphans, who, but for such provision, in the majority of instances, would become charges or wards of the State. By just so much as this is avoided, by just so much as women and children are made independent of such assistance, the revenue of the Nation or of the State is relieved, and can therefore be devoted, and is devoted, to the development of other interests affecting public welfare. In view of this point it is clear that life insurance should not be a subject of taxation, but rather, to the contrary, as a means of diminishing public burdens it should in all respects receive the generous consideration of the States.'

"In 1798, under the income-tax law of England, incomes were exempted from taxation to the extent of premiums paid for life insurance. Hon. William Pitt, in defense of the bill, said:

"'Laying aside the proud idea of the vigor, permanence, and renewing energy which this measure secures, there is one case which, with a view to the class who are really willing to save for the benefit of others for whom they are bound to provide, makes some modification. It is in favor of those who have recourse to that easy, certain, and advantageous mode of providing for their families by assuring their lives. In this bill, as in the assessed taxes, a deduction is allowed for what is paid on this account.'

"With England's great need for revenue this practice has been continued, that country at the present time exempting from tax one-sixth of the income of each citizen, provided it is devoted to the purchase of life insurance protection. Prior to the present war there was no premium income tax in France, Belgium, Austria, Hungary, Italy, Spain, or Russia, and we are led to believe that the same condition still prevails.

"The several States, as well as the Federal Government, seem to fail to recognize the essential qualities and the beneficent character of life insurance and have imposed upon it tax burdens far greater than those imposed upon other institutions. This is no doubt due in large part to the ease with which the needs of the various governments could be met by taxation of this accumulation of assets for later distribution among dependents, in which funds no single individual has a sufficiently large interest to render it worth while to institute a vigorous opposition.

"Hon. Thomas E. Drake, superintendent of insurance of the District of Columbia, in his report of November 30, 1907, thus expresses his view on the subject:

"'Because of the beneficent character of insurance, I consider it equally as unjust to exact from policyholders anything above a sufficient sum to maintain supervision as that of imposing a tax on school, church, or cemetery property, which is everywhere exempt from extortion.'

"A few years ago Hon. E. E. Rittenhouse, then insurance commissioner of the State of Colorado, said:

"'The insurance companies of the United States are paying, through insurance departments, fees and taxes amounting, in round numbers, to $12,000,000 per annum. Approximately $2,000,000 of this amount comes from fees and $10,000,000 comes from license taxes levied chiefly upon premium income. Inasmuch as the fees more than provide for the cost of operating the departments, it is safe to say that this $10,000,000 per year represents the penalty which the law is enforcing against the insurance business.'

"The president of one of the prosperous companies of the country a few years ago wrote to insured members as follows:

"'The policyholders should recognize this (taxation) clearly as an item of expense outside the company's control and as a tax on their individual savings, provision, and thrift. Our tax bills amount to 20.8 per cent of all management and investment costs, including commissions to agents, office maintenance, and, in short, one-fifth of the total expense account. Apart from taxes, there has been a reduction in all other items of expense, making it possible to report a favorable experience in the three great factors of a successful life insurance business—mortality, expenses, and interest.'

"In the report of the special taxation committee adopted by the convention of insurance commissioners at Detroit, August, 1908, this very pertinent inquiry is made:

"'Why should not the State and the public, which wisely and vigorously resent and prohibit by drastic laws in the interest of the policyholders and of the beneficiaries of insurance the diversion of such funds for political campaign purposes or for extravagance in management, see with equal clearness the unwisdom of their diversion at the instance of the State itself from their appropriate use to increase the revenues of the State? Does not $2 taken from the company by the State out of every $100 a policyholder pays for the premium either correspondingly increase the sum the policyholder must pay or reduce the insurance benefits he thereby buys, just the same as if the $2 were diverted by the management to political campaign contribution or used by them in extravagant expenditure?'

"Several of these utterances have special reference to the tax of life insurance premiums by the various State insurance departments, but apply with equal force to any levy made by the Federal Government.

"The present tax law applies specifically to net incomes of over $3,000 only, but inasmuch as the average policy in companies conducted upon the mutual plan, excluding industrial insurance, is less than $3,000, and the annual premium thereon upon the average less than $126, the

effect has been indirectly to tax at least this much of the income of insured members who are otherwise exempt. Where the net income of an individual has exceeded $3,000, the effect has been a double tax upon so much thereof as is devoted to life insurance, and all of this in addition to the State taxation heretofore mentioned—a triple taxation.

"The members of this company through the management protested against the imposition of the present income tax, and repeat this protest with added force in view of the contemplated doubling of the tax rate.

"In view of the fact that every dollar of the funds disbursed by a life insurance company has come from the premium paid by the insured, even the interest receipts being the income derived from the investments of premiums paid in former years, all taxes of whatever nature fall ultimately upon the individual policyholder, and we bespeak the attention of your committee to this phase of the situation in your proposed consideration of H. R. 16763.

"Yours, very truly,

"_____ _____."

In view of all of the foregoing, it is respectfully submitted that if the life insurance business of the United States is to be burdened by the increase in the tax thereon, as here proposed, it will serve as a decided discouragement and a clog to the further exercise of that spirit of energy and thrift which has so strongly characterized the people of the United States in the past and which is so essential to the well-being of every nation. If this tax increase is effected it must necessarily react to the disadvantage of the American public. Your memorialist hereby enters its profound protest against the passage of the proposed increase on mutual life insurance companies as contained in H. R. 20573.

Respectfully submitted.

MASSACHUSETTS MUTUAL LIFE INSURANCE CO.

The Pending Democratic Revenue Legislation.

EXTENSION OF REMARKS

OF

HON. GEORGE W. FAIRCHILD,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 31, 1917.

Mr. FAIRCHILD. Mr. Speaker, at this time we have to meet the extraordinary situation made by the failure of the revenue legislation already enacted by the party in power to provide the revenue really needed, and by the continued extravagance which is characteristic of the Democratic Party when in power. The striking feature of the Democratic plan for meeting the present revenue situation is that it shows clearly the inability of this party to maintain its own declared principles, whether of revenue or of national welfare, or, in fact, to maintain and enforce any useful principle of governmental policy.

A SACRIFICE OF PRINCIPLE.

The principle of a tariff for revenue only, so long professed by the Democratic Party and advanced in opposition to the Republican principle of a tariff for protection as well as for revenue, means that tariff rates can properly be imposed for the sake of revenue. If they are to be imposed for revenue, the rates must necessarily be determined with regard to the revenue needed and can be adjusted with regard to changing situations as to revenue requirements, whether increasing or diminishing. The rates of the Democratic tariff of 1913 are admittedly too low for revenue purposes, even in normal times of peace, and with the decline in imports incident to the war the existing tariff has become more than ever a failure as a revenue producer. Under the present circumstances, upon the principle of a tariff for revenue, the rates of the present tariff should be adjusted to yield more revenue.

This would mean increasing the rates at this time, for it is admitted that our imports are in no way diminished now by the prevailing tariff rates and the enlarged free list. The imports are diminished for the time being solely by diminished production in foreign countries available for export to this country and by direct impediments in transportation, both factors, of course, entirely due to the war. It has been shown that in the 10 months during which the present Democratic tariff was in effect before the war began—from October 4, 1913, to August 1, 1914—the imports increased greatly in quantity beyond the total during the corresponding 10 months 1 year before under the former Republican tariff, and it is admitted on all sides that this period of the Democratic tariff before the war began affords the only real basis for determining the effect of this tariff on the volume of imports. It is established, therefore, that the existing Democratic tariff in itself encourages abundant importation and yields far too little revenue, yet, notwithstanding these plain facts, the Democratic Party, which under President Cleveland demanded a drastic reduction of the tariff because of superabundant revenue, now refuses to consent to any increase in the tariff to add to the revenues now so sadly deficient.

DEMOCRATIC HOSTILITY TO PROTECTION.

This is sacrificing the principle of a revenue tariff, and the Democratic Party casts aside this principle largely because of the Democratic hostility to the Republican principle of a protective tariff. The Democratic Party fears to increase the tariff rates at this time because it would be an open admission of the failure of the tariff of 1913 as a revenue tariff. Except for special consideration to a number of southern agricultural products, the factor of protection to American industries was almost entirely eliminated from the Democratic tariff of 1913. It was a tariff for revenue, and if it fails as to revenue it fails altogether, except in its very limited and sectional protective benefits. And the practical failure of this Democratic tariff is, in fact, just as clear to all at this time as it would be if it were now amended by increase of rates.

The Democratic Party also refuses to increase the tariff because if it attempted such increase the force of present circumstances and the disturbing prospect of the near future would press almost irresistibly for protective rates of duty, which the Democratic Party is determined not to grant. Pressure of circumstances and the urgent requirements of American industries forced from the reluctant democracy last year, in the revenue legislation then necessary under the failure of their former plans, certain protective rates of duty on dyestuffs, and this fact warns the Democracy of the serious conditions that would face them if the subject of tariff revision were now taken up.

SOCIALISM INSTEAD OF DEMOCRACY.

The conditions of to-day and the prospects of the near future demand a renewed application of the Republican principle of a protective tariff, and because of this the Democratic Party fears to permit any revision of the tariff, and rather than do so turns its back upon its accepted principles of democracy and makes a further plunge into socialism. The essential principle of democracy is contrary to the essential principle of socialism, but we have had already, at the hands of the so-called Democratic Party, a great deal of legislation which is not democratic but admittedly socialistic, and apparently we are to have many more installments of socialism while this party remains in power. The Alaska Railroad Act and the shipping act are very well known instances of such socialistic legislation, and by other acts as well as the Government under the control of the misnamed Democratic Party has proceeded with its program of discouraging and crippling private enterprise.

What has become of the old Democratic axioms that "that government is best which governs least," and that it is private enterprise which must build up and maintain the welfare and progress of the country and which must not be interfered with by government and can not be replaced by government? We find these principles no longer adhered to by the party which formerly championed them. They have been cast aside, and in casting them aside the Democratic Party under its present leadership, seeing that it obtained in the election of 1916 the votes of many thousands of avowed Socialists and former members of the Socialist Party, and that by this means a new lease of power was obtained—seeing this, the Democratic Party is encouraged to go on further in its program of socialism and to make its necessary revenue legislation a part of that program.

NEW BURDENS ON PRIVATE ENTERPRISE.

So we have come under the Democratic administration to a point at which in the exercise of the taxing power the conservation and encouragement of the private enterprise of the country are no longer favorably regarded, but rather marked out as the proper subject of extraordinary burdens. This is the meaning of the heavy tax on "excess profits," so called, which is made the principal feature of the new Democratic taxation at the same time that revision of the tariff is refused. The Democratic Party began by taking away protection from American industry and enterprise, and now goes further in its dangerous progress and piles great burdens on these necessary efforts. Not content in its policy with withdrawing the encouragement of the Goverment from productive enterprise at home, it now adds a substantial discouragement of home industry while continuing to invite into the home market, through its radical low tariff, new and increasing competition which will seriously strain the ability of home industry to meet it.

FOREIGN COMPETITION AFTER THE WAR.

Our home industries are now face to face with the approaching end of the great European war. While it can not be said that peace is now actually in sight, it is practically certain that the further duration of the war is to be reckoned in months only, and it is well known that in all of our industrial enterprises the problems now engaging attention are those relating to the competition that must be met after the war. We are

passing out of the stage of war business and the abnormal encouragement of our home industries that came with the disturbance of imports caused by the war, and we are passing into the stage of less urgent demand by foreign countries for our products and the renewed production abroad and undisturbed transportation to our shores of articles which will enter our home market and there compete with and depreciate or displace the products of our own fields and factories. In a word, we are passing from a period of highly stimulated domestic production, very effectually sheltered from competition in the home market, into a period of unstimulated or normal domestic production, practically unsheltered in the home market from a revived and intensified competition from abroad.

PROTECTION FOR DYESTUFFS CONCEDED.

Last year the Democratic Party conceded protective tariff rates on dyestuffs. It was a measure of protection wrung from reluctant advocates of the free-trade theory by the urgent requirements of domestic industries backed by a strong pressure of public sentiment. The object of this tariff on dyestuffs was to encourage the greater and better production of dyestuffs in this country, and the legislation is already having a good effect in that direction. It is just as important, of course, to sustain and encourage the production in this country of many other commodities besides dyestuffs, and we are this year nearer than we were last year to the end of the war and the period when such legislation to protect becomes really effective and vitally necessary. But this year the Democratic Party, having obtained a renewed lease of power, feels itself strong enough to defy the needs of American industry and to repudiate again the protective principle and to engage in further socialistic attacks on private enterprise.

THE REAL ISSUE.

Thus the issue is again clearly joined in the revenue legislation now under consideration by Congress between the Republican policy of encouraging private enterprise and building up the prosperity and developing the resources of the country and the Democratic policy of discouraging and burdening private enterprise, of disregarding the sources of prosperity, interfering with industry, adding to the inquisitorial and repressive features of the Government, and drawing from the working capital and lifeblood of our own industrial development while freely giving to foreign competitors every possible opportunity to substitute their production for ours in our own market.

THE PRESENT EXTRAORDINARY NEED FOR PROTECTION.

True to its sound and successful principle of protection, to which the present industrial development of our country is largely due, the Republican Party through its representatives in Congress call for a measure carrying higher import duties, a measure which would, if enacted, provide additional revenue and also protection for our home industries. Our country has urgent need of such a measure at this time. The enactment of it would at once inspire confidence in the world of business enterprise and would maintain and increase production, keeping labor abundantly employed at good wages, and by increasing the supply of American-made goods would benefit the consumers.

Without a measure of this kind, the near future brings a great deal of difficulty for us. The situation is really unprecedented. We have experienced the competition of Europe in normal times and found it serious enough, when not subjected to substantial import duties here, to create great depression among our industries, with enforced limitation of our production taking effect in the shutting down of factories or running them on part time, with loss of wages and employment by our working people, business failures, and general distress on all sides. This was the competition of Europe under the old ways of living, with life and industry carried on in old routine and methods, in what was a comparatively easy-going and leisurely manner. With the breaking out of war this competition of Europe in our market practically ceased and Europe called on us for much more of our products than she would ever take in normal times, and likewise she called on the rest of the world for many products that otherwise would have sought our market.

The great industrial nations of Europe, all their faculties and resources being strained to the limit in a war such as never occurred before, have undergone a great industrial transformation. New evidences of this are constantly coming to our attention, and the results are unmistakable. The unprecedented emergencies and needs of this war have accomplished what was believed to be impossible in Europe. They have stricken off the shackles of tradition and changed accustomed grooves of thought and energy in industry. They have forced the adoption of quicker and more productive methods, they have brought about, practically at a bound, the "speeding up" of all industry, bringing in shorter cuts to the desired results, eliminating unnecessary steps in manufacturing and trade processes, introducing labor-saving machinery, and given to the management of industrial and commercial establishments new ideas of progress and development and extraordinary encouragement and assistance in many ways by the various governmental authorities, all of whom are working with great energy in their respective countries to secure the utmost yield and distribution in a given time. It is a true saying that these few years of war have brought to the industries of Europe more of quickening and new inspiration than would have come from a generation of peaceful progress.

THE STIMULATION OF INDUSTRY THROUGHOUT THE WORLD.

Similar progress has taken place in the industrial and agricultural production of neutral nations all over the world as a result of the great and urgent demand for supplies needed in the war or to meet scarcities caused by war's requirements. All of this quickened and intensified production, all of this multiplied efficiency, both in the warring and in the neutral nations, must be regarded as a permanent gain in the strength of those who will compete with us in the coming months, both in our American home market and in the markets of the world. The nations at war have suffered severe losses and have greatly increased their debts. They will be compelled to keep up their intensified production all along the line to make up their money losses and to provide for their debts.

It is neither a safe nor warrantable assumption that these warring nations will be less efficient in industry after the war because of the loss of many men. The coming generation replaces the older men very quickly, and there were great numbers of unemployed men in these countries before the war. Moreover, there is an unprecedented employment of women in their industries. The employment of women in great numbers will probably continue, and this has the effect of lowering costs of production. It is well known that one of the surprising features of the war is the great efficiency shown by the women of the belligerent countries in manufacturing processes and in the handling of modern machinery.

A PERMANENT GAIN IN THE STRENGTH OF FOREIGN INDUSTRIES.

When such developments in productive industry have been once made it is very easy to go on and on with the improved situation, maintaining and strengthening it, and this will certainly be done not only in the nations now at war but also in practically all of the neutral nations, which, having profited greatly from increased foreign trade, will seek more of it and cultivate increased production for this purpose. Many of the neutral countries have used their good profits of the last few years to install new and up-to-date machinery and additional equipment that enables them to increase production to a great extent in the future and to reduce producing costs. A well-known example of this, very close to our shores, is found in the remarkable improvement recently established in Cuba in the production of sugar. It is clear, therefore, that throughout the rest of the world beyond our shores a new era of industry has begun, which will continue and which has as its distinctive feature increased production and consequently increased foreign trade, stimulated and assisted by every resource of government, including the liberal use of export bounties and many other methods of special development.

All of this increased production and development in foreign commerce will have as their principal and most favored object the placing of the largest possible quantities of commodities in the United States, known everywhere as the greatest and richest market in the world. The fact that ocean transportation is so largely controlled by foreign interests makes it easy for such interests to increase the shipment of foreign commodities to our shores. Besides, it is practically certain that after the war is over the Teutonic allies will find new barriers and difficulties in the way of their goods entering the markets controlled by the entente allies; also that goods produced by the entente allies will be shut out as much as possible from markets controlled by the Teutonic allies. Hence the goods of each of these great groups of allies, meeting new barriers in former markets, will seek particularly the easily accessible and easily entered market of the United States. This is the situation which our productive industries in the United States must face, and which they are now beginning to realize that they are facing, and they will understand it more clearly as time goes on. A number of our leaders of industry are now seriously examining this situation to determine the rearrangements that will be enforced thereby upon their plans for future production.

THE DEMOCRATIC PARTY FAILS TO MEET THE CRISIS.

In this crisis for American industry the Democratic Party, obstinately adhering to its free-trade theory and indifferent to every consideration affecting our progress under the new con-

ditions, pursues a policy of twofold injury to the national welfare. On the one hand protective tariff rates are denied and on the other hand a heavy tax on profits is imposed. This tax is on the profits or earnings of our industry and enterprise. Instead of encouraging these indispensable factors of national prosperity by a tariff that would give home industry and home enterprise a reasonable advantage in the home market, in recognition of our higher standard of living and higher costs of production, a positive burden of great severity is imposed upon the home industries deliberately left exposed to all the dangers of an extraordinary foreign-trade competition in this home market and elsewhere.

THE FREE-TRADE THEORY DISCARDED BY OTHER NATIONS.

The theory of free trade among nations has not been accepted throughout the world, as its adherents imagined for many years that it would be. It has been found impracticable as a working policy, and Great Britain alone, among all the great nations, has maintained a free-trade policy in recent years. As is well known, it is simply the remarkable insular position of Great Britain and the small area and very limited natural resources of the British Islands—a situation not found with any other great nation—which have made it possible and desirable for that country to maintain the policy of free trade until now. But now it is beginning to appear that the conditions after the war and the trade policy to be adopted with reference to the Teutonic allies will probably impel great Britain to abandon her free-trade policy and enact a tariff system that will discourage imports into that country or into any British colony except such imports as originate within the British Empire. There seems to be a growing British sentiment for such a policy, which would help to meet fiscal requirements and assist the development of British colonies to contribute to the repair of the ravages of war.

GENERAL INCREASE OF TARIFFS AFTER THE WAR.

It is clear also that there will be a general increase of tariffs in European and other countries, and in this period of the almost universal use of tariffs by other countries, for revenue and for protective purposes, it is a great misfortune that our country is compelled to endure the Democratic policy of sacrificing the tariff system as a means of securing revenue and protection and of piling upon our people burdens that in other countries have not been imposed except when compelled by the necessities arising from actual participation in an exhausting war.

NO JUSTIFICATION FOR THE PROPOSED HEAVY TAX ON PROFITS.

The war—in which we are not engaged and need not be engaged—is not a sufficient justification for the proposed heavy tax on profits in this country. The need for preparedness is not a sufficient justification. Preparedness has been neglected in a shameful way by the Democratic administration, which was in office when the European war began in 1914, and which could readily have set about the gradual increase in our military and naval strength which common prudence would indicate. It is important, of course, to repair as promptly as possible the neglect of former years, and such repair must be paid for, but it can and should be paid for by a rational policy of strict economy, with elimination of unnecessary expenditures dictated by partisan favoritism for certain projects and certain localities, and the raising of the revenue really necessary by approved and successful methods which do not impair industrial efficiency. It is well recognized by the best intelligence of the country that our industrial efficiency is industrial preparedness, which is fundamentally the most important preparedness, for war as well as for peace.

A PENALTY ON PROFITS IS AN IMPAIRMENT OF WORKING CAPITAL.

Considered from the standpoint of economic truth, there is no such thing as an "excess" of profits. The profits of business enterprise, when they exceed the amount necessary to merely maintain and continue that enterprise, form the working capital for the extension of business operations and the creation of new enterprises. Such surplus profits are constantly needed for the progress and development of all of our industry—that is, for the welfare and advancement of the country. The industries of a nation can not stand still; they must either go forward or backward. To impose heavy burdens upon the capital of advancement, to take too much from the funds which make it up and to put penalties upon and discourage the earning of such funds, is to impede progress and to inflict lasting injury upon the country. We may take it for granted that the farsighted statesmen of the foreign countries now at war will at the end of the war proceed as rapidly as possible to put an end to high taxes on profits. They will conserve and encourage profits as a necessary part of their policy of upbuilding and strengthening their countries in industry and commerce.

UNFAIR COMPETITION ENFORCED UPON OUR PEOPLE.

While this wise and constructive policy of increasing tariffs and helping rather than burdening the development of productive enterprise will be followed by the rest of the world, in connection with which they will be pouring their commodities in enormous quantities into the American market, paying practically nothing for entrance fees, our Government will be going on in its dangerous policy of leaving our productive enterprise exposed to the fullest severity of competition from everywhere, in the home market as well as abroad, and at the same time piling up taxes upon taxes on the profits of our domestic enterprise. This is ruthlessly taking away these profits, step by step, from those who have fairly earned them. If such a policy continues, how can our American producers compete successfully in the home market? How can American industry escape depression and decline?

A SECTIONAL AND NOT A NATIONAL POLICY.

It has been made clear already in the course of the revenue legislation enacted by the Democratic Party that the Democratic policy of to-day is not concerned so much with advancing the general and real welfare of all the people of the country as it is with favoring in a special way the people of one part of the country at the expense of all the rest of the people. This sectional favoritism—for it is nothing less—is shown in the existing Democratic tariff, wherein a number of agricultural products of the Southern States are given protective rates of duty such as are denied to farm products of the Northern and Western States.

The same policy is shown in the determination and persistence with which the Democratic Party has at every opportunity increased the taxes on incomes and profits of business enterprise. With the exemptions which the Democratic Congress has granted in such measures, this tax legislation, and especially the additional tax on profits now proposed, constitute heavy taxation which is aimed especially at the Northern and Eastern States. It has been pointed out already that the income tax, with its exemptions, is paid principally by the people of the Northern and Eastern States, while a great deal of the money raised is expended in special projects, with much attending extravagance and waste, which are of advantage principally to the people of the Southern States.

This same sectional favoritism is repeated and intensified in the proposed heavy tax on profits. It is taking more tribute from the same Northern and Eastern States and sparing the Southern States from the payment of their just share. It is not genuine uniformity in taxation. It is the culmination of a narrow and unwise policy that has now gone too far and which will not be approved by the deliberate and best judgment of the country.

The Pacific Halibut Dispute.

EXTENSION OF REMARKS
OF
HON. AUGUSTUS P. GARDNER,
OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 31, 1917.

Mr. GARDNER. Mr. Speaker, under the authority granted me by the House, I extend my remarks by reprinting an article from the January, 1917, number of the Alaskan Colonist, published in Seattle, Wash.

This article refers to the contest which has been waged for over a year for the fresh-fish trade of the Pacific.

The contest involves the rival activities of the port of Ketchikan, Alaska, the port of Prince Rupert, British Columbia, and the port of Seattle, Wash.

The Senate last year adopted an amendment to the revenue bill discriminating against the British Columbian port. I opposed that amendment, and finally it failed in conference.

My interest in the matter lies in the fact that the Atlantic deep-sea fisheries center in Gloucester, Mass., in the district which I represent. After years of bickering we have reached a tolerable understanding with Canada and Newfoundland, and we hope very much that this understanding may not be imperiled by the quarreling of rival Pacific ports. The Alaska Colonist is published at 83 Pike Street, Seattle, Wash. On its editorial page it states that it is "A monthly publication devoted to colonization, rational government, and business freedom

in the Territory of Alaska." Here is the article to which I invite attention:

[From the Alaska Colonist, Seattle, January, 1917.]

THE HALIBUT FIGHT—SEATTLE VERSUS RUPERT—ALASKA'S VIEW OF DISPUTE—MISREPRESENTATION OF ALASKA'S INTERESTS CARRIED ON BY ALIEN CORPORATIONS WITH THE AID OF LOBBYISTS AND PRESS AGENTS.

HOW IT ORIGINATED.

On the 9th of March, 1915, the Canadian Government published an order in council granting to fishing vessels of United States register the privilege of landing Alaskan fish at Prince Rupert duty free for transshipment in bond to United States markets. Since freight rates to eastern markets are practically the same from Prince Rupert and Seattle, the former can afford to pay substantially the same price as Seattle for Alaskan fish and thus in competing for the market has the insuperable advantage over Seattle of being 600 miles nearer the fishing grounds. As a natural consequence the business of receiving and distributing Alaskan fish has to a large extent gravitated to Prince Rupert.

PARTIES INTERESTED IN THE TRANSITION.

And how are the various parties in interest affected by the readjustment? The consumer is saying nothing; his prices are not affected, for they are always as high as the traffic will stand, limited only by the prices of substitute food products. Moreover, he derives an advantage from wider and more expeditious distribution. Genuine Alaskan interests are not complaining, for even a child can see that if a halibut boat lands its fish in Seattle it will spend its money in Seattle, while if it sells at Prince Rupert it will spend its money, to a large extent, in Ketchikan and other Alaskan ports; that the fisherman has better prices and more money to spend than before; and that the opening of the Grand Trunk Pacific gives Ketchikan or some other point near the boundary the opportunity of succeeding Seattle as a market for Alaskan fish whenever it can free itself from the present unfair restraints of trade. Canadian interests are reaping the merited advantage of a shorter trade route and freedom of trade. And the producer, the fisherman! Why, for him Prince Rupert competition has been a veritable godsend. For the first time in history he enjoys a reasonable approach to fair prices and fair treatment. While Seattle had a monopoly of the market he was accustomed to being skinned to the limit by manipulation of prices and cheating in weights and grades. To-day, thanks to Prince Rupert, Seattle fish buyers are making a painful but healthful acquaintance with fair competition. See quotations of prices paid to halibut fishermen before and after Prince Rupert's entry into the market. They tell their own story.

WHOSE OX IS GORED?

Then, whose ox is gored? Who is responsible for all this clamor? Who is raising this murky cloud of false pretense, half truths and whole lies to mislead the public? Who is spending good money on press agents and lobbyists? Doesn't it look like the slimy reptilian work of our old familiar enemy the octopus? Is there any escape from the conviction that certain arms of the reptile as the Fish Trust and the Alaskan Steamship Trust are responsible for the agitation that is being maintained? Only interests that are hostile to the free development of Alaskan business are seeking to bar American fishermen from Prince Rupert.

KETCHIKAN BUSINESS.

And what is Ketchikan's part in this controversy? Ketchikan is the cat's-paw, the basis of a false pretense. In a business sense Ketchikan is merely a depot, branch, or substation of Seattle. Ketchikan affairs are and have always been controlled by agents of alien corporations to the advantage of those corporations and against the interests of town and Territory. Ketchikan is 90 miles nearer the fishing grounds than Prince Rupert, and the cost of handling fish over this 90 miles should not exceed one-half cent per pound. But if Ketchikan should pay within a half cent of the Rupert price she would get all the fish. Why does she not do it? Let anyone exercise his horse sense and he can see why. Seattle is doing the buying at Ketchikan, and whatever Ketchikan gains as a receiving and distributing point for Alaska Seattle must lose. If the Federal Government can be constrained to keep its hands off the matter Ketchikan or some other point near the boundary that offers freer business conditions is bound to win out.

WHO IS H. C. STRONG?

Since the beginning of the controversy one H. C. Strong, nominal Ketchikan citizen and pseduo-Alaskan, has spent practically all his time on a campaign of false pretenses in Washington having for its aim the exclusion of American fishermen from Prince Rupert. And who is this H. C. Strong who is thus acquiring newspaper fame? Mr. Strong came to Alaska many years ago as the agent of alien capital and has been the agent of alien capital ever since. He is at present agent of Seattle capital in various minor enterprises, of Standard Oil, the Dupont Powder Co., and of the Alaska Steamship Trust. If he is principal in any business whatever his fellow townsmen have not discovered the fact. Now, who is paying Mr. Strong's expenses as lobbyist? Is it Ketchikan? The idea is laughable. Bona fide Ketchikan business is too poor to keep a lobbyist in Washington 15 minutes. A man with Mr. Strong's associations can not possibly do otherwise than work for the element that is jealously restricting Alaska's free development for its own selfish ends.

"THE PROPOSED LAW."

To nullify the advantage Alaska should gain through the completion of the new trade route of the Grand Trunk Pacific and the freedom of the port of Prince Rupert, hostile interests seek the enactment of the following measure:

"Be it enacted, etc., That from and after 90 days after the passage of this act no fresh or frozen halibut or salmon from the North Pacific Ocean or its tributary waters shall be admitted into the United States through any foreign country except when the same shall be in bond from an American port."

And what does it mean?

It means: "Repudiate the principle of freedom of trade, yield to the artificial clamor of hired lobbyists and a reptile press, suppress competition, and give the American fisherman back into the hands of a combination of buyers to be skinned as in the good old days, strangle the small measure of commercial freedom Alaska has derived from a Canadian concession, drive trade out of its natural channel, provoke Canadian recriminations and invite international complications." And all for what end? Why, to help out the poor Guggenheim interests and their allies, to be sure, and incidentally to perpetuate the bonds by which big business keeps Alaska impoverished and thus restricts its settlement and industrial expansion.

THE WASHINGTON ATTITUDE.

The Washington attitude seems to be about as follows: "Why should we give any heed what Alaskans want? They have no votes to club us with nor money to buy us." From all we can learn, it appears the infamous measure cited above would have gone through without a question but for the opposition of the New England Fish Co., which feared Canadian recriminations would injure its international business.

We have used harsh language in speaking of the Federal authorities, for it is hard to believe that Cabinet members, Senators, and Representatives are acting in good faith with us, that they are not intelligent enough to perceive the facts of the situation and the nature of the interests behind this bill. Let it be remembered that it was the Federal Government that sent a district judge to Nome to lend his official aid to the robbery of the placer miners, that is jockeying the homesteader and dishonoring its obligations to him, and that blackmails the pioneer under cover of a forest-reserve bureaucracy. If Alaskans were so disposed they could draw up a list of grievances that would make the Declaration of Independence ashamed of itself. A desperate effort is being made this winter to pass the above bill. Will Congress yield? Heaven only knows; but if it does the Colonist will do its best to make the significance of its action plain to the American public.

Immigration.

EXTENSION OF REMARKS
OF
HON. JOHN M. MORIN,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 31, 1917.

Mr. MORIN. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD, I include a copy of the resolution of the Civic Club of Allegheny County, Pa., which contains an article that appeared in the Pittsburgh Post of December 8, 1916, relative to the Americanization work in which Pittsburgh has long been a leader. The question of immigration is one that is engrossing the attention of all at the present time, and any movement that will enable those who come to us from foreign lands to gain an education that will make of them desirable citizens is worthy of the highest words of commendation and praise.

Resolution of the Civic Club of Allegheny County, Pa.

Whereas the Civic Club of Allegheny County, Pa., is deeply conscious of the great need of imparting a reading and speaking knowledge of the English language, as well as a general knowledge of the history and political institutions of the country, to the many aliens in the rapidly increasing communities or settlements of foreigners in the United States, particularly Allegheny County; and

Whereas the following editorial appeared December 8, 1916, in the Pittsburgh Post, which summarizes the utterances of many other newspapers, commanding the efforts of the Bureau of Naturalization working in cooperation with the local public-school authorities in raising the standard of citizenship by educating the prospective candidates for naturalization:

"The helpful attitude of Americans toward immigrants desiring to become citizens is illustrated in the annual report of the Commissioner of the Bureau of Naturalization, which is a part of the Federal Department of Labor. While everyone has heard of instances where certain Americans have imposed upon immigrants, and, on the other hand, of where certain aliens have shown traits of the undesirable, it is recognized that, in the main, there is a strong disposition on both sides to cooperate on wholesome lines wherever possible. It is this mutual good will that the Commissioner of Naturalization describes. It will be recalled that last year officers of the public schools were asked by the Naturalization Bureau to join a nation-wide Americanization movement—to help immigrants qualify upon a higher standard of admission to American citizenship. The bureau proposed that it send the names of candidates for citizenship to the public schools, and that the latter afford them and their wives instruction in American ways, particularly in questions of citizenship and government. Nearly 900 cities and towns have joined the movement, opening their schools to classes of immigrants. The Bureau of Naturalization is sending letters to the applicants for naturalization, urging them and their wives to go to the schools for instruction, learn English as fast as they can, and generally adapt themselves to American ways. Many thousands of the aliens are prompt to grasp the opportunity, and it is believed that as the information of the system spreads the great majority will avail themselves of the instruction.

"Pittsburgh has long been a leader in Americanization work. For years its evening schools have been giving instruction to aliens, and they were prompt to cooperate with the Naturalization Bureau. Nothing emphasizes the American spirit of helpfulness as this free instruction afforded for the aliens. True, the country gains by it through making the newcomers better citizens, but the enthusiasm of the work shows that much of it is due just to the spirit of helpfulness." Now, therefore, be it

Resolved, That the Civic Club of Allegheny County indorses the sentiment expressed in the above editorial and commends the efforts of the joint activities of the Bureau of Naturalization and the public-school authorities in the several communities in the endeavor to prepare the aliens for citizenship; and be it further

Resolved, That the Civic Club of Allegheny County take special cognizance of the above-mentioned needs of the alien communities, and make special efforts to extend its influence in the highly important work, and further the hope is expressed that Congress will authorize the exer-

tion of still further efforts in this line on the part of the Federal Government; and be it further

Resolved, That the secretary be directed to forward copies of this resolution to the United States Senators from Pennsylvania and the Members of Congress from the districts of Allegheny County.

For the CIVIC CLUB OF ALLEGHENY COUNTY,
H. M. DENNITT, *Secretary*.

JANUARY 29, 1917.

The Chemical Industries of the United States and Their Relation to National Preparedness.

EXTENSION OF REMARKS
OF
HON. EBENEZER J. HILL,
OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 31, 1917.

Mr. HILL. Mr. Speaker, under leave to print granted me today, the House having under consideration H. R. 20573, a bill entitled "A bill to provide increased revenue, to defray the expenses for the increased appropriations for the Army and Navy and the extension of fortifications, and for other purposes," I submit the following, it being an article from the Journal of Industrial and Engineering Chemistry, prepared by C. A. Browne, and including the "First report upon the chemical industries of the United States and their relation to national preparedness":

[Reprinted from the Journal of Industrial and Engineering Chemistry, vol. 9, No. 2, page 177. February, 1917.]

THE FIRST REPORT UPON THE CHEMICAL INDUSTRIES OF THE UNITED STATES AND THEIR RELATION TO NATIONAL PREPAREDNESS.

[By C. A. Browne. Received December 20, 1916.]

To those who have studied the historical development of chemical industries in the United States the recent discussions and papers upon Industrial preparedness, Chemical statistics, Tariff legislation, etc., that have appeared in this Journal have a strangely familiar sound. The situation which confronts the manufacturer of chemicals in the United States to-day is not a new one, and the present endeavors to make a statistical estimate of the needs of our chemical industries are not the first efforts which have been made in this direction. History has, at times, a strange method of repeating itself. If we of to-day could only transport ourselves to the United States of a century ago we might hear, then, as now, the same fears expressed concerning mushroom prosperity and unpreparedness; we might listen to the same arguments in favor of antidumping laws; and we might read the same resolutions proposed by committees who had met in convention to investigate the industrial situation.

The efforts of our great grandsires to solve a condition of affairs so similar to that of the present is not only interesting but instructive. The first business of the ancient Romans, when they met in conclave, was to determine the consulta patrum; we can do no better than follow their example.

GENERAL INDUSTRIAL CONVENTION HELD IN 1831.

On October 26, 1831, there met in New York City a general convention of the friends of domestic industry, consisting of about 500 delegates from 13 different States. These delegates, who represented all the leading industries of that time, divided themselves into a number of committees, whose work was to prepare a series of reports upon iron and steel, salt, sugar and molasses, glass, chemicals, and other industries. These reports, which were widely distributed as separate pamphlets, were collected the following year into a single volume which was printed as a 200-page book at Baltimore in September, 1832.

This collection of reports is preceded by an appeal to the people of the United States and is followed by a memorial to Congress, in which the recommendations of the various committees are summarized. The volume is carefully edited and contains a vast amount of information, invaluable to historian and statistician. A few extracts from the introductory appeal will serve to illustrate the bearings of this early report upon present conditions.

"The events that followed the French Revolution gave a new and unexpected direction to the enterprise of our citizens. The disturbed state of the continent of Europe, and the prevalence of universal wars throughout the nations of that quarter of the globe, placed the United States in the position of the only neutral among many belligerents and so obviously opened the way to commercial wealth to our citizens that all other interests sank into insignificance compared with those which were concerned in pushing a foreign commerce into every region where the strife of the contending parties excluded the competition of the belligerents themselves and left to the United States the undisputed monopoly of trade. To this unfortunate conjuncture of circumstances is to be ascribed the most rapid growth that has ever been traced in the history of any empire."

This picture of snug prosperity is followed, however, by another picture which should make the present-day apostles of unpreparedness pause and reflect.

"It was one result of this state of things that, while our countrymen were intent upon gathering the harvest which the distracted condition of the world had strewn before them, they were unmindful of the future and neglected to treasure up the elements of strength and prosperity which lay hidden in the bosom of the Nation, and which, as they were independent of foreign legislation or external accidents, were most likely to furnish the means of a stable and enduring happiness.

"Troubles soon afterwards broke out at home. A war threatened and our citizens were suddenly called to meet a tremendous emergency. Our commerce was put in fetters by nonimportation acts and embargoes, and the crisis that succeeded found us without the most ordinary resources of an independent people. Our Armies went to the frontier clothed in the fabrics of the enemy; our munitions of war were gathered as chance supplied them from the four quarters of the earth; and the whole struggle was marked by the prodigality, waste, and privation of a thriftless nation, taken at unawares and challenged to a contest without the necessary armor of a combatant.

"When it pleased heaven to rescue us from the imminent hazards of this doubtful and disproportioned conflict, we saw around us a Nation of 8,000,000 of people possessed of a territory nearly equal to the Continent of Europe, rich in the ungathered resources of every kind of wealth—just emerging from a war of two years and a half with an enemy who had never assembled an army of more than 30,000 men—and yet deranged in all its channels of industry, exhausted, and on the verge of bankruptcy. Nothing but the most perverse neglect of the fundamental precepts connected with the proper administration of the concerns of a commonweaith could have produced such a result.

"These disasters opened our eyes to some important facts. They demonstrated to us the necessity of extending more efficient protection, at least, to those manufactures which were essential to the defence of the Nation."

The New York convention recognized the importance of chemistry to the manufacturers, "essential to the defense of the Nation," for we note upon their minutes for the third day of the meeting the following resolution:

"In convention, October 28, it was—

"*Resolved*, That a committee of five be appointed to report on the subject of chemistry as connected with the manufactures and the mechanic arts."

The chairman of the committee thus appointed was Isaac Tyson, jr., of Baltimore. The name Isaac Tyson (the firm of Howard Sims and Isaac Tyson began the manufacture of chemicals and paints in a laboratory on Pratt Street in Baltimore in 1816, just a century ago. They afterwards removed to Washington Avenue, where they engaged extensively in the manufacture of copperas, chromate of potash, chrome yellow, and other chromic pigments. The raw material for the latter consisted of chromate of iron obtained from Bare Hills, Md., and from Chester County, Pa. The importance of the chrome yellow industry is mentioned in the committee's report) is memorable in the early history of American chemistry, and Baltimore 100 years ago gave promise of becoming a great center in this branch of industrial activity. It is worth a passing note that there were 24 delegates from Baltimore at the New York convention and only 6 from Pittsburgh. The associates of Isaac Tyson upon the chemistry committee were Christian Keener, another Baltimorean; William Permenter, of East Cambridge, Mass.; Edward Roberts, of Philadelphia; and Thomas Bakewell, of Pittsburgh.

The report of the above committee is the first definite statement of any importance regarding the condition of the chemical industries in the United States. As it is inaccessible to most members of the American Chemical Society, the original report is here given in full:

REPORT OF THE COMMITTEE ON CHEMISTRY, GENERAL CONVENTION FRIENDS OF DOMESTIC INDUSTRY, NEW YORK, OCTOBER 26, 1831.

"The committee, in discharge of the duties assigned them, report that chemistry as connected with the business of life may be considered a modern science. Its early history gives it rather the character of an occult art, associated with the visionary theories of the alchemist. And for a long period it was signalized neither by usefulness nor by dignity. Finally, however, the improved state of society and the progress of civilization excited the genius of a few, who, by a series of brilliant discoveries, astonished the world; and, by the application of these to manufactures and the arts, administered to the comfort and the necessities of mankind. Though long taught in the schools as a science, it is only a short period since the United States were dependent on foreign countries for every article in this interesting and important department of manufactures.

"Intimately connected with science and the healing art and essential to other manufactures, chemistry received very little or no attention from the enterprise and skill of our country until the late war. That event suddenly cut off the usual supplies from foreign countries. The consequent advance in price was excessive and the inconvenience sustained by that class of manufacturers who consumed chemicals incalculable. This state of things gave the first impulse to chemistry in our country.

"The return of peace, however, brought foreign competition, which soon threatened to extinguish the infant and yet inexperienced establishments which had crept into existence during the war. The large importations which at that period inundated the country caused a reduction in prices, alike ruinous to the importer and his competitor, the American manufacturer.

"This depression, however, would have been but temporary had there been no interference on the part of the Government. The foreigner would have prevailed in the contest, and, the market becoming his, the prices would have been in accordance with his own remorseless interests.

"Happily for the Nation, and more particularly for that numerous laboring class who are dependent on chemical manipulations, and the agriculturists, who find in this class a customer instead of a rival, happily also for the other classes of manufacturers which owe their existence to chemistry, the tariff act of 1824 placed the seal upon the policy of the Nation. By this act, and not until after its passage, was the manufacture of chemicals established in the United States.

"Until it became the policy of the Nation to encourage a domestic supply of chemicals prices were constantly fluctuating—were generally high, and oftentimes seized upon for purposes of speculation, to the great injury of consumers. Domestic competition has caused prices to settle at a minimum rate. The manufacturer is now so near the consumer that his wants are anticipated and scarcity is unknown, because the raw material, being unlimited in quanity, and individual enterprise commensurate with it, the demand is seldom allowed to overtake the supply. When alum was an article for import the price was generally $7.50 per hundredweight. During the late war it rose to 18 cents per pound. The price at present is about 3¾ cents per pound.

"Copperas was subject to greater fluctuations, varying with the vacillating policy of the importer or the foreign manufacturer or the contrivance of the speculator. The price was often $7 per hundredweight, and sometimes below the cost of importation. During the war it advanced to 17 cents per pound. It now sells for 2¼ cents per pound.

"Epsom salts, which is one of the leading items in the chemical department, is an offspring of the tariff of 1824. And what is the result of this parental relation? A mineral which had remained for ages unnoticed and even unknown was dug from hills previously considered barren and valueless and, by an admirable process of chemistry, con-

verted into magnesia and Epsom salts of a quality superior to the foreign. But the effect of a protective system is more clearly shown by the following list of prices of Epsom salts at the different periods before and after the duty of 4 cents per pound was imposed by the tariff of 1824:

Price per pound.	Cents.
1820	11–12
1823	7¼
1824	10
1826	7½
1831	3½

"Those who seriously contend that the duty on foreign merchandise is a tax on the consumer to the full amount of that duty, will here find a case difficult to reconcile with their theory, the present price of Epsom salts being 3½, while the duty is 4 cents per pound. Nor is this all—the improved manufacture and reduced price of Epsom salts (one of the numbers of the London Mechanics' Magazine for 1828, said: 'The United States, which used to be furnished with Epsom salts from this country, now have the whole supply from a manufactory established in Baltimore—making a purer salt than in Europe, and at much less price.') has very nearly excluded the use of the coarse and nauseous article, Glauber salts, of which latter only a small quantity is at present made and consumed.

"The usual price of refined saltpeter was about 13 cents per pound before the tariff of 1824, when a duty of 3 cents per pound was laid upon the foreign manufacture, which is its present price. The Treasury tables for 1830 show that only $80 worth of it was imported.

"Sulphuric acid was worth 7 cents per pound previous to 1824—since only 3 and 4 cents.

"The sulphate of quinine, when first manufactured, sold at an enormously high price; and its value in France was said to be $2,000,000 per year. In 1828 it was worth from $7 to $8 per ounce, and its manufacture was soon after commenced in the United States. At the close of 1831 it was selling in Baltimore for $1.50 per ounce, but has latterly advanced to $2.75, because of the increased cost of the material out of which it is made.

"Many other articles show a similar result, but the cases cited will sufficiently illustrate the principle contended for. It may be safely stated that the general price of chemical articles is one-half less than it was before the establishment of their manufacture by the protecting tariff of 1824. Hence it would appear that $1,000,000 per annum have been saved to present consumers in the United States, by this new application of domestic industry, talent, and capital; besides the employment and subsistence of a large number of persons, variously engaged in the laboratories, or furnishing materials; and the chief part of the latter would have remained, as they had been for ages, valueless—but on the account of the encouragement and protection afforded.

"The large consumption caused by the growing wants of our country, if dependent on the laboratories of Europe, would have either enhanced prices or have justified the maintenance of former rates—for, until the business was undertaken in this country, the foreign manufacturers seem not to have discovered how cheaply they could work.

"The intimate connection between chemistry and the arts of dyeing, bleaching, and calico printing, and their mutual dependence on each other, need not here be insisted on. The importance of the former can not be duly estimated without taking into view the various interests into which it diffuses itself.

"The protection offered to several chemicals has not only reduced prices, but almost entirely excluded the foreign articles. Indeed, as to alum and copperas, the exclusion seems complete—for the Treasury tables of 1830 do not show that one pound of either was imported. The prices of many chemical articles are as low in this country as in Europe; but, nevertheless, your committee are of the opinion that it would be unwise to repeal the existing duties, because experience indicates that the foreign competitor, from a disposition to get rid of his surplus stock, and with the less creditable design of strangling the growing establishments which have deprived him of a market, will crowd his productions upon us, regardless of the calculations which usually govern trade—enduring the present loss with the hope of distant gain, which is to be the fruits of victory obtained in prostrating his rival.

"The chemist asks to be protected from such an enemy. Your committee might further illustrate the principles they contend for by a more detailed examination of the department referred to them; but in so doing they would extend this report to an unreasonable length and multiply arguments on a question which, fortunately for the country, is already settled.

"Besides the articles previously noticed, the chemical establishments of this country manufacture calomel and various other mercurial preparations, Glauber salts, Rochelle salts, tartar emetic, ammonia, sulphate of quinine, oil of vitriol, tartaric acid, aqua fortis, Prussian blue, chrome yellow, chrome green, nitric acid, muriatic acid, barilla, oxalic acid, chloride of lime, chloride of soda, refined saltpeter, refined borax, refined camphor, acetic acid, acetate of lead, nitrate of lead, prussiate of potash, bichromate of potash—and the endless developments of the science of chemistry are almost daily adding to the list.

"It is a highly interesting fact that nearly all the materials used in chemical establishments are the produce of our country. Brimstone, saltpeter, quicksilver, cream tartar, and Peruvian bark are the only material exceptions; and it happens that our competitors in manufacturing chemistry are without domestic resources for these same excepted materials. Both draw their supplies from the same sources. Nor is the fact less interesting that the articles used in chemical factories, other than the exceptions just alluded to, are generally of a character useless and sometimes loathsome.

"Clay is used in the manufacture of alum; iron ore and pyrites for copperas; a magnesian mineral for magnesia and Epsom salts; copper ore, old copper, and the scales which occur in the manufacture of copper, for blue vitriol. The blood which flows from the slaughter-house, the horn shavings which are swept from the combmaker's shop, and the trimmings and scraps of leather, which would otherwise encumber the currier, are all converted into Prussian blue, the prussiate of potash, and ammonia.

"Even the atmosphere we breathe is made subservient to the cause, and is converted into merchandise by its combination with brimstone, in the formation of oil of vitriol and other chemicals.

"Your committee, believing that a more particular allusion to a few facts may be useful in causing the subject of chemistry to be appreciated, take the occasion to state that chrome yellow, as a pigment in common use, may be said to be the result of American chemistry. It was originally discovered native in the Uralian Mountains, and sold for its weight in gold. It was first made artificially in France, by Vauquelin, from the chromate of iron, discovered in small quantities in the Department of Var, in 1797. The chromate of iron having been discovered in considerable quantities near Baltimore, in the State of Maryland, extensive works were erected for manufacturing it into chrome yellow. The price was first $3 per pound, but domestic competition and improvements in the process have caused a gradual decline to 35 cents per pound.

"Some years ago the chemists of the United States exported chrome yellow to England, and, for a short time, fancied that a valuable market was opened to them, for the British tariff had not provided for this new article. But the British manufacturer, finding his protection thus encroached on, applied to the board of trade for relief, and an order in council was immediately passed, subjecting foreign chrome yellow to a duty so high as to be prohibitory. An act of Parliament was too tedious a process to give relief to a British manufacturer, subject to the competition of an American manufacturer. "Free trade" was no more the policy of England then than it is her practice now.

"A further evidence of the great resources of this country, as developed by chemistry, is found in the existence of vast masses of alum and copperas ore on the Chesapeake Bay, near Baltimore. In searching for bituminous coal, of which there are strong indications, this mineral was brought to light. It consists of partially decomposed vegetable matter, with clay and sand and iron pyrites distributed through the mass, and the whole covered with a bed of iron pyrites. This mineral, dug and exposed to the atmosphere, undergoes a spontaneous combustion, and gives rise to the formation of sulphate of alumina and iron, which, lixiviated, requires only evaporation and crystallization. Preparations are now being made in Baltimore for manufacturing, from this mineral, alum and copperas to an extent fully adequate to the wants of the community.

"Beds of iron pyrites also exist of great extent in the towns of Strafford and Shrewsbury, Vt., from which the country east of the Allegheny Mountains has been principally supplied with copperas for many years. They are worked by two incorporated companies, manufacture 2,500,000 pounds per annum; employ 75 men, consume 3,000 cords of wood, pay for transportation by wagons, canal, river craft, and coasting vessels, $20,000—using considerable quantities of lead, iron, and gunpowder.

"In the neighborhood of Liberty, in Frederick County, Md., there exists a copper ore, which, besides being adapted to yielding metallic copper, is, by a slight chemical treatment, converted into blue vitriol.

"But it would swell this report beyond its proper limits were your committee to give in detail the history and resources of the manufactures of this country. They are able to enumerate 30 chemical establishments in the United States. The capital invested in these concerns, according to the best estimate that can be made, is $1,158,000. The value of the articles produced may safely be put down at $1,000,000, the number of hands employed at 900, and the number dependent on them for support 4,000. Nearly the whole value of chemicals is paid in labor and fuel, the cost of most of the materials used being inconsiderable.

"Pot and pearl ashes enter into the composition of many chemicals, giving a home market for a large quantity of the product of the forest.

"Almost every chemical process requires the aid of heat. Immense quantities of fuel are consequently consumed in the laboratories. One establishment in Baltimore requires 4,000 cords of wood per annum, besides considerable quantities of anthracite and bituminous coal. The total value of fuel consumed in chemical operations in this country is estimated at $120,000. The benefit accruing to the landed interest, by reason of this great demand on the forests and the mines, and the employment given to the laboring class in cutting the wood and mining the coal, and in transporting both to these new markets, can not but be appreciated by all reflecting persons.

"The smelters of the lead of our own mines in the far West here find an important ally. Large quantities of this metal are used in the construction of chemical works, and some is consumed in the manipulations. But your committee forbear to trespass upon the duties of the committee appointed on lead and its manufactures.

"Your committee have no accurate data by which they can learn the quantity of tonnage employed in transporting the materials used and the chemicals manufactured from them.

"The sulphur from the volcanic mountains of ancient Sicily, the quicksilver from Spain, the saltpeter from the East Indies, and the Peruvian bark from South America form considerable items in our foreign trade, and give no small employment to the shipping interest. But it is the coasting trade that receives the chief benefit.

"The chemical establishments are few, compared with the number of their customers, and their goods are consequently distributed along the whole line of our coast.

"Should any change be made in the existing tariff, your committee suggest some amendments which the new developments of the science have made necessary.

"Sulphate of quinine is manufactured from the Peruvian bark, and promotes the important trade with the Pacific. The consumption in the United States is, in part, supplied by the chemists of France, the duty being only 15 per cent. If the duty on sulphate of quinine were increased and the bark from which it is extracted admitted free of any duty, the entire consumption would be derived from our own laboratories, and the increased trade with Peru would greatly benefit the commercial interest. Instead of importing the quinine in its small bulk, not appreciable as a freight, and by a short voyage, and from a country that excludes almost everything American, cotton excepted, we would, on the other hand, receive from distant Peru the more bulky bark, paying for it in household furniture and various other American manufactures, and even in the quinine itself, extracted from the material.

"Saltpeter is one of the most costly articles used by the manufacturing chemist. Small quantities of very inferior quality are found in the limestone caves of the Western States; but the crude material is limited, and the refining process costly, therefore few are disposed to engage in that business, and these few on a very small scale. There is no interest in this country to be benefited by a duty on saltpeter.

"Your committee are of the opinion that the following articles might safely be admitted free of duty. Some of them, if not strictly within the sphere of the present inquiry, indirectly belong to it: Peruvian bark, crude saltpeter, nitrate of soda, quicksilver, crude borax, crude camphor, cream tartar, galls, gum arabic, gum senegal, gum copal, gum tragacanth, gum shellac, platina, caoutchouc.

"The time and the occasion are suitable to suggest that many foreign chemicals are only charged with the small duty levied on articles not enumerated in the tariff. Such of them as interfere with the establishments of this country, or such as would be produced with a suitable patronage from the Government, ought to bear a heavier duty, and such as are not adapted to our climate or resources might be declared free of duty.

"And, as there is always a strong temptation, by distinguishing them under a name not found in the law, in order to bring them under the ad valorem duty of 15 per cent (that being the duty of nonenumerated articles), it would be expedient to make all nonenumerated chemicals subject to a much heavier duty. Every article would then come in review before the country, and each would be either made free of duty, or be assigned to its proper place in the scale. And specific duties, the committee think, should be always preferred to the ad valorem if practicable.

"Having already named the articles which may, without interfering with any domestic manufacturing interest, be exempted from all duty on their importation, it now becomes proper to furnish a list of such as require further legislation, to relieve the country from an unnecessary dependence on foreigners, as follows: Sulfate of quinine, carbonate of magnesia, sugar of lead, nitrate of lead, acetate of iron, roll brimstone, all the preparations of mercury, sal ammoniac, Rochelle salts, soda, solutions of tin, verdegris, tartar emetic, chromate of potash, bichromate of potash, chloride of lime, chloride of soda, tartaric acid, chrome yellow, Prussian blue, prussiate of potash, barilla, soda, carbonate of soda, magnesia.

"If Congress should determine to abolish the duties on imported articles not coming into competition with similar articles made or produced within the United States, the labor of the officers of the customs would be much diminished; and it is respectfully suggested, whether the contemplated law ought not to require these officers to keep a particular and separate account, accessible to the public, at each customhouse, of the quantity and value of all merchandise imported, whether free of duty or subject to specific or ad valorem duties? The statistical information thus obtained would be of great importance to the manufacturing chemist, as well as to every other class of persons. The law might, with great propriety, also provide for a more prompt diffusion of the information thus obtained. Statistical facts are valuable in proportion to the promptness with which they are known. When delayed they are more a matter of curiosity than of practical usefulness.

"A well-organized system of statistics would not only be a guide to the statesman, enabling him to legislate on the intricate subject of trade understandingly, but it would inform the merchant on the important matter of consumption and supply, and save him from the many errors into which he is liable to be led, by reason of his unavoidable ignorance in this particular. Such intelligence often and promptly communicated would, in a great measure, prevent the occurrence of that scarcity and consequent enhancement of price, which so frequently takes the consumer by surprise, and, on the other hand, would guard against that excessive glut and consequent ruinous reduction of prices, which have done more to involve the enterprising merchant and injure the manufacturer than all the foreign competition that can be combined against them.

"On behalf of the committee.

"ISAAC TYSON, Jr., *Chairman.*"

The remarks which this report of the committee on chemistry makes upon the effects of foreign competition, the necessity of an adequate protective tariff, and the importance of a well-organized system of statistics are as applicable to-day as they were 85 years ago.

But the principal lessons to be drawn from this early report upon industrial preparedness are contained in the memorial which the Friends of Domestic Industry transmitted to Congress.

The thought that the only successful method of combating militarism is by means of an efficient industrialism is not lightly to be dismissed. In reflecting upon the downfall of Napoleon, the memorial asks the following momentous question:

"Has it not been a matter of common remark, since the close of the late wars, that it was not the artillery of Wellington and Blucher, nor even the noble enthusiasm of the youth of Germany, but the mightier machinery of the power loom and spinning jenny, the splendid miracles of Arkwright and Cartwright, that sustained the cause of the alliance in all the fields of Europe for 25 years in succession, and finally overthrew the greatest military empire that ever existed?"

The dangers which threaten domestic industries at the conclusion of a foreign war can be illustrated no better than by the following account of what happened in the United States after the Napoleonic wars:

"Everything goes on prosperously until the war comes to a close. Within a few months after our markets are inundated with British goods, cheaper than we can make them of equal quality, and the manufacturers are, in their turn, involved in one common ruin. It is in this way that the fluctuations incident to these distant and uncertain exchanges reach successively all the great branches of industry. The results which your memorialists have thus described are not accidental, but the regular consequences of the state of things to which they are attributed, and must continue to recur from time to time wherever such a state of things exists."

In commenting to Congress upon the possibility of future occurrences of this kind, in which even the United States might be involved, the memorial sounds an admonition which is almost prophetic:

"At this moment the danger of such an occurrence appears to be again very imminent; but whatever may be the issue of the present crisis, it is at all events clearly the duty of an American statesman to suppose, and to act upon the supposition, that the country is continually liable to be drawn into war with any of the foreign powers with which we have relations. If, then, we look to these foreign powers for our regular supply of the ordinary comforts of life, what is to become of us during these periods of occasional hostilities, which may last 3 years or 30, as the quarrel happens to turn? By what miracle are we to find at a moment's warning resources, before unemployed, which will furnish us with substitutes for this supply? Are we to extemporize at the commencement of every war, as we did at that of the last, a set of manufacturers sufficient to meet the demand of 12, 15, or, looking forward only to the end of the next 5 and 20 years, 20,000,000 consumers, only to see them all shaken to their foundations by the return of peace, and sinking in one general ruin as they did before? Your memorialists can hardly imagine how an intelligent person can be so totally blind to the most obvious considerations of expediency as to counsel such a policy. They leave it with confidence to your honorable body to decide whether it be not the duty of a prudent Government to provide by every imaginable means against the recurrence of such widely spreading disasters; whether, were it even true, as it is not, that domestic manufactures would be in the end dearer than foreign ones, an annual pecuniary sacrifice of considerable extent made in this form would not be decidedly preferable, both on the score of interest and feeling, to supporting the incalculable losses and miseries of every kind produced by these convulsions."

With this final warning we must bring our citations from the Report of the Friends of Domestic Industry to a close. It would be interesting to quote more fully, but enough has been given to indicate the resemblance of conditions a century ago to those of to-day. In addition to the light which the report throws upon the early state of our chemical and other industries, it contains premonitions that are full of meaning, and conveys lessons that are set forth—

"With such a luster he that runs may read."

80 SOUTH STREET, *New York City.*

Revenue Bill.

EXTENSION OF REMARKS
OF
HON. BENJAMIN C. HILLIARD,
OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 31, 1917.

Mr. HILLIARD. Mr. Speaker, it is far from pleasant to vote taxes in any form. I would save from burdens rather than visit them. The appropriations voted and in prospect make necessary the amount of revenue provided in the pending measure. No more equitable taxation bill being suggested, I find myself obliged to determine whether I shall support this bill or vote to deny to the Government the money which the Congress through other legislation has authorized. Thus stated, my duty is apparent.

There is much misapprehension in some quarters relative to the operation of the bill. It does not seem that serious complaint should be offered to a measure made necessary by the extraordinary preparedness bill of the Government and which operates only on excess profits. Every corporation or other entity to be affected will enjoy an exemption of $5,000, plus 8 per cent net earnings on its invested capital. Of any earnings above $5,000, plus 8 per cent net on invested capital, there will be levied an 8 per cent tax. Stated concretely, a corporation with $100,000 capital will first be allowed all manner of expense items, including taxes by whatever authority levied. Next will be deducted $5,000. To this sum will be added 8 per cent net earnings, or $8,000, making $13,000 of earnings. This is equivalent to a net profit of 13 per cent on the invested capital of $100,000. Supposing that the company actually makes $15,000 net. From this sum must be deducted $13,000 which the company is permitted to make before the law attaches. There would remain $2,000 of so-called excess profits. This measure would require the company to pay into the Government Treasury 8 per cent of $2,000, or $160. Not much of a burden, when analyzed.

Something further of my views is set forth in correspondence which I have had with a constituent of mine, Mr. Paul Hardy, of Denver, Colo., secretary of the Colorado Bankers' Association, and I conclude my remarks with reading the message of protest from that association against this bill and my reply:

[Telegram.]

DENVER, *January 29, 1917.*

Hon. B. C. HILLIARD, Congressman,
Washington, D. C.:

The Colorado Bankers' Association wish to enter their protest against the passage of the proposed amendment to the Federal internal-revenue act providing for a tax of 8 per cent on net incomes. This amendment is most unjust. We request that you use your best efforts to defeat this amendment.

COLORADO BANKERS' ASSOCIATION,
By J. M. B. PETRIKIN, *President,*
PAUL HARDY, *Secretary.*

WASHINGTON, D. C., *January 30, 1917.*

Mr. PAUL HARDY,
Secretary Colorado Bankers' Association,
Denver, Colo.

MY DEAR MR. HARDY: In response to your telegram I have sent you the following wire:

"New tax 8 per cent not attach until earnings $5,000 plus 8 per cent net on capital invested. The revenue imperative for preparedness program. Tax on excess profits seems least burdensome. Would appreciate suggestion for more equitable plan."

I regret very much that additional revenue legislation has been made necessary. This bill would not be required now but for the appropriations for the Army, Navy, and fortifications, as they are estimated to exceed this year those of last year. It is also true that the revenue legislation in the first session of this Congress would not have been needed had it not been for the increased appropriations for the same purposes. In other words, but for the propaganda for the expenditure of hundreds of millions in a very short period far in excess of anything heretofore attempted by the Government the Underwood bill would have produced all the revenue required by the Government. I confess that I have not been in entire sympathy with the preparedness legislation, and I feel now that it is largely a waste of money and

results in visting unwarranted burdens on the people and business activities.

The great difficulty is that the propaganda is financed with unlimited millions by those engaged in the business of manufacturing munitions and shipbuilding. A fair analysis must convince any reasonable and thoughtful man that this combination has succeeded, first, in creating a sentiment for preparedness that can not be denied, and, second, the country in complying with the demand is forced to patronize these very interests at a time when, because of the foreign demand, the prices are the highest ever known.

The further astounding fact is that those interested in creating the sentiment out of which these vast appropriations and tax levies have come, in the same merciless way require the Government to sign contracts for warships, guns, and all sorts of material, but which they do not bind themselves to furnish for from two years to a longer time. Their excuse is that they are running to full capacity supplying contracts already made with foreign Governments. In short, they drive us to the belief that we need something at once which only they can furnish; require us to appropriate money and levy burdens in payment thereof at a time when the prices are the highest; and they postpone us delivery, while they fill the orders of other countries with the very engines of war with which we could be attacked, if we should reach the stage of misunderstanding which they profess to say is imminent.

In a word, the preparation consists almost altogether in awarding favorable contracts at present prices, to be filled when prices will have fallen, and when the demand from abroad no longer obtains.

With everything appointed to their liking in the foregoing these very munition magnates protest against an excess profit tax.

The representative of one of these companies urged to the chairman of the Ways and Means Committee that the charge against his company under the proposed law would amount to $500,000; "an outrageous tax," as he expressed it. Still his company would have $5,000 flat exemption, and then 8 per cent net profit on its invested capital, surplus earnings, and undivided profits, before the new law would attach. It is easy to perceive that if 8 per cent of the surplus net earnings would equal a half million dollars, the company would cover into its own treasury over and above all other items of expense and taxes, in addition to $5,000 and 8 per cent on its investment, the neat sum of eleven, plus, times a half million, or $5,500,000. Naturally we marvel at their nerve.

But no thoughtful man on reflection should be surprised. A combination that has been able, by and through a campaign costing millions to create a sentiment for preparedness to the tune of more than a billion of the people's money, to wring contracts at unconscionable prices, to be filled in the distant future, when its goods are no longer required in other countries, may well claim a proprietary interest in the Government and look with disfavor on any effort to levy a tax that would so much as touch a dollar of its profits.

Of course, I know that none of the banks in your association come within the category of munition factories. But the law must be made uniform, and whatever tax you may have to pay must be borne as your tribute to the ingenuity of the mighty private interests engaged in the most successful "drive" for profits since time began.

With some others I tried to make reasonable and modest protest against the program that has made necessary the tax of which you now complain. But when the fight was on where we could have prevented the necessity for added revenue, I did not receive a word of encouragement from you or any other of my friends engaged in the banking business. I am not complaining on that score, and I mention the fact only that you may appreciate how availing might your influence have been when Congress was reluctantly yielding to the power that finally overcame, and how now the most devoted defender against taxation is powerless to help.

Still I am reluctant to vote for the bill, for I find no pleasure in visiting burdens, even though they are to be borne by those able to pay. I regret it the more, I am frank to say, for while the manner of bringing it about is not now discernable, I fear the ingenuity of organized and invisible cunning will ultimately find a way to shift the load to Lincoln's "common people." One school of statesmen in Congress would place it upon the people at once by levying a tariff tax on the everyday necessities. My sole joy in the premises is that I can exercise a potent influence in preventing, for the present at least, an added increase to the cost of living of the struggling masses of my countrymen.

Yours, very truly, B. C. HILLIARD.

Immigration.

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BENNET,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 1, 1917.

Mr. BENNET. Mr. Speaker, the debate on the President's veto having, against my wishes, been limited to 20 minutes for and 20 minutes against passing the bill over the President's veto, I have declined the brief time which it was possible to allot me and chosen to record my views in this manner. I have fought the literacy test for 12 years. I am always sorry to see it pass the House. To my mind it marks a low level of American thought and national feeling.

The literacy test is a selfish attempt to bar others from enjoying the privileges we enjoy. It is scarcely contended that it is proposed because of its educational features. It is rather grimly advocated for the sole purpose of reducing immigration. That we are sacrificing the American ideal of a refuge for the oppressed and a country free for all to an exclusion which will not exclude is little solace. The principle has been sacrificed, though the results may be of value to no one.

Just at this time this bill is particularly heinous. The starving Mexican on the south is willing to move and, once in this country, furnishes labor of a fair grade. He is not a trouble maker, but he has never learned to read and, therefore, he and his wife and children must remain in unhappy Mexico, though the West needs his labor sorely. The unhappy Jewish children of Russia and Poland, living now on one plate of soup and one slice of bread daily, need not look toward us. We are no longer the home of such as they. The Armenian, the murder of whose relatives has made his native country unbearable to him, can still find in Canada the chance for a new start, which our so-called free country denies him.

The Italian, of the people one of whom discovered our continent, will also still find his skill and industry as a laborer appreciated by our neighbor on the north.

Now is perhaps the worst time we ever had for the passage of such a bill. Labor is scarce. The negro of the South by the hundred thousand is coming North to take his place in industry. This has never occurred before. The States which are most largely responsible for this bill will not be exempt from its evil results.

Japan, when she fully realizes what has been done, will resent our action also, and the diplomatic situation, which the President points out, is fraught with danger and difficulty.

It is strange that the very day that the eloquent gentleman from North Carolina [Mr. KITCHIN] urges us to stand by the President is the day which we choose as that on which to repudiate the President's leadership in foreign affairs.

We can still hope that in another body the President's veto will be more highly respected and American ideals find a more effective defense.

Senate Bill 706.

EXTENSION OF REMARKS
OF
HON. L. C. DYER,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 30, 1917.

Mr. DYER. Mr. Speaker, I desire to invite the special attention of the Members of the House of Representatives to Senate bill 706, a bill proposing an amendment to section 260 of an act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911. This bill passed the Senate on December 7, 1916, and was reported by the Judiciary Committee of the House of Representatives to the Committee of the Whole House on the state of the Union on January 5, 1917, and is as follows:

Be it enacted, etc., That section 260 of an act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911, be, and the same is hereby, amended so as to read as follows:

"SEC. 260. When any judge of any court of the United States, appointed to hold his office during good behavior, resigns his office, after having held a commission or commissions as judge of any such court or courts at least 10 years continuously, and having attained the age of 70 years, he shall, during the residue of his natural life, receive the salary which is payable at the time of his retirement for the office that he held at the time of his resignation.

"In the event any circuit judge, having so held a commission or commissions at least 10 years continuously, and having attained the age of 70 years as aforesaid, shall nevertheless remain in office, the President, if he finds that any such judge is unable to discharge efficiently all the duties of his office by reason of mental or physical disability of permanent character, shall appoint, by and with the advice and consent of the Senate, an additional circuit judge of said circuit, who, notwithstanding the incumbency of the judge so entitled to resign, shall sit customarily as one of the judges of the circuit court of appeals of his circuit. And the judge so entitled to resign shall thenceforth be relieved, save as hereinafter provided, from the duty imposed by section 118 of this title to sit as one of the judges of said circuit court of appeals, and shall be held and treated as if junior in commission to the remaining judges of said court, who shall, in the order of the seniority of their respective commissions, exercise such powers and perform such duties as by law may be incident to seniority: *Provided*, That the presiding judge of the said circuit court of appeals, whenever in his judgment the public good shall so require, may thereafter, from time to time, designate the judge so entitled to resign to sit upon the hearing of any cause or causes in the said circuit court of appeals. And the Chief Justice of the United States may, upon like occasion, thereafter designate and appoint any such circuit judge so entitled to resign to service upon the circuit court of appeals of any other circuit; and he may likewise be designated and appointed, as provided by section 18 of this title, to hold a district court in any district, either within or without his said circuit.

"In the event any such judge of a district court of the United States, having so held a commission or commissions at least 10 years

continuously, and having attained the age of 70 years as aforesaid, shall nevertheless remain in office, the President, if in his opinion the public good so requires, may appoint, by and with the advice and consent of the Senate, an additional judge of such court, who, notwithstanding the incumbency of the judge so entitled to resign, shall preside customarily over the said district court and shall exercise such powers as are vested by law in the judge thereof. And the district judge so entitled to resign shall thenceforth be relieved, save as hereinafter provided, from service therein: *Provided*, That the said district judge so entitled to resign as aforesaid may be designated and appointed from time to time to hold any district court, either in his district or within or without his circuit, as provided by sections 13, 14, 15, 16, and 17 of this title, or to sit in the circuit court of appeals of his circuit, as provided by section 120 of this title.

"Upon the death or resignation of any circuit or district judge so entitled to resign following the appointment of any additional judge as herein provided, the vacancy caused by such death or resignation of the said judge so entitled to resign shall not be filled, but the number of judges then in office shall be reduced accordingly."

I consider this bill so important to my country that I have taken great pains to get the views of men learned in the law and otherwise upon the question as to whether or not the bill should become a law. Among others to whom I have appealed to for advice were the bar association of the city of St. Louis. The president of this association, Hon. James C. Jones, caused copies of the bill, and the majority and minority reports, to be printed and placed in the hands of every member, with the request that it be given study and consideration and to attend a special meeting of the bar association on the 22d of January last, when discussion would be had and action taken as to approving or disapproving of it. Under date of January 24, I am in receipt of a letter from Hon. William F. Fahey, secretary of the Bar Association of St. Louis, which is as follows:

THE BAR ASSOCIATION OF ST. LOUIS,
St. Louis, January 24, 1917.

Hon. L. C. DYER,
House of Representatives, Washington, D. C.

MY DEAR MR. DYER: Referring to your favor of the 9th instant, addressed to Mr. Jones, I beg to inform you that, at a special meeting of this association, held at the Washington Hotel on Monday evening, January 22, 1917, the association considered at great length Senate bill No. 706, and voted to concur in the minority report of the Judiciary Committee of the House of Representatives.

Very respectfully,

WM. F. FAHEY, *Secretary.*

The minority report of the Judiciary Committee of the House of Representatives, which is referred to and indorsed by the Bar Association of St. Louis, is as follows:

MINORITY REPORT.

Messrs. VOLSTEAD, NELSON, MORGAN, DANFORTH, GRAHAM, CHANDLER, DYER, and WALSH are opposed to the passage of S. 706 and recommend that it be indefinitely postponed. Mr. VOLSTEAD, in support of that recommendation, submits the following views:

The report made by a majority of the members of the committee does not meet my views, and the following comments on that report and observations on the bill are respectfully submitted:

The recommendation of Justice McReynolds, while Attorney General, and his successor, the present Attorney General, can not properly be cited in support of this bill, as the legislation they recommended differs materially from that proposed in this measure. They suggest that should a judge who has served 10 years and attained the age of 70 fail to resign the President shall appoint an additional judge who is to have precedence over the old judge. A bill drawn along that line might be so framed as to avoid most of the objections urged against this bill.

A number of acts are referred to in the report in which Congress has created or abolished courts or taken from or added powers and duties to the different courts. But in all of these the official tenure of the judges have been preserved. That this may be done is not in issue and needs no support from the case cited. The question to which I desire to direct attention is not whether Congress may confer much or little power upon any particular court, but whether Congress has the power to remove a person from his place as judge for any other reason than the one for which removal is permitted by the Constitution. The argument of the report appears to proceed upon the theory that the terms "judge" and "court" are synonymous. No citation of cases is necessary to show that a judge is only an officer of the court and is not the court. The Constitution does not limit the number of inferior courts or prescribe their duties, but the Constitution does prescribe the official tenure of Federal judges. To argue that because courts may be created with much or little power, therefore the official tenure of a judge may be destroyed by taking from him the functions that appertain to his office is a non sequitur. The courts in question are not only constitutional because authorized by the Constitution, but also for the reason that it is made the duty of Congress to invest in some court all Federal jurisdiction, and that in obedience to that mandate Congress has conferred all general jurisdiction on the district, circuit, and supreme courts (1 Wheat., 328). It is the tenure of the judges of these courts that the Constitution protects. This bill does not change these courts. Their powers and duties remain the same; nor is there any change in the functions of the judges, but those functions are to be exercised by other judges. Congress can not say that when a judge reaches the age of 70 he shall no longer act as a judge; that is not prescribing new duties for the court, but limiting, in violation of the Constitution, the official tenure of the judge. It is the power of Congress to do this that is questioned.

In urging these considerations it may be observed that the purpose of the bill clearly appears on its face and is frankly argued in the report—that of dismissing from service judges who may retire on pay. The bill provides that the new judges are to take over all the duties of the ones relieved. The old judges will then have no jurisdiction or power to act as judges. They may, however, if specially authorized by some other judge, act. But without such authorization they can not even approve a bail bond. They simply become unnecessary supernumeraries who are not to be replaced by others when they die. Can judges be thus dismissed from service, notwithstanding the provision in the Constitution that their tenure is during good behavior?

The author of this bill evidently recognized that an act simply dismissing these judges would be void and sought to meet that difficulty by providing that those who are to be displaced may be designated to perform certain duties.

If this bill provided that a judge entitled to retire on pay should have no powers or duties unless Congress should thereafter by special act authorize them to act, would anyone seriously contend that such an act would be legal? And still, what real difference is there between such a bill and the one under consideration? This bill simply delegates to some judge the power which Congress would in the supposed bill reserve to itself. In neither case is there any assurance that the judge that is to be relieved will ever have or perform any duties. A position such as that lacks the essential elements of a public office.

Hinds' Precedents, volume 1, page 608, cites among other things the following as bearing upon what is a public officer:

"It (public office) implies a delegation of a portion of the sovereign power to, and the possession of it by, the person filling the office, and the exercise of such power within legal limits constitutes the correct discharge of the duties of such office. (3 Greenleaf (Md.), 481; Mechem's Public Office, etc., sec. 2; Olmstead *v.* The Mayor, 42 N. Y. Sup. Ct., 481; Public Officers, Throop, sec. 6.)

"Again, the employment must not be merely transient, occasional, or incidental.

"In United States *v.* Hartwell (6 Wall., 385), the court held that the term 'public office' embraces the ideas of tenure, duration, emolument, and duties, and that the duties were continuing and permanent, not occasional or temporary.

"In United States *v.* Germaine (99 U. S. Sup. Ct., 508), the question of who is or who is not a public officer was again up, and the court said:

"'If we look to the nature of defendant's employment, we think it equally clear that he is not an officer. In that case (referring to United States *v.* Hartwell) the court said the term embraces the ideas of tenure, duration, emolument, and duties, and that the latter were continuing and permanent, not occasional or temporary. In the case before us the duties are not continuing and permanent, and they are occasional and intermittent.'

"The constitution of the State of New York, 1846, article 6, section 8, prohibits the judges of the court of appeals and justices of the supreme court from exercising any power of appointment to public office.

"Section 16, chapter 280, laws of 1847, conferred upon the chancellor power to issue a commission to some person empowering him to act as a surrogate in a particular case when by reason of statutory disqualifications the officers designated to act could not do so. It was contended that such person when designated to act as surrogate becomes a public officer, inasmuch as for the time being and in the matter before whom he was to act as a judicial officer with full power to hear, try, and determine the particular case, but the court of appeals in the matter of Hathaway (71 N. Y., 238) held:

"'The term "public office," as used in the constitution, has respect to a permanent public trust or employment, to be exercised generally and in all proper cases. It does not include the appointment, to meet special exigencies, of an individual to perform transient, occasional, or incidental duties, such as are ordinarily performed by public officers; as to such appointments the legislature is left untrammeled and at liberty to invest the courts with power to make them.'"

It has likewise been held that a retired military officer who is entitled to retain his official title, receive pay, and is subject to be designated for occasional services, is not an officer except while performing the duties to which he may be assigned.

The official tenure of a judge can not be defeated by abolishing the court or by taking the powers away from the judge. The courts will not permit the Congress to do indirectly what it can not do directly.

The case of the Commonwealth *v.* Gamble (62 Pa., 343) is in point on this question.

The constitution of Pennsylvania provides that judges shall be appointed for 10 years, if he shall so long behave himself. A judge was appointed, but the legislature abolished his district, as it had the power to do, and appointed another judge to perform his duties. Held to be unconstitutional as an attempt to do indirectly what the constitution forbade. In this case the court lays emphasis on the fact that it is the powers and duties that constitute the office and not the title and pay. Speaking on this subject, the court said: "These powers, authority, and jurisdiction constitute the office and are the essence of it and inseparable from it, and are granted to be exercised for the period of 10 years."

In the same case it said, "The only remedy for removal is by impeachment," citing Lowe *v.* Commonwealth (4 Met. (Ky.), 237).

To the same effect is State of Ohio *v.* Geo. W. Choats (11 Ohio, 511). In that case the constitution required that certain judges must reside within the counties for which they should be commissioned. The legislature changed the county lines so as to exclude the territory in which one of the judges was living from the county for which he was commissioned. Held, that though the legislature might legally change or abolish the district for which he was elected, it could not abolish the judge, as his term of office was fixed by the constitution.

In People *v.* Dubois (23 Ill., 547) the Illinois court announces the same doctrine. The constitution of Illinois provided for the election of circuit judges to serve for six years. A judge had been duly elected and qualified. The legislature thereafter, and during his term, abolished his judicial district and attached his territory to another district. Held, that he was still a judge and entitled to pay as such, and that the act of the legislature could not terminate his office.

In the case of People *v.* Howland (45 N. Y. Sup., 347) the court had occasion to consider an attempt on the part of the New York Legislature to confer the criminal jurisdiction of a justice of the peace on a police judge. In holding this attempt futile the court, among other things, said:

"We have here, then, a constitutional officer, the most important of whose powers and functions are conferred upon another officer created by the legislature; the incumbents of the constitutional office relieved from the duty of discharging the functions of that office, deprived of their pay for such services, if they perform them, and with no officers to execute their process if they issue any. Does it need any argument to show that this is utterly destructive of the office? Can a public office be conceived of with no duties to be performed? And what becomes of a court or magistrate whose powers and jurisdiction have been conferred upon another, where the incumbents of the office have no duties to perform?

"The powers and jurisdiction conferred upon the office of the justice of the peace are not for the benefit of the incumbent, but for the public good, and when the occasion arises it is his duty to exercise them.

Powers conferred for the public good and the duty to exercise them are coupled together, and can not be severed.

"The office consists in a right and a corresponding duty to exercise a public or private trust." (3 Kent Comm., 454; People *v.* Nostrand, 46 N. Y., 375.)

So where a State constitution provides for the election of a sheriff and fixes the term of office, but does not define what powers, rights, and duties shall attach to or belong to the office, the legislature has no power to take from the sheriff a part of the duties and functions usually appertaining to the office and transfer them to another. (People *v.* Kieler, 29 Hun., 175.)

That Congress has the power to provide additional judges when necessary is not denied. That is a duty as well as a right that Congress must exercise, but in doing so it can not take from the present judges the powers they can efficiently exercise. It may relieve them to the extent relief is necessary, but that is not what is attempted in this bill. Upon a finding by the President that a circuit judge entitled to retire is not able by reason of some mental or physical disability to efficiently perform all his functions he may be removed, and if in the opinion of the President the public good requires it the like district judge may be removed. A failure by reason of some disability to do as much work as the President may deem desirable permits removal in one case, and the mere opinion of the President that the public good might be subserved by a change permits the removal in the other. Neither of these reasons for removal are recognized by the Constitution. If this bill is to adopt a consistent policy, it should be made to apply not only to the judges entitled to retire but to all, regardless of age. There often is as strong a reason for removal before as after a person reaches the age of 70. Under such a law the President and Senate (and the Senate could be dispensed with) could remove every judge, as no one could question the President's finding, and substitute other judges entitled to reward as his partisans or more subservient to his views. Can anyone doubt the dangerous character of such legislation? It places the judges under the direct influence of the Executive. There are said to be some 16 or 18 places that may be filled under this bill. May it be asked whether politics has any share in urging this legislation? It was to avoid making judges dependent on the President or Congress that life tenure was given them. The sad experience of England under judges dominated by the Crown or subject to the will of partisan passion wrote into our Constitution the provision giving our judges a life tenure.

This bill is a surrender of a long-established policy. Congress must, under the Constitution, provide courts. This power carries with it the duty of determining to what extent additional judges are necessary. In the past Congress has insisted that when an additional judge is appointed that appointment should first be authorized by an act passed for that purpose. This bill is an attempt to delegate to the President the power to discharge that duty. There is no good reason why a district suffering for lack of judges should not in the future, as in the past, apply to Congress for relief. The only reason suggested is the difficulty in securing relief through Congress. Congress has always been liberal in providing judges, but before doing so it insists on knowing that there is some necessity for the additional expenditure that such an appointment always entails. Under this bill one judge could not be made to serve as judge in two districts, while Congress may by an act provide relief by adding one judge where two are now serving, thus saving the expenses incident to an additional judge.

Not only is this bill in contravention of the Constitution, but it would adopt a vicious and dangerous policy, one that if made effective as applied to the judges who may now retire would no doubt in time be applied to all judges. Such a law, if valid, would make the judiciary absolutely dependent on the will of the Executive. It is the duty of Congress to guard the Public Treasury. This bill gives the President power to obligate the Treasury for the salary and other expenses of judges that Congress and not the President should authorize.

This bill should not pass.

In addition to the action of the bar association of my city, I have received a number of letters from individual members of the bench and of the bar of that city. At my request they have written me touching its merits. I have only received two letters that favor the bill. I insert those, as follows:

ST. LOUIS, *January 18, 1917.*

Hon. L. C. DYER,
House of Representatives, Washington, D. C.

MY DEAR MR. DYER: Your copy of Senate bill 706 is before me, and I have read it with care. I entirely approve the bill as it stands. It protects the public from judges who have become incapable of full work by providing other judges in their places, and at the same time makes provision for the individual judge whereby he will not be harshly removed from office for total or partial physical incapacity, but will be assigned to the performance of such duties as—in the opinion of others than himself—he can efficiently perform.

Truly, yours,

CHARLES CLAFLIN ALLEN.

—

ST. LOUIS, MO., *January 18, 1917.*

Hon. L. C. DYER,
House of Representatives, Washington, D. C.

DEAR LEE: I feel very much flattered that you should ask my opinion of Senate bill 706. This bill is evidently intended to take care of those cases, which occur occasionally, where a judge, on account of his advanced years, should resign but refuses so to do. Though I do not think the bill is of vital importance, it gives the opportunity in occasional cases of remedying an unfortunate condition. Though power to appoint an additional judge might be abused, I think, on the whole, it will be apt to be exercised with great caution and only in very exceptional cases. I think, therefore, that it might be well to have this bill become a law.

Yours, truly, J. CLARENCE TAUSSIG.

I will not take the space to print all of those that I have received opposing the bill, and will only include a few of them, as follows:

ST. LOUIS, *January 15, 1917.*

Hon. L. C. DYER,
House of Representatives, Washington, D. C.

DEAR SIR: I have before me a copy of your letter to Mr. James C. Jones, president St. Louis Bar Association. While I am a member of that body, I rarely attend its meetings, and will not participate in its consideration of Senate bill 706, on which you have asked the views of that body. Speaking for myself, I have read over the bill and the majority and minority reports on it and entirely concur in the views of the minority. I know a number of the judges of the United States court who are over 70 years of age in full possession of their mental faculties, vigorous also in body. Under this bill a President, acting under political pressure, or for political reasons, can arbitrarily retire any circuit or district judge when he is over 70. That is a bad feature of it. Furthermore, in entire accord with the views of the minority of the Judiciary Committee of the House, of which I notice you are a member, I do not believe the proposed law is constitutional, for the reasons set out in the report of the minority of the committee.

In addition to what I wrote you this morning on Senate bill 706, it occurs to me that the practical effect of the law is to allow the President of the United States to impeach a judge as having become disqualified. Disguise it as you may, that is the effect of this bill. Would anyone contend that under the Constitution, as an original proposition, Congress could enact a law that judges shall be appointed to hold office until they attain the age of 70 years? Or that the President, in issuing the commission, could write into that commission that the appointee is to serve in office until he attains the age of 70 years? It seems to me that it therefore would fall under condemnation by virtue of section 3 of Article I, of the Constitution, defining legislative powers, whereby the fifth subdivision of that section "sole power to try all impeachments" is lodged in the Senate.

Section 1, of Article III, of the Constitution, referring to the judiciary, provides that the judges of the Supreme and inferior courts "shall hold their offices during good behavior." While it may be admitted that "good behavior" implies capacity to discharge the duties of the office, failure in that respect is a cause for removal on articles of impeachment presented by the House and sustained by the Senate. Articles of impeachment have, at various times, been lodged against judges for what may be called corruption, partiality, or other violation of duty or of official misconduct. It would seem that capacity to discharge the work of the office should belong to the same category, and that this proposed bill is a violation of the letter and spirit of the Constitution and is contrary to the uniform practice governing such matters from the very organization of our government under our Constitution.

Yours, truly,

GEO. D. REYNOLDS.

—

ST. LOUIS, MO., *January 20, 1917.*

Hon. L. C. DYER,
Committee on the Judiciary, House of Representatives, Washington, D. C.

DEAR MR. DYER: I have your letter of the 16th instant inclosing copy of Senate bill 706, which is a proposed amendment to the judiciary act of March 3, 1911.

Your letter finds me exceedingly busy and with hardly time to give this matter the attention it deserves. I understand that there is to be a meeting of the St. Louis Bar Association in regard to this bill on the evening of the 22d instant, and I hope to attend that meeting. I may discover other objections to the bill, but those which impress me just now are as follows:

Under this bill the President of the United States is given too much discretionary power in regard to the judiciary, and power which might be susceptible of much abuse. Personally, I do not at all believe in the Dr. Osler theory, especially in regard to the judiciary. I know many judges who are past 70 and who are rendering now the best service that they ever rendered in their lives as judges, who are mentally and physically active, and who, though perhaps not as strong physically as in earlier years, yet, bringing to bear their knowledge and experience, are able, practically, to dispatch more business and do more justice than would be done by younger and less experienced men. This I consider peculiarly true in respect to the Federal judiciary. So many men are appointed Federal judges who antecedently had practically little or no experience in Federal practice and in the branches of law of which the Federal courts have exclusive jurisdiction. Granting, for the sake of argument, that such men are good lawyers when they are appointed, nevertheless it takes them time to be at home on the Federal bench and master the Federal practice and be competent to decide the questions peculiar to Federal jurisdiction. The President of the United States has an immense power over the judiciary as it is, and I am afraid this proposed bill, which has already passed the Senate, is calculated to give the President of the United States too much power over the judiciary.

There is one provision in the proposed bill which I consider particularly objectionable. I quote a part of that section, italicizing and putting in brackets that portion which I consider peculiarly objectionable:

"In the event any such judge of a district court of the United States having so held a commission or commissions at least 10 years continuously, and having attained the age of 70 years as aforesaid, shall, nevertheless, remain in office, the President, if in his opinion the public good so requires, may appoint, by and with the advice and consent of the Senate, an additional judge of such court [*who, notwithstanding the incumbency of the judge so entitled to resign, shall preside customarily over the said district court, and shall exercise such powers as are vested by law in the judge thereof. And the district judge so entitled to resign shall thenceforth be relieved, save as hereinafter provided, from service therein.*]"

What follows should go out, too, in view of judiciary act of March 3, 1911.

In the first place, I believe that as a general rule, to which there are few, if any, exceptions, the character of the honorable gentlemen who now constitute our Federal judiciary is such that if any one of them who has held his position 10 years and had attained the age of 70 years and was entitled to retire with full pay felt that he could not do his duty in his position as judge he would resign. If the proposed bill goes through as it stands, as quoted above, it would probably happen that in some instances an excellent Federal judge who had held his position for 10 years and who had attained the age of 70 years, but who had not resigned, could, practically speaking, be shelved by this power given to the President. In any event, wherever the President of the United States saw fit to appoint an additional district judge, in the case contemplated by the above-quoted objectionable clause, such new judge would practically override and supersede the district judge who did not see fit to resign. This, in my opinion, would in many instances work great injustice, and necessarily prove most humiliating to the district judge who did not see fit to resign.

If the clause in question were only as follows it might not be so objectionable:

"In the event any such judge of a district court of the United States, having so held a commission or commissions at least 10 years continuously, and having attained the age of 70 years as aforesaid, shall nevertheless remain in office, the President, if in his opinion the public good

so requires, may appoint, by and with the consent of the Senate, an additional judge of such court."

The above would only amount to authorizing the President, under the circumstances stated, to appoint an additional district judge merely to help out the other district judge in his work. If that were all in it, and it were also governed by the existing section 23 of chapter 1 of the new Federal Judicial Code, it might not be objectionable, because said section 23 of chapter 1 of the act of March 3, 1911, provides:

"SEC. 23. In districts having more than one district judge, the judges may agree upon the division of business and assignment of cases for trial in said district; but in case they do not so agree the senior circuit judge of the circuit in which the district lies shall make all necessary orders for the division of business and the assignment of cases for trial in said district."

I am interested in this matter, because, for the reasons stated herein, I consider the proposed bill very objectionable. I intend to oppose this proposed bill at the St. Louis Bar Association meeting on the 22d instant. It may also be that I shall write you further on the subject, giving you other grounds of objection to this bill after the bar association meeting next Monday and after I have had time to give the matter a little more thought. It so happens that I am under a great stress of work at present. Were it not for this I might be able to go into the matter more fully in the present letter. I may also add that I have been in the active practice of my profession since 1879; that since that time my practice has been almost wholly in the Federal courts of the United States; and that during this time I have actually tried cases in every one of the nine circuits of the United States. It may be an accident, but although I know I have tried many cases before Federal judges who were more than 70 years of age, I have never yet tried any case before any Federal judge who, because of his age, I found incapacitated for the work which he was doing. There may be such cases, but all I can say is that I do not know of any such cases. Right here in St. Louis we have a Federal district judge who is more than 70 years of age, and it is my privilege to appear before him often; he is vigorous, energetic, and alert, and disposes of his cases at least as rapidly as any Federal judge who has been on the bench in St. Louis since I came to the bar in 1879.

Yours, respectfully,

PAUL BAKENELL.

—

ST. LOUIS, *January 20, 1917.*

Hon. L. C. DYER,
Washington, D. C.

DEAR LEE: I received your letter concerning pending bill affecting tenure of judges in the United States circuit court of appeals and in the United States district courts and have read the same carefully.

The provisions of the bill with respect to remand of United States circuit court of appeals are probably sound, but as to the provisions with respect to the judges of the United States district court I think the bill as it stands opens the door for decided wrong. It virtually places in the power of the Chief Executive the authority at his will to dispose any district judge without cause who has served 10 years and is over 70 years of age. Some of our best judges are past 70, and a great many of them do their very best work after reaching that age. Without going into details, I think the bill with respect to district judges is vicious for numerous reasons and should never become a law in its present form. It subjects a good judge to improper attack and opens the door to intrigue. None of us want the judiciary to be thus embarrassed, and I hope it will be defeated.

Very truly, yours,

M. C. EARLY.

—

ST. LOUIS, MO., *January 20, 1917.*

Hon. L. C. DYER, M. C.,
Washington, D. C.

DEAR MR. DYER: In answer to your favor of the 16th, inclosing copy of a bill (S. 706) amending section 260 of the laws relating to the judiciary by providing for an additional judge in case the incumbents are past 70, wish to say I have carefully read the bill and do not believe it should be enacted.

If other judges are needed, I think provision should be made for permanent positions for them, where they will permanently sit.

I am opposed to the plan by which particular judges may be selected and sent around to try particular cases or take up and leave off work of the regular judge from time to time.

Yours, truly,

CHARLES W. BATES.

—

ST. LOUIS, *January 18, 1917.*

Hon. L. C. DYER,
Committee on the Judiciary, House of Representatives,
Washington, D. C.

MY DEAR MR. DYER: I have received your letter of January 16, and have given the subject some attention.

While I think that there is an evil to be corrected in the situation which is covered by the proposed amendment to the judiciary act, the method adopted seems to me to be open to serious objections.

The constitutionality appears to be somewhat in doubt because of the presidential discretion involved.

The effect of the proposed amendment would be to place the acting judge in a humiliating position. It practically forces any man with self-respect to resign. In this way the law would covertly accomplish a purpose which the Constitution does not contemplate.

It is somewhat dangerous as a precedent because similar legislation might be aimed at any of the judges and serves to diminish the stability of their tenure of office and independence of action.

I have taken the act and interlined it in a manner which seems to me to remove the objections noted. The effect of my interlineations is to remove the element of discretion, thus requiring the appointment of an additional judge, and to eliminate the features which would make a continued holding of the office humiliating to the incumbent. I have added a clause which would give the presiding judge of the Circuit Court of Appeals the power to apportion the duties in the district court where two judges might be qualified.

Practically, I think that the act as I have amended it would work acceptably. The elderly judge could remain in office, if he so desired, with full power and dignity, and the work of the court would be assisted by the presence of another judge who would have the benefit of the counsel and experience of the incumbent.

I might say parenthetically that my grandfather, Judge William Cranch, remained as presiding judge of the United States Circuit Court for the District of Columbia (now the Supreme Court of the District) until he was 86 years old, and I have never heard that his service was unacceptable.

Very truly, yours,

EDWARD C. ELIOT.

—

ST. LOUIS, *January 18, 1917.*

Hon. L. C. DYER,
House of Representatives, Washington, D. C.

DEAR SIR: I have your letter of the 16th instant, inclosing copy of Senate bill 706, now pending before the House of Representatives upon favorable report of the Committee on the Judiciary. As you ask for my views as to whether the bill should become a law, I beg to state that in my opinion this bill is a direct invasion of the constitutional provision that Federal judges shall hold their office "during good behavior." In other words, I believe that to shear the judge of all or practically all his judicial powers and duties if he fails to resign from office upon reaching the age limit provided by law, amounts in substance and effect to removing him from office without the benefit or opportunity to defend charges preferred against him and sustained after hearing by competent tribunal. I do not believe that this clause of the Constitution should be thus impaired upon considerations of convenience or expediency in special cases or for the benefit of particular communities which may possibly suffer by reason of their judges holding on to office after they are privileged to retire upon full pay. There are many and strong arguments in favor of granting the relief provided by the bill in question, but I do not believe that all the good to be derived from its passage would offset the harmful effect of thus weakening the most salutary safeguard provided by the Constitution for the tenure in office of the Federal judiciary.

I give you these views for whatever they are worth and shall watch the action of the House in the matter with great interest.

Very truly, yours,

FRANKLIN MILLER.

—

[From the St. Louis Globe-Democrat, Jan. 28, 1916.]

THE FEDERAL JUDGES—PROPOSED COMPULSORY RETIREMENT AT AGE OF 70.

ST. LOUIS, *January 27.*

A bill amending the Federal judiciary acts has passed the House and is pending in the Senate which attempts to confer upon the President the power to appoint substitute judges in the district and circuit courts, where the incumbent is 70 years old, has served 10 years continuously, and refuses to resign on full pay. The President is given discretion to determine when "any such judge is unable to discharge efficiently all the duties of his office by reason of mental or physical disability of a permanent character."

If the Senate now passes the bill and the President signs it, it is computed that 18 or 20 positions on the Federal bench will become immediately available.

This bill is said to have been prompted by the case of the late Judge Thomas S. Maxey, for the western district of Texas, whose invalidism prevented the discharge of his judicial duties for a considerable length of time, and who refused to avail himself of the statutory privilege of resigning with full pay.

No one familiar with the constitutional history of the United States can view this measure in any other light than as unconstitutional, and, in addition, as a vicious attempt to subordinate the judiciary to the Executive power. It must be kept in mind that the three departments in our governmental system—the executive, legislative, and judicial—are conceived as independent and coequal and that none shall be subordinated to or by the others.

As a means of preserving the independence of the judiciary, the Constitution provides that "the judges, both of the Supreme and inferior courts, shall hold their offices during good behavior, and shall at stated times receive for their services a compensation which shall not be diminished during their continuance in office."

There is no way to dislodge a Federal judge from his office, therefore, except by impeachment for a high crime or misdemeanor. It has never been held that the infirmities of age constitute such an offense. Such instances of impeachment as have actually occurred during our brief career as a Nation have been founded upon acts which are in their nature or consequence subversive of some fundamental principle of government or highly prejudicial to the public interest, involving a violation of law or duty.

The new measure proposes that when the President has appointed the additional judge the septuagenarian incumbent "so entitled to resign shall thenceforth be relieved," while retaining his title and salary. In certain contingencies the relieved incumbent "may be designated and appointed from time to time" to hold court, in spite of his "permanent" disability. At his death the substitute becomes his successor, looking forward in turn to his own seventieth birthday.

Only rapacity for patronage could have blinded Members of Congress to the long line of its own actions and of judicial decisions which reveal this measure as wholly void.

Its effect, in fact, is to remove a Federal judge from office, in spite of the empty title he retains and in direct violation of a constitutional injunction.

It has been judicially determined in a multitude of decisions that the word "office" as used in the Constitution embraces as necessary elements "tenure, duration, emolument, and duties"; that it connotes a permanent trust and the right at all proper times and in all proper cases to exercise the functions of that trust. Conversely, it has been held that employment on behalf of the Government that is merely "transient, occasional, or accidental," without the power to legislate, to execute law, or to hear and determine judicially questions submitted, does not constitute "public office" within the meaning of the Constitution.

If a Federal judge, therefore, is to be relieved of his power to hear and determine judicially questions submitted, he has ceased to be a public officer.

The House of Representatives discussed this question fully during the Spanish-American War, when it declared the seats of Congressman Joseph Wheeler and others vacant after they had accepted commissions in the United States Army. It was held that the acceptance of such commissions constituted holding another office, contrary to the Constitution. In the report on these cases it was said that military officers, after being retired, have been Members of Congress, and properly so, since persons on the retired list are "without the power of command, the right of promotion, or the obligation to perform some duty," and have ceased to hold office by reason of these facts.

It will be seen then that the power to exercise the functions of a public office is what constitutes an officer, and to relieve him of his powers is to remove him from office.

The fact that "relieved" judges "may be designated and appointed" to special work would hardly seem to supply the absence of actual duties, since retired Army officers may be and frequently are so assigned. That fact in their case, however, has not been held to alter their status or to affect their eligibility to "public office" unless the assignment carries with it "the power of command, the right of promotion, and the obligation to perform some duty." A retired Army officer may consequently remain a Member of Congress unless he is reincorporated into the active armed forces.

It is pertinent to recall that in the Constitutional Convention, when the subject of the Federal judiciary was being debated, John Dickinson moved, as an amendment to Article XI, section 2, after the words "good behavior," "*Provided*, That they may be removed by the Executive on the application by the Senate and House of Representatives." It was the prevailing opinion that such a proviso would seriously weaken the independence of the judiciary, and Delaware alone voted for Dickinson's amendment.

The tenure of the judges of the Federal Supreme Court is the same as that of judges of the inferior courts; and if Congress can empower the President to "relieve" the latter it can do so with respect to the former.

As three judges of the Supreme Court, including Chief Justice White, are now past 70, it will be seen how such an extension of the proposed law would make for the Executive dominance of that body.

STERLING E. EDMUNDS.

Cumulative Suffrage, or an Equitable Electorate.

EXTENSION OF REMARKS

OF

HON. WILLIAM H. MURRAY,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 1, 1917.

Mr. MURRAY. Mr. Speaker, for the growth and development of the individual, as well as for his protection, society was organized. By the united strength of all each became secure from the greed and aggressions of one another. By this means alone could the weak survive the aggressions of the strong. This society, in all the experience of man's past, has found its best expression through the formation of the family as the primary unit of the State. Thus to lose the family, as such unit, means the degeneration of society by weakening its moral forces making for progress and development, and final disintegration of the State. Hence whatever will protect the integrity of the family preserves society and perpetuates the State.

The chief object, therefore, of all law—of administration and public policy—is to get every man in love with one woman united for the propagation of the family. When this is accomplished it is called civilization. All things else whatsoever must be surrendered in governmental policy with this end in view. If the character, intelligence, and conditions of a people require monarchy for the safety of the home and society, the appeal for "natural rights" becomes illogical in such society. If a republic or a democracy best serves this purpose, such form becomes wise statesmanship. Nor must we stop here. Only those should rule, or exercise the right to choose such rulers, who will best preserve the family or protect the home, whether this means universal suffrage or franchise limited on account of ignorance, race, or sex. We must know no interest but the family interest, no rights except those of society. In this suffrage at once becomes a duty or a privilege granted for the protection of the family, society, and the State, and not a natural right. If in our Republic, with unlimited suffrage among men, the family and State have become insecure, it can not be made better by doubling the evil. To argue this is but to contend that civilization depends more upon the number of the electorate rather than upon the quality. From such reasoning we could have no fear of the ballot in the hands of the vicious and ignorant if only they were cast in large numbers. Certainly no person would make so bold as to claim that women are better prepared to cast a ballot than men. That they have a greater refined sentiment than men is granted, but we have already too many men in office elected upon sentiment. The most wholesome law comes from the head of the statesman, not his heart. In this we must, like the ancient Romans, never forget the maxims of the Roman law, "Rea publique suprema lex esto"—Let the public good be the supreme law. It also follows that as population increases to the point of congestion and strata of society become fixed, it ofttimes necessitates limiting suffrage rather than extending it, which may be brought about either by denial of the right to some or extending greater power to the most worthy.

My conception of national suffrage, even for men, is that it is unwise. There exists no provision of the Federal Constitution for national suffrage except the indirect provision of the amendments growing out of the Civil War, and this was a mistake. But in the event of the adoption of national woman's suffrage the policy of the founders of the Government will have been changed. Foreseeing this possibility, resulting ultimately in universal suffrage, without respect to race or sex, rather than make further direct resistance I offer a policy to circumscribe national suffrage. I therefore offer as a substitute to the "Susan B. Anthony Amendment" the following amendment to the Constitution of the United States, which has in basic support the foregoing fundamental principles governing the electorate. That amendment would read as follows:

ARTICLE —. Every citizen of the United States over 21 years of age shall be a legal voter in all the elections in the several States of the United States and entitled to cast one vote as such legal voter; and every such legal voter who is lawfully married and who has lived continuously with his or her spouse for at least 12 months prior to any election in any State shall in addition be entitled to one extra vote; and every such legal voter who is head of a family and having at least two minor children depending upon him or her for support and education shall be entitled to one extra vote; and every such legal voter who has been educated or has mastered the curriculum (which curriculum shall be uniform throughout the United States) up to and including the eighth grade fixed for schools, academies, and colleges shall be entitled to one extra vote; and every such legal voter who hereafter shall have served in the naval or military forces of the United States in any war against a foreign enemy and shall have been honorably discharged shall be entitled to one extra vote. The several States shall have power to provide, as a condition of voting, for registration of all legal voters, classifying them with reference to the number of votes to which each may be entitled; and may prescribe as a condition of such registration residence in the State, county, and precinct in which such legal voter desires to vote: *Provided*, That the several States shall have the power to limit suffrage or disfranchise idiots or insane persons and all persons supported in almshouses or other asylums at public expense; persons of debauched, vicious, or licentious habits, and persons convicted of crime: *Provided*, That no citizen of the United States shall be denied the right of suffrage on account of sex, nativity, religion, race, or previous condition of servitude.

It will be observed that the foregoing amendment authorizes a registration and, indeed, it would become essential. This in order to classify the voters according to "talents"—or number of votes—as all voters by "natural right" under this amendment would have one "talent" or vote, some two, others three, even five. All with the exception of one could be acquired by the individual's own efforts as a reward for such efforts, and registration thus authorized would become essential in order to provide that each registered voter should cast one ballot; but those of class two would have their ballot in the final count multiplied by two, those in class three multiplied by three, and so on, thus giving effectuality without requiring the voter to cast more than one ballot.

That such rewards are for those things that make for better citizenship no person can deny, and, if so, why not? A system of rewards in any government invariably proves wholesome. It was for this purpose that Napoleon created the Cross of the Legion of Honor for stimulation toward great achievements in every line. The effect of putting into the United States Constitution a grant of a monopoly for a given period of years to the author of a book and upon the product of the brain of an inventive genius a monopoly in the form of a patent has so stimulated the American inventive genius that it has surpassed all other civilizations of history, solely because of this reward.

This "cumulative suffrage" system is not new. It has existed in no less than six nations of history, just as woman's suffrage is not new. That is more than 3,000 years old; is even modern, and yet abandoned. The State of New Jersey had woman's suffrage for 25 years during the first half century of this Republic, to be abandoned as it was abandoned by the ancients.

The legislator, whether in Congress or the State's assembly, invariably reflects the power that elected him. Members who depend upon commercial interests for success bend their energies to promote the commercial interest. Members who depend for their election upon the labor vote never tire in search of something to satisfy or appease the demands of labor organizations.

The foregoing amendment would unequivocally give the power of the electorate to the families of the country and would lessen the power of the vicious and the hobo (the "proletariat," who is defined by most writers as a person unskilled, uneducated, without property, and having neither home, family, religious, or national ties) by giving to each head of the family—the husband and the wife—from two to five times the strength of the "proletariat," at the same time extending to all citizens, without regard to sex or other conditions, their "natural right" to one vote each. All the rest can be acquired by the citizen and becomes at once a reward for his efforts—a reward in every instance for better citizenship—a reward for education,

for family ties, granted to both the husband and the wife, and in case of war with a foreign enemy a reward for patriotism.

It does more. It in a measure eliminates, without indirect methods, the negro problem of the South, for the reason that the average negro, particularly the dangerous voter of the South, is purely a "proletariat." It would reward the stable element, those who maintain families and homes, and in all experience of the Southern States this class of negroes are not a menace to society. As a rule the Southern negro who owns a home, who continuously maintains family relations, endeavors to educate and support his children, have almost a sacred regard for law, a regard stronger than racial ties, for they as jurors would convict a member of their own race who should violate the laws of society and home. There is quite a distinction between this class of negroes and the liquor-drinking, crap-shooting, coke-eating "coon" of the South.

There is another consideration, and that is no one has fear of a ballot in the hands of the wives and mothers of the country, but all may well fear the vote of the slums woman, and this measure would give the wives and mothers a voting power from two to three times that of the slums woman, and who would for a moment deny that power to the wife and mother?

By giving the wives and mothers this power would eliminate to a greater degree an appeal to the slums woman or man, whilst to give them equal power would cause candidates for public office, politicians, and political committees to ransack the slums section, because securing their votes would be a mere matter of money. Under equal suffrage, as now, a farmer may drive in to market—this producer who is endeavoring to feed the world and clothe mankind to maintain a home, support a family, and preserve society would not more attract a candidate than a veritable saloon bum. He would as likely run after the hobo, with an equal power at the ballot box, as he would this stable citizen. Whereas to give this farmer, in addition to his natural vote, one vote for maintaining family relations, another vote for supporting and educating children, and his wife an equal power, the rule would be reversed. The candidate would make the most strenuous efforts to capture that farmer with his three votes and a like number of his wife's, even though he had to neglect totally the hobo with but one vote. The inexorable rule would follow that the families of the country would constitute the elective power of all candidates to public office. Legislation would proportionately reflect the demands and interests of the homes of the country, and since homes are built among all classes it would tend to place a check upon class legislation based upon occupations or wealth and poverty, but would go directly toward the object of fostering and building the home interest of the country—and why not? Who can deny the wisdom of this course?

I have just stated that this is not new—there is nothing new in government. Point out, if you please, any political policy or principle, or any of the measures of political propaganda, and I will point out in my library to the page of history where just such a principle was once the law of some nation of history, sometimes two or three thousand years in the dim, distant past.

The question may arise, What was the objection to Federal qualification and regulation of suffrage upon the framing of the Constitution? An answer to that question involves a discussion of all the philosophy of government in man's experience, but primarily it was based upon this principle, that qualifications for suffrage could not be made universal; that the requirements of one State might be quite different from that in another because of the difference of race or blood or education or opportunity. Realizing the force of this wisdom, I am unwilling to sacrifice all our future to danger unless the power can be so shifted that the best element of our citizenship, or those possessing more elements of good citizenship, shall have a power greater than the degraded and vicious who have no care for society or for family and home. If we must have national suffrage, let us frame it along rules of safety.

It may be of interest and a surprise to many to note the difference in the qualifications for electors that have existed in the thirteen original American Colonies and the various States of the Union.

When the Federal Constitution was adopted all the States, with the exception of Rhode Island and Connecticut, had constitutions of their own. Those two continued to act under their charters from the Crown. Upon an examination of those constitutions we find that in those States all citizens were permitted tutions we find that in those States all citizens were permitted to vote. Each State determined for itself who should have that power. Thus in New Hampshire "every male inhabitant of each town and parish with town privileges and places unincorporated in the State, of 21 years of age and upward, excepting paupers and persons excused from paying taxes at their own request," were its voters; in Massachusetts "every male inhabitant of 21 years of age and upward, having a freehold estate within the Commonwealth of the annual income of £3, or any estate of the value of £60"; in Rhode Island, "such as are admitted free of the company and society" of the colony; in Connecticut, such persons as had "maturity in years, quiet and peaceable behavior, a civil conversation, and 40-shilling freehold or £40 personal estate," if so certified by the selectmen; in New York, "every male inhabitant of full age who shall have personally resided within one of the counties of the State for six months immediately preceding the day of election * * * if during the time aforesaid he shall have been a freeholder, possessing a freehold of the value of £20 within the county, or have rented a tenement therein of the yearly value of 40 shillings, and been rated and actually paid taxes to the State"; in New Jersey, "all inhabitants * * * of full age who are worth £50, proclamation money, clear estate in the same, and have resided in the county in which they claim a vote for 12 months immediately preceding the election"; in Pennsylvania, "every freeman of the age of 21 years, having resided in the State two years next before the election, and within that time paid a State or county tax which shall have been assessed at least six months before the election"; in Delaware and Virginia, "as exercised by law at present"; in Maryland, "all freemen above 21 years of age having a freehold of 50 acres of land in the county in which they offer to vote and residing therein, and all freemen having property in the State above the value of £30 current money, and having resided in the county in which they offer to vote one whole year next preceding the election"; in North Carolina, for senators, "all freemen of the age of 21 years who have been inhabitants of any one county within the State 12 months immediately preceding the day of election and possessed of a freehold within the same county of 50 acres of land for 6 months next before and at the day of election," and for members of the house of commons, "all freemen of the age of 21 years who have been inhabitants of any one county within the State 12 months immediately preceding the day of election and shall have paid public taxes"; in South Carolina, "every free white man of the age of 21 years, being a citizen of the State and having resided therein two years previous to the day of election, who hath a freehold of 50 acres of land, or a town lot of which he hath been legally seized and possessed at least six months before such election, or (not having such freehold or town lot) hath been a resident within the election district in which he offers to give his vote six months before said election, and hath paid a tax the preceding year of 3 shillings sterling toward the support of the Government"; and in Georgia, "such citizens and inhabitants of the State as shall have attained the age of 21 years, and shall have paid tax for the year next preceding the election, and shall have resided six months within the county."

The Immigration Bill.

REMARKS

OF

HON. ROSCOE C. McCULLOCH,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 1, 1917.

Mr. McCULLOCH. Mr. Speaker, I shall vote to pass the Burnett immigration bill over the President's veto. I voted for the Burnett immigration bill when it passed the House, and I voted for the literacy test contained in the bill when it was voted on in the House, and I see no reason why I should not continue to support the bill. I am not impressed with the reasons expressed by the President in his message to the House of Representatives on January 29, 1917, vetoing the immigration bill. Personally I am in favor of restricting immigration. Since we impose a restriction on immigration against the physically, mentally, and morally unsound I think it is but fair and proper that we should provide restriction in the matter of literacy. To provide that an immigrant coming into our land who will receive the benefits of our institutions must be able to read and write 30 or 40 words in his native language or some language is, in my judgment, not an unfair and improper restriction.

The greatest good that we can gain to this country from immigration is to have the immigrants who come here anxious and willing to become American citizens. In this day and age the immigrant who has not learned to read and write 30 words in his own language is not likely to begin to qualify himself in literacy after he reaches this country. I believe that the literacy test is not an unfair restriction, and that it will serve to develop a higher class of immigrants, and will not keep out any deserving person who desires to come to this country and secure the benefits of a residence in America.

Revenue Bill.

EXTENSION OF REMARKS
OF
HON. ISAAC SIEGEL,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 31, 1917.

On the bill (H. R. 20573) to provide increased revenue to defray the expenses of the increased appropriations for the Army and Navy and the extensions of fortifications, and for other purposes.

Mr. SIEGEL. Mr. Speaker, I shall vote against this bill because I feel that continued direct taxation means the taking away from States of the only means of taxation which they possess. I shall vote against this bill because it discriminates in favor of corporations as against partnerships, and furthermore because it discriminates against corporations and partnerships in favor of individuals.

I shall vote against the bill because I am opposed to the placing of inheritance taxes upon bequests and legacies that are left to charities. The State of New York makes such an exemption, and there is no reason in the world why Uncle Sam should commence to collect taxes from such bequests and legacies, thus in effect robbing the poor who would receive the benefit thereof.

I am of the opinion that all the revenue that is sought to be obtained by this bill can be gotten by the imposition of a protective tariff upon imports.

We have a low tariff at the present time, and I know of no consumer who is purchasing anything at a lesser price than at what he bought it four years ago when a protective tariff was in existence.

The argument that has been advanced that a low tariff would prove of benefit to the consumer has proven fallacious as has been the bitter and trying experience of the ordinary citizen of middle or limited means.

I have heard more said in the debate regarding sectionalism than should have been uttered, and it is to be regretted that, although the war is over for more than 50 years, men seem to forget that the Stars and Stripes float over a country and a people that stand for union now and forever.

That the law is discriminatory was well expressed in a letter that appeared in the New York Sun on January 27, 1917, which I quote in full:

TAXING PROFITS—GREAT INJUSTICE TO PARTNERSHIPS AS AGAINST CORPORATIONS.

NEW YORK, *January 25.*

To the EDITOR OF THE SUN.

SIR: Mr. KITCHIN, chairman of the House Ways and Means Committee, has stated that: "It is proposed to tax profits of corporations and partnerships when such profits are in excess of 8 per cent of the capital invested." I will say nothing of the general objection to such a tax, but wish to point out the great injustice and hardship of coupling "partnerships" with "corporations" in levying this tax.

A corporation has officers—president, secretary, treasurer, etc.—all of whom may receive very large salaries, which are included in the expenses to be deducted in calculating the profits. It can easily be understood that these salaries and similar expenses may be so great that the profits of the corporation will not exceed 8 per cent on the capital, in which case they will be subject to no tax.

A partnership is another matter. Two or more persons compose it, and do business with some success on a limited capital. The money they earn is due to a very large extent to the personal service they render and not to the capital employed. In the case of the corporation the officers who perform this service receive salaries, which will be deducted as stated above. But in the partnership no such deduction can be made because the compensation of each partner is a share of the profits and not a salary. This shows how much greater hardship such a tax would be to the partnership than to the corporation.

Suppose a corporation with $100,000 capital makes a gross profit of 20 per cent, or $20,000, but the officers' salaries amount to $20,000. There is no profit on the capital, as it has all gone in salaries, and there is nothing to tax. Suppose a partnership has a capital of $100,000, and makes a gross profit of 20 per cent, or $20,000. An allowance of 8 per cent on the $100,000 will be made and $12,000 will be taxed. A still greater hardship would be inflicted in the case of a partnership with a very small capital, where the entire profit results from the most laborious personal effort of the partners. Suppose a corner grocery conducted by two hard workers, who are on the job from 4 o'clock a. m. to 10 o'clock p. m. They have a capital of $5,000 and make $3,500 each, a total of $7,000. They would be taxed on the excess over 8 per cent on $5,000, or on $6,600, while the big corporation with a $20,000 president, taking life easy, and living in luxury, would escape all tax.

There are many partnerships also conducting business on borrowed capital, where the hardship would be still greater. An exemption of $5,000 capital in addition to 8 per cent on capital would not in very many cases remove the discrimination against partnerships. Again, why should a "partnership" be taxed when a similar business next door carried on by a single proprietor is not taxed?

The principle of taxing business men, if a penalty must be imposed for success, on profits in excess of 8 per cent on capital is entirely wrong. If such a tax must be imposed it should be on net profits on sales, say, in excess of 10 per cent of such sales.

H. E. D.

The Evening Sun of January 31, 1917, expresses the opinion regarding this bill far more than I can do in limited space, and I therefore quote it in full:

THE OUTRAGEOUS REVENUE BILL.

Of course the exposure of the revenue bill's wickedness will not prevent its passage. As we pointed out the other day, the present majority in Congress, having nothing more to fear and nothing to hope from the people, has put aside all restraint and all shame. The measure will go through "with bells on." The caucus whip will not have to be cracked. All Wilsonia seems to be of one mind: Draw Mason and Dixon's line and make the North sweat.

But none the less the course of the Republican Congressmen in forcing the facts into the light before the passage of the bill is praiseworthy. It is proper that the truth should be so stated in the House that no Member will be able hereafter to say that he voted in ignorance. It is well that the voters, not merely in the North but also below Mason and Dixon's line, should have their attention riveted upon the exact character of the measure, and should fully understand the sort of financiering that it results from.

There is no real need for this monstrous act of supertaxation if the Democrats in control of the Congress had shown any sort of moderation in appropriations. As Representative FORDNEY pointed out, money has been laid out, or is to be, to the tune of hundreds of millions of sheer waste. Besides the $162,000,000 spent in buying national disgrace in Mexico—for which Congress is not directly blamable—there are the $20,000,000 nitrate plant, the $11,000,000 armor plant, the $50,000,000 shipping law, $20,000,000 in excess of the true value to be paid for the Danish West Indies, perhaps $50,000,000 excess over all proper needs in the public-buildings and rivers and harbors bills, and $50,000,000 or thereabouts for a malapropos flood-control experiment, which may or may not get through the Senate. Perhaps in all a total of $300,000,000 to $360,000,000 has been spent or appropriated, which would have been saved by a thrifty administration and Congress. Such an economy, even the smaller sum, would have rendered the present plunder bill wholly unnecessary.

As for the methods adopted for raising the money, it can only be said that they combine every element of folly and oppression. They are sectional, as Mr. KITCHIN admits; they are discriminatory against business; they are a burden on efficiency and prosperity. They involve offensive inquisition and meddling with the affairs of citizens. They excite anger against the Government and hatred of the law. They are an incentive to evasion, even to fraud, so onerous are they to their victims. They impede the growth of capital and they curb enterprise. They are expensive and difficult in application. Withal they are unnecessary, since a readjustment of the tariff would produce, in the opinion of experts, all the money needed, the burden being distributed evenly, in proportion to the consumption and enjoyment of commodities, over all sections and classes, and being easily and inexpensively collected.

As the 4th of March draws near the people are gaining a truer notion of what Wilsonism and Democracy mean. They will be in a position to enjoy inauguration day in a chastened spirit.

When all hands are asking the question how to raise revenue, a letter which appeared in the New York Evening Post of January 19, 1917, might be worthy of consideration, and as a tariff bill will undoubtedly have to be framed the coming session, I read the letter in full:

TO TAX LUXURIES.

To the EDITOR OF THE EVENING POST.

SIR: Up, up with the high cost of living; down with the consumer! "The destruction of the poor is their poverty." The consumer of necessities has no friends. Let's bang him! The "war bridegrooms" are hastening to their haven with their hoard. Why despoil them of their quick-gotten profits?

A deficit in revenue, over $200,000,000, is facing the United States Treasury. At once the plan is urged upon Congress to increase the duties on necessities like sugar, wool, coffee, rubber, etc.

Why not raise the tax on imported luxuries? In 1915, according to the Commerce Reports, there were brought into the United States importations of precious and semiprecious stones amounting to $15,000,000, paying an average duty of 17 per cent. In 1916, $24,000,000 came to our shores. To this add gold and silver manufactures to the tune of $3,000,000.

This is a free country. If people with surplus moneys want to spend them on these foreign luxuries, let them do so. But let them pay for it. Put duties of 100 and 200 per cent on imported luxuries. This will not deter the well-to-do from buying them. It will only increase the inducements to have them. No luxury was ever taxed out of existence. Increased taxation only enhances its value in the eyes of its purblind devotees. Meanwhile Government, which means you and I, will derive revenue, and the overwhelming burden on the shoulders of the wage earner and the salaried man to make a living will be somewhat relieved.

There are other articles of idle luxury. Take ostrich feathers. If women must have this costly means of decoration to enhance their natural charms, let them pay for it. In 1911, $7,000,000 of crude feathers were imported from South Africa, paying a duty of but 20 per cent. Why should not such a luxury pay 100, 200, even 500 per cent? To him that hath shall be given! Why should the poor perpetually pay? If the plethoric piper must have his pleasures and pastimes, why not let him pay for them?

Enlightened self-interest is the keynote of modern economics as well as philanthropy.

Since our solons are scraping the legislative bins for new sources of revenue, let them consider this. Under the present tariff act importation of plumages, like paradise and gourah from the jungles of Sumatra and the Celebes, is prohibited. There apparently is no dearth of them, however, in this country. View the gorgeous window displays and the stylish headgear of fashion's throngs on Fifth Avenue any afternoon. But lately the newspapers announced the sentence in a Federal court of a ship's steward for smuggling in $50,000 worth. If women are going to have these plumages, let them come in through the regular legitimate channels and let them pay revenue to Government. Being excessive luxury, let them, too, pay excessive revenues.

A searching survey of the luxury imports, like silks, furs, costly fabrics, etc., will soon show our worrying legislators how this $200,000,000 deficit can very easily be made up by those best able to pay it.

"And from him that hath not shall be taken even the little that he hath!" Why pile everything on the back of the unresisting consumer, poor and inarticulate?

Let the legislators shift somewhat the load now straining the wincing shoulders of the galled jade! For once let's play that happy little game, passing the economic buck, in the back yard of the well to do, yclept hard to do.

Let's apportion the economic burden more equitably, and we'll all be happier!

Hands off the necessities!

Make up the Federal deficit through increased taxes on imported luxuries.

B. M. BRIGGS.

NEW YORK, *January 10.*

Resolutions of the Legislature of the State of Oklahoma Memoralizing Congress, First, to Sell the Coal and Asphalt Lands in the Choctaw and Chickasaw Nations; and, Second, to Lease the Remaining Lands in the Osage Nation for Oil, Gas, Coal, and Other Minerals.

EXTENSION OF REMARKS

OF

HON. WILLIAM W. HASTINGS,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 2, 1917.

Mr. HASTINGS. Mr. Speaker, under leave to print granted me I submit two concurrent resolutions passed by the Legislature of Oklahoma. The first is house concurrent resolution No. 12, memoralizing Congress in the matter of the sale of the coal and asphalt deposits of the Choctaw and Chickasaw Tribes of Indians, and setting forth the urgent reasons why the Congress of the United States should at an early date enact legislation providing for the sale of these coal and asphalt lands, as provided in an agreement entered into with the tribes. These Indian tribes are very anxious to have the remainder of their lands sold and their money distributed among them. A bill is now pending in Congress—H. R. 12544—which has the indorsement of the entire Oklahoma delegation. It was introduced by Congressman CARTER and was favorably reported by the House Committee on Indian Affairs. This bill is indorsed by the representatives of the Choctaw and Chickasaw Tribes of Indians, the coal lessees in Oklahoma, and the white citizens of Oklahoma interested in the development of the State.

This concurrent resolution reflects the unanimous sentiment of the people of Oklahoma, and I trust that Congress at an early date will enact the legislation prayed for.

The resolution and bill are as follows:

House concurrent resolution 12. (By Nesbitt, Durant, Neal, and Shores.)

Be it resolved by the Legislature of the State of Oklahoma, That—

Whereas there is in the old Choctaw and Chickasaw Nations of this State approximately 500,000 acres of valuable coal and asphalt deposits belonging to the Choctaw and Chickasaw Tribes of Indians; and

Whereas by the treaty of Atoka, effective September 25, 1902, the Government of the United States became bound by agreement with the Choctaw and Chickasaw Tribes to sell their lands and mineral deposits and distribute the money per capita to the members of said tribes, and although 14 years have passed this solemn obligation made and entered into with the United States in consideration of the performance of which the Choctaw and Chickasaw Tribes of Indians agreed to the allotment of their lands in severalty has not been performed; and

Whereas the mines now operating under lease contracts with said tribes are of such a short duration as to make it impossible for the operators thereof to procure or afford to expend the money necessary for the necessary improvements required to protect the lives of their employees against accident or to mine the said lands economically; and

Whereas the growth and stability of the business interests of that portion of our State wherein are situated these coal and asphalt deposits require that the same be operated upon a stable basis, to the end that the State of Oklahoma and the counties in which these vast deposits are situated may so develop in taxable real estate as to procure, without oppression, sufficient revenue to enforce orderly justice among her citizens: Therefore be it

Resolved, First. That the Congress of the United States be, and it is hereby, respectfully memorialized by this legislature to authorize the sale of the coal and asphalt deposits of the Choctaw and Chickasaw Nations, to the end that the Choctaw and Chickasaw Indians may receive the just value thereof, and that our State may be permitted to develop along stable, commercial lines.

Second. That a copy of these resolutions be forwarded to each of the Representatives of the State of Oklahoma now in Washington, D. C., with the request that this memorial may be properly presented to the Congress of the United States, and that a copy also be forwarded to the honorable Secretary of the Interior of the United States; Hon. Cato Sells, Commissioner of Indian Affairs; Victor M. Locke, principal chief of the Choctaws; and Douglas H. Johnson, governor of the Chickasaw Tribe of Indians.

Adopted by the house of representatives this 16th day of January, 1917.

PAUL NESBITT,
Speaker of the House of Representatives.

Adopted by the senate this 18th day of January, 1917.

M. E. TRAPP,
President of the Senate.

A bill (H. R. 12544) providing for the sale of the coal and asphalt deposits in the segregated mineral land in the Choctaw and Chickasaw Nations, Okla.

Be it enacted, etc., That the Secretary of the Interior is hereby authorized to sell the coal and asphalt deposits, leased and unleased, in the segregated mineral area of the Choctaw and Chickasaw Nations, in Oklahoma, in the manner hereinafter set forth.

Before offering such coal and asphalt deposits for sale the Secretary of the Interior, under such rules and regulations as he may prescribe, shall cause the same to be appraised by a board of appraisers, consisting of three members to be appointed by the President, one upon the recommendation of the Secretary of the Interior, one upon the recommendation of the principal chief of the Choctaw Nation, and one upon the recommendation of the governor of the Chickasaw Nation, the compensation of each to be uniform and fixed by the President of the United States, and such appointments shall be made within 60 days after the passage of this act. Such appraisement, both as to leased and unleased lands, shall be described in tracts to conform to the descriptions of the legal subdivisions heretofore designated by the Secretary of the Interior, and shall be completed, sworn to by such appraisers, and final report made to the Secretary of the Interior within six months from the date of the appointment of the appraisers.

SEC. 2. That the sale of such deposits shall be thoroughly advertised, and shall at the end of 90 days from the final report of such appraisers be offered for sale in tracts to conform with the report of such appraisers at not less than the appraised value so fixed, except that isolated tracts of less than 960 acres may be sold separately under like provisions: *Provided,* That 20 per cent of the purchase price shall be paid in cash, and the remainder shall be paid in four equal annual payments from the date of the sale, and all deferred payments on all deposits sold under the provisions of this act shall bear interest at the rate of 5 per cent per annum, and shall mature and become due before the expiration of four years after the date of such sale.

SEC. 3. That immediately after the expiration of one year after the coal and asphalt deposits shall have been offered for sale, or forfeited for nonpayment under the terms of the sale, the Secretary of the Interior, under rules and regulations to be prescribed by him, shall readvertise and cause to be sold to the highest bidder at public auction all coal and asphalt deposits remaining unsold and all coal and asphalt deposits forfeited by reason of such nonpayment of any part of the purchase price: *Provided,* That the Secretary of the Interior, in his discretion, may reject any or all bids which he does not consider adequate, but at the expiration of six months thereafter the Secretary of the Interior may again readvertise and offer the same for final sale to the highest bidder at public auction, upon such terms as he may prescribe and at such valuation, independent of the appraised value, as he may fix.

SEC. 4. *Provided,* That such deposits of coal or asphalt on the leased lands shall be sold subject to all rights of the lessee, and that any person acquiring said deposits of coal or asphalt shall take the same subject to said rights and acquire the same under the express understanding and agreement that the Department of the Interior will cancel and withdraw all rules and regulations and relinquish all authority heretofore exercised over the operation of said mines by reason of the Indian ownership of said property, and that said properties thereafter shall be operated under and in conformity with such laws as may be applicable thereto, and that advance royalty paid by any lessee and standing to the credit of said lessee shall be credited by said purchaser to the extent of the amount thereof, and that no royalties shall be paid by said lessee to said purchaser until the credit so given shall be exhausted at the rate of 8 cents per ton mine run, and that the royalty to be paid thereafter by said lessee to said purchaser shall be 8 cents per ton mine run of coal, and that any lessee may, at any time after completion of such sale, transfer or dispose of his leasehold interest without any restriction whatever; and that any lessee shall have the preferential right, provided the same is exercised within 90 days after the approval of the completion of the appraisement of the minerals as herein provided, to purchase at the appraised value any or all of the surface of the lands lying within such lease held by him and heretofore reserved by order of the Secretary of the Interior and upon the terms as above provided, and shall also have the preferential right to purchase the coal deposits embraced in any lease held by such lessee by taking same at the highest price offered by any responsible bidder at public auction; and if any lessee becomes the purchaser of any coal deposits on any undeveloped lease owned by him, then one-half of the advance royalties paid by any lessee on such lease shall be credited on the purchase price thereof, and the advance royalties heretofore paid by any lessee shall be credited to such lessee on account of any production of coal on any other lease which he may own and operate: *And provided,* That nothing herein contained shall be construed as limiting or curtailing the rights of any lessee from acquiring additional surface lands for mining operations as provided by the act of Congress of February 19, 1912.

SEC. 5. That the surface of any segregated coal and asphalt lands in the Choctaw and Chickasaw Nations, in the State of Oklahoma, which may have been, or may be, condemned under the laws of the State of Oklahoma for State penal institutions, or for county or municipal purposes, as authorized by the Indian appropriation act approved March 3, 1909, shall be construed to include the entire estate, save the coal and asphalt reserved: *Provided,* That the State of Oklahoma shall have the preferential right of purchase, at the appraised value thereof, upon the same terms applying to other coal and asphalt deposit sales under this act, all coal and asphalt deposits underlying the surface heretofore purchased by the said State of Oklahoma, and more particularly described as follows: Southeast quarter and south half of the northeast quarter of section 33; south half of and northeast quarter and south half of northwest quarter, and northeast quarter of northwest quarter of section 34; all of section 35, and southeast quarter of southwest quarter of section 26; and south half of southeast quarter of section 26; and south half of southwest quarter of section 25; and northwest quarter and west half of southwest quarter and west half of east half of southwest quarter and northeast quarter of northeast quarter of southwest quarter and west half of southeast

quarter of northeast quarter of southwest quarter and west half of east half of southeast quarter of southwest quarter of section 36, township 6 north, range 14 east.

SEC. 6. That the Secretary of the Interior be, and he is hereby, authorized to prescribe such rules, regulations, terms, and conditions, not inconsistent with this act, as he may deem necessary to carry out its provisions, and shall establish an office for such purpose at McAlester, Pittsburg County, Okla.

SEC. 7. That when the full purchase price for any property sold hereunder is paid, the chief executives of the two tribes shall execute and deliver, with the approval of the Secretary of the Interior, to each purchaser an appropriate patent, conveying to the purchaser the property so sold: *Provided*, That the purchaser of any coal or asphalt deposits shall have the right at any time before final payment is due to pay the full purchase price on said coal and asphalt deposits, with accrued interest, and shall thereupon be entitled to a patent therefor as herein provided.

SEC. 8. That there is hereby appropriated, out of any Choctaw and Chickasaw funds in the Treasury not otherwise appropriated, the sum of $50,000 to pay the expenses of appraisement, advertisement, and sale herein provided for, and the proceeds derived from the sales hereunder shall be paid into the Treasury of the United States to the credit of the Choctaws and Chickasaws.

The second is house concurrent resolution No. 13, memoralizing Congress to lease the remaining lands belonging to the Osage Tribe for oil, gas, and coal, and giving the reasons therefor in the preamble of the resolution:

Engrossed house concurrent resolution No. 13. (By Wismeyer, of Osage; Shores, of Carter; and Hall, of the senate.)

Be it resolved by the House of Representatives of the Sixth Legislature (the Senate concurring therein):

Whereas under the act of Congress approved June 28, 1906 (34 Stat. L., 539), entitled "An act for the division of lands and funds of the Osage Indians in Oklahoma Territory, and for other purposes," there were allotted to the Osage Tribe of Indians about 1,400,000 acres of land; and

Whereas under the provisions of said act all oil, gas, coal, and other minerals upon said allotted lands were reserved to the use of said tribe for a period of 25 years; and

Whereas under the provisions of said act about 180,000 acres of said allotted lands have been leased for oil, gas, and other mining purposes, the royalties therefrom to be paid by the United States under the direction and regulations of the honorable Secretary of the Interior to said tribe of Indians; and

Whereas there remains of said allotted lands about 1,220,000 acres of land yet unleased, and which from recent developments have been proven to be rich in oil and gas and other minerals reserved to said tribe under said act; and

Whereas under the provisions of said act the allottees of said lands, upon proper certificates of competency, are authorized to convey certain of said lands, and under such certificates have conveyed to alien holders about one-third or more than one-third of said lands; and

Whereas under the provisions of said act the said oil, gas, coal, and other minerals of said lands are reserved to said tribe for a period of only 25 years, leaving approximately about 14 years until the expiration of such reservation for the benefit of said tribe, after the expiration of which time all of the oil, gas, coal, and other minerals contained in said land will pass by deed of conveyance to purchasers thereof; and

Whereas after the expiration of said period of 25 years from June 28, 1906, the greater portion, if not almost all, of the titles to said land will have passed to alien holders, together with the titles to the oil, gas, and other minerals therein contained; and

Whereas the royalties now collected from the aforesaid 180,000 acres of leased land amount, according to the estimate of the Secretary of the Interior, annually to about $2,000 per capita to each member of the Osage Indian Tribe; and

Whereas the Secretary of the Interior has persistently discouraged the further leasing of any of said lands upon the theory that the royalties now derived from said lands amounting, under his estimate, to about $2,000 per capita per year, are sufficient for the members of said tribe, and is all that is needed or necessary for the members of said tribe, and that the interest of said tribe would be better conserved by not allowing any further leasing of said land or any further or additional mining on said lands, and on January 10, 1917, a letter from the Secretary of the Interior, dated January 2, 1917, was read to the Osage Tribal Council, holding that in view of the fact that the Osage receive now about $2,000 per capita annually from their royalties, that that was sufficient for their maintenance, and that in his opinion their wealth would be best conserved by allowing it to remain in the earth and not brought to the surface, and for these reasons advised that no further leases on the Osage lands would be made except such leases as were necessary to prevent drainage by wells already in operation around the borders of said lands; and

Whereas we believe that in truth and in fact the opinion and rulings of the honorable Secretary of the Interior is not for the best interests of said tribe, and does not conserve their properties, but for the reason that only about 14 years yet remain of said reservation, and for the reason that the unleased lands of said tribe are rapidly being conveyed, and for the reason that after the expiration of said reservation the title to said oil and gas and coal and other minerals would pass to the purchasers of said lands and said tribe will thereby be deprived of their property rights in the same; that the interests of said tribe would be better subserved and their property rights be better conserved by allowing them to lease said lands under such rules as might be just and fair in the premises in order that they might obtain the use and benefit of said reserved minerals before the expiration of said 25-year period of reservation and before the title to almost all of said lands and the oil and gas and coal and other minerals therein contained passed into alien hands; and

Whereas the honorable Secretary of the Interior has persistently refused to grant a hearing to said tribal council or their representatives for relief in the premises: Therefore, be it

Resolved by the House of Representatives of the Sixth Legislature of Oklahoma (the Senate concurring therein), That the Congress of the United States be, and is hereby memoralized, requested, and urged, to take such steps and adopt such measures as will grant to said Osage Tribe the right to lease any or all of said lands in order that they may derive the full benefit of their property in the oil, gas, coal, and other minerals contained in said land before the expiration of said period of reservation, and before the title to same has passed into alien hands, and beyond their reach and control.

Adopted by the house of representatives this 16th day of January, 1917.

PAUL NESBITT,
Speaker of the House of Representatives.

Adopted by the senate this 18th day of January, 1917.

M. E. TRAPP,
President of the Senate.

International Leagues to Enforce Peace.

EXTENSION OF REMARKS

OF

HON. AUGUSTUS P. GARDNER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 3, 1917.

Mr. GARDNER. Mr. Speaker, we have most of the world's money, we have boundless lands, and we have very little military power. European nations have no money, little land, and boundless military power. Yet we actually believe that European statesmen are staying awake at night devising schemes to make us secure against themselves. We even fancy that Japanese statesmen are increasing their navy with a view to turning it over to some international admiral who is to have charge of the "freedom of the seas." And, by the way, speaking of the "freedom of the seas," let us try to be honest about it. To whom in time of peace have the seas been otherwise than free for a hundred years past? Only the pirates have had a just cause for complaint.

Now come these various plans for international leagues to prevent war. The idea is no novelty to readers of history, but that is no reason why it should be rejected. After the European war is over there is to be disarmament, we are told. There is to be an international court to decide disputes among nations and an international army and navy to enforce its decrees. If war breaks out the international army and navy are to suppress the aggressor if they can find out who the aggressor is.

From this time forward everything is going to be left to arbitration. Oh, of course, I know that at present they talk of limiting the scope of these arbitrations; but if you are going to have an international court at all and tie this country up to an international army and an international navy, you had better arbitrate the things which men have strong feelings about and not merely arbitrate questions which no one would fight over, anyway.

Vague as the whole program is, nevertheless its advocacy at the present time can have no other effect than to check the preparedness movement and retard the development of our own Navy and our own Army.

SUPPOSE IT WILL NOT WORK?

Now, let us take a good, square look at both sides of these pictures of international leagues to enforce peace. I can easily see the attractiveness of the program if we look at only one side of the question. Let us consider what might happen if any nation or group of nations were to become dissatisfied with the decrees of the international court and should show a disposition to take to fighting. If our international army and navy could prevent war, well and good; but suppose that they were unable to prevent war; suppose that the international army and navy must actually be used to enforce the court's decree; what then? Is the United States going to let that international court declare war for us in some European or Asiatic quarrel with which we have no concern whatever? Has the people's opinion of their own Congress sunk so low that they are ready to take away from us the power to declare war and hand that power over to a court of European and Asiatic lawyers? A year ago gentlemen were arguing that we ought not to go to war except by vote of the people. To-day those very same gentlemen are arguing in favor of going to war at the command of a council of foreign advocates.

Suppose that we had had this kind of an international court in 1914, and suppose that this international court had decided that Germany and Austria were in the wrong and had then called upon the United States to furnish its quota of men and money and ships to put down the Austrian and German belligerents. Looking the proposition honestly and squarely in the face, what chance is there that Congress would have voted

in 1914 to raise half a million men and send them to war in Europe, to support the allies against Germany and Austria?

But let us ask ourselves whether we are genuine in clamoring for a settlement of international questions by arbitration. Would we, were the issue to arise, consent to the arbitration of the Monroe doctrine? Perhaps so; we are getting pretty wabbly on it.

Supposing Germany goes before that international court and claims the right to restore order in Mexico in order to recover property which has been taken from the Kaiser's subjects; supposing that we refuse to intervene and refuse to let Germany intervene; will the international court support our side or the side of Germany?

If the court decrees that Germany has the right to send an army into Mexico, what are we going to do; submit to the decree or repudiate our international agreement?

THE OPEN DOOR FOR CHINESE CHEAP LABOR.

Would we consent to arbitrate our right to exclude the Chinese and other yellow races from this country? The exclusion of cheap Asiatic labor is a doctrine nearest to the American workingman's heart, yet it is a doctrine under which Japan and China chafe and fume. Suppose you had your international court, with a judge from Japan, and a judge from Great Britain, and a judge from Sweden, and a judge from Germany, and a judge from Austria, and a judge from Russia, and a judge from Italy; and suppose Japan were to go before the court and claim the right of free immigration of Japanese and Chinese into the United States; would our workingmen submit to the decree of that international court opening the door to Chinese cheap labor? I think not. American labor would repudiate such a decision of an international court.

COUNTRIES DO NOT KEEP WORD.

I confess that I have lost confidence in international agreements. Countries do not keep their treaties when the pace gets too hot. Even Uncle Sam's hands are by no means clean.

We violated our treaty with the Chinese when we passed the Chinese exclusion act, and we violated our treaty with the Indians when we drove them from their homestead lands to the country west of the Mississippi River. The march of events was too strong for us.

How should we have fared throughout this Nation's history if, instead of fighting our battles, we had been asked to depend upon decrees of international courts? Would the revolutionists of 1775 have left it to international courts to decide whether or not New England ought to be taxed?

How should we have fared if we had submitted to arbitration the disputes which caused the Mexican War? We assisted Texas to get away from Mexico, and then we proceeded to annex Texas. Plainly and bluntly speaking, our purpose was to get some territory for American development.

How do you think we should have come out before an international court in those days? And yet does even the most extreme pacifist deny that the world has benefited by our rape of Texas?

Would the North have consented to arbitrate the question of slavery? Would this Nation have permitted an international tribunal to decide whether or not the battleship *Maine* was blown up from the inside or from the outside, or whether Spain should be forced to evacuate Cuba? If this question had been submitted to the international court, how would the international court have decided? Does anyone deny that Cuba has a happier present and a happier future because the concert of powers of Europe in 1898 was unable to prevent us from going to war with Spain?

Washington's advice against entangling alliances is not yet a vermiform appendix.

Retirement of Federal Judges.

EXTENSION OF REMARKS

OF

HON. WILLIAM H. COLEMAN,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 3, 1917.

Mr. COLEMAN. Mr. Speaker, in view of the remarks of the gentleman from Missouri [Mr. DYER], under date of January 30 this year, in connection with Senate bill 706, a bill to amend section 260 of the Judicial Code with reference to the retirement of Federal judges, which remarks are found in the RECORD of February 1, I desire to call attention to House bill 6450, introduced by myself on December 17, 1915, and reported to the House with an amendment on May 5, 1916, and passed on June 10. The bill as amended reads as follows:

Be it enacted, etc., That section 260 of the Judicial Code be, and the same is hereby, amended to read as follows:

"SEC. 260. That when any judge of any court of the United States, appointed to hold his office during good behavior, resigns his office after having held a commission or commissions as judge of any such court or courts at least 10 years continuously, and having attained the age of 70 years, he shall during the residue of his natural life receive the salary which is payable at the time of his resignation for the office that he held at the time of his resignation. But instead of resigning any judge other than a Justice of the Supreme Court, who is qualified to resign under the foregoing provisions, may, by statement addressed to the Attorney General, retire upon full salary from regular active service on the bench, and the President shall thereupon be authorized to appoint a successor; but a judge so retiring may nevertheless be called upon by the circuit judge of that circuit and be by him authorized to perform such judicial duties in such circuit as such retired judge may be willing to undertake, or he may be called upon by the Chief Justice and be by him authorized to perform such judicial duties in any other circuit as such retired judge may be willing to undertake."

This bill does not attempt, like the Senate bill, to coerce any judge into retirement on account of his age, but permits a judge, having attained the age of 70 years and under existing law entitled to resign, to retire from active service with the right of undertaking after such retirement such duties as he may be willing to perform. The bill, therefore, in some degree meets the situation aimed at by the Senate bill, but without interfering with the right of the judge to exercise his own judgment on the question of retirement. Many judges having served a number of years on the bench, and having reached the age at which they are permitted to retire on full pay, are loath to sever their connection with a service to which they have been attached for long years, and perhaps in some instances do hold on after their physical powers have become somewhat impaired.

But under the provisions of House bill 6450 they can retire and yet keep in touch with their work by performing such duties as they are willing to undertake, thereby giving to the Government the advantage of their ripe experience without any additional expense.

The gentleman from Missouri in his remarks inserted a communication from the St. Louis Globe-Democrat, part of which reads as follows:

A bill amending the Federal judiciary act has passed the House and is pending in the Senate which attempts to confer upon the President the power to appoint substitute judges in the district and circuit courts.

It is apparent from the sentence quoted as well as the comments that follow in this communication, that it refers not to the bill that has passed the House and is pending in the Senate but rather to the bill which has passed the Senate and is now pending in the House, for the only bill in this connection that has passed the House is the one introduced by myself, above referred to; and it does not confer upon the President the power to appoint substitute judges or in any manner interfere with the freedom of choice of the incumbent on the question of retirement.

I make this statement for the purpose of directing the attention of the Members of the House to the difference in the two bills, both aiming to amend section 260 of the Judicial Code, with reference to retirement of judges, but the one carefully preserving the right of the judge to exercise his own judgment as to the time of retirement. I am opposed to compulsory retirement and to the Senate bill in so far as it attempts to force judges from office, which in effect it does in the following provisions:

In the event any circuit judge, having so held a commission or commissions at least 10 years continuously, and having attained the age of 70 years as aforesaid, shall nevertheless remain in office, the President if he finds that any judge is unable to discharge efficiently all the duties of his office by reason of mental or physical disability of permanent character, shall appoint, by and with the advice and consent of the Senate, an additional circuit judge of said circuit, who, notwithstanding the incumbency of the judge so entitled to resign, shall sit customarily as one of the judges of the circuit court of appeals of his circuit.

While the aim of relieving an incompetent judge may be commendable, yet, in consideration of the greater benefit of the absolute independence of the judiciary from any outward influence and the danger of allowing a coordinate branch of the Government to exercise its judgment on the question of removal, there should be no hesitation on the part of the Members of this House in refusing to extend the power of the Executive over the judiciary. This power is sufficiently exercised in the appointment of judges without adding thereto a discretionary authority as to the time of removal.

Just to be reminded of the age of Crown-made judges removable at pleasure and the decisions rendered to order in purely

civil to say nothing of political affairs, should cause us to carefully guard the independence of the judiciary.

I am therefore in hearty accord with my colleague in his opposition to Senate bill No. 706, and will vote against it if occasion is offered, and thus maintain the dignity and independence of the courts, preferring to endure the evils resulting from an occasional judge holding on to his office after his usefulness has been impaired to giving to the Executive department of the Government authority to exercise its discretion as to when any judge should be relieved of duty with the consequent dangers that such a practice would entail.

What the Junior Officers and the Enlisted Men of the National Guard Think of the Regular Army and of Compulsory Military Training.

EXTENSION OF REMARKS

OF

HON. AUGUSTUS P. GARDNER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 5, 1917.

Mr. GARDNER. Mr. Speaker, in compliance with permission to extend my remarks granted me to-day, February 5, 1917, I herewith submit a statement which I recently prepared for presentation to the Senate Committee on Military Affairs, as follows:

"A few days after election in November last I started for the Mexican border with two objects in view: First, to study the relations of the National Guard with the Regular Army and, second, to endeavor to ascertain the causes of the disinclination of young men to enlist.

"I found that on October 7, 1916, an order had been issued from the headquarters of the Department of the South directing all Regular officers serving as inspector-instructor or otherwise with the National Guard to make a report on the virtues or defects of the National Guard system. I found that the reports made in compliance with this order were almost invariably exceedingly unfavorable to the National Guard system. Of course, I realized that Regular Army officers are human and that we must expect from them a certain amount of impatience at the fulsome laudation which we politicians so freely bestow on the National Guardsman who votes and so churlishly withhold from the Regular Army man who bears the brunt of battle. But no amount of irritation or prejudice or jealousy or intrigue or of all these things combined could account for the unanimity of the replies to Gen. Funston's circular order of October 7. I can not find that these replies have ever been published, but the report on the mobilization of the National Guard issued by the War Department tells exactly the same story of the inefficiency of all except a few National Guard organizations.

"Realizing as I did that the generalissimos of the National Guard would let loose a storm of criticism of the Regular Army as soon as the mobilization reports were published, I approached Gen. Bell, commanding the district of El Paso, and discussed with him a plan for ascertaining the views of the National Guard toward the Regular Army. The views of the generalissimos I already knew. What I was seeking was the opinion of the junior officers and enlisted men of the National Guard.

"There were at that time 16 National Guard regiments, 4 separate battalions of Artillery, and squadrons of Cavalry, and 296 companies, batteries, troops, and hospital and ambulance units under the command of Gen. Bell. The plan was hit upon of sending a list of questions to each of the 20 officers in command of regiments and separate battalions or squadrons, and to each of the 296 captains commanding companies, batteries, troops of Cavalry, and hospital and ambulance units. In order to get the point of view of the enlisted men, as well as of the commissioned officers, the same list of questions was sent to the 296 first sergeants of the aforementioned companies, batteries, and so forth. List of questions were sent in all to 612 individuals. Ordinarily, when subordinates make reports, they are required to forward them through 'military channels,' as it is called. That is to say, a first sergeant makes his report to his captain, who signs it and forwards it to his colonel. Thereupon the colonel indorses the report and forwards it to the brigade commander, who in his turn forwards it to the division or district commander. In other words, under ordinary circumstances the report of a first sergeant in the El Paso district would pass under the supervision of three different commissioned officers before it reached Gen. Bell's headquarters. In this particular case, however, Gen. Bell gave orders that all reports were to be made to him direct, and it was generally understood that the names of the signers should be confidential. Furthermore, directions were given that each man should make his report without consultation with anyone else.

"Here is Gen. Bell's order:

"HEADQUARTERS EL PASO DISTRICT,
"El Paso, Tex., December 13, 1916.

"1. The following questions will be answered by each regimental commander, company commander, and first sergeant of the National Guard:

"2. The answers will be written with a typewriter or pencil, and the completed paper will then be sealed in an official envelope and mailed without delay *direct* to the 'Commanding General, El Paso District, Mills Building, El Paso Tex.'

"3. The district commander desires that each man called upon for report express his opinions *without consultation with anyone.*

"By command of Brig. Gen. Bell.

"H. H. WHITNEY,
"Lieutenant Colonel, Adjutant General, District Adjutant."

"Here are the questions and answers:

"No. 1. Question. Would the instruction of the National Guard proceed more rapidly if more Regular officers and noncommissioned officers were detailed for service with the National Guard?

"Answer. Yes—Colonels, 18; captains, 190; first sergeants, 180; total yes, 388. No—Colonels, none; captains, 41; first sergeants, 53; total no, 94. Conditional—Colonels, 2; captains, 50; first sergeants, 38; total conditional, 90.

"NOTE.—The noes were qualified in about half of the replies by the statement that there were 'already enough,' meaning that one regular officer and three regular noncommissioned officers, as at present detailed for the instruction of each regiment, were ample.

"No. 2. Question. Are the officers and enlisted men of the National Guard desirous of the instruction from the officers and noncommissioned officers of the Regular Army? If not, what is the reason?

"Answer. Yes—Colonels, 16; captains, 217; first sergeants, 205; total yes, 438. No—Colonels, none; captains, 12; first sergeants, 30; total no, 42. Conditional—Colonels, 4; captains, 49; first sergeants, 17; conditional, 70.

"No. 3. Question. Can you suggest any way in which the officers and men of the Regular Army can cooperate more fully with the National Guard in the development of a citizen army?

"Answer. The answers to this question may be roughly classified as follows: More cooperation by friendly intercourse and a closer relationship, 122; more careful selection of Regular Army instructors, 28; more instruction from Regular Army, particularly at home stations, 83; sundry suggestions, 50.

"NOTE.—Over 70 replies to question No. 3 desired one regular officer with each regiment or separate battalion and one noncommissioned officer with each company instead of only three for the whole regiment, as at present.

"No. 4. Question. Have you formed any opinion on the question of universal military training? If so, what are your ideas?

"Answer. In favor—Colonels, 16; captains, 250; first sergeants, 234; total yes, 500. Against—Colonels, 1; captains, 5; first sergeants, 4; total no, 10.

"No. 5. Any additional remarks you may have to make bearing on the above.

"Many of these remarks are most valuable. They will be made a subject of special study at Gen. Bell's headquarters.

"I have here all the original 572 replies to Gen. Bell's order. They were tabulated by the officers at his headquarters, and I have given you the tabulation figures. If any member of the committee wishes to do any tabulation on his own account, he is welcome to do so, but I request that the names of the signers may be held confidential."

Revenue Bill.

EXTENSION OF REMARKS

OF

HON. H. STANLEY BENEDICT,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 31, 1917.

Mr. BENEDICT. Mr. Speaker, I am opposed to the whole policy of this bill, because I do not believe that the National Government should raise its revenue by direct taxation. This course is always discriminatory and inequitable, and, what is

far worse, the amount of the tax returns is never certain. The only equitable method of distributing the burden of taxation over the entire people in the just proportion in which each enjoys the privileges of Government is by a reasonable and adequate tariff, which is an indirect tax. This source of revenue is always certain and the amount of tax returns is reasonably definite. I do not favor a high tariff, nor yet a so-called protective tariff intended to foster our so-called infant industries. I believe in a tariff that equalizes the cost of production abroad and the cost at home, having in mind the difference in living conditions of labor abroad and in our country, plus a fair profit for the manufacturer. A tariff is the only efficient barrier of protection to our manufacturer and laborer against the cheap labor of other countries.

My particular objections to the several provisions of this bill may be specifically stated under the following four heads:

First. It is discriminatory and unfair, particularly in that portion applying to the excess profits tax, in that it lays this tax upon corporations, companies, and partnerships, and excludes those individuals who are enjoying equal excess profits and are favored as fully with all the privileges and advantages of government. I do not favor the taxing of a class, but I think it only equitable that if a class is to be taxed that all persons properly falling within that class should be taxed. Perhaps it was deemed politically expedient by the framers of the bill to tax corporations, because that might be popular, and to avoid taxing individuals, because of the storm of protest that might be raised thereby. I have no more sympathy for corporations than for individuals, but believe that justice requires that both be dealt with on an equal basis. There is an income-tax law affecting corporations and one of like character affecting individuals, but no effort was made in this revenue bill to amend the income-tax law relating to individuals.

Second. It is economically unsound, because the provision for the excess profits tax is relied upon to yield $226,000,000, which estimate is based upon highly prosperous times. The moment the European war ceases and prices return to normal this tax would diminish to almost nothing, and during poor business years no return whatever could be expected from this source. Any governmental policy that depends upon so unreliable a source of revenue is manifestly unsound. Furthermore, provision is made in this bill for the issuance of the balance of the Panama Canal bonds, the proceeds to be used for any of the purposes contained in this bill, and for the issuance of an additional amount of $100,000,000 worth of 50-year bonds, as well as the issuance of $300,000,000 worth of certificates of indebtedness, while no provision whatever is made, so far as I can ascertain, for the ultimate retirement of these bonds and certificates of indebtedness. Such a procedure must be conceded by all to be unbusinesslike and economically unsound. The argument that the issuance of bonds for permanent improvements is justifiable is wholly fallacious. The Federal Government will not engage in profit-making enterprises with these permanent improvements as do private corporations, and therefore can not refund these investments without some specific provision for doing so. I fail to find any provision anywhere for the ultimate retirement of these bonds. They are simply a legacy of debt for posterity to pay.

Furthermore, the certificates of indebtedness are required to be paid within one year's time, doubtless depending upon the uncertain returns hereinbefore mentioned for securing the funds with which to meet these short-time loans. No prudent business man would borrow money, making a definite promise of payment within a certain time, and depend upon so uncertain a source for securing the funds with which to meet his debt. The thought of a new, rich country like ours mortgaging itself to conduct its governmental activities is wholly repugnant to me and, in my judgment, entirely unwarranted. A solvent, prosperous business man is expected to pay as he goes, so also should a Government, especially one so extremely wealthy and whose natural resources are so abundant.

Third. It invades the right of the States in their effort at raising sufficient revenues for maintenance of State government by assuming to collect an estate or inheritance tax, which right has for years been enjoyed by the States and upon which the States have depended for revenue. By this bill the rates to be used in this estate tax have been so increased that the States will ultimately have to discontinue raising revenue by this method. My State has passed resolutions against the invasion of this field by the Federal Government.

Fourth. It levies a double tax, and that, too, in most cases, upon industry, thus discouraging and hampering the growth and development upon which the Nation is so dependent for its prosperity. At the present time the National Government collects a corporation income tax and an individual income tax, in many cases the burden falling upon the same individuals for both these taxes, and now it is proposed to increase the amount of the corporation tax. In addition, the States collect a corporation franchise or license tax which is a duplication of the National Government tax, but which was in operation in the States many years before the National Government adopted it.

The States now collect an estate or inheritance tax, having done so for many years, and the entrance of the National Government into this field is a double tax. The power of direct taxation should be left to the States, and the National Government should acquire its revenue by indirect taxes.

I realize full well that revenue must be raised, and that by reason of the deficit of the present administration and the large appropriations made by it the amount of revenue required is enormous. There is, however, only one certain definite way that has in times past always proved adequate for governmental needs, and that is the tariff. Every time that any other method of raising revenue has been substituted the Government has run behind and fallen into debt. The political party now in power has continually refused to adopt any adequate form of tariff, with the result that it now faces an enormous deficit, and in desperation is seizing upon every available means of raising revenue, including the issuance of the unused Panama Canal bonds, individual income tax, estate or inheritance tax, corporation income tax, general bonds of 50-year maturity, and certificates of indebtedness or temporary one-year loans.

Protests Against Advance in Grazing Fees on National Forests.

EXTENSION OF REMARKS
OF
HON. CARL HAYDEN,
OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 29, 1917.

Mr. HAYDEN. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I desire to print the following memorial lately adopted by the Legislature of the State of Arizona:

THIRD STATE LEGISLATURE.

Senate memorial No. 2.

To the honorable the SECRETARY OF AGRICULTURE,
Washington, D. C.:

Your memorialist, the Third Legislature of the State of Arizona, respectfully represents—

That among the greatest industries of the West, and prominent among the activities upon which the prosperity of the country depends, is the live-stock industry.

That its success and therefore its ability to fulfill the demands essential to the maintenance of life made upon it depends in great measure upon the affording of fair grazing facilities within the national forests.

That the recent order of the honorable Secretary of Agriculture, which proposes within three years to double the present fees charged for the grazing of live stock upon the national forests, will, if enforced, work great injustice and irreparable injury to the industry, and greatly restrict the benefits it is now able to confer; that it will, in fact, prove practically confiscatory in its nature.

Your memorialist, the Third Legislature of the State of Arizona, therefore prays that you give the most careful consideration to the order which has been promulgated, with a view to rescinding the same, thus doing common justice to a great industry of the West and avoiding the unreasonable restriction of an important source of food supply.

And your memorialist will ever pray.

Passed by the house January 19, 1917, by the following vote: Thirty-five ayes, no nays, none absent, none excused.

A. A. JOHNS,
Speaker of the House of Representatives.
SAM W. PROCTOR,
Chief Clerk.

Passed by the senate January 19, 1917, by the following vote: Eighteen ayes, no nays, none absent, one excused.

D. H. CLARIDGE,
President of the Senate.
C. P. HICKS,
Secretary of the Senate.

The National American Live Stock Association adopted the following resolution at its twentieth annual convention held at Cheyenne, Wyo., on January 20, 1917:

Whereas the American National Live Stock Association has been advised by Hon. David F. Houston, Secretary of Agriculture, of a proposed advance in the fees charged for grazing live stock on the national forests, which in 1919 will amount to a 100 per cent increase; and

Whereas there has been received a large number of protests from the various advisory boards, representing a great majority of the stock grazed on the national forests; and

Whereas these protests are based upon the contention that the permittees are now paying the full value of the forage on the forests on account of (a) the geographical location and physical character of the forests; (b) poisonous plants; (c) predatory wild animals; (d) cost of salting cattle on national forests; (e) range development necessary to utilize our privileges fully; and (f) restrictive grazing regulations; which cause a very substantial increase in the cost of producing our live stock; and

Whereas a study of the live-stock business and the financial incomes of permittees will fully substantiate these contentions; and

Whereas the moneys accrued from the grazing of live stock more than offset the cost of the administration thereof by a 33⅓ per cent net return to the Government; and

Whereas the present grazing regulations and fees have been supported by the hearty cooperation of the American National Live Stock Association, and the various advisory boards now protesting against the said increase, under the assurance of the department that these grazing resources would not be commercialized; and

Whereas the proposed advance in fees is a complete reversal of this policy, which we very much deplore; and

Whereas we believe the reasons advanced by the honorable Secretary of Agriculture in support of this proposed advance are insufficient and unsupported by the facts that actually exist, and that any advance in the grazing fees based upon such reasons is unjust and unfair: Now, therefore, be it

Resolved by the American National Live Stock Association in convention assembled at Cheyenne, Wyo., January 18–20, 1917, That we most vigorously and unanimously protest against any advance in the fees now charged for grazing privileges on the national forests.

Mr. F. J. Hagenbarth, president of the National Wool Growers' Association, discussed this question in the course of his address at the fifty-third annual convention of that association, held in Salt Lake City, Utah, on January 13, 1917, as follows:

When the law creating forest reserves was passed, in 1896, no reference was made, either in the enacting clause or in any part of the law, to live stock or grazing or anything relating to our industry. No provision was made in the law for the imposition and collection of grazing fees. The use of the forest reserve for grazing has been the upgrowth of natural conditions. The Forest Service has come to learn that instead of being a detriment the grazing of live stock on the national forests is a benefit that progressively increases as time goes on. The forests are guarded, fires prevented, the natural growth of grass increased, and in no instance, under proper administration, have we ever learned of any detrimental results following the use of live stock on the national forests.

In addition to the benefits above enumerated and others arising, both directly and indirectly, which I will not mention, the live-stock interests paid last year approximately a million and a quarter dollars in fees for this grazing privilege. About one-third of this amount, or $400,000, was spent in the various States, either by apportionment of 25 per cent directly to the States and 10 per cent for the building of roads in the forests located within the States. At this time we have before us a proposition on the part of the Forest Service which, if carried into effect, will double the present fees which we are paying. We do not believe that the Bureau of Forestry has fully studied in its farthest reach the unfairness of this proposition. The flockmaster and the herdsman are fully paying all the cost of administration involved in the handling of live stock on the forests.

It is not to be conceived that this great Government under the guise of conservation has gone into the forestry business for the purpose of making money out of the live-stock industry. We believe that every cost of administration which is justly chargeable to us should be paid by us. And we are willing to go further; we are willing to be assessed a reasonable amount for purposes of road construction, development of water, reseeding of the range, building of drift fences, roads, and bridges; but we earnestly protest against the use of the national forests for the purpose of obtaining funds which will go into the National Treasury, to be diverted to other interests than our own. A 50 per cent increase over the present fees would be ample to cover every reasonable necessity of the forests, both for present use and future development, in so far as live stock is concerned. This increase should be made, say, one-half each year for two years, and all moneys so derived should be spent for the forests and in the forests and primarily for the benefit of the industry by which the money is paid.

I also include an open letter from the Tusayan Cattle Growers' Association, addressed to the Secretary of Agriculture, in which a convincing argument is made against the proposed advance in grazing fees on the forest reserves:

WILLIAMS, ARIZ., *January 15, 1917.*

Hon. DAVID F. HOUSTON,
Secretary of Agriculture, Washington, D. C.

DEAR SIR: Your letter to T. W. Tomlinson, secretary of the American National Live Stock Association, under date of November 3, 1916, wherein you set forth the reasons offered by the Department of Agriculture for the proposed increase in fees for grazing stock upon national forests, has been called to the attention of the advisory board of the Tusayan Cattle Growers' Association, an organization representing over 80 per cent of the permittees grazing cattle upon the Tusayan National Forest, one of the largest national forests in the State of Arizona.

After a careful consideration of the reasons offered by you for the proposed increase in grazing fees, upon behalf of the members of this association we desire to enter an earnest protest against the proposed action, and in doing so submit our reasons, as hereinafter set forth.

In your letter to Secretary Tomlinson you state that one of the leading criticisms of the management of the national forests is that they are not self-supporting and are a burden upon the National Treasury. In our judgment this is by no means a valid criticism.

If the original objects of forestry, viz, the conservation of the timber and water supplies of the Nation, as were set forth by the National Academy of Sciences in 1897, when that body was requested by the Secretary of the Interior to formulate a national-forest policy, and which resulted in the passage of the act of June 30, 1897 (30 Stat., 34–36), are correct and are a benefit to the people as a whole, and if the timber and water resources of the national forests are insufficient to sustain the cost of administration, why should the national forests not be a legitimate burden upon the National Treasury?

An examination of the organic act authorizing the creation of national forests, the act of March 3, 1891 (26 Stat., 1095), and the act of June 30, 1897 (30 Stat., 34–36), which supplements the same, discloses the fact that neither the words "stock raising" nor "grazing" appear therein. As an asset, therefore, of forestry, grazing is a by-product. It is something that has been thrown into the lap of the national forests which was not contemplated at the time of the passage of the organic act. That this is true is amply testified by the fact that originally—in fact, up to 1905—no fees whatever were charged permittees for the privilege of grazing stock upon national forests.

Again, it is asserted by you that one of the criticisms frequently advanced against the Forest Service is the fact that timber and other resources of the forests are being disposed of at market prices under commercial methods and at competitive prices, while grazing is being disposed of to stockmen at extremely low prices.

The effect of this criticism is that grazing privileges should be disposed of in the same manner as the timber on a forest is sold, viz, to the highest bidder. In reply to this we are loath to believe that the Government would for a moment contemplate such action. It is admitted that under the act of June 30, 1897, the Government has a legal right to take such action should it see fit to do so. However, we do deny the moral and equitable right of it to place the disposal of grazing privileges upon the same plane as is the right to cut and sell timber. In the first place, the highest bidder for the right to cut and sell timber has acquired no right, privilege, or preference to do so in the sense of that acquired by a permittee to graze stock upon a national forest. He has in no sense assisted in the development of the country or the range. He has never been a prior user or occupant of the range, nor in any instance has he been a pioneer in the country, blazing a trail for others to come and assist in making the West what it is to-day. Upon the other hand, the average stockman is a pioneer in the development of the resources of the West. Long, long before such a thing as a national forest was ever contemplated, the stockmen and their predecessors used, occupied, and developed the range upon which to-day they are compelled to pay a fee to graze their stock—a fee which already amounts to a burdensome tax upon their established business—and a fee which in nearly every respect is more than ample to pay for the administration of that branch of forestry which was not contemplated when forestry itself was inaugurated in the United States. In the second place, the highest bidder for the right to cut and sell timber has no established business upon the forest at the time he makes his bid, while the stockman who has an established business upon the forest, and who is dependent upon securing the use of the range for the successful maintenance of that business, might be forced to bid more, much more, than the privilege to graze his stock is worth in order to protect his investment, which would practically amount to confiscation of his property were he not successful in obtaining the same. Third, the bidder for the right to cut and sell timber bids upon something that has already matured—something that he can see, measure, and estimate his probable profit upon, while upon the other hand a stockman would be compelled to bid upon something that may or may not materialize—something that depends upon the sun and rain to produce for him after he has been compelled to pay his money for the same, and which has varying degrees of value. Therefore the disposal of timber and grazing privileges by competitive bidding are not in any way comparable.

It is an admitted fact that the grazing capacity of the forests is limited, and that the number of stock that can be provided for is far less than the number of stock seeking grazing privileges. But is this not equally true of all other privileges the Government has at its disposal for the utilization of its resources?

As to the argument that stockmen who are permittees upon a national forest have an undue financial advantage over other stockmen who must either lease or buy lands upon which to graze their stock, we submit that stockmen possessing grazing privileges upon national forests do not possess any further advantages over other stockmen than privileges earned by them and granted by the Forest Service on account of the investment in and the ownership of ranch property, the prior use and development of the range, or by acquiring such privileges through the purchase of stock from former permittees. The transfer of such rights, privileges, or preferences through the Forest Service with restrictions from one permittee to another are customary and are actually carried into effect by the Forest Service itself. Purchasers of stock upon permits therefore always pay not only for the stock, but also for the privileges which they will secure through the sanction of the Forest Service on account of the purchase of the stock. The money spent by the permittees in the development of the range is, for the most part, spent upon forest lands and usually upon the demand of the Forest Service, and such improvements made by the permittee belong to the Forest Service, and not to the stockman who has spent his time and money in making them. It would therefore practically amount to the confiscation of ranch property of the permittee and of his time and money expended in making improvements and in building up his business or of the purchase price he has paid to charge him the same price that an outsider might be willing to pay for the grazing privilege.

It must be remembered that in the Tusayan National Forest there is comparatively little permanent water, and that the use of the range has to a very great extent been made possible by the development of water by the stockmen, without which such range would be comparatively useless for stock purposes; nor would the Forest Service be receiving fees for the same except for this expensive work done by the stockmen grazing under permit upon it—work which ranges in value to stockmen of from $500 to $10,000 for each dam or reservoir constructed. The natural lakes and water holes, as shown upon maps, sometimes make it appear as though the country is naturally well watered. Whereas, as a matter of fact, these lakes and water holes are, for the most part, merely slight depressions which fill only from the winter storms, last only for a few months in the first part of the year, and are not dependable for stock purposes. Practically none of them are fed by living springs. Most of the natural lakes have been improved at great expense by the stockmen. Furthermore, on account of the sparse and scattering grass and other forage, it is necessary to develop water in a great number of places in order to utilize the small amount of forage, which makes the cost to the stockmen very great, without being compelled to pay increased grazing fees. Also, on account of the light and "spotted" rainfall and the great evaporation in this arid country, expensive dams of large size are absolutely required in order to use the range.

There can be no question but that permittees using national-forest ranges do enjoy certain advantages. But, as has been stated above, these advantages which he is compelled to pay for, are but rights, privileges, or preferences which have been acquired through prior use and

development of the range—a right, privilege, or preference which the Forest Service has acknowledged since its incipiency—or through money invested in ranch property.

As to the complaint by municipalities that owing to the low grazing fees stockmen are being favored over the citizens as a whole, such complaint is unwarranted. It simply amounts to a complaint that the privileges already acquired by stockmen upon national forests should be especially taxed for the benefit of the citizens as a whole, regardless of the fact as to whether or not such an additional tax is warranted.

At the time grazing fees were first established no attempt upon the part of the Forest Service was made to secure more than a nominal fee, which should represent a fair share of the cost of the administration of national forests, and which should be borne by the stockmen using these ranges. The reasons that only nominal fees for grazing were to be exacted of stockmen at the time fees were first charged were that the stockmen had been using and were in possession of the ranges at the time national forests were created, and that it was not the intention of the Government to deprive the stockmen of the use of these ranges nor to interfere with them in any way, save and except where it was absolutely necessary to do so for the protection of the forests and watersheds of the country. This announced policy was in perfect accord with the object and intention of the organic act creating national forests, and it recognizes the fact that up to that time grazing upon a national forest had not been considered as an asset of forestry, but that thereafter it should be made to pay only its just proportion of the cost of administering that particular branch of the service. But, it must be confessed, that within the past few years a change from this policy seems to have manifested itself in the administration of the forests, and if, therefore, that portion of your letter to Secretary Tomlinson relative to the suggestion of submitting grazing privileges to the highest bidder be enacted into a regulation of the service, you would be compelled to completely disregard all rights, privileges, or preferences of stockmen upon national forests that have been acquired by them through the expenditure of their time, their money, and their efforts to establish a successful business.

As to the study made by the Forester of some 900 cases of the comparative charges paid by stockmen for grazing privileges upon private lands and those of national forests, we must confess that we are at a loss to understand the basis as stated by you upon which the Forester arrives at his conclusions. As a matter of fact—and we make the statement without fear of successful contradiction—there is not the slightest degree of comparison in the value of a grazing privilege upon private, State, reclamation withdrawal, Indian reservation, and railroad lands with that of a grazing privilege upon lands within a national forest. In the first place, it is superfluous to argue the advantages that an owner or a lessee has in the control of lands that are completely under his domination with that of a permittee who is compelled to graze his stock upon public lands not under his control, and upon which his stock is compelled to graze in common with other classes of stock. On a national forest cattle and sheep graze together, and almost invariably to the disadvantage of the former. On a national forest cattle are subject to certain restrictions, regulations, reductions in the permitted number, troubles—such as that at present over the question of raising grazing fees—as well as other innumerable annoyances from incidental causes, none of which owners or lessees of private, State, reclamation, Indian reservation, or railroad lands have to contend with. In case of drought the owner or lessee of any of these lands can easily gather his stock for shipment to other points, whereas upon a national forest the owner is unable to gather his entire holding, and for that reason is bound to suffer heavy losses. Furthermore, the study made by the Forester must have included very little, if indeed any, railroad lands. Up to within the past year the Atchison, Topeka & Santa Fe Railway Co. lands were leased throughout the State of Arizona at the sum of 1 cent per acre per year, which fact would by no means justify the conclusion arrived at by the Forester in his study of the comparative prices paid for grazing privileges upon national forests and this particular class of lands, to say nothing whatever of the advantages accruing to the lessee of the latter over that of a permittee upon a national forest.

In conclusion we respectfully submit that, since the national forests were created for the purpose of conserving the timber and water supplies of the Nation, there is no reason why the stock industry, which, as has been pointed out, is a by-product of forestry, should be compelled to pay more than its just proportion of the cost of administration of the grazing department of the national forests.

Very respectfully,

TUSAYAN CATTLE GROWERS' ASSOCIATION,
By A. F. POLSON, *President.*

In the hope that the information contained therein may be of interest in connection with the discussion of this question, I also desire to print as a part of my remarks the following letter, which I have lately received from the Commissioner of Indian Affairs:

WASHINGTON, D. C., *January 26, 1917.*

MY DEAR MR. HAYDEN: In further response to your letter of December 11, 1916, there follows a table giving the desired information regarding existing approved leases and permits for grazing stock on tribal Indian lands:

Riddle Bros	Riddle, Idaho	do	500 cattle	1.25

You will observe that the grazing fees received on the several reservations vary considerably. This is the result of a number of factors over which we have no control but which have great influence in determining the prices received. These factors include the topography of the country, the water supply, amount of fencing necessary, condition of the range, winter protection, and climate. In addition to the foregoing, proximity to the railroad is an important factor.

On some of the reservations the permits now in existence were made several years ago, when prices were considerably lower than at the present time, and it is my intention when the present permits expire to advance the price to a figure commensurate with the reasonable value of the grazing privilege.

I hope the information listed herein will serve your purpose.

Sincerely, yours,

CATO SELLS, *Commissioner.*

HON. CARL HAYDEN,
House of Representatives.

I am glad to know that the Secretary of Agriculture has decided upon an increase of but 25 per cent in the grazing fees for the season of 1917 instead of an advance of one-third, as was originally contemplated. In the following letter recently addressed to the secretary of the American National Live Stock Association, Secretary Houston promises to make a further study of the local conditions on the various forests before considering additional advances in grazing fees:

MR. T. W. TOMLINSON,
Secretary American National Live Stock Association,
515 Cooper Building, Denver, Colo.

DEAR SIR: After a very careful consideration of the statements presented by the committee appointed by your association and the many statements, resolutions, and letters from local stockmen, I have reached a definite conclusion in reference to the proposed increase in grazing fees.

The purposes of the national forests are to improve and protect the forests for the purpose of securing favorable conditions of stream flow, and to furnish a continuous supply of timber for use of the people. The conservation of the national-forest resources should always be given first consideration and their use regulated in the way which will be for the best interest of all the people. The timber, grazing, water power, and other resources which are used for commercial purposes should be charged for at a rate which represents their fair value. If a charge only sufficient to cover the cost of administration were made, all of the profit from the commercial use of the national forests would go to a comparatively few individuals instead of to all of the people, to whom they belong and who are entitled to share in their benefits. This principle applies to the present situation, and the charge for grazing should be based upon the real value of the forage upon the national-forest ranges as determined by a careful survey of all the facts and not by competitive bid, as required in timber sales.

Whether or not the fees charged at present represent a fair value of the forage is the question to be decided. The facts before me clearly indicate that the present charge does not represent the full value of grazing privileges on the national forests. This is conceded by many stockmen. There is, however, a difference of opinion as to the real value. The stockmen representing some localities contend that the present charge represents the full value of the range, while the stockmen of other localities concede that the grazing is worth more than is now being charged, but contend that the proposed increase of 100 per cent would be in excess of its real value.

My attention has been called to many factors which have a bearing on the matter. Among these are the small average ownership of stock in some localities and the possible hardship which the proposed increase would cause new settlers and small owners, the ownership of watering places and other improvements by the stockmen, the losses from predatory animals and poisonous plants, and the uncertainties which attend the issuance of only annual permits or permits subject to annual reduction. This indicates the possibility of a variation in the real value of grazing on different forests or in different general localities, and also that in a few instances the proposed increase might not be justified. I appreciate that there is a possibility of considerable variation in the value of grazing on the different forests. There does not seem to be any doubt, however, that the grazing everywhere is worth more than the present rates.

In view of all these facts, I have concluded to modify the plan outlined in my letter of November 3, 1916. Instead of an increase of 33⅓ per cent for the first year, an increase of 25 per cent will be made on all forests at this time to apply on permits issued for grazing periods beginning on or after March 1, 1917. Further increases will be deferred until a specific study of the existing conditions upon each of the national forests has been made. Upon the basis of the facts thus obtained, after having considered all of the advantages and disadvantages of the locality, additional increases will be made when the real value of the forage upon any forest is found to be more than the amount charged, but no such additional increase will be made effective before March 1, 1918.

The several suggestions which have been made for amendment of the regulations will be most carefully considered and such changes as are deemed advisable will be submitted to you for comment by the advisory board of your association before their final adoption.

Very truly, yours,

D. F. HOUSTON, *Secretary.*

Revenue Bill.

EXTENSION OF REMARKS

OF

HON. WILLIAM H. CARTER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 1, 1917.

Mr. CARTER of Massachusetts. Mr. Speaker, I am opposed to the method of raising revenue for this Government as provided for in this bill, and will register my protest by voting against it.

I am opposed to everything in this bill, in spite of the eloquence and dispassionate explanations of my Democratic friends.

I am not basing my disapproval of the bill on partisan grounds, as I am always ready to support a good measure, Republican or Democratic.

This bill, like many others which have been passed in this House, penalizes efficient industries and punishes thrift. The people of this country are willing to pay any just and reasonable tax to the end that we may run our Government on businesslike methods.

This bill provides for the raising of $340,000,000 by bonds, $300,000,000 by note certificates, $248,000,000 by new taxation, and $22,000,000 by increased inheritance taxes.

I am for a protective tariff. I believe in a protective tariff, not only for raising revenue but for the protection of American workmen and American industries—a protective tariff that will stimulate American business and one which will provide for enough revenue to run this Government; a protective tariff that will not lower the standard of living of the American workmen.

I believe that if the Democrats in control of this House would stop the wasteful extravagances we would not have to face this situation.

It is interesting to learn that exports from the United States have been averaging for the past six months more than $500,000,000 a month in value. The leading items were as follows:

Brass, and manufactures of	$164,876,044
Wheat	215,532,681
Flour	87,347,805
Oats	47,993,096
Automobiles, aeroplanes, and railway cars	167,743,608
Copper manufactures	173,946,226
Cotton, bales	374,186,247
Cotton manufactures	112,053,127
Explosives	467,081,928
Rubber	35,181,096
Iron and steel manufactures	621,209,453
Leather manufactures	146,613,815
Meat and dairy products	291,051,602
Oils, mineral and refined	166,423,230
Sugar	79,390,147
Tobacco	53,163,595
Wool manufactures	53,983,655
Animals	99,682,213

It is also interesting to learn that for 11 months in 1916 there was imported nearly $600,000,000 more than in the same period in 1913. There were also $100,000,000 less revenue collected this same period.

At the close of this European war I believe that our markets will be flooded with goods and that these same European countries will buy far less from us owing to the fact that they will become practically paralyzed as the result of the long war.

While the soldiers are fighting in the trenches there are millions of women at work in the factories. A great many of these women will retain their places after the war and will work for far less than is paid the men in these countries.

Unless we have a protective tariff we will be a dumping ground of all European nations.

Instead of helping and encouraging business in this country, this Democratic Congress is continually passing laws hindering

it. The successful business man is always being prosecuted and this bill which raises $910,000,000 seems to aim directly at him.

We should stop penalizing the business man and protect the workers and the industries, so that we can compete with the world when this war is over.

Business in this country to-day is good.

In my own particular district, which comprises 2 wards of Boston and 25 suburban towns and cities, prosperity is raging on every side. Workingmen are getting more money for their efforts than ever before. I do not see, however, that we should be misled regarding this prosperity.

A careful examination will show where this prosperity comes from. In my own particular district are large shoe factories, which are turning out millions of pairs of shoes for the European warring nations. The shoe factories that are not engaged in war orders are busy supplying shoes for our own demands.

All through my district machine shops are engaged in the making of shrapnel and other munitions, while the cotton and woolen factories are making clothing, army blankets, and so forth.

Last month our exports amounted to $517,000,000, while the high-water mark previous to the war was about $200,000,000.

See where the prosperity of this country is to-day.

At the Bethlehem Steel Works in Bethlehem, Pa., there are 50,000 extra men at work; at Hopewell, Va., there are employed 20,000 men making guncotton, and they are using a thousand bales of cotton a day.

Two years ago Hopewell, Va., was not on the map. At Eddystone, Pa., there are 42,000 men at work making rifles and sabers; at Bridgeport, Conn., 10,000 men are engaged in a new factory making rifles. The Du Ponts have 50,000 men making powder.

In all sections of the country the factories are enjoying prosperity, such as they have never dreamed of before. But what will happen to these men when the great war is over? Great Britain, France, and Germany have built thousands of factories, which there is no doubt but what they will operate when the war is over.

The industries of those foreign countries have not been destroyed, but their industrial efficiency has been increased manyfold.

We will lose a tremendous amount of foreign business when this war is over, and I believe that Congress should at least preserve for this country our normal domestic trade by imposing a protective tariff.

A protective tariff would tend to reduce the cost of living, as it would encourage domestic production to compete with foreign imports.

I believe that the Democrats are afraid at this time to increase the tariff, for they believe that it would be an admission of the failure of the Underwood bill.

To my mind, one of the most unbusinesslike propositions that I have had to vote on was the public-buildings bill. I opposed this measure last week because of the manner in which the bill was framed. I had an appropriation of $100,000 myself in this bill for a new post office. I believe that this post office is needed. However, in order to get this appropriation I would have had to vote for the whole bill which I believed contained a hundred items that were needless.

I believed that at this time the Government's money should be put to much better advantage, and for that reason I voted against the bill.

I want at this time to insert, as an extension of my remarks, the bill itself as reported from the Ways and Means Committee:

A bill (H. R. 20573) to provide increased revenue to defray the expenses of the increased appropriations for the Army and Navy and the extensions of fortifications, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I.—SPECIAL PREPAREDNESS FUND.

SECTION 1. That the receipts from the tax imposed by Title II and one-third of the receipts from the tax imposed by Title III of this act shall constitute a separate fund in the Treasury to be used only for the expenditures incurred under the act entitled "An act making appropriations for the support of the Army for the fiscal year ending June 30, 1917, and for other purposes," approved August 29, 1916; the act entitled "An act making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes," approved August 29, 1916; and the act entitled "An act making appropriations for fortifications and other works of defense, for the armament thereof, for the procurement of heavy ordnance for trial and service, and for other purposes," approved July 6, 1916, or any other act or acts subsequent thereto making appropriations for Army, Navy, or fortification purposes. In addition to such receipts from the taxes imposed under Titles II and III of this act, there shall be credited annually, beginning with the fiscal year ending June 30, 1918, to such separate fund, the sum of $175,000,000, such sum being the estimated additional revenue to be derived under the act entitled "An act to increase the revenue, and for other purposes," approved September 8, 1916, in excess of the revenue to be derived under then existing laws: *Provided*, That the Secretary of the Treasury may use such fund for other purposes, but such fund shall be reimbursed for any portion thereof so used.

TITLE II.—EXCESS-PROFITS TAX.

SEC. 200. That when used in this title—

The term "corporation" includes joint-stock companies or associations and insurance companies;

The term "United States" means only the States, the Territories of Alaska and Hawaii, and the District of Columbia; and

The term "taxable year" means the 12 months ending December 31, except in the case of a corporation or partnership allowed to fix its own fiscal year, in which case it means such fiscal year. The first taxable year shall be the year ending December 31, 1917.

SEC. 201. That in addition to the taxes under existing laws there shall be levied, assessed, collected, and paid for each taxable year upon the net income of every corporation and partnership organized, authorized, or existing under the laws of the United States, or of any State, Territory, or District thereof, no matter how created or organized, excepting income derived from the business of life, health, and accident insurance combined in one policy issued on the weekly premium payment plan, a tax of 8 per cent of the amount by which such net income exceeds the sum of (a) $5,000 and (b) 8 per cent of the actual capital invested.

Every foreign corporation and partnership, including corporations and partnerships of the Philippine Islands and Porto Rico, shall pay for each taxable year a like tax upon the amount by which its net income received from all sources within the United States exceeds the sum of (a) 8 per cent of the actual capital invested and used or employed in the business in the United States, and (b) that proportion of $5,000 which the entire actual capital invested and used or employed in the business in the United States bears to the entire actual capital invested; and in case no such capital is used or employed in the business in the United States the tax shall be imposed upon that portion of such net income which is in excess of the sum of (a) 8 per cent of that proportion of the entire actual capital invested and used or employed in the business which the net income from sources within the United States bears to the entire net income, and (b) that proportion of $5,000 which the net income from sources within the United States bears to the entire net income.

SEC. 202. That for the purpose of this title, actual capital invested means (1) actual cash paid in, (2) the actual cash value, at the time of payment, of assets other than cash paid in, and (3) paid in or earned surplus and undivided profits used or employed in the business; but does not include money or other property borrowed by the corporation or partnership.

SEC. 203. That the tax herein imposed upon corporations and partnerships shall be computed upon the basis of the net income shown by their income-tax returns under Title I of the act entitled "An act to increase the revenue, and for other purposes," approved September 8, 1916, or under this title, and shall be assessed and collected at the same time and in the same manner as the income tax due under Title I of such act of September 8, 1916: *Provided*, That for the purpose of this title a partnership shall have the same privilege with reference to fixing its fiscal year as is accorded corporations under section 13 (a) of Title I of such act of September 8, 1916: *And provided further*, That where a corporation or partnership makes return prior to March 1, 1918, covering its own fiscal year, and includes therein any income received during the calendar year ending December 31, 1916, the tax herein imposed shall be that proportion of the tax based upon such full fiscal year which the time from January 1, 1917, to the end of such fiscal year bears to the full fiscal year.

SEC. 204. That corporations exempt from tax under the provisions of section 11 of Title I of the act approved September 8, 1916, and partnerships carrying on or doing the same business shall be exempt from the provisions of this title, and the tax imposed by this title shall not attach to incomes of partnerships derived from agriculture or from personal services.

SEC. 205. That every corporation having a net income of $5,000 or more for the taxable year making a return under Title I of such act of September 8, 1916, shall for the purposes of this title include in such return a detailed statement of the actual capital invested.

Every partnership having a net income of $5,000 or more for the taxable year shall render a correct return of the income of the partnership for the taxable year, setting forth specifically the actual capital invested and the gross income for such year and the deductions hereinafter allowed. Such returns shall be rendered at the same time and in the same manner and form as is prescribed for income-tax returns under Title I of such act of September 8, 1916. In computing net income of a partnership for the purposes of this title there shall be allowed like deductions as are allowed to individuals in sections 5 (a) and 6 (a) of such act of September 8, 1916.

SEC. 206. That all administrative, special, and general provisions of law, including the laws in relation to the assessment, remission, collection, and refund of internal-revenue taxes not heretofore specifically repealed and not inconsistent with the provisions of this title are hereby extended and made applicable to all the provisions of this title and to the tax herein imposed, and all provisions of Title I of such act of September 8, 1916, relating to returns and payment of the tax therein imposed, including penalties, are hereby made applicable to the tax required by this title.

SEC. 207. That the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall make all necessary regulations for carrying out the provisions of this title, and may require any corporation or partnership subject to the provisions of this title to furnish him with such facts, data, and information as in his judgment are necessary to collect the tax provided for in this title.

TITLE III.—ESTATE TAX.

SEC. 300. That section 201, Title II, of the act entitled "An act to increase the revenue, and for other purposes," approved September 8, 1916, be, and the same is hereby, amended to read as follows:

"SEC. 201. That a tax (hereinafter in this title referred to as the tax), equal to the following percentages of the value of the net estate, to be determined as provided in section 203, is hereby imposed upon the transfer of the net estate of every decedent dying after the passage of this act, whether a resident or nonresident of the United States:

"One and one-half per cent of the amount of such net estate not in excess of $50,000;

"Three per cent of the amount by which such net estate exceeds $50,000 and does not exceed $150,000;

"Four and one-half per cent of the amount by which such net estate exceeds $150,000 and does not exceed $250,000;

"Six per cent of the amount by which such net estate exceeds $250,000 and does not exceed $450,000;

"Seven and one-half per cent of the amount by which such net estate exceeds $450,000 and does not exceed $1,000,000;

"Nine per cent of the amount by which such net estate exceeds $1,000,000 and does not exceed $2,000,000;

"Ten and one-half per cent of the amount by which such net estate exceeds $2,000,000 and does not exceed $3,000,000;

"Twelve per cent of the amount by which such net estate exceeds $3,000,000 and does not exceed $4,000,000;

"Thirteen and one-half per cent of the amount by which such net estate exceeds $4,000,000 and does not exceed $5,000,000; and

"Fifteen per cent of the amount by which such net estate exceeds $5,000,000."

SEC. 301. That the tax on the transfer of the net estate of decedents dying between September 8, 1916, and the passage of this act shall be computed at the rates originally prescribed in the act approved September 8, 1916.

TITLE IV.—MISCELLANEOUS.

SEC. 400. That the Secretary of the Treasury is hereby authorized to borrow on the credit of the United States from time to time such sums as in his judgment may be required to meet public expenditures on account of the Mexican situation, the construction of the armor-plate plant, the construction of the Alaskan Railway, and the purchase of the Danish West Indies, or to reimburse the Treasury for such expenditures, and to prepare and issue therefor bonds of the United States not exceeding in the aggregate $100,000,000, in such form as he may prescribe, bearing interest payable quarterly at a rate not exceeding 3 per cent per annum; and such bonds shall be payable, principal and interest, in United States gold coin of the present standard of value, and both principal and interest shall be exempt from all taxes or duties of the United States as well as from taxation in any form by or under State, municipal, or local authority, and shall not be receivable by the Treasurer of the United States as security for the issue of circulating notes to national banks: *Provided*, That such bonds may be disposed of by the Secretary of the Treasury at not less than par, under such regulations as he may prescribe, giving all citizens of the United States an equal opportunity therefor, but no commissions shall be allowed or paid thereon; and a sum not exceeding one-tenth of 1 per cent of the amount of the bonds herein authorized is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to pay the expenses of preparing, advertising, and issuing the same: *And provided further*, That in addition to such issue of bonds, the Secretary of the Treasury may prepare and issue for the purposes specified in this section any portion of the bonds of the United States now available for issue under authority of section 39 of the act entitled "An act to provide revenue, equalize duties, and encourage the industries of the United States, and for other purposes," approved August 5, 1909: *And provided further*, That the issue of bonds under authority of this act and any Panama Canal bonds hereafter issued under authority of section 39 of the act entitled "An act to provide revenue, equalize duties, and encourage the industries of the United States, and for other purposes," approved August 5, 1909, shall be made redeemable and payable at such times within 50 years after the date of their issue as the Secretary of the Treasury, in his discretion, may deem advisable.

CERTIFICATES OF INDEBTEDNESS.

SEC. 401. That section 32 of an act entitled "An act providing ways and means to meet war expenditures, and for other purposes," approved June 13, 1898, as amended by section 40 of an act entitled "An act to provide revenue, equalize duties, and encourage the industries of the United States, and for other purposes," approved August 5, 1909, be, and the same is hereby, amended to read as follows:

"SEC. 32. That the Secretary of the Treasury is authorized to borrow, from time to time, at a rate of interest not exceeding 3 per cent per annum, such sum or sums as, in his judgment, may be necessary to meet public expenditures, and to issue therefor certificates of indebtedness in such form and in such denominations as he may prescribe; and each certificate so issued shall be payable, with the interest accrued thereon, at such time, not exceeding one year from the date of its issue, as the Secretary of the Treasury may prescribe: *Provided*, That the sum of such certificates outstanding shall at no time exceed $300,000,000, and the provisions of existing law respecting counterfeiting and other fraudulent practices are hereby extended to the bonds and certificates of indebtedness authorized by this act."

RETURNS OF DIVIDENDS.

SEC. 402. That Title I of the act entitled "An act to increase the revenue, and for other purposes," approved September 8, 1916, be amended by adding to Part III a new section, as follows:

"SEC. 26. Every corporation, joint-stock company or association, or insurance company subject to the tax herein imposed, when required by the Commissioner of Internal Revenue, shall render a correct return, duly verified under oath, of its payments of dividends, whether made in cash or its equivalent or in stock, including the names and addresses of stockholders and the number of shares owned by each, in such form and manner as may be prescribed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury."

The Revenue Bill.

EXTENSION OF REMARKS

OF

HON. EDWARD COOPER,

OF WEST VIRGINIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 31, 1917.

Mr. COOPER of West Virginia. Mr. Speaker, representing what I believe is the greatest soft-coal producing district in the world, a district which furnishes the fuel that drives the wheels of industry in many parts of the Nation, a district giving employment to thousands of honest working men, I feel I should protest against the method of raising revenue proposed in this bill. Our industries in West Virginia do not desire to evade taxation, but we believe in equality of taxation. The people of my district believe in collecting the expenses necessary to run this Government at the customhouses, and not by the direct system of taxation that we now have on the statute books of this country. The people of West Virginia favor the indirect system of taxation, known as the "protective-tariff" system, the system of taxation under which West Virginia has prospered until to-day we are the second coal-producing State in the Union. We are opposed to this system of taxation which places a tax upon success, upon brains, upon industry, and upon enterprise.

The price to be paid for success under the Democratic direct system of raising revenue is an income tax of 2 per cent on the earnings of corporations; 50 cents on each $1,000 of the actual value of the stock of corporations; and then 8 per cent on the net earnings of corporations, after making certain allowances on account of legal interest and to evade the legal question of confiscation of property. It is apparent the framers of this bill intend to establish the theory that 8 per cent will finally be the legalized amount business will be permitted to earn in this country.

This class of legislation will do more to stop the wheels of industry than anything which has occurred in many years. Brains will not submit to the theory of taxation which brands enterprise as being allowed to earn only 8 per cent on its best endeavor when in the form of a corporation, and wealth, when standing alone, in an individual capacity, shall be relieved from all taxation. If it is fair to tax the stockholder of a corporation, it is equally fair to force the individual, when engaged in business as such, to pay tribute to the National Government, when it is well known the individual engaged in business as such, is, in many cases, far better able to pay taxes to the support of the Government than the stockholder of a corporation.

I believe the majority of the people in this Nation are in favor of the preparation now being made to defend this country against a foreign foe, and I feel to make the plan ring true with the real American spirit it should be paid for and fostered by all loyal citizens. Every American with earnings sufficient to keep the wolf away from his door will resent the attempt being made here to build up in this country a system of defense supported and paid for only by a selected few. The ordinary citizen will not feel the interest in our Army and Navy he would feel were he allowed to contribute his mite to the support of national defense.

This bill is supposed to raise the money necessary for our national defense, and not for the ordinary expenses of the Government. My experience is that the church that is built with the dollars collected from the churchgoing people is more successful than the church that is built by some wealthy man in the community. Even though a man may be so poor he can afford to pay but for one brick in the church, he feels an interest in the church to just that extent. His one brick paid for with the money made by honest toil represents as much to him as the thousand dollars contributed by a man fully able to pay the thousand dollars.

Under the plea of necessity, brought about by the system of preparedness adopted by the Congress of the United States as a national-defense system, we see the business interests of the Nation again made the target for a further onslaught on their respective industry, business sagacity, and success, again being picked out as an easy mark to make up a deficit caused by the failure of the Democratic method of raising revenue to run the affairs of the Government, all under an extravagant administration of governmental affairs.

We thought preparedness was a national spirit, a spirit that knew no North, South, East, or West, and the expenses to provide the country with an adequate and proper defense would be gladly borne by the entire country, and no discrimination would be attempted in placing the burden of taxation on the business of the country.

The business interests and the people had a right to expect that the Democratic administration would give aid and comfort only to meritorious legislation. All unnecessary appropriations could have been deferred until a later day. The Flood Control, Nitrate Plant, Armor Plate, Ship Purchase, and numerous other appropriation bills could easily have gone over until another term. In view of the unrest in Europe, the terrible conflict going on there, and the danger, as the President informed us, of the sparks blowing this way the good business foresight would most certainly have been to practice economy in all departments of the Government.

We have within a short time realized how simple and easy it is to collect revenues under our present system of taxation. The temptation is strong to ride the good old horse to death. An income tax of 1 per cent on the earnings of corporations

and individuals soon demonstrated to the eager ones how easy it would be to collect double the amount of taxation from this source by the simple method of increasing the rate to 2 per cent, and then how easy to collect more revenue from corporations by imposing a tax of 50 cents per one thousand on the actual value of the capital stock of corporations. Now it is proposed to go still further and impose an additional tax of 8 per cent on the net earnings of corporations, after allowing an exemption of $5,000, and dividends based upon 8 per cent of net earnings.

No account of the character of the business engaged in is taken into consideration. A coal mine operating in West Virginia to-day, after an expenditure of hundreds of thousands of dollars, and having, after years of unproductiveness, succeeded in placing the mine upon an earning capacity of 15 to 20 per cent, must pay its income tax, its capital-stock tax, and will under this bill, pay its excess profits tax before it will be allowed to pay a penny in dividends to its stockholders, notwithstanding the fact that it has been engaged in the business for a number of years and no dividends have been paid its stockholders since its organization. Under the dangers of coal mining an explosion may at any moment wipe out forever the investment of stockholders in a coal mine. No allowance whatever is made for a meritorious enterprise in the event disaster overtakes it.

Investment in a mining property is of a different nature than almost any other business. Every ton of coal or mineral taken from a mining property thereby reduces the value of the property to that extent. You can not mine your coal and have it too. In making allowances for fair earnings on the capital stock of such a corporation it is necessary to figure the life of the property, and unless the dividends earned will pay a fair return on the capital invested and return the capital itself within the life of the property the investment would be considered a poor one indeed.

The farmer with his bag of wheat sells it for $2 per bushel and gets away with the money free from tax under the provisions of this bill. The coal operator with his ton of coal, selling it for $2 per ton, must shake hands with the internal-revenue collector, open wide his books for information, and accept the mandate of the internal-revenue officer on all questions relating to the depreciation of his coal property. In the operation of the plant, in the event of accident to life or destruction of the coal plant by explosion or otherwise, the coal operator can rebuild his plant, answer in the courts for damages, for loss of life, or go into bankruptcy, and perhaps spend the remainder of his days in jail charged with criminal neglect of duty.

I wonder how long this form of taxation would endure if the tax were levied against farm products alone? It would be interesting to see the vote on the roll call on the passage of such a bill. Yet there is as much reason and justice in placing the tax against farm products as against the earnings of corporations. But, in my opinion, a tax placed either against farm products or earnings of corporations would be unjust.

The proposed tax is a tax on industry, a tax on thrift, a tax on enterprise, a tax on the man who by persistence opens the way, blazes the trail, builds railroads, opens mines and mills and industrial plants, risking all in order to develop business enterprise. It is a tax on the man who goes into the wilderness and by foresight, nerve, and energy shows to the world the possibilities hidden away in the hills and mountains, awaiting man's thrift and industry to uncover them. Surely a man who uncovers nature's wealth, after braving all, risking life, property, everything, is entitled to more than 8 per cent on such an investment.

Engineering versus Evolution in the Moral and Civic Uplift of Nations.

EXTENSION OF REMARKS

OF

HON. JOHN I. NOLAN,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 7, 1917.

Mr. NOLAN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an article having reference to a bill which I introduced (H. R. 8485) for specific training in the Bureau of Education.

The article is as follows:

ENGINEERING VERSUS EVOLUTION IN THE MORAL AND CIVIC UPLIFT OF NATIONS.

[By Wilson L. Gill, C. E., LL. B.]

The invitation to address the National Popular Government League furnishes the first occasion that has ever presented itself to me which seemed to demand or even to justify exactly such a statement as I am about to make, without seeming to be ostentatious and presuming beyond toleration. Certain occasions have been right for the presentation of one of these ideas and other occasions for others, but when I am asked to address a league of State and National associations, all seeking by various means to aid in developing a higher civilization, I feel impelled to say to you that however forceful and valuable your means may be, your ultimate object can not be reached without a general survey of the whole field, and such an application of engineering skill as is necessary to enable us to use to the best possible advantage every factor that exists or can be constructed.

In the course of my work and study as a civil and mechanical engineer and a lawyer, engaged in directing the building of railroad cars, etc., and the conduct of various mercantile establishments, I have made a number of discoveries and inventions which have seemed to me to be of importance. Among these is a group of a half dozen, without which the highest objects of your league can never be reached, for without them popular government can never be made entirely successful, peace at home and abroad can not be made permanent, and civilization itself can not be made to develop continuously and rapidly. There is an enormous force for good that has never yet been organized and utilized for the greatest good of humanity, which is within our reach, only waiting and begging to be used. I refer to the love, the innocence, and the energy of the entire volume of child life of all nations.

How an effective appeal may be made to this vast power has been a subject of my investigations and inventions, and though in the time allotted to me this evening I can not give the details of any, I will mention all six, in the hope that sometime your league may find the way to join me in the important work of developing them.

DEMOCRACY AN ART AND AN EDUCATIONAL FORCE.

This group of a half dozen discoveries and inventions is as follows:

First. Democratic citizenship is a practical art, which can be learned by the practice of the art itself under instruction, and not by academic or sentimental methods alone, of recitations, songs, salute to the flag, precepts, lectures, or sermons. While this same discovery may have been made by a thousand others a thousand years ago, no person previous to 1897 both made the discovery and then worked out a practical system for its application and persisted in pushing it until a large number of public schools put the system into successful operation. This system was at first called the school city. Now we call it the school republic or the boys' and girls' republic, and of this I am to speak to you for a few minutes, but first I will enumerate the remaining five of the half dozen subjects.

Second. Democracy can be used as a valuable educational force to aid an individual to form a strong, clean, efficient, independent character, always in the spirit of the "golden rule" and ready to cooperate effectively for every good purpose.

RIGHT TIME TO TEACH DEMOCRACY.

Third. The right time in an individual's life in which to begin his training in the responsibilities, rights, and pleasures of democracy is any time you can get him—the nearer the cradle the better. Long before a child enters the kindergarten at 4 years of age he is able and glad to respond to a reasonable democratic appeal to do right, and any successful kindergartner can teach to excellent advantage her little circle to make laws and enforce them, to elect officers to serve with enthusiasm and common sense. No later time is so good for the individual, but he had better have systematic training, under authoritative supervision, in the responsibilities of citizenship, in the last weeks of the last term of his senior year in college, than not at all. His entire following life will be more intelligent, forceful, and better in every respect because of it.

TEACH CHILDREN TO TEACH.

Fourth. Children, even the youngest children in the schools, can be taught to teach their classmates; that is, to convey to others the knowledge they have acquired, and to draw out from them an intelligent expression of the same and of other information. Whatever they learn to teach they understand better, and it is more at their command for every purpose. The power thus acquired is invaluable to the individual, whether he be a common day laborer, a mechanic, merchant, or professional man, a spinster or the mother of a family. It is at least as important as "the three R's." Lancaster a hundred years ago hovered near this truth, but did not seem to reach it. If he had done so, I think the ordinary educational conservatism could not have so completely defeated his excellent work. By means of this discovery all schools for children can be made more efficient for their purpose, and the more than $600,000,000 expended annually on the schools of our country can be made to do far more than double the service this amount is now giving.

EFFICIENT NORMAL SCHOOLS WITHOUT COST.

Fifth. The benefits for the public and for individuals that are derived from normal schools may be gained and greatly increased by a process in the public schools, just hinted at, which will nearly if not completely eliminate the cost of maintaining separate normal schools and this without increasing the cost of the public schools.

A CHILDREN'S PALACE.

Sixth. Any community which maintains public schools for 2,000 children or more can establish, without greater expense than that of properly housing them in one school, what might be called with propriety the children's palace, which can be made to serve the multiple purpose of a school for the children, both academic and industrial, in which every child may be helped to make himself in part, if not wholly, independent financially while still in school; a normal school; a free museum of child and home life, to which boys and girls, young men and women, mothers, fathers, and other members of the community could go for assistance in solving the social, industrial, mechanical, and other problems of child and home life.

I succeeded in getting a children's building established at the Chicago World's Fair to demonstrate this idea, and it accomplished my purpose to a considerable extent and made entirely evident, to all who were look-

ing for such lessons, that such a children's palace could be maintained in every city, performing all the functions of a public school with little or no expense beyond that of the cost of maintaining an ordinary public school for a like number of pupils, and also that it would prove to be a civilizer of greatest importance. Gen. Wood authorized me to solve this problem of a children's palace for Habana, and had our occupation of Cuba not been cut so short we should soon have had a splendid example of a children's palace, proving a blessing to the whole city and exerting a wholesome influence upon the people of the entire island.

SOCIAL AND CIVIC CONDITIONS.

On the side of destruction are drunkenness, robbery, murder; civic apathy of educated men, the selling of votes, bossism, and graft everywhere; prisons and insane asylums full; cold storage used to curse instead of to bless the people; strikes, riots, and banditry even to the limit of threatening the Government of our Nation; crime of every nature rampant; and an influx of people ignorant of our language and of our institutions. On the side of construction are schools, colleges, churches, the public press, and our American democratic government, all of which combined with all other good forces have failed to prevent conditions of poverty and crime being as bad as they exist to-day.

Of the constructive institutions the schools are vastly the greatest of all these constructive forces. Are they efficient for the prevention of social and civic apathy and crime in general? Certainly not. The government of the conduct of school children is the school's greatest implement and force for good or for evil. School government in our country, in Prussia, and in all other countries as far back as the history of schools runs has been and is monarchical.

Monarchy in school produces in most cases irresponsible subjection and obedience to force, and in the rest anarchy or the desire and inclination to avoid all obedience to authority, neither of which is compatible with the responsibility of democratic citizenship and government. Did our great-grandfathers recognize this and provide for it when they established the Government of the United States? They did not. They had not the experience that would enable them to anticipate the conditions which have developed. Has it been provided for since? It has not.

In Russia and in Prussia a ukase or an imperial decree can wipe out the sale of intoxicants and deal effectually with crime and inefficiency. The corresponding power in America is the judgment and action of the people, and the people have not been trained in the schools or elsewhere to deal with social and civic crime and inefficiency in such a way as to prevent conditions being as horrid as they have been and are to-day.

NEW CONDITIONS—NEW TREATMENT.

New conditions call for new treatment. The responsibilities of democratic citizenship call for training not in irresponsible subjection to monarchical government but the performance of responsible duties of democratic citizenship. The school republic provides for this. The children in a schoolroom are given printed directions for conducting their government, corresponding to a charter given by a State legislature to the people of a city. The teacher aids them in making the application of this to their daily experiences as he does the rules of arithmetic for the solving of mathematical problems. It is a method of training for the teacher to use, requiring not much intelligence or tact, but a great deal of interest and determination to make the best of it, such as is necessary for success in all other branches of school work. The children if normal can be counted on with certainty to do the rest, whatever may be their nationality, class, creed, or condition—kindergarten children or college students. But in this connection it is well to remember that the boy is father of the man and the little child is parent of the big child.

All honors to the school board, school committee, superintendent, principal, or teacher who will assume the responsibility of doing what is right by our people in this matter, but the fundamental and the final responsibility is not with our school men and women, but with the statesmen of our Nation.

They are the ones who should be familiar with the history of civilization and the developing of democracy and have the insight, foresight, and the force of character to make adequate provisions for the protection and developing of the institutions of our Nation, or, in other words, for responsible and efficient citizenship.

THE BOYS AND GIRLS' REPUBLIC.

I think the following incidents will help you to catch the spirit of this matter:

Tommy Jones, a 9-year-old newsboy, lived in a miserable alley in a near-by city. He smoked cigarettes and was unkempt and dirty. He had but small respect for the school and played truant to such an extent that he was a sore trial to the truant officer, who could not cure his habit of being irregular and tardy in his attendance at school. I organized his school as a republic. To the disgust of their teacher, the children of his room elected him to represent them in their legislature. At recess, after his election, he washed his face at a hydrant in the school yard and wiped it with his cap. Next day he was on time, clean, his hair brushed, buttons all on his clothes. The following day it was the same. His teacher remarked to the other teachers that he was as courteous as it was possible for a boy to be and actually studying for the first time in his life. She said, "The whole thing seems like a miracle, but it is too good to last." Six weeks after his teacher stood at his desk and remarked, "Tommy, I am proud of you. You are never absent or tardy any more. You are neat and polite as any little gentleman, and you have come from the very foot of the class to the head. I congratulate you, Tommy!" The little fellow looked up earnestly into her face and replied, "You know, Miss Sally, they expect so much of a member of the legislature."

TO PROTECT OUR COUNTRY FROM RAVAGES OF YELLOW FEVER.

Gen. Leonard Wood was in command of our Army at Santiago de Cuba. President McKinley cabled him to come to Washington. Arriving at the quarantine station in New York Harbor, he sent me a message asking me to meet him in Washington. I did so before breakfast the next day. He said, "The President has sent for me. I suppose it is to make me military governor of Cuba. If this guess is right, I shall have three problems of special importance to solve. The first is to clean Cuba and rid it of yellow fever, not so much as a philanthropy toward the Cubans as to protect the people of our Southern States from the annual threat of yellow fever, which always comes from a Cuban port. I know how to do that. The next is to get a citizenship that will keep it clean after we shall have cleaned it. Such a citizenship as they have in Mexico and Central America will not answer our purpose and we shall have just that or worse unless we make some forceful move to get something better. There is no direct way by which we can make any practical appeal to the large illiterate part of the population. I believe, however, that by the process you worked out in New York City we can get into every family that has a school child in it and with very considerable force. For this reason, if I get this appointment, I want you to go with me and take charge of the problem of citizenship. Will you do it?" I told him I would, and did so, in the pay of the War Department and with the title of general supervisor of moral and civic training.

Directly and indirectly I organized every public school in Cuba as a republic, of which the children were the citizens. There were over 3,600 schoolrooms. There were only the first four grades, but each year a new grade was added, so that when the government of the island was given over to the new Republic there were six grades. I say this to emphasize the fact that our work was chiefly in the primary grades.

THE GOLDEN RULE, A CIVIC RULE.

I told the Cuban children that there could be no thoroughly successful citizenship in Cuba or any other country unless it should be based upon the practice of the "golden rule." I told them that that rule means many things, but first, that they should be honest, just, and kind to one another in the school, at home, and everywhere; and, secondly, just as much, that they must be clean in every respect, their bodies, clothing, homes, streets, language, everything. This meant a great deal to them, for their streets were deep in filth, the buzzards being the only scavengers, and this they could not avoid tracking into their homes. Moreover, the street language of the boys was filthy beyond anything that one of our street urchins could ever imagine. Teachers and police could not check this filthy custom.

I suggested their adopting certain laws of conduct, and showed them how to elect legislative, executive, and judicial officers. With the greatest eagerness and enthusiasm they did as I suggested. They obeyed their laws, and their indecent language stopped instantly. They scrubbed themselves and ceased to litter the streets. Their enthusiasm for cleanliness was contagious and their parents caught it. Gen. Wood's health and cleanliness squads were at work everywhere. The streets were soon cleaner than I have ever seen in our American cities except those in the hands of Col. Waring. Inside of two years the yellow fever and plague of mosquitoes were gone. Gen. Wood was demonstrated to be not only a great physician, soldier, and executive officer, but a statesman also, and his power of seeing into the heart of things is what revealed to him the necessity of making use of the children to regenerate Cuba and prepare the people for citizenship in a democratic Republic. His work was cut too short. He should have had five years more, and he would have given to the world such an example of civilization as has been dreamed of but never realized.

MEXICO.

Should the Mexicans call on Gen. Wood as the one greatest living specialist in nation building to reconstruct their State, they should give him at least 10 years for the undertaking, and with his brief time in Cuba as their evidence they could rest assured that safety of person and property, of cleanliness, health, peace, justice, intelligence, and prosperity would come and abide with them permanently, and a chief element in these happy national conditions would be the training of every child in the wholesome practices of true democracy and in financial independence through reasonable training in productive industry. Since the beginning of the present strife in Mexico he remarked to a group of officers of the General Staff, "If Mexico had had the school republic in all her schools for 10 years, as we used it in Cuba, the present troubles would never have arisen."

A WARNING—DEPENDENCE V. INDEPENDENCE.

At this point I wish to warn you that in your endeavor to protect the children of our country from slavery in mills and mines that there is serious danger of overstepping the bounds of wisdom and of blocking the way for a greatly needed reform in educational methods in our country. We owe to every child the right to develop his own moral and physical strength and his own moral and industrial independence, and such assistance as he needs to develop the best that is in him.

Our schools with their present methods do much to bless the children, but I fear they do quite as much to handicap them. Of course, their intention is the very best, but ignorantly most schools attempt to do for the children what they should encourage them to do for themselves, and thus tend to break down rather than develop independence of character and the power of initiative. They tend to institutionalize the children as in a more marked way the ordinary orphan asylums and other boarding and Government Indian schools do, and thus bind upon them a heavy handicap or awful incubus from which many never fully free themselves, and they sink, morally unable to resist the curse of liquor, gambling, and dishonesty.

Hampton and Tuskegee have solved the problem of training in industrial independence, yet even as enlightened as they are they fail to develop that moral and civic strength and independence which is in their reach by means of a democratic school government, inculcating the correct spirit and training in the right civic practices of citizenship and American Government under wise instruction and supervision.

At Hampton and Tuskegee, if a building is to be erected or other work done, the pupils are employed and paid wages, and in turn they buy and pay for their clothes and food. They are given the natural incentive to work. They learn to work and to enjoy it, and their knowledge, skill, and character are all built up together. They appreciate the value of money, of their clothing and other property, of the food they eat, and the privilege of being educated. The chance to give them correct civic practice ought not to be wasted.

It is very different in an ordinary orphan asylum or Government Indian school. If a building is to be erected, a contract is given to some outside firm, and the pupils are denied this educational opportunity. The pupils work, but with no natural incentive—just because it is required of them. There is no connection between their work and their board and clothing. They work as slaves, not as freemen. I have seen Indian boys compelled to scrub the floors of a dormitory building twice in one day just to keep them busy, when there was much constructive work needed to be done, such as the boys could have done and would have been glad to do. In that same school, and it is typical, no boy had a spot he could call his own except three nails, one above the other, on which to hang his clothing. This room, for more than 50 boys, is only about 10 by 18 feet. At another place, in a half hour's stroll through a grove that belongs to the school, I found four new coats all issued to the boys within a week, and as I passed the refuse dump I saw a sleeve sticking out here and a collar there. I pulled them out and there were as many more coats of the same lot perfectly good. Moreover, the Indians are taught to live in dormitories, when there are opportunities to have them build and live in houses at the same schools. The Indian children are neatly dressed and generally well fed in the Government schools, but as supervisor at large of the Indian schools I have seen that their processes tend to destroy independence of character and all moral fiber. I have warned again

and again the successors of Indian Commissioner Valentine, but they treat the matter as a small joke.

This is but a hint at the moral and civic irresponsibility produced by bad methods. All children have the right to be trained into independence of character instead of irresponsibility, as is the case not farther away than the public schools right here in the District of Columbia.

NO REASONABLE EXCUSE.

There is no reasonable excuse for this conservatism, hanging onto the methods of past ages, training our children as irresponsible subjects of a monarchical school government, rather than as responsible citizens of a democratic Republic. This is no mere theory, but well-demonstrated practice. Children of every race have responded eagerly to this call of democracy. There is no trouble with the children, nor will there be with the teachers, when they know that they are required to use the methods of democracy. This does not require much skill or tact on the part of the teachers, but it does need as much interest and enthusiasm as is needed for success in any other school work. Reasonably skillful general supervision of the teachers is needed to keep them on the right road.

If this league is to be efficient in developing popular government, it must look after the schools, for day by day they are training the child population away from popular government instead of into responsible, democratic citizenship.

AN APPEAL.

As an engineer I have worked out this great problem of civilization, and I appeal to you to do what you can, through Congress, through the State legislature, and by all other public and private means, to support the work I have started, to help the general movement toward popular government and a better civilization in our own and all other countries by tapping and using that vast reservoir of power for good—the childhood of all nations.

Civil War Volunteer Officers' Retired List.

EXTENSION OF REMARKS
OF
HON. S. TAYLOR NORTH,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Monday, February 5, 1917.

On the bill (H. R. 386) to create in the War Department and the Navy Department, respectively, a roll designated as the "Civil War volunteer officers' retired list," to authorize placing thereon with retired pay certain surviving officers who served in the Army, Navy, or Marine Corps of the United States in the Civil War, and other purposes.

Mr. NORTH. Mr. Speaker, the volunteer officers whom this legislation will benefit have only a few short years with us, and we should not deny them any longer that which a former Congress promised.

There is a State-wide demand for this legislation in Pennsylvania. During the 1913 session of the Pennsylvania Legislature the house, of which I was a member, asked the senate to concur in a resolution, which they did on April 29, petitioning the Congress of the United States to enact this legislation.

I only know of three of these volunteer officers in my entire district who would be benefited by this act; however, there may be more. One of these officers wrote me that out of 35 officers of his regiment only 3 survive, and their ages average 83 years.

The one hundred and twentieth session of the House of Representatives of the State of Pennsylvania. Harrisburg, April 29, 1913. Concurrent resolution No. 5.

Whereas the Government of the United States, in securing volunteers for soldiers for the Civil War of 1861–1865, offered "the officers, noncommissioned officers, and privates organized in the Army, Navy, and Marine Corps shall in all respects be placed on the same footing as to pay and allowances of similar corps of the Regular Army"; and

Whereas the Congress of the United States passed acts of Congress on the 22d of July, 1861, and of the 3d of August, 1861, and at divers other times embodying and making pledges and promises aforesaid; and

Whereas by the pension laws of the United States, passed by the Congress of the United States, in existence and in force at this date, there is provision made for the redemption practically of the pledges and promises aforesaid in so far as the noncommissioned officers and privates are concerned, mentioned and characterized as such; and

Whereas there has been no provision made for the redemption of the pledges and promises aforesaid to the officers designated as such in the said act or any other acts of Congress contained: Now, therefore, by reason of the promises hereinbefore set forth, be it

Resolved (*if the senate concur*), That the Legislature of Pennsylvania approve of and recommend the Congress of the United States to pass an act of Congress providing for the institution of a roll designated "The Civil War officers' retired list," to be made and kept in the Department of War and the Department of the Navy, respectively, of the Government of the United States, authorizing and directing the placing thereon with retired pay all persons who were organized and served as officers in the Army, Navy, and Marine Corps of the United States, respectively, in and during the Civil War of 1861–1865, and will embody and provide for the redemption of the pledges and promises in said acts of Congress of 1861 and other acts of Congress aforesaid; and be it further

Resolved, That the above-named legislature urge and request the Members of the United States Senate from the State of Pennsylvania and each and every Member of the House of Representatives of the Congress of the United States from Pennsylvania to vote for and in favor of such act of Congress designated in the preceding resolution.

Resolutions Adopted by Both Houses of the General Assembly of the State of Delaware.

EXTENSION OF REMARKS
OF
HON. THOMAS W. MILLER,
OF DELAWARE,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 7, 1917.

Mr. MILLER of Delaware. Mr. Speaker, the Senate and House of Representatives of the General Assembly of the State of Delaware, at their session on Monday, February 5, 1917, adopted resolutions approving the action of the President of the United States in the present international crisis.

It is my pleasure to present these so that they may be inserted in the RECORD. Both resolutions were adopted unanimously, and as they express conclusively the views of the loyal and patriotic citizens of the State of Delaware, voiced by the General Assembly of the State, no further comment is necessary.

Senate concurrent resolution, General Assembly of the State of Delaware.

Whereas in the judgment of the President of our country, it has become necessary to sever diplomatic relations with a great country with which in the past we have ever maintained the most friendly relations; and

Whereas the people of the State of Delaware and our delegation in Congress, and the members of this general assembly, are divided between the great political parties; and

Whereas the State of Delaware occupies the high and exalted position of being the first State of the Union, in that it was the first to ratify the Constitution of the United States: Therefore, be it

Resolved by the Senate of the State of Delaware (*the House of Representatives concurring therein*), That we pledge to the President of the United States the loyal support of the State of Delaware in any action that may be taken by him in the crisis that now confronts our country; be it further

Resolved, That our Senators and Representative in Congress are hereby requested to cooperate with the President to carry into effect the spirit of this resolution; and be it further

Resolved, That the secretary of state send a copy of this resolution to the President of the United States and to our Senators and Representative in Congress.

House resolution, General Assembly of the State of Delaware.

Whereas the President of the United States, through his great love of humanity and his utter aversion to war, with all the suffering and sorrows that follow in its wake, has with infinite patience, tact, and diplomacy kept this country at peace with the world; and

Whereas the German Empire, notwithstanding the unspeakable horrors of the sinking of the *Lusitania*, whereby hundreds of innocent men, women, and children were sent without warning to a watery grave; and notwithstanding her repeated pledges since that dastardly tragedy that the rights of American citizens on the high seas would be respected in accordance with international law, has finally been compelled to throw off the mask and by her announcement to the United States Government that she intended to wage her relentless warfare of submarine frightfulness to the limit has left the President of the United States with only one course to pursue, now to sever all diplomatic relations with that Government: Now, therefore, be it

Resolved by the House of Representatives of the State of Delaware, That it highly commends the President of the United States for his patriotic action in severing all diplomatic relations with the Government of the German Empire, and we indorse what he is doing in his efforts to protect the rights, liberties, and lives of American citizens upon the high seas, in accordance with international law and the rights of humanity; and be it further

Resolved, That if it be necessary to use force in upholding this principle the State of Delaware will support our Chief Magistrate to a man.

Immigration.

EXTENSION OF REMARKS
OF
HON. PETER F. TAGUE,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 7, 1917.

Mr. TAGUE. Mr. Speaker, I rise to support the veto of the President on H. R. 10384, the Burnett immigration bill, as I feel that I would be remiss in my duty as a Representative of the people of my district, made up as it is of immigrants from all parts of the Old World, if I did not raise my voice in opposition to the passage of this bill and in support of this able veto. I fully agree with the President in his message to Congress on this all-important subject and have yet to hear ex-

pressed on this floor any argument that would justify this House in passing this bill over the veto.

I realize that many Members have made up their minds, and little could I say that would persuade them in changing their views. It is my contention, nevertheless, that if this bill becomes a law that the day is not far distant when those who vote to make it so will look to Congress to repeal the same. The criticism of the immigrant by many who have spoken is unjustified and unwarranted. It comes from those who know nothing of them and have not had the opportunity to live among them. They would have you believe that to be illiterate is a crime, while at the same time they will permit the thief, the crook, and the immoral man to come into this country simply because he can read and write.

Four times a bill similar to this has been vetoed by a President of the United States, who, having the interest of all the people at heart and realizing the injury that would come to the people of the Government by such a law, has expressed himself very strongly upon the subject.

On March 3, 1897, President Cleveland vetoed the immigration bill containing the illiteracy test, and the House by a vote of 193 yeas to 37 nays passed the bill over the veto. The bill was then sent to the Senate and was referred to the Committee on Immigration, where no action was taken up to the time of the adjournment of Congress.

On February 18, 1913, by a vote of 72 yeas to 18 nays, the Senate passed over the veto of President Taft an immigration bill containing this illiteracy test. The following day the bill was sent to the House where, by a vote of 213 yeas to 114 nays, the House refused to pass the bill over the President's veto. Again on January 29, 1915, President Wilson vetoed the immigration bill containing this illiteracy test and returned it to the House with the following strong message:

To the House of Representatives:

It is with unaffected regret that I find myself constrained by clear conviction to return this bill (H. R. 6060, "An act to regulate the immigration of aliens to and the residence of aliens in the United States") without my signature. Not only do I feel it to be a very serious matter to exercise the power of veto in any case, because it involves opposing the single judgment of the President to the judgment of a majority of both Houses of the Congress, a step which no man who realizes his own liability to error can take without great hesitation, but also because this particular bill is in so many important respects admirable, well conceived, and desirable. Its enactment into law would undoubtedly enhance the efficiency and improve the methods of handling the important branch of the public service to which it relates. But candor and a sense of duty with regard to the responsibility so clearly imposed upon me by the Constitution in matters of legislation leave me no choice but to dissent.

In two particulars of vital consequence this bill embodies a radical departure from the traditional and long-established policy of this country, a policy in which our people have conceived the very character of their Government to be expressed, the very mission and spirit of the Nation in respect of its relations to the peoples of the world outside their borders. It seeks to all but close entirely the gates of asylum which have always been open to those who could find nowhere else the right and opportunity of constitutional agitation for what they conceived to be the natural and inalienable rights of men, and it excludes those to whom the opportunities of elementary education have been denied, without regard to their character, their purposes, or their natural capacity.

Restrictions like these, adopted earlier in our history as a Nation, would very materially have altered the course and cooled the humane ardors of our politics. The right of political asylum has brought to this country many a man of noble character and elevated purpose, who was marked as an outlaw in his own less-fortunate land, and who has yet become an ornament to our citizenship and to our public councils. The children and the compatriots of these illustrious Americans must stand amazed to see the representatives of their Nation so resolved, in the fullness of our national strength and at the maturity of our great institutions, to risk turning such men back from our shores without test of quality or purpose. It is difficult for me to believe that the effect of this feature of the bill was realized when it was framed and adopted, and it is impossible for me to assent to it in the form in which it is here cast.

The literacy test and the tests and restrictions which accompany it constitute an even more radical change in the policy of the Nation. Hitherto we have generously kept our doors open to all who were not unfitted by reason of disease or incapacity for self-support or such personal records and antecedents as were likely to make them a menace to our peace and order or to the wholesome and essential relationships of life. In this bill it is proposed to turn away from tests of character and of quality and impose tests which exclude and restrict; for the new tests here embodied are not tests of quality or of character or of personal fitness, but tests of opportunity. Those who come seeking opportunity are not to be admitted unless they have already had one of the chief of the opportunities they seek, the opportunity of education. The object of such provisions is restriction, not selection.

If the people of this country have made up their minds to limit the number of immigrants by arbitrary tests and so reverse the policy of all the generations of Americans that have gone before them, it is their right to do so. I am their servant and have no license to stand in their way. But I do not believe that they have. I respectfully submit that no one can quote their mandate to that effect. Has any political party ever avowed a policy of restriction in this fundamental matter gone to the country on it, and been commissioned to control its legislation? Does this bill rest upon the conscious and universal assent and desire of the American people? I doubt it. It is because I doubt it that I make bold to dissent from it. I am willing to abide by the verdict, but not until it has been rendered. Let the platforms of parties speak out upon this policy and the people pronounce their wish. The matter is too fundamental to be settled otherwise.

I have no pride of opinion in this question. I am not foolish enough to profess to know the wishes and ideals of America better than the body of her chosen Representatives know them. I only want instruction direct from those whose fortunes, with ours and all men's, are involved.

WOODROW WILSON.

THE WHITE HOUSE, *January 28, 1915.*

On February 4, 1915, this bill came before the House by a vote of 261 yeas to 231 nays, and the House sustained the veto of President Wilson.

Again for the second time this bill comes before the House of Representatives with the veto of President Wilson, because it contains this objectionable illiteracy test.

To the House of Representatives:

I very much regret to return this bill (H. R. 10384, "An act to regulate the immigration of aliens to, and the residence of aliens in, the United States") without my signature. In most of the provisions of the bill I should be very glad to concur, but I can not rid myself the conviction that the literacy test constitutes a radical change in the policy of the Nation which is not justified in principle. It is not a test of character, of quality, or of personal fitness, but would operate in most cases merely as a penalty for lack of opportunity in the country from which the alien seeking admission came. The opportunity to gain an education is in many cases one of the chief opportunities sought by the immigrant in coming to the United States, and our experience in the past has not been that the illiterate immigrant is as such an undesirable immigrant. Tests of quality and of purpose can not be objected to on principle, but tests of opportunity surely may be.

Moreover, even if this test might be equitably insisted on, one of the exceptions proposed to its application involves a provision which might lead to very delicate and hazardous diplomatic situations. The bill exempts from the operation of the literacy test "all aliens who shall prove to the satisfaction of the proper immigration officer or to the Secretary of Labor that they are seeking admission to the United States to avoid religious persecution in the country of their last permanent residence, whether such persecution be evidenced by overt acts or by laws or governmental regulations that discriminate against the alien or the race to which he belongs because of his religious faith." Such a provision, so applied and administered, would oblige the officer concerned, in effect, to pass judgment upon the laws and practices of a foreign Government and declare that they did or did not constitute religious persecution. This would, to say the least, be a most invidious function for any administrative officer of this Government to perform, and it is not only possible but probable that very serious questions of international justice and comity would arise between this Government and the Government or Governments thus officially condemned should its exercise be attempted. I dare say that these consequences were not in the minds of the proponents of this provision, but the provision separately and in itself renders it unwise for me to give my assent to this legislation in its present form.

WOODROW WILSON.

THE WHITE HOUSE, *January 29, 1917.*

This message is now before you for consideration, and you are asked to decide this all-important question to-day. I believe that if the Members will take into consideration the importance of the step they are about to take they would stand by the President at this time.

I am opposed to the policy of this legislation and with its departure from the broad and liberal spirit which has hitherto guided our legislation on the subject, and I am also astonished that it should be seriously considered in this National Congress. Ignorance in the foreigner is a misfortune and not a crime. He is ignorant because it has pleased the Almighty to plant him on a barren soil and under an inclement sky, there to live in subjection to a cruel and wicked policy which has kept him in ignorance and darkness.

I would like to take those Members who are advocating this bill to my district. There they would find people of many nationalities—the Italian, Jew, Pole, Greek, Armenian, Hungarian, Irish, Scotch, French, and German—all taking advantage of the splendid institutions of our country. Many of them may have been illiterate, but by persistent efforts have not only educated themselves but are doing all in their power to educate their children. It is to these people that the future of the Nation looks, and they will not look in vain, as these immigrants love America for what she is and what she has done for them.

I will never vote to deny any man the protection of our laws and the benefits of our free institutions on the score of learning. The Committee on Immigration proceeds on the theory that vice and ignorance go hand in hand, and that in order to bar out the vicious it is necessary to bar out the ignorant. It neither requires statistics nor arguments to prove that the ignorant are more prone to vice than the learned, but it will require stronger argument than the friends of this legislation have so far advanced to convince me of the truth of their contention.

BOSTON, MASS., *January 31, 1917.*

Hon. PETER TAGUE,
Washington, D. C.:

The presidents of the Italian societies representing the Italian colony of Boston entirely protest against the literacy test bill, which not only injures the interests of the best immigrants but also the vital interests of this great country. Therefore we feel sure that, for the sake of humanity and justice, you will vote against said bill.

JOS. PISTORINO,
President for the Committee, 178 North Street.

BOSTON, MASS., *January, 1917.*

Hon. PETER F. TAGUE,
House of Representatives, Washington, D. C.

DEAR SIR: We, the undersigned, believing that immigration is needed for our agriculture, industries, and domestic service; believing also that existing laws are sufficient to bar out undesirable immigrants, such as diseased persons and criminals, and considering that the educational test and other like measures will tend to deprive the country of so many honest, sturdy workers, therefore we request you as our Representative in Congress to protest against the enactment of the Dillingham bill, which provides for the educational test, and we pray you to vote to sustain the President's veto.

THE SOUTH END YOUNG MEN'S HEBREW ASSOCIATION,
MAX GOLDMAN, *Secretary.*

BOSTON, *February 5, 1917.*

Hon. PETER F. TAGUE,
House of Representatives, Washington, D. C.

DEAR SIR: In behalf of the Associated Young Men's Hebrew Associations of New England I wish to thank you for your efforts in behalf of the immigrant, and, although unsuccessful, we will never forget your aid. I feel quite certain that if the Senate passes it you will have a chance in the future to take a leading part in a successful fight to repeal that un-American section relating to the literacy test.

Thanking you for all the past favors, and wishing you the greatest of success in this great hour of need, and assuring you that the Young Men's Hebrew Associations in your district are to a man strongly behind you, I am, with best regards to your secretary and yourself,

Sincerely, yours,

BENJAMIN F. EVARTS,
Director of the Department of Immigration and Naturalization of the Associated Young Men's Hebrew Association of New England.

HEBREW SHELTERING AND IMMIGRANT AID SOCIETY OF AMERICA,
Boston, Mass., January 22, 1917.

Hon. PETER F. TAGUE, M. C.,
Washington, D. C.

DEAR SIR: It is with a feeling of great pleasure that I take this opportunity of extending the thanks of the entire Jewish community to your good self for the kindness shown us by honoring us with your presence at our ratification meeting last evening, and your earnest words will ever remain in our memories. May you continue to be a factor in the great good you have constantly striven to do for the poor and oppressed.

Respectfully, yours, J. H. STONE, *Secretary.*

Legislature of the State of Nebraska Unanimously Indorses the Action of the President in Regard to Germany.

EXTENSION OF REMARKS
OF
HON. ASHTON C. SHALLENBERGER,
OF NEBRASKA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 7, 1917.

Mr. SHALLENBERGER. Mr. Speaker, I ask to extend my remarks for the purpose of inserting in the RECORD an article from the Daily Star, of Lincoln, Nebr., containing an account of the action of the Legislature of the State of Nebraska in unanimously indorsing the action of President Wilson in the matter of the international crisis with Germany:

DRAMATIC SCENE IN LOWER HOUSE WHEN NEWS BROKE—NEBRASKA LEGISLATORS STAGE A PATRIOTIC DEMONSTRATION IN SUPPORT OF PRESIDENT IN CRISIS—GERMANS PLEDGE LOYALTY—HOFFMEISTER, IN RINGING SPEECH, PRESENTS RESOLUTION APPROVING WILSON'S STAND—JOIN IN SINGING "AMERICA."

All differences of nationality and party were forgotten and swept aside when the members of the Nebraska House, acting from a common impulse of patriotism, pledged themselves unanimously, by rising vote, to the support of President Wilson in the new situation which has arisen between the United States and Germany.

Upon the joint motion of Representative Hoffmeister, himself a native of the Kaiser's realm, and Representative Peterson, the leader of the Republican minority, the house Saturday forenoon declared itself unreservedly behind the Government of the United States in any measures necessary to protect the rights and interests of American citizens and the honor of the American flag.

Led by Mr. Peterson, the legislators sang "America" and, upon his motion, the chief clerk of the house was instructed to telegraph President Wilson of the action that had been taken. As a further expression of its unity in standing behind the President, the house at 11 o'clock recessed until 1.30 p. m.

OUTBURST OF PATRIOTIC FEELING.

A score of speeches voicing the sentiment of undivided allegiance to the Stars and Stripes, and of loyalty to the Government in whatever steps it may deem necessary to maintain American rights and interests were made by different members. Each was followed by loud applause.

The most feeling speech of all was that of Mr. Hoffmeister, when he took the floor to move an amendment to the Lemar-Lampert peace resolution proposed on Friday. His voice shook with emotion as he said:

"It is with a sad heart that I move the adoption of this resolution. Blood ties have bound me to my mother country, and tears were in my eyes when I stood nine years ago upon the place where I was born. But, gentlemen, this is my country. I have three boys—all six-footers—and if necessary I will give them all to the service of the Nation and the defense of our flag. Yesterday I got word that my nephew, who like myself was born across the sea, has just been commissioned as a lieutenant in the Army of our country, the United States of America, and if he is called upon he will go and do his duty. I hope this resolution will be adopted unanimously."

TEXT OF THE RESOLUTION.

The amendment which Messrs. Hoffmeister and Peterson offered to the resolution introduced Friday and which the house adopted unanimously, is as follows:

"*Be it further resolved*, That while we are earnest in our desires for continued peace we do as representatives of the State nevertheless pledge to the President of the United States in the crisis at hand the loyal and undivided support of the entire citizenship of the State of Nebraska, of whatever political party, of whatever blood or place of birth, in whatever measures may be found necessary to maintain the right of Americans, the dignity of our Nation, and the honor of our flag."

GERMAN MEMBERS PLEDGE LOYALTY.

"I was born in Germany and lived there until I was 14 years old," said Jacob Sass, representative from Sarpy County. "It is hard for me to break the ties of my native land, but no matter what happens I am for the Stars and Stripes."

Mr. Greenwalt stated that he was a German, his father having been an officer in the German Army, but announced that in spite of everything he was an American. He still saw some chance of keeping out of war, declaring, however, that an American Army, fighting in the cause of liberty and justice and backed by 100,000,000 people, would be invincible if it should be necessary to fight.

Representative Hoffmeister, who fathered the declaration pledging support to President Wilson, was born in the German State of Brunswick and came to this country in 1879. His nephew, Herman C. Dempewolf, now in the United States Army, was also born in Brunswick and has been in the United States for six years. Neither of them ever served in the German Army. Dempewolf has been attached to an Engineering Corps at Vancouver, Wash., but has been transferred to an Infantry regiment at Fort Leavenworth, Kans., with the rank of lieutenant, and will soon join it there.

City Council Tells President That Cleveland Is With Him in Crisis.

EXTENSION OF REMARKS
OF
HON. HENRY I. EMERSON,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 7, 1917.

Mr. EMERSON. Mr. Speaker, I ask unanimous consent to extend my remarks by inserting in the RECORD a copy of the resolution adopted by the City Council of Cleveland, Ohio, as sent me by Hon. Harry C. Gahn, member of said council:

CITY COUNCIL TELLS PRESIDENT THAT CLEVELAND IS WITH HIM IN CRISIS.

Be it resolved by the Council of the City of Cleveland, State of Ohio, That we send word to the President of the United States that in the present national crisis the people of Cleveland are heartily with him and are ready to carry out his orders; and be it further

Resolved, That the text of this resolution be sent to the President by telegraph.

By a rising vote, council last night adopted the foregoing resolution, offered by W. F. Thompson. It was signed by Mayor Harry L. Davis immediately after passage. The text was then telegraphed to the President.

Councilman Harry C. Gahn moved its adoption, but insisted the people of Cleveland are not urging war.

"We ought to make it plain that we are in favor of peace rather than war," Mr. Gahn said. "We should urge the President to ask American citizens to keep off of boats in the danger zone unless it is absolutely necessary that they go on these boats."

Letter and Telegram From the Chamber of Commerce of Casey, Ill.

EXTENSION OF REMARKS
OF
HON. JOSEPH G. CANNON,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 7, 1917.

Mr. CANNON. Mr. Speaker, under the leave granted to me to extend by remarks in the RECORD I include a letter and telegram from the Chamber of Commerce of Casey, Ill., which is in the center of Illinois oil field.

The letter and telegram are as follows:

CHAMBER OF COMMERCE,
Casey, Ill., February 5, 1917.

Hon. JOSEPH G. CANNON, M. C.,
Washington, D. C.:

We inclose copy of telegram herewith.

It is our desire to assist the Nation in the coming crisis, and our level hay country offers a suitable place for an aviation camp. We can

give the free use of a tract of land near the city owned by the commercial club for the use of any buildings that may be needed.

We are located in the midst of the Illinois oil field, and our local refinery desires to herewith offer its plant and equipment to the War Department if it is found necessary.

We have several good business men located here who have spent their entire business life in the production of crude oil. They herewith volunteer their services, if needed, in the production, transportation, or operation of producing oil. Should the Government see fit to take over the crude-oil business, we can be depended upon to do our part.

We have considerable machinery and buildings that can be utilized in assembling and manufacturing many parts of aeroplanes. Our people will quickly respond to organizing our entire city of 3,000 people for any needed work.

We believe that the protection of the immense tanks of crude oil in Casey Township should have consideration. Fanatics with dynamite and a little fire could create great damages.

We desire to go upon record as being behind the President in condemning unrestricted submarine warfare. We shall do everything possible to uphold his actions that may be for honorable and just relations among the nations of the world.

Respectfully,

CHAMBER OF COMMERCE OF CASEY,
By WM. CHENOWITH, *President*.
H. C. LEGGETT, *Secretary*.

To Hon. JOSEPH G. CANNON, M. C.,
Washington, D. C.:

We tender the free use of our commercial club grounds at this place to the Government for an aviation field. Will organize our machine shops and mechanics as needed. In event the Government takes charge of our crude-oil fields, will furnish experienced men as a local board, who will serve without pay. Our local refinery holds itself ready and subject to control and desire of the Government. Protection of the millions of gallons of crude oil stored here should be considered.

CHAMBER OF COMMERCE OF CASEY, ILL.

The Immigration Bill and the President's Veto.

EXTENSION OF REMARKS
OF
HON. BENJAMIN K. FOCHT,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 1, 1917.

Mr. FOCHT. Mr. Speaker, every time this splendid, patriotic measure has been before this House during my eight years of service here I have given it the full support of my voice and vote. This is the first time I have not been able to secure at least a few minutes to argue in its behalf. I agree with those in charge that there is no need of consuming the time of the House and the taxpayers' money in any long argument by all or any Members of this body. It is the thirteenth time the proposition has been voted upon in this House during this generation and the fourth time it has come back from the White House on account of a presidential veto. The measure has passed Congress 4 times in recent years, each time with an increased vote; the Senate 12 times, and, as I said, this body 12 times. No other bill in this or any other country has such a legislative record, and taking advantage of the general leave to extend remarks in the CONGRESSIONAL RECORD I want to say that it is about time the people's will was done and this needed legislation was placed upon the statute books, where it belongs.

I agree that there is no need of argument. Every Member knows how he ought to vote and what his constituents want done, and so I am not objecting to the curb that has been put upon discussion at this time, and feel satisfied with bowing to the will of the Democratic leaders in this case, voting in favor of passing the bill over the President's veto, and taking advantage of the general leave to extend remarks in the RECORD in order to point out a few salient facts about the President's veto messages and about the provisions of this 65-page bill.

There is more misinformation and there have been more misstatements made about this bill than any other that has ever come before Congress, in my opinion. Sight seems to have been completely lost by both the President, the press, and the opposition, of the fact that this carefully prepared measure contains much legislation found absolutely necessary by a commission composed of six Members of Congress and three distinguished Federal officials and publicists, who spent a million dollars thoroughly investigating immigration conditions at home and abroad and who made a 42-volume report to Congress several years ago, recommending all the legislation contained in this 65-page bill.

The President in his veto message gives only two reasons for refusing to sign the bill, neither of which, in my humble opinion, are well founded. His veto message of last Monday, as well as his short veto message of two years ago, clearly shows that he is not familiar with the bill and entertains erroneous facts and opinions about it. For instance, in his veto message of January 28, 1915, President Wilson asserted that the bill "seeks to all but close entirely the gates of asylum which have always been open to those who could find nowhere else the right and opportunity of constitutional agitation," when, as a matter of fact, it is the first immigration bill and the first legislative proposal to legalize the right of asylum and the right of entry into this country of political refugees, for in section 3 of that bill and of this bill I find the following proviso:

> That nothing in this act shall exclude persons convicted of an offense purely political.

The President was equally in error in his assertion in the form of an interrogation that no political party had ever declared for the illiteracy test or restriction and had been commissioned with the control of the country's affairs, for as far back as 1896 the Republican Party, which was successful that year, declared in its national platform:

> For the protection of the quality of our American citizenship and of the wages of our workingmen against the fatal competition of low-priced labor we demand that the immigration laws be so extended as to exclude from entrance into the United States those who can neither read nor write.

And the Democratic Party, in its platform that very year, way back in 1896, went the Republicans one better in general terms, declaring:

> We hold that the most efficient way of protecting American labor is to prevent the importation of foreign pauper labor to compete with it in the home market.

Likewise in his message of January 30 this year, President Wilson, in the two reasons he gives for vetoing the bill, shows that he has been misled. He says that he can not sign the bill because the illiteracy test is no test of character and would result in a reversal of our policy and attitude toward immigration, and that, secondly, because the provision exempting religious refugees from the reading test would impose upon our immigration officials "an invidious function" of passing upon whether some law of some country or some overt act of some group of individuals within some country amounted to religious persecution.

Of course, every piece of new legislation, if it amounts to anything and is worth the time it takes Congress to pass it, must be a change in our attitude and legislative policy, and yet the President gives in his message of last week as the first of his two reasons for vetoing the immigration bill the excuse that the test "constitutes a radical change in the policy of the Nation which is not justified in principle." For nearly a half century Congress has from time to time passed immigration legislation restricting the entry of undesirables and objectionables. Not only has the Nation adopted a clearly restrictive attitude toward European immigration, but 30 years ago it put into force the absolute exclusion of Chinese coolie immigration. Gradually we have enacted one test after another, excluding physical, mental, and moral degenerates, until exclusion and restriction seem to me to have become the traditional policy of the American people. We compel our own native born to go to school to learn to read and write in order to better fit them for earning a living and for intelligently participating in our public affairs. It seems only fair and right that we should expect as much from adult foreigners in the matter of ignorance and intelligence as we compel of our own native born. I see nothing un-American or radical in principle in such an attitude toward ignorance, either in compelling our own native born to go to school or checking the entrance of illiterate adult foreigners until they learn to read 30 words in their own language.

It seems to me that the reading test is strictly in keeping with our public-school system principle, and I am glad to vote to thus recognize our public schools in a Federal statute. To exclude illiterate adults is in keeping with the immigration policy of this country during the last half century. We have enough ignorance and illiteracy already in this country without importing it by the hundreds of thousands annually, as we did before the war and certainly will after the present European conflict is ended. But the President writes, and many of the opponents of this splendid 65-page measure talk, as if the reading test were the only provision in the bill, when as a matter of fact it is only about one sixty-fifth part of the bill, and there is a whole grist of new legislation in it that was recommended by the Congressional Immigration Commission, excluding mental, physical, and moral degenerates, strengthening the administrative machinery for their exclusion, stiffening the white-slave-traffic law, fining the foreign steamship companies for bringing undeniably undesirable aliens here whose condition is ascertainable at the time of buying ticket, improving steer-

age conditions, and the like. All these changes have been urged also by immigration officials, as shown in the recent annual reports of the Bureau of Immigration, and even by State officials, New York State having sent experts here to testify before congressional committees and to ask that Congress either exercise its exclusive power to regulate foreign commerce (immigration) by excluding mental, physical, and moral defectives and delinquents that are under the present law being admitted and costing the taxpayers of New York State $5,000,000 a year, or reimburse the people of the Empire State the $5,000,000 annually spent for their care and keep.

Something has been said about the press of the country being opposed to this needed legislation. I have here a number of editorial expressions on the part of leading newspapers throughout the country, from which I will quote.

The Cincinnati Times-Star, reported to be owned by ex-President Taft's brother, had this to say, among other things, editorially:

The immigration bill passed the Senate. It has been said that President Wilson will veto it on account of his opposition to the literacy test. The large majority by which the bill passed the House and the overwhelming majority by which it passed the Senate give the friends of the bill hope that it may be repassed over the President's veto.

The present immigration bill is very similar to the one passed during the last administration. Ex-President Taft's veto was regarded by many good Republicans as the most serious mistake of his administration. Since that time the popular demand that something be done has become more plain. By vetoing the present immigration bill Mr. Wilson would be placing his own ideas above the desires of the country and the opinions of the brainiest and most patriotic men in Congress. * * * With the end of hostilities abroad, if we do not adopt further restrictive legislation, it is probable that the United States will be face to face with the greatest flood of immigration in its history.

There are many Americans who consider immigration as the most pressing problem at present confronting the country. If the immigration bill is unfavorably acted upon at the White House, this newspaper for one will pray for its passage in the House and Senate over the President's veto.

I have here one of several splendid editorials which appeared in the Chicago Tribune, from which I will quote:

Peace may not bring a new influx of aliens to America. Emigration from Europe may be checked by laws of the countries in need of workers or by the employment of workers at home at high wages. But, even if this prove to be true, and war taxes or bitter experience do not drive men and women from the Old World to our shores, the tide may set in from other regions, and these are precisely the sources from which the least assimilable elements are drawn.

The part of common sense and common caution for us is to close our gates for a time. All thinking Americans have become conscious in recent years that the process of Americanization is much slower and more superficial than we have flattered ourselves it was. The amount of foreign nationalism, of unassimilated immigration, is disquietingly, if not alarmingly, large. It is time to prevent our national composition from being further diluted. It is time to concentrate on an undisturbed process of American nationalism. * * * We can not afford to be full of domestic divisions and internal distractions, the only clay pot in the stream. We shall need a robust nationalism, a strong unity against the world.

And there is another reason for closing the gates. If we are to enter a period of prosperity, the fruit of our own energy, restraint, and pacific temper, we want that prosperity to be distributed among our own people, among those who have cast their lot with us and contributed to our welfare. The Tribune believes the absolute restriction of immigration would check the consequences of a reaction after the war and insure a widespread prosperity. It would protect our own wage earners from the competition of cheap labor, insure good wages and the American standard of living, and thereby stimulate the home market and bring about the broadest prosperity.

That is good Republican philosophy. As a Republican believing in a protective tariff, the rational levying of import duties with a view to developing our resources and protecting our working people and producing masses whether in the mine, at the factory, or on the farm, I must be and every Republican must be in favor of protecting our institutions, our industries, and our working people themselves from foreign cheap labor and its ruinous competition.

On the editorial page of the New York Times for last Monday, January 29, is an excellent article that was written by Prof. Robert De Courcey Ward, of Harvard University, which completely answers an editorial attack that has been referred to. I shall quote the entire article, it is such an able exposition of the merits of the immigration bill:

In your editorial article in the Times for January 20, entitled "The Labor Exclusion Bill," you say: "The new bill is against the entry of desirables. It is not in the interest of public morality or public health." May I take the liberty of differing with you most emphatically in this view? I hold no brief at this time for the reading test. It seems to me, however, that most of those who attack this provision have not read the immigration bill at all, and do not realize that this bill covers about 60 pages, of which perhaps 1 or 2 pages concern this much-discussed reading test. With the many exceptions which are made in its application, this provision seems to me a rather unimportant part of the bill as a whole. It certainly is not worth all the fuss that is being made over it. It is in regard to the rest of the bill—the 58 or 59 pages of it not concerned with the reading test—that I wish here to speak. The new bill, in my judgment, is distinctly not "against the entry of desirables," and as certainly is "in the interest of public morality and public health." I take the liberty of repeating here certain statements which I made in print in an article published within the last few months, because they express my views as well to-day as they did when they were first written.

The bill is the result of years of careful study of our present law and of its workings. Its provisions, as the Commissioner General of Immigration says in his annual report (June 30, 1915), "contain the result of experience and investigation—of the experience of administrative officers, extending over nearly a quarter of a century, in the enforcement of various statutes regulating immigration, and of the investigations conducted variously but in particular by the Immigration Commission, created under the act of 1907, the report of which, comprising 42 volumes, was submitted to Congress in December, 1910." The provisions of this bill "have been drawn with great care and thoughtfulness, * * * by them the law is made certain in its definitions and clear in its terms throughout—improvements badly needed in the existing statute." The bill aims to protect the United States against the incoming of mentally and physically and of otherwise unfit and undesirable aliens. It also embodies several provisions which would insure more humane treatment to the aliens themselves, and would, to a large extent, do away with the hardships involved in the deportation of aliens who are excluded at our ports by preventing their original embarkation.

To the excluded classes the bill adds persons of constitutional psychopathic inferiority and persons with chronic alcoholism. That many persons not properly certified as insane but who would, in many cases, become insane soon after arrival, could be kept out under the former provision, has long been the opinion of the physicians, the alienists, and the immigration officials who have made a special study of this subject, and who have for years strongly urged the inclusion of this new provision in our immigration law. Chronic alcoholics, who are surely undesirable members of our community, are often discovered by our examining surgeons, but as the law does not now state specifically that they shall be excluded they must in most cases be allowed to land. The new bill excludes vagrants, and persons afflicted with tuberculosis in any form. It also aims to prevent the embarkation of aliens afflicted with idiocy, insanity, imbecility, feeble-mindedness, epilepsy, constitutional psychopathic inferiority, chronic alcoholism, tuberculosis in any form, or a loathsome or dangerous contagious disease, by imposing upon steamship companies who bring such aliens a fine of $200, plus the amount paid by the excluded alien from his initial point of departure, provided the Secretary of Labor is satisfied that the defects could have been detected by a competent medical examination before embarkation. This is an excellent and humane provision, and would go far toward making these companies more careful in the sale of passage tickets, and would save many unfortunate aliens the disappointment and hardship of being deported after arrival at our ports. The present fine of $100 has been shown to be too small to be really effective, and does not cover as many cases as are above enumerated. A new fine of $25, plus the alien's transportation expenses, is established in cases of certain other less serious mental defects, and of physical defects which may affect an alien's ability to earn his living.

The new bill provides for a very much more thorough medical examination of arriving aliens, especially with reference to the detection of mental diseases; gives the medical inspectors the services of interpreters, and suitable facilities for the detention and examination of the aliens. This amendment has been strongly urged by the united action of the most important scientific bodies in the United States which deal with the prevention and treatment of mental disease, by State medical associations, and by individual physicians all over the country. That our medical inspection has been hopelessly inadequate has long been known to the experts. We have not had enough medical inspectors, and those on duty have not had adequate facilities for their work. Thus it has come about that, in spite of our law prohibiting the admission of insane and mentally defective aliens, our institutions have been filling up with just these people. As Dr. T. W. Salmon, of the National Committee for Mental Hygiene, has well said:

"There is no reason for the acceptance of a single insane or mentally undesirable alien except inability to determine his condition."

The new bill extends from three to five years the period during which aliens may be deported who at the time of entry belonged to one or more of the excluded classes, who have become public charges from causes existing prior to landing, and of some other groups. This extension of the deportation period has been urged, year in and year out, by heads of institutions who have had to do with dependent, defective, and delinquent aliens, by organized charitable societies, and, perhaps most strongly, by the former commissioner of immigration at the port of New York, the Hon. William Williams, whose thorough, sane, and illuminating study of the whole immigration problem has contributed greatly to our understanding of the subject. It is the conviction of all the unprejudiced experts who have studied this problem that a five-year deportation period would relieve our penal and charitable institutions of an enormous financial burden, reaching into the millions of dollars, and would rid our communities of large numbers of defectives who otherwise would remain here, many of them a burden upon State or city, and many of them starting long lines of defective and delinquent children.

The new bill strengthens the provisions of existing law regarding the "white slave" traffic, makes the inspection of steerage quarters more thorough, compels steamship companies when deporting aliens to give such aliens as adequate quarters as those for which they paid on the voyage to this country, makes possible the expulsion from the country of alien anarchists and criminals, even when they have become such after entry, and in many other ways provides for the welfare of the alien as well as for the welfare of the United States.

I confess that I can not see how you can regard a bill which embodies the many excellent provisions here very briefly referred to as directed "against the entry of desirables," and as "not in the interest of public morality or public health."

I have here an editorial from the leading Boston paper, the Boston Evening Transcript, of February 2, 1917, as follows:

[From the Boston Transcript, Feb. 2, 1917.]

LOOKING TOWARD RESTRICTION.

The prevailing sentiment of the American people in the matter of the restriction of immigration is likely to have its way, in spite of repeated presidential vetoes. The House of Representatives has passed the immigration bill, with its exclusion of immigrants who can not read in their own language, over President Wilson's veto, by 25 votes more than a two-thirds majority; and as the Senate's vote for the

bill was 64 to 7, the upper House will undoubtedly follow the lower House's suit. There has long been this practical unanimity, taking the country through, in favor of some form of restriction, but a certain fear of alienating the foreign vote in the cities has withheld the House from going to the extent of disregarding the presidential opposition, which is in every case based on what may be called the eastern need of labor in constructive enterprises as well as upon conservative misgivings as to denying the traditional doctrine that America must always be the refuge of the poor and the oppressed of all nations. But we have long since abandoned that doctrine with regard to the poor and the oppressed of Asia, and there is certainly no constitutional reason why we should not pick out the poor and oppressed that we want, even when it comes to immigration from Europe.

The real sentiment which lies at the bottom of the strong congressional support for the literacy test is the belief that some form of restriction must be applied, and no other form being apparently available except that along the line of education, this must be adopted if any is adopted.

But perhaps more representative and much more authoritative from a newspaper or editorial standpoint, in so far as such is in point and material, is the editorial utterances of a periodical like the Saturday Evening Post, of Philadelphia, which has a circulation of over 2,000,000 copies a week and practically goes into every home and is read at every fireside. It was only a few months ago that the following editorial appeared in that conservative and representative periodical—a periodical which unquestionably voices the people's wishes:

THE LITERACY TEST.

In the 10 years 1905–1914 a little over 10,000,000 immigrants reached the United States. A few less than 175,000 were debarred from landing, mainly on account of physical and mental defects proscribed by the present law. Because the inspecting force at Ellis Island was insufficient, tests for mental defects at least have been superficially applied. More scientific examination on a given day disclosed 72 feeble-minded applicants, of whom only 8 had been detected in the regular course. Superficial inspection unfortunately is likely to be more or less a standing condition. But 2,300,000 of these immigrants, by their own statements, were unable to read or write. Probably tests would have disclosed a greater number. It is this 23 per cent or upward of illiterates whom the literacy test in the Burnett bill would exclude.

No possible scheme of exclusion that reaches beyond imbeciles can work with ideal perfection. Any possible scheme must set up an arbitrary standard. We debar the immigrant who can not exhibit a few dollars of cash; but the man with $10 may lose it before night and become a public charge, while the man with empty pockets may in the same time find a good job. The consumptive may recover and be a most useful citizen. The murderer may repent and become a light to the community. So in any individual case the illiterate immigrant may be more desirable than the literate; but there is a broad warrantable presumption that the man who can not read or write is either very stupid or has grown up under poor social and political conditions, with a low standard of living, and is less desirable than the literate man. Practically the whole question is, Do we want any real restriction upon immigration or a wide-open—white—door?

Ten million immigrants in 10 years is too large an order for any national digestive apparatus. The fact that many of them return to Europe affects the essential problem but slightly. (June 24, 1916.)

Essentials for Rural Credit Law.

EXTENSION OF REMARKS
OF
HON. WILLIAM H. MURRAY,
OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 8, 1917.

Mr. MURRAY. Mr. Speaker, I avail myself of the privilege of extending my remarks on the proposed rural-credit legislation by printing a speech delivered on the 11th day of February, 1915, at the Farmers' Union Conference called by President C. S. Barrett at the Powhatan Hotel, Washington City. The speech as reported by the Farmers' Union reporter, is as follows:

"Mr. MURRAY. Mr. Chairman and gentlemen, I shall be as brief as possible to express my views as to a proper rural-credit bill, and that, too, without reference to the speech of President Barrett or the statement made by Mr. Mobley. In my opinion, a rural-credit bill must be written having regard for the following details and principles:

"First. It must be independent of and have no connection with the regional reserve system or any regional reserve bank and must be independent of the Regional Reserve Board.

"Second. It must be under the control of the farmers or of the Government. The former control, in my opinion, is wisest.

"Third. It must be so framed that it will not require subscriptions of stock, because the farmer can not and will not subscribe stock.

"Fourth. It must have no dividends or profit-taking provisions, but the bill must absolutely prohibit such declaration of dividends or profit taking. This to insure lowest rate of interest.

"Fifth. It should make no distinction as to amount in acreage or in value of a loan upon farm lands, but should have a gradation as to the amount that can be loaned on the valuation. To illustrate, when a man buys a small tract of land and intends it for his home, and intends to reside or does reside upon it, say an amount of 40 or 80 acres, he should be permitted to borrow at least 90 per cent of the value of the land stripped of the improvements; otherwise there will be very little opportunity for a poor man to buy a home. To illustrate, if the law should provide that a thousand-dollar farm home was a reasonable home for a farmer, it ought to provide that he might borrow in the beginning $900 with which to pay for this home. Most men could raise $100, but he could not raise half, or $500, and begin the improvements on his home.

"Then, when a loan is sought to be secured upon a larger acreage, provision should be made that up to a certain limit, say $5,000, the farmer could borrow 50 per cent of the value of the land, and that when a loan is to be made in excess of $5,000 he could borrow but 40 per cent of the valuation. I think it extremely unwise to attempt to limit the amount that can be borrowed, because it invites opposition to your measure and final defeat, and would not encourage home owning.

"It must be remembered that 'agrarian' political parties are seldom successful, even for a short while, and this rural credit is wholly an 'agrarian' policy, and if you do not provide both for the landless man and at the same time the man with large acreage you invite defeat. You may overcome this by limiting the amount that may be loaned upon the larger tracts and thus have all owners of agricultural land lined up for your policy. It must be remembered also that when a loan is made to the amount of 90 per cent, provision must be written in the law whereby the rural-credit association, who jointly stand responsible for the payment of the loan, shall have some authority to prevent waste by the owner, just as they have in Europe.

"Now, as to governmental aid. This is desirable, but not essential. Personally, I would rather secure the advantages I have just enumerated and not have any governmental aid than to lose either and secure governmental aid, because in the end your rural-credit system would be subject to the control of commercial banking.

"In the matter of securing the loans, this will have to be done either by a reserve fund or by the guaranty of the Government, and it will be impossible ever to secure the guaranty of the Government. I think the Government could be induced, like Germany has, 'to loan' to the association (I will call it a loan in order to meet the objection of the commercial banker), such loan to be without security, a sum sufficient to create this reserve fund and make it clear to the money lender that the land plus the reserve will always be sufficient to guarantee the payment of the loan upon any particular tract of land. This will insure the ready sale of the 'debentures' or bonds.

"I shall not discuss my method of how I provide a rural-credit association (not a bank) to be the voluntary organization of the farmer and at the same time relieve him from the necessity of subscribing stock, because it takes too much time to do so, but this, in my opinion, is easy of accomplishment. In fact, I think all of the details along the line of the principle that I have here laid out are easy of accomplishment.

"I warn you that any rural-credit system that is satisfactory to the farmer will be difficult of passage, but to-day there is a greater probability of doing so than there was 12 months ago. The farmers must realize the wisdom expressed by Gen. Albert Pike in his work Morals and Dogma when he said: 'Reforms in republics are slow of attainment. First, there must be a propagation of the reform; second, a disagreement as to the objects to be attained and as to details surrounding an agreed object; third, the people must come together for discussion and then deliberation; and in the end the reform may be destroyed by too much deliberation, while a wise and honest monarch can put in operation a reform to the satisfaction of everybody even when the great body of the people will not understand the philosophy of the reform, while the people must be brought to understand its philosophy before they will agree upon a plan.' We have just reached the period of 'disagreement' in the progress toward rural-credit legislation.

"Now, in conclusion, you may rest assured that I am ever ready to do all I can to promote rural-credit legislation. I discussed this question in my campaign in 1910, and again in 1912 in Oklahoma. The subject is not new to me, but to my notion the great problem will be to reach something upon which those in authority will agree.

"Now, just a word as to home ownership. Home ownership can not be brought about by one law, but it requires a group of laws, just as any other policy, which together constitute a policy, and in this case it will require such group of laws not only on the part of the Federal Government, but on the part of

the State governments as well, and the farmers themselves should begin an agitation of a uniform group of State laws, looking toward one object—easy method of acquiring homes. Among these are as follows:

"The State should not tax mortgages on real estate because in the end the borrower must pay the tax. The State ought not to tax the full value of land where purchased on credit, because it discourages credit sales and credit sales are essential to the poor man trying to buy a home, but tax laws should be revised so as to provide that the man who buys a home on credit shall not be compelled to pay on that home any more in taxes, except the amount of equities he owns in it. To illustrate: Suppose he buys a home worth $1,000 and he has paid $500 upon it. He should not be assessed upon $1,000 worth of land, but the assessment should be for $500 worth, the amount he actually owns. Nearly all of the States do tax to the full value, and the poor man is obliged to pay taxes on something he does not own. At the same time the mortgage is taxed and this becomes a double burden, discouraging such sales. Another policy should be provided, and must be provided by State law, and that is the working out of a provision whereby the titles can be known without depending upon the 'opinion' of some lawyer, which may be a good opinion or may not be worth the paper it is written upon. The title to land should be known to a certainty, and that can be done by the adoption of the Torrens Land Registration System.

"Had I the time, I should be pleased to discuss other issues, or laws, all grouped together forming the one policy making for home ownership."

In discussing the question of betterment of farm life, I will attempt to speculate and to "drop" into poetry. So wide is the vision that expands before the mental eye of the effect of the wholesome policy of farm betterment, and particularly the increase of farm-home owners, that I may be pardoned to digress long enough to quote the following poem:

TENNYSON'S LOCKSLEY HALL.

For I dipt into the future, far as human eye could see;
Saw the vision of the world, and all the wonder that would be;

Saw the heavens fill with commerce, argosies of magic sails,
Pilots of the purple twilight, dropping down with costly bales.

Heard the heavens fill with shouting, and there rained a ghastly dew
From the nations' airy navies grappling in the central blue.

Far along the world-wide whisper of the south wind rushing warm,
With the standards of the peoples plunging thro' the thunderstorm;

Till the war drums throbbed no longer, and the battle flags were furled
In the parliament of man, the federation of the world.

There the common sense of most shall hold a fretful realm in awe,
And the kindly earth shall slumber, lapt in universal law.

Yet I doubt now thro' the ages one increasing purpose runs,
And the thoughts of men are widened with the process of the suns.

Knowledge comes, but wisdom lingers, and I linger on the shore,
And the individual withers, and the world is more and more.

Thro' the shadow of the globe we sweep into the younger day;
Better fifty years of Europe than a cycle of Cathay.

Catching the spirit of the last couplet, I had rather say:

Better fifty years of rural credit than a whole century of tenant agriculture.

Revenue Bill.

EXTENSION OF REMARKS
OF
HON. SEWARD H. WILLIAMS,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 1, 1917.

Mr. WILLIAMS of Ohio. Mr. Speaker, I shall vote against this revenue bill for the reason that it is discriminatory, unjust, and imposes a system of double taxation. It is absolutely un-American.

It is claimed by the majority members of the Ways and Means Committee in their report on this bill and it is stated on the floor of the House that—

this legislation is made necessary because of the urgent need of funds with which to meet the extraordinarily large appropriation for the Military and Naval Establishments and fortifications.

On page 2 of the majority committee report accompanying this bill we find this statement:

Estimated deficit in the general fund June 30, 1918, $302,389,939.

Now let us see whether it is necessary to impose additional direct taxes upon the people, as proposed in this measure, to meet the expenditures for the "Military and Naval Establishments and fortifications." There has been incurred by the administration extravagant expenditures which no business concern would tolerate in face of an increasing deficit in the Treasury. Among these items may be mentioned:

For the Mexico adventure to "get Villa"	$162,000,000
For the Vera Cruz expedition	25,000,000
For the Alaskan Railroad	35,000,000
For purchasing ships	50,000,000
For new offices	45,000,000
For nitrate plant	20,000,000
For purchase of Danish West Indies	25,000,000
Total	362,000,000

Making a total of $362,000,000, or $60,000,000 more than the estimated deficit in the United States Treasury at the close of the fiscal year 1918, according to the statement of the majority members of the Ways and Means Committee, as set forth in their report before referred to.

It is for these items of expense that the people are to be made to pay through a system of direct and double taxation, as proposed in this bill. But even with these extravagancies, at a time above all others when economy ought to be practiced, let me call the attention of the Members to the fact that had the rates of the last Republican tariff law been in operation there would have been received into the United States Treasury through our customhouses a sum not less than $520,000,000 in excess of the amount which was received under the present tariff act; so that there would have been a surplus of over $200,000,000, in spite of all of these expenditures, instead of a deficit of $300,000,000.

It can not be successfully contended that with the rates of the last protective tariff in force the amount of imports would have been decreased during this period, for the reason that the war has created abnormal demands upon our manufactured articles and a proportionate increase in demand for raw materials entering into these manufactured articles, and a consequent increase in the price of the imported articles. Then, too, the protective tariff would serve the double purpose of raising revenue and of protecting the industries and the working men and women after the close of the war, when conditions become normal and we are not making munitions of war, against an influx of foreign-made goods. By this means only can we prepare ourselves commercially to meet postwar conditions. With this matter in view, on the 17th day of January I introduced in the House a resolution requesting the Ways and Means Committee to consider the propriety of restoring the rates of duties carried in the last protective tariff measure rather than to resort to the imposition of additional direct taxes. The resolution provides as follows:

Whereas the Treasury of the United States is threatened with a constantly increasing deficit, and additional means are being contemplated for the purpose of raising sufficient funds with which to pay the expenses of the Government; and

Whereas experience has proven that the levying and collecting of income taxes is the most expensive system in its administration, while the levying and collecting of customs is the least expensive in its operation of all systems of raising revenue; and

Whereas the United States Tariff Commission has not yet organized; and

Whereas it is evident that the Government of the United States must prepare to meet a gigantic commercial struggle which now threatens and will involve our country seriously upon the close of the European war; and

Whereas this situation can be met successfully through the operation of a tariff sufficiently hight to protect the industries of the United States, the workingmen, and the people generally: Therefore be it

Resolved, That the Ways and Means Committee be requested to consider and report to the House of Representatives a bill repealing the act of October 3, 1913, entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes," and restoring the provisions of the tariff act of August 5, 1909, entitled "An act to provide revenue, equalize duties, and encourage the industries of the United States, and for other purposes," with such alterations as conditions may warrant.

While this resolution was referred to the Ways and Means Committee, the minority members of that committee had no opportunity to confer formally with the majority members relative to formulating a revenue measure.

The restoration of the rates of the act of August 5, 1909, as provided in this resolution would raise in custom duties from now until June 30, 1918, upon the present amount of imports, an additional sum in excess of the amount proposed to raise by direct taxation in the pending revenue bill. The introduction of this direct-taxation measure is a confession on the part of the majority party of the failure of the operation of the Underwood tariff law and is a repudiation of that plank in the Democratic platform of 1916, which reads:

We reaffirm our belief in the doctrine of a tariff for the purpose of providing sufficient revenue for the operation of the Government economically administered, and unreservedly indorse the Underwood tariff law as truly exemplifying that doctrine.

As the Democratic Party, in passing the Underwood tariff law, failed to observe the plank in its platform of 1912, which reads:

We recognize that our system of tariff taxation is intimately connected with the business of the country, and we favor the ultimate attainment of the principles we advocate by legislation that will not injure or destroy legitimate business—

so has the party failed to raise "sufficient revenue for the operation of the Government economically (?) administered." It was claimed by the advocates of the Underwood tariff act at the time of its passage that it would do two things—first, "it would reduce the cost of living," and, second, "it would raise revenue sufficient to run the Government."

If these prophesies have been fulfilled why seek to impose additional direct taxes on the people?

Resolutions Adopted by the Legislature of California.

EXTENSION OF REMARKS

OF

HON. JOHN E. RAKER,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 8, 1917.

Mr. RAKER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the resolutions adopted by the Legislature of California.

The resolutions are as follows:

Assembly joint resolution 1.

Adopted in assembly January 22, 1917.

B. O. BOOTHBY,
Chief Clerk of the Assembly.

Adopted in senate January 25, 1917.

CLIFTON E. BROOKS,
Secretary of the Senate.

This resolution was received by the governor this — day of ———, A. D. 1917, at — o'clock — m.

ALEXANDER MCCABE,
Private Secretary of the Governor.

CHAPTER —.

Assembly joint resolution 1, relative to the loaning of the funds of the postal-savings banks directly to public-school districts.

Whereas the Federal Government has in its postal-savings department more than $100,000,000, which money is being loaned to banks and banking institutions at 2½ per cent interest, bonds of school districts being acceptable as security for such loans: Now, therefore, be it

Resolved by the assembly and senate jointly, That our Senators and Representatives in Congress be requested to use all honorable means to secure the passage of laws whereby a portion of the funds of the Postal Savings Bank may be loaned directly to the public-school districts.

C. C. YOUNG,
Speaker of the Assembly.
WM. D. STEPHENS,
President of the Senate.

Attest:
[SEAL.]

FRANK C. JORDAN,
Secretary of State.
By FRANK H. CORY,
Deputy.

Assembly joint resolution 3.

Adopted in assembly January 24, 1917.

B. O. BOOTHBY,
Chief Clerk of the Assembly.

Adopted in senate January 25, 1917.

CLIFTON E. BROOKS,
Secretary of the Senate.

This resolution was received by the governor this — day of ———, A. D. 1917, at — o'clock —. m.

ALEXANDER MCCABE,
Private Secretary of the Governor.

CHAPTER —.

Assembly joint resolution No. 3, relative to the early completion by the United States of hydrographical work on the Pacific coast, and asking that adequate appropriations be made for forwarding the work as speedily as possible.

Whereas more than 60 per cent of the Pacific coast is not yet charted; and

Whereas the hydrographical work of the Coast and Geodetic Survey is far from complete on said Pacific coast; and

Whereas the nature and action of many coast currents are not yet thoroughly understood; and

Whereas shipping and commerce is rapidly increasing on the Pacific coast and ocean; and

Whereas many wrecks have occurred, causing a large loss of human life and involving a great loss of property, not only to private persons or firms, but to the United States Government as well, to wit, in the loss of some of the finest ships of the Navy; and

Whereas this loss of human life and property has been caused largely by reason that the greater portion of said Pacific coast is not charted and that the action and nature of many of the coast currents are not properly understood: Therefore be it

Resolved by the assembly and senate, jointly, That the Legislature of the State of California hereby respectfully memorializes the Congress of the United States for the early completion of the work of charting the Pacific coast and the hydrography work of the Coast and Geodetic Survey on said coast, to carry out all measures necessary for such work, and to make adequate appropriations to forward said work as speedily as possible; and be it further

Resolved, That the Secretary of Commerce be requested to take the necessary measures for hastening the charting and hydrography work on the Pacific coast; and be it further

Resolved, That our Senators in Congress be instructed and our Representatives requested to use all reasonable means to secure the action desired in this matter for the purpose aforesaid; and be it further

Resolved, That the chief clerk of the assembly be, and he is hereby, instructed to forward a copy of these resolutions, respectively, to the President of the United States, the Secretary of Commerce, the respective Houses in Congress, and to each of our Senators and Representatives in Congress, including those to assume office on March 4, 1917.

C. C. YOUNG,
Speaker of the Assembly.
WM. D. STEPHENS,
President of the Senate.

Attest:
[SEAL.]

FRANK C. JORDAN,
Secretary of State.
By FRANK H. CORY,
Deputy.

Assemly joint resolution 5.

Adopted in assembly January 25, 1917.

B. O. BOOTHBY,
Chief Clerk of the Assembly.

Adopted in senate January 26, 1917.

CLIFTON E. BROOKS,
Secretary of the Senate.

This resolution was received by the governor this — day of ———, A. D. 1917, at — o'clock — m.

ALEXANDER MCCABE,
Private Secretary of the Governor.

CHAPTER —.

Assembly joint resolution No. 5, relative to a measure pending in Congress, known as H. R. 19291, for the promotion of reclamation of arid and swamp lands, and memorializing Congress for the passage of the bill.

Whereas there has been introduced in the House of Representatives by Mr. SMITH of Idaho a bill known as H. R. 19291, and in the Senate by Mr. CHAMBERLAIN, known as S. 7487, which proposed bill is as follows:

"A bill (H. R. 19291) to promote the reclamation of arid and swamp lands in the United States, and for other purposes.

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That beginning with July 1, 1917, there shall be paid out of the receipts of the reclamation fund the sum of $500,000 per annum into a special fund in the Treasury of the United States, to be known as the reclamation guaranty fund, until such reclamation guaranty fund reaches a total of $10,000,000, to be used to reimburse the general funds of the Treasury of the United States for any costs, losses, or expenses not otherwise provided for, which may be incurred under the provisions of this act. Should said reclamation guaranty fund ever become exhausted in the payment of obligations incurred under the provisions of this act, then from such time the sum of $1,000,000 shall be paid each year out of the receipts of the reclamation fund until such reclamation guaranty fund again reaches the sum of $10,000,000.

"SEC. 2. That when the Secretary of the Interior, pursuant to the provisions of the reclamation act of June 17, 1902, and acts amendatory thereof and supplementary thereto, hereinafter referred to as the reclamation law, shall have determined that the construction of a project or unit of a project for the reclamation of arid and semiarid lands is practical and advisable, or if he shall determine that any project for the drainage of any swamp lands is practicable and advisable, and shall have approved of the construction thereof under the provisions of this act, the Secretary of the Interior is authorized to enter into contract or contracts with an irrigation or drainage district or districts, including such lands which are duly organized under the laws of the State or States in which such lands are located, and thereafter to provide for the construction of the necessary works under the provisions of this act for the reclamation of such lands.

"SEC. 3. That when such district or districts shall have duly voted and issued bonds bearing interest at a rate to be fixed by the Secretary of the Interior, not to exceed 4 per cent per annum, in sufficient amount to cover the cost of such project as estimated by the Secretary of the Interior, and the legality and validity of such bond issue shall have been duly confirmed by the courts in the manner provided by the State laws and upon the execution of contract or contracts between the district or districts and the Secretary of the Interior, he is authorized to accept such district bonds and deposit the same with the Secretary of the Treasury, who shall collect the principal and interest thereof and apply the same to the payment of the principal and interest of the certificates of indebtedness hereinafter authorized: *Provided,* That the total face value of such irrigation or drainage district bonds accepted by the Secretary of the Interior shall not for any one project exceed the sum of $25,000,000.

"SEC. 4. That upon the receipt by the Secretary of the Treasury of such district bonds he shall issue certificates of indebtedness of the United States in amount equal to the face value of such district bonds and bearing interest at the same rate, in such form as he may prescribe and in denominations of $50 or multiples thereof, the principal and interest to be payable in gold coin of the United States, the principal and interest thereof to become due not less than 60 days after the due date of the principal and interest of the corresponding district bonds, respectively. Such certificates of indebtedness shall run for the same period as the corresponding district bonds.

"SEC. 5. That from time to time, as funds may be required by the Secretary of the Interior for construction purposes, such certificates of indebtedness shall be disposed of by the Secretary of the Interior, under such rules and regulations as he may prescribe, giving all citi-

zens of the United States an equal opportunity to subscribe therefor, but no commission shall be allowed, and the aggregate issue of such certificates shall not exceed the amount of the district bonds deposited with the Secretary of the Treasury, and shall in no event exceed the sum of $25,000,000 for any one project, and the proceeds from the sale of such certificates of indebtedness shall be deposited in a special project fund to be used in carrying out the provisions of this act for said project.

"SEC. 6. That the Secretary of the Interior is hereby authorized to expend the moneys in any such project fund for constructing the necessary works in the same manner and under the same conditions as expenditures are provided for in the said reclamation law, which shall be applicable to the said works in all respects, except as herein specifically modified.

"SEC. 7. That should a surplus remain from the proceeds of the sale of such certificates of indebtedness issued in connection with any project after the construction of the works provided for in the contract or contracts, such surplus may be used in the construction of additional works in connection with said project provided for by supplemental contract or contracts, or the same may be used in the operation and maintenance of the works of the project or credited as payment of interest on the district bonds issued on account of said project until exhausted. All contracts hereunder with such districts shall limit the expenditures to be made by the United States to the proceeds of the certificates of indebtedness issued on account of bonds for such district or districts and may provide for the issue and deposit of additional bonds should the bonds originally deposited prove insufficient in amount. If, in the opinion of the Secretary of the Interior, sufficient funds are available in the reclamation fund, the construction of the proposed works for the reclamation of arid or semiarid lands within the States named in the reclamation law may be paid wholly or in part out of the reclamation fund, and the said reclamation fund shall be reimbursed for any sums so used therefrom.

"SEC. 8. That the certificates of indebtedness herein authorized shall be exempt from taxes or duties of the United States as well as from taxation in any form by or under the State, municipal, or local authority, and a sum not exceeding one-tenth of 1 per cent of the amount of the certificates of indebtedness issued under this act is hereby appropriated out of the said reclamation fund to pay the expense of preparing, advertising, and issuing the same: *Provided*, That the reclamation fund shall be reimbursed for such expenditure out of the proceeds of the sale of such certificates of indebtedness, which expense shall be charged to the district or districts in the same manner as all other expenses in connection with the construction of the project works.

"SEC. 9. That should the collections of principal or interest on any district bond issue deposited with the Secretary of the Treasury be insufficient to meet the payment of the principal or interest of the corresponding certificates of indebtedness, then the general funds of the Treasury shall be reimbursed for any such deficiency out of the reclamation guaranty fund, and should any such defaulted bond, interest or principal, be collected after such reimbursement of the general fund, then such collection shall be credited to the said reclamation guaranty fund.

"SEC. 10. That upon default of any installment of the principal and interest of any district bond so accepted and deposited the Secretary of the Interior may declare the entire amount of such issue in default, and through the Attorney General of the United States may cause suit to be instituted for the collection of the amount in default of principal or interest or the entire amount of such bond issue, principal and interest, and the Attorney General shall, upon request of the Secretary of the Interior under this act, cause proceedings to be commenced for the recovery of said amounts within 90 days from the receipt of the application at the Department of Justice.

"SEC. 11. That unentered public lands of the United States proposed to be irrigated or drained under any project under the provisions of this act shall be divided into farm units of areas which, in the opinion of the Secretary of the Interior, may be reasonably required for the support of a family upon the lands in question, and the Secretary of the Interior is hereby authorized to have such farm units appraised and from time to time to advertise and sell the same in such portions or units of the project as he shall deem advisable at public auction for cash to the highest bidder at not less than the appraised value thereof, not more than one farm unit being sold to any one person, and such sale shall be subject to the conditions hereinafter provided in regard to the reclamation and drainage thereof. Should any such land remain unsold at such public auction it may thereafter be sold at private sale for cash at not less than the appraised value, and should any such land remain unsold at private sale it may be reappraised from time to time at intervals of two years and sold at public auction or private sale, as in this section provided.

"SEC. 12. That for lands so sold contracts of sale shall be issued subject to the condition that within two years after the date of notice by the Secretary of the Interior that water is available for the irrigation of such farm unit, or drainage capacity is available therefor, that the purchaser shall have cleared (where clearing is required), drained, cultivated, prepared for irrigation or agricultural uses in the manner required by the Secretary of the Interior at least one-eighth of the irrigable or reclaimable acreage of such farm unit and made proof of the irrigation or drainage thereof satisfactory to the Secretary of the Interior; one-fourth of the irrigable or reclaimable acreage shall be reclaimed and drained within three years, three-eighths within four years, and one-half within five years after the date of such notice by the Secretary of the Interior. Upon proof satisfactory to the Secretary of the Interior of the reclamation and drainage of one-half the irrigable or reclaimable acreage at any time before or after said period of five years patent shall issue to the purchaser or his assignee holding an assignment duly filed in the local land office, but should such purchaser fail to make proof in any year of the irrigation, drainage, and reclamation of the acreage as herein required or to make proof of the irrigation, reclamation, and drainage of one-half the irrigable and reclaimable acreage within a period of 10 years, then such contract, together with all payments made thereon, shall be subject to forfeiture by the Secretary of the Interior, and the land shall revert to the United States to be again appraised and sold in like manner as hereinbefore provided.

"SEC. 13. That from the money received from such sales of land the expense of appraisement and sale paid from the reclamation or project fund shall be deducted, and the balance shall be turned into the reclamation fund and may, in the discretion of the Secretary of the Interior, be used in the construction of proposed projects either under this act or under the reclamation law.

"SEC. 14. That the unpatented lands of the United States within the limits of any district with which contract is made by the Secretary of the Interior shall be subject to the provisions of the act entitled 'An act to promote the reclamation of arid lands, approved August 11, 1916 (39 Stats., 506).'

"SEC. 15. That the Secretary of the Interior is hereby authorized to perform any and all acts and to make such rules and regulations as may be necessary and proper for the purpose of carrying the provisions of this act into full force and effect"; and

Whereas the passage of such bill would be of inestimable benefit to the State of California in aiding in the reclamation of its arid land:

Resolved, That the Senate and Assembly of the State of California respectfully request and urge the Congress of the United States to pass the said bill; and be it further

Resolved, That our Senators and Representatives in Congress be urged to use all reasonable means to secure the passage of this bill; and be it further

Resolved, That copies of this resolution be sent to the Senators and Representatives in Congress of California and to the President of the United States.

CHAPTER. —.

Assembly joint resolution 11, relative to the improvement of Crescent City Harbor.

Whereas there has been introduced in the Congress of the United States a bill carrying an appropriation of $390,000 for the improvement of Crescent City Harbor; and

Whereas the shipping interests of the Pacific coast greatly need a harbor midway between the Golden Gate and the mouth of the Columbia River and halfway between Mexico on the south and Canada on the north, into which coastwise vessels may enter with safety in time of storm or in time of distress; and

Whereas a large area of country in northern California and southern Oregon will be greatly benefited by such improvement and the commerce of the United States greatly increased from the now dormant natural resources in mines, horticultural products, agricultural products, and the wonderful timber resources of that country; and

Whereas 140,000 people who live in the territory to be benefited by it are demanding the improvement of Crescent City Harbor; and

Whereas 60,000 square miles of territory in northern California, northern Nevada, southern Oregon, and southern Idaho will be directly benefited by the improvement of this harbor; and

Whereas Rogue River Valley alone will enjoy a saving in freight rates of $7,000,000 a year on 18,000,000 boxes of fruit when the present plantings are in full bearing and the harbor at Crescent City is improved; and

Whereas 84,000,000,000 feet of merchantable lumber will find its way to Crescent City Harbor from the United States forest reserves, provided the harbor is improved, which would mean at least $84,000,000 for the Government from stumpage and $840,000,000 for the people who fell the timber, handle the logs, and manufacture and move the lumber; and

Whereas it is estimated that private parties and corporations own at least 120,000,000,000 feet of timber in this territory, which if manufactured and moved to market would mean over $200,000,000 to the owners and the men who do the work; and

Whereas 1,000,000 tons of copper ore have been blocked out within 60 miles of Crescent City Harbor, which can be profitably moved only with harbor and railroad facilities, which would amount to a million-dollar business, and as yet this section of country has not been thoroughly prospected for minerals; and

Whereas when the sea walls have been completed, according to the engineers' report, the harbor will have an entrance 40 feet deep at low water and a width of 1,000 feet, there will be a strip of water from 500 to 2,000 feet wide and over a mile long, 30 feet deep and over; and

Whereas Crescent City Bay, with the proposed sea walls completed, would be a harbor of refuge for all coastwise craft, and could be economically deepened and widened to make room for a large fleet of heavy-draft vessels; and

Whereas this bay is halfway from San Francisco to the mouth of the Columbia River, and is midway between Canada on the north and Mexico on the south, its geographical location, therefore, especially fitting it for a naval base, and its close proximity to the Coast Range of mountains to the south and east and the high islands 2 miles to the north admirably fitting it for inexpensive defense; and

Whereas the Board of Engineers for Rivers and Harbors has reported favorably upon the project; and

Whereas the resources of an empire await this harbor improvement; and

Whereas the people of Del Norte County, Cal., have provided $100,000 to be used by the Government engineers in the proposed work: Now, therefore, be it

Resolved by the Assembly and the Senate of the Legislature of the State of California, jointly, That our Representatives and Senators in Congress be, and they are hereby, urged and requested to use all honorable means to procure the passage of said bill providing for the improvement of Crescent City Harbor; and be it further

Resolved, That the chief clerk of the assembly be, and he is hereby, directed to forward a certified copy of these resolutions to each of our Representatives and Senators in Congress.

CHAPTER —.

Assembly joint resolution No. 12, relative to the recession to the State of California by the United States of the right to use any part of the bed of Lower or Little Klamath Lake for the storage of water connected with the operations of the Reclamation Service of the United States, and the recession to said State of all the right, title, interest, and claim of the United States in and to any and all lands uncovered by the lowering of the water level of said lake, or surrounding or connected with said lake, ceded to the United States by an act of the Legislature of the State of California approved February 3, 1905.

Whereas the Legislature of the State of California passed an act, approved February 3, 1905, of which the following is a copy:

"CHAPTER VI.

"An act authorizing the United States Government to lower the water levels of any or all of the following lakes: Lower or Little Klamath Lake, Tule or Rhett Lake, Goose Lake, Clear Lake, situated in Siskiyou and Modoc Counties, and to use any part or all of the beds of said lakes for the storage of water in connection with the irrigation and reclamation operations conducted by the Reclamation Service of the United States; also ceding to the United States all right, title, interest, or claim of the State of California to any lands uncovered by the lowering of the water levels of any or all of said lakes not already disposed of by the State. (Approved Feb. 3, 1905.)

"The people of the State of California, represented in senate and assembly, do enact as follows:

"SECTION 1. That for the purpose of aiding in the operations of irrigation and reclamation conducted by the Reclamation Service of the United States, established by the act of Congress approved June 17, 1902 (32 Stat., 388), known as the reclamation act, the United States is hereby authorized to lower the water levels of any or all of the following lakes: Lower or Little Klamath Lake, Tule or Rhett Lake, Goose Lake, and Clear Lake, situated in Siskiyou and Modoc Counties, as shown by the map of the United States Geological Survey, and to use any part or all of the beds of said lakes for the storage of water in connection with such operations.

"SEC. 2. And there is hereby ceded to the United States all the right, title, interest, or claim of this State to any lands uncovered by the lowering of the water levels of any or all of said lakes not already disposed of by this State; and the lands hereby ceded may be disposed of by the United States free of any claim on the part of this State, in any manner that may be deemed advisable by the authorized agencies of the United States, in pursuance of the provisions of said reclamation act: *Provided*, That this act shall not be in effect as to the lakes herein named which lie partly in the State of Oregon until a similar cession has been made by that State." And

Whereas the Reclamation Service of the United States has not during the 12 years which have elapsed since the approval of the aforesaid act lowered the water level of said Lower or Little Klamath Lake, or used the bed of said lake for the purpose of storing water to use in connection with the reclamation of the land adjacent to said lake, and there are no indications that the Reclamation Service intends to ever reclaim the land, thereby accomplishing the purposes of the Legislature of the State of California as expressed in said act approved February 3, 1905; and

Whereas there is a large body of swamp and overflowed land surrounding said lake in Siskiyou County, unfit for cultivation without reclamation, upon the title to which a cloud has been cast by the ambiguous wording of the above-mentioned act, which it is necessary to remove before such land can be successfully thrown open to entry, reclamation, and cultivation: Therefore be it

Resolved by the assembly and senate jointly, That the Legislature of the State of California respectfully request our Senators and Representatives in Congress to use their influence and to take all proper means to have a bill introduced and passed by Congress and approved by the President of the United States ceding back to the State of California the right to use all or any part of the bed of Lower or Little Klamath Lake for the storage of water connected with the operations of the Reclamation Service of the United States, and also ceding back to the State all the right, title, interest, or claim of the United States in or to any of the lands surrounding or connected with said lake in Siskiyou County, ceded to it by the above-mentioned act of the Legislature of California, to the end that such lake, water, and lands shall be returned to said State, as they were prior to the approval of said act of the legislature approved February 3, 1905, and be governed by the general laws by which they were governed prior thereto, reserving, however, to the United States the right to lower the water level in said lake as provided in said act approved February 3, 1905.

CHAPTER —.

Senate joint resolution No. 3, relative to the establishment of definite lines of division between Federal and State taxes, and the calling of a congress of the States to consider conflicting jurisdictions of the Federal and State Governments.

Whereas in the exercise of its taxing power the Federal Government is embracing the sources of revenue heretofore not availed of by that Government; and

Whereas there exists a line which separates the taxable units that equitably and logically may be left solely to State taxation from the units logically belonging to the broader Federal jurisdiction; and

Whereas the establishment of some reasonable line of division giving to the States sole taxing authority below such line and to the Federal Government sole taxing authority above such line would cure much of the trouble existing because of conflict of jurisdiction between States, would relieve the tension between Federal and State Governments; would result in great economy in the levying and collection of taxes, and would relieve the growing dissatisfaction on the part of the taxpayer resulting from irritating and expensive duplication of accounts and reports and double taxation: Now, therefore, be it

Resolved by the Senate and Assembly of the State of California, jointly, That we respectfully urge upon the Congress of the United States and the legislatures of the several States the need of holding a congress of the States to consider the subject of Federal and State sources of revenue, with the object of adopting and urging upon the Congress of the United States a definite policy in the segregation of State and Federal revenue; and we urge the legislatures of the other States to provide for attendance of representatives at such congress; and be it further

Resolved, That the President of the United States be invited to appoint a representative and that both Houses of the Congress of the United States be invited to appoint representatives to attend such conference; and be it further

Resolved, That the governor of the State of California is hereby requested to urge the governors of other States to recommend favorable action and to arrange for the time and place of such national meeting; and that the governor of California be authorized to appoint delegates to represent the State of California at such conference; and be it further

Resolved, That a copy of these resolutions be forthwith transmitted by the secretary of the senate to the President of the Senate of the United States and to the Speaker of the House of Representatives of the United States, a copy hereof to each Member of Congress from the State of California, and a copy to the president of the senate and to the speaker of the house of representatives of each of the State legislatures in session at this time.

CHAPTER —.

Senate joint resolution No. 4, relative to amending the act of Congress approved February 28, 1891, providing for an exchange of lands between the United States and the State of California.

Whereas there is now pending in the Congress of the United States H. R. 15096, by SCOTT FERRIS, to amend the act of Congress entitled "An act to amend sections 2275 and 2276 of the Revised Statutes of the United States, providing for the selection of lands for educational purposes in lieu of those appropriated" (act of Congress approved Feb. 28, 1891, 26 Stats., p. 796), and to authorize an exchange of lands between the United States and the several States, including the State of California; and

Whereas the legislation has the approval of the Department of the Interior and the Department of Agriculture, and also of the various States involved; and

Whereas the Department of the Interior has for many years withheld from certification the greater part of the lieu lands selected by the State of California, owing to a doubt and uncertainty as to the proper construction and interpretation of said act of Congress of February 28, 1891, and has determined to withhold further approvals of State selections based on the exchange provisions of said act of Congress pending further and remedial legislation; and

Whereas this situation has resulted in delay and hardship to the State of California and to the purchasers of lieu lands situated in this State and the other States involved, and calls for action which will enable the United States and the States to adjust and settle the school land grants, and said H. R. 15096 will accomplish this object if enacted into law; and

Whereas there remains to be listed to the State of California by certification approximately 320,000 acres of the public domain of the United States selected by the State of California under the authority granted by said act of Congress approved February 28, 1891, for which lands the State of California has issued certificates of purchase to over 2,100 State applicants, but final evidence of title can not be issued to them until the selected lands are conveyed to the State of California by the United States, and which lands, if conveyed by the proper listing and certification from the United States to the State of California, will become subject to taxation: Now, therefore, be it

Resolved by the Senate and Assembly of the State of California, jointly, That our Senators and Representatives in Congress be, and they are hereby, urged and requested to take all proper means to expedite and secure the passage and enactment into law of the said H. R. 15096; and be it further

Resolved, That the secretary of the senate be, and he is hereby, directed to transmit copies of these resolutions forthwith to each of our Senators and Representatives in Congress.

WM. D. STEPHENS,
President of the Senate.

To Amend the Constitution of the United States so as to Elect President and Vice President by a Direct Vote of the People.

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HUMPHREY,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 7, 1917.

Mr. HUMPHREY of Washington. Mr. Speaker, one of the questions that is to-day attracting the attention of the American people is an amendment to the Federal Constitution, so as to permit the election of President and Vice President by a direct vote of the people. One of the best articles that has been written upon this subject is by Judge Julius A. Coleman, of Seattle, Wash. This is a thoughtful article. It shows wide research and an intimate understanding of our Constitution. I think every Member of Congress would find it time well spent to give this article a careful reading. It is worthy of a place in the CONGRESSIONAL RECORD, and I shall extend my remarks by incorporating it in full. It is as follows:

AMENDMENT TO ELECT PRESIDENT AND VICE PRESIDENT BY THE PEOPLE DIRECT FOR ONE TERM OF SIX YEARS.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That in lieu of Article II of and the twelfth amendment to the Constitution of the United States, and to stand as Article II of the Constitution, the following be proposed as an amendment to the Constitution, which shall be valid to all intents and purposes as part thereof, when ratified by the legislatures of three-fourths of the States:

ARTICLE XVIII.

SECTION 1. The executive power shall be vested in a President of the United States of America. He shall hold his office for the term of six years, beginning the 4th day of January next following his election, and shall be elected by the people of the United States. At the same time, for the same term, and in the same manner there shall be elected a Vice President of the United States of America, upon whom, as President, shall devolve the powers and duties of the said office in case of the death or constitutional disability of the President to discharge the powers and duties thereof, or of his resignation or removal therefrom.

SEC. 2. No person except a natural-born citizen of the United States shall be eligible to the offices of President and Vice President; neither shall any person be eligible thereto who shall not have attained to the age of 35 years and been 14 years a resident within the United States. No person once holding the office of President shall be eligible thereto thereafter; nor shall an inhabitant of the same State as the President be eligible to the office of Vice President.

SEC. 3. The Congress shall determine the day on which the election shall be had for President and Vice President, which day shall be the same throughout the United States; shall make uniform laws, regulations, and provisions for such election, and for ascertaining and declaring the results thereof, which the authorities of each State shall carry into execution, but which in their default the Congress shall carry into execution; shall establish or designate, or cause to be established or designated, subject to its approval, tribunals in each of the several States to hear and determine controversies and contests as to such election therein; and shall fix the day on which and the method whereby the votes in all the States shall be counted at the seat of government and the results thereof declared.

SEC. 4. Each State shall be divided into election districts, which districts shall be the same as the districts for the election of Members of the House of Representatives, and citizens of the United States in each district who have the qualifications requisite for electors of the most numerous branch of the State legislature shall have the right to vote therein at this election; they shall vote by ballot, and shall name in their ballots the person voted for as President and the person voted for as Vice President.

SEC. 5. The executive in each State shall, within 10 days after the results of such election are ascertained, make, in quadruplicate, distinct lists of all persons voted for as President, and of all persons voted for as Vice President, and of the number of votes for each in each of said districts in such State, which lists he shall sign and certify to under the seal of the State, and dispose of as follows: One list he shall transmit, sealed, to the seat of government of the United States, by registered letter, directed to the President of the Senate; one list he shall transmit, in the same manner, directed to the Secretary of State of the United States; one list he shall deliver to the judge of the district court of the United States for the district in which the seat of government of the State is located; and one list he shall deposit in the archives of his office.

SEC. 6. The President of the Senate, on the day fixed by the Congress, which day shall not be later than 30 days prior to the date of inaugurating the President, shall, in the presence of the Senate and House of Representatievs, open all the certificates, and the votes of all the districts, as certified to, shall then be counted.

Second. The person having the votes of the greatest number in each district for President shall have the vote of such district for President, and the person having the votes of the greatest number of districts for President shall be declared the President, if such number be a majority of all the districts.

Third. If no person have such majority, the House of Representatives elect shall be immediately convened in special session, solely for such purpose, and from the persons, not exceeding three, having the highest numbers on the list of those voted for as President, in case of the death or permanent disability to discharge the powers and duties of the said office of either of such three, in his stead, the person voted for as Vice President in association with him as President shall choose immediately by ballot the President.

A quorum for this purpose shall consist of two-thirds of the whole number of Representatives elect, and in so choosing the President a majority of the whole number of such Representatives shall be necessary to a choice.

Fourth. In case, however, of the death or permanent disability to discharge the powers and duties of the said office of the person so shown to have been elected President by the people, then the person shown to have been elected Vice President by the people as hereinafter provided, shall be declared the President.

SEC. 7. The person having the votes of the greatest number in each district for Vice President shall have the vote of such district for Vice President, and the person having the votes of the greatest number of districts for Vice President shall be declared the Vice President, if such number be a majority of all the districts. If no person have such majority, then from the two highest numbers on the list of those voted for as Vice President, in case of the death or permanent disability to discharge the powers and duties of the said office of either of such two, in his stead, the person nominated, either by his associate voted for as President, or, if he do not act, by the organized authority of the body of the people that voted for them, the Senate shall choose, by ballot, the Vice President. A quorum for this purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice.

Second. In case, however, of the death or permanent disability to discharge the powers and duties of the said office of the person so shown to have been elected Vice President by the people; or thereafter holding the said office, the President in office for the term wherein such vacancy shall occur shall nominate, and by and with the advice and consent of the Senate, appoint a Vice President.

SEC. 8. The Congress shall, by law, provide who shall temporarily discharge the powers and duties of the said offices in case of the death or permanent disability of both persons so

shown to have been elected President and Vice President, or of both while in office, and their titles, and shall fix the day on which the election of a President and Vice President to fill the unexpired terms occasioned by such calamity shall be had, which day shall not be later than six months after the date that such vacancies occur; the day on which the votes of all the said districts shall be counted at the seat of government and the results thereof declared; and such other proceedings had as are herein provided for that may then be necessary, but no such election shall be had in case the date of the same would fall within one year of the date of the regular succeeding election of President and Vice President by the people of the United States.

SEC. 9. The President and Vice President shall, at stated times, receive a compensation for their services, which shall neither be increased nor diminished during the period for which they shall have been elected or chosen, and they shall not receive within that period any other emolument from the United States, or any of them.

Second. After the expiration of their terms of office, and during their lives, each of them shall be privileged to frank all correspondence through the United States mail, and shall be paid a pension, as their compensations have been paid—to the former, of an amount not less than one-third the compensation paid the President; to the latter, of an amount not less than the compensation paid the Members of the Congress—which amounts the Congress shall determine: *Provided*, That in case either of such persons shall hold an office of profit under, or be paid any other pension by the United States, his pension herein provided for shall cease and abate during such time to the extent of the emolument of such office or the amount of such pension, and one-half of such pension shall be so paid to their widows, if any, during their widowhood.

Third. The provisions of this amendment shall apply to all persons who have filled or now fill either of said offices, and to their widows, if any, who are not now paid a pension by the United States.

SEC. 10. Before either enters upon the execution of his office he shall take the following oath or affirmation: "I do solemnly swear (or affirm) that I will faithfully and impartially execute the office of (President or Vice President) of the United States, and will to the best of my ability obey, preserve, protect, and defend the Constitution of the United States."

—

A PROPOSED AMENDMENT TO THE CONSTITUTION.

While the test of time, its use as a pattern by every Republic and federation formed since its adoption, and the consensus of earth's ablest opinion stamp our Constitution as the wisest document ever framed by man, that part of it which earliest provoked complaint, and sought remedy in the twelfth amendment to it, is yet a matter of debate—the method of electing and the term of our President.

President Wilson has suggested a primary law to more definitely decide the people's choice. This would be wise were this amendment in force, but as no law of Congress can abridge or enlarge constitutional powers, so long as presidential electors have the constitutional power both to nominate and elect President and Vice President, they can defy such primary instruction and set at naught even the ultimate voice of the people.

Under section 3 of this amendment primary laws could be enacted that would bar betrayal thereof, and which, if preventive provisions against fraud and cunning were escaped, could undo such designing schemes when discovered.

Do not electors of unlimited and unlimitable powers, as now, create a menace to national welfare that demands removal? Should not that menace be removed before the explosion comes rather than then, mid blinding smoke and falling débris, rush to repair the rents in our national walls?

Since President Jackson in his every annual message urged one term of six years for President, his ineligibility thereafter, his election direct by the people, sentiment in favor thereof has constantly grown. The presidential year is dreaded by every business interest; its less frequent recurrence desired for universal tranquillity. The great majority feel that a term of six years is long enough to test a proposed policy and prompt its preservation, yet a term within which both Senate and House can be so changed as to check, if not wholly change, mistaken policy, while ineligibility to a second term would choke off the mortal greed for personal power that has ever gained appetite on what it fed, and insure patriotic effort for permanent good, instead of scheming for reelection.

The most nagging detriment to, unmitigated nuisance in, every business, organization, and community is the unfortunate who opinionates himself into the delusion that he is indispensable to it; and when a country reaches the stage where it imagines any one man indispensable it has ripened to the rottenness that is ready for despotism.

Mankind has seen earth's apostles netted from common fishermen, a surveyor boy father of his country, a rail splitter rescue it from destruction. There never has been, never will come, a day when the American people can not say, as our second martyr said when the great grasp of the first was stricken from the helm of our ship of state, "God rules, and the Government at Washington City still lives." As long as liberty and culture last this country will be crowded with splendid capacity for presidential or any other exalted service. As long as the people rule and follow the lead of the Statesman of all time—the Nazarene—from the people will come the needed leaders when the crisis calls for their coming. God Almighty knows what He is about, and His children never did and never will need to rest their safety, their continued progress, on any one mortal man.

History rings no truth in louder tone than that the most consuming curse of all time has been hero worship, the frenzied following of the one-man power. It has dragged nations to dishonor of plighted faith, drenched them with blood, and devastated them with wreck and ruin.

The whole country has come to realize that the inauguration in March is a menace to comfort, to health, to life. That the assembling of Congress in December, with the confusion of the holiday break, is a waste of time and money. Should Congress, as it can, change the day of assembling to January, uninterrupted work would supplant the always useless effort of the short December session, which could be held only every six years and solely to count the Presidential vote, and declare the result.

The definite fixing of the Vice President's succession in case of the death, resignation, or removal of the President is retained, but the abhorrent thought of his removal placed last instead of first. Indeed, the words "or removal" might be omitted, for the words "constitutional disability" cover them. Their retention is well, as a reminder that this is a Government of, by, and for the people, and that they retain the right to remove one who may forget that in this country the rule of "masters, not men" can never exist.

It was the evident intent, and is yet the universal desire, that both high offices should not be held by inhabitants of the same State, yet the provisions of the Constitution, instead of precluding, make this calamity possible and probable. Instance the 1912 election.

The Democratc Party had 40 States; could easily have spared the electoral vote of any one State. Had the electors exercised their constitutional power both to nominate and elect President and Vice President, those from 40 States could have voted for Marshall for President; those from Indiana for some equally eminent statesman for Vice President; those from the other 39 States for Kern for Vice President; and thus lawfully elected both from the same State.

Had either wing of the divided Republican Party nominated an inhabitant of New Jersey for Vice President, and, as was much dreaded and predicted, the election been thrown into the House for President, the Senate for Vice President, the House being Democratic would have elected Wilson President, and, had the divided Republicans united in the Senate, they would have elected the New Jersey nominee Vice President, electing both from the same State, for the only prohibition on the Senate in such case is, not that the man it votes for shall not be an inhabitant of the same State as the President, but that he shall not be "constitutionally ineligible to the office of President," and the only qualifications of eligibility therefor are that he shall be native born, 35 years of age, a resident within the United States for 14 years, and not come under the inhibition of the fourteenth amendment.

The proposed amendment settles that intent and universal desire.

That this will never be done is no answer. What can lawfully be done will be done, if the occasion calls for it. Indeed, like conditions as above would compel partisan policy to do this very thing.

All recognize that we hold a dual citizenship, national and State, and vote accordingly. This election is a matter not of State but of national concern. Therefore the common, universal—the national—authority should make the laws and regulations therefor the same in each and every State. The one common action of the whole people should be uniform. The dignity of the State, the universal convenience, are subserved by leaving the execution of these provisions to the States, respectively, but keeping the power of self-preservation

in national hands should any State prove derelict in this high duty.

The Tilden-Hayes eight-to-seven tribunal, a resort to avert revolution, had no warrant in law. It disclosed the explosive perils that yet confront us—the risk of the last resort by an outraged electorate. It reiterated the lesson of all time—a tribunal hastily instituted at a time of universal, intense excitement is certain to be the subject of intrigue for present advantage, of action for the occasion, and to have carried into it the passions and partialities of the hour.

Some tribunal of highest qualification that would command the confidence of all should be prearranged to settle the always heated questions over this election that are certain to arise and to stir States and Nation in the future as they have in the past.

Should one judge from the Federal, one from the supreme court of each State be selected, these two to select a third from an equal number of Federal and supreme court judges, this tribunal be selected every six years a year prior to the nomination, to hear and determine these contests, we would have, without expense, save for the keeping of the records, a tribunal whose decisions would inspire universal confidence and avert hurtful contest thereover in the Congress called to count those votes.

The construction of this tribunal, however, is left to the best thought we have—the advised discretion of Congress.

Our presidential electors are our only national officials for whom, by our national authority, no qualifications are prescribed, no oath or bond binds, no precedents guide. To permit the limitless power that they possess to exist in any other, from President to poundkeeper, would be thought the limit of madness. Not even citizenship is made a qualification. Any incompetent, from Alaska to Cape Horn, or anywhere else, is eligible, if his bray be loud enough, political pull be strong enough to land the prize, and there is no legal hand to stay his kicking over the traces of instruction or scorch any other outbreak of inborn assininity. The national risk is too great to permit such power in incapacity; still more dangerous to permit it in unscrupulous or designing capacity.

In the last election there were 531 electors, and not 10 men in all the country can to-day name the electors of his own State. We are trusting the election of our highest officials to men no one ever heard of before, or will hear of again, unless for conduct that provokes humor or indignation. Could the qualifications of these electors within living memory be collected it would raise a roar of ridicule from border to border, but the continued farce some day may—will—turn into a tragedy.

Is it not high time that we cart off in some garbage can and dump in a place of safety these dynamite sticks of transient, irresponsible, unqualified, autocratic electors of unlimited powers, bury them beyond the power of harm, and give to the owners of our Union home the same and sane right to choose the chief stewards thereof that they have to choose in the Congress the best qualified, the mightiest ministers of their lawmaking?

This amendment will for the first time require by national authority qualifications for presidential electors.

It is economy. It would wipe out all the expense of the election of these worse than useless electors, and of transportation to herd them in some common corral for action, while it would cost less to transmit the two certificates of the people's election by the governor than it now costs to send the straw-drawn messenger of a motley body with its certificates 1 mile, and be less risk. At the same time, it would relieve our Representatives wasting valuable time in what we, the people, sent them to do, over the nagging for office by the misfit whose only recommendation was the windfall of some political gust.

When Horace Greeley died the electors chosen by the people who voted for Greeley and Brown, instead of obeying their voice, voted 3 for Greeley, 42 for Hendricks, 18 for Brown, 2 for Charles J. Jenkins, 1 for David Davis.

This established a precedent, not contrary to the Constitution, however contrary to any sort of intelligence, but consonant to the eternal unfitness of electors destitute of all qualifications, so far as any national law was concerned. A precedent that they could vote for whom they pleased, dead or alive, nominated or not, and regardless of the people's vote—a precedent from which evil will flow unless the system be changed.

In case of the death of the President elect, the Vice President elect is given the vote, and the voice of the people obeyed the same before as after the inauguration of their choice.

The twelfth amendment provides, where there is no election of a Vice President by the electors, and such election is had by the Senate, that the person elected Vice President shall "act as President," and there has been debate as to his title and attestation of documents, whether as President or as Acting President. This amendment removes that debate.

In event of the death of the Vice President elect the President elect is empowered to nominate, when he comes into office, and, by and with the advice and consent of the Senate, appoint a Vice President, as the President is empowered to do in event of a vacancy in that office thereafter.

This provides for the continuous occupancy of the office by a method that has worked well with the Federal judiciary and the Cabinet.

The President now so appoints a Cabinet, seven members of which may succeed him in event of his death, and there being no Vice President. There is no greater risk in so appointing a Vice President who may in a similar, yet more definite manner, succeed the President.

If this office is superfluous and merely ornamental it should be abolished. If not so, the Constitution should provide for keeping it filled. It will never be abolished. Too many in Congress hope—expect—to get it to ever start such proposal. The same reasons exist for its continuous filling as do for the continuous filling of our other offices. The office has its essential and important duties, and the people should have some say beyond the life of one man for their President.

These offices are simply cogs in our national wheel that should never lack a single cog, nor have one too many. If this be one too many, let us save material and complication of machinery by recasting the wheel without the needless cog and get simpler machinery. If not too many, provide means for prompt replacement in case of loss.

The whole history and teaching of our Government is that, while man is everything, the man is but little, purposes much; that the best are but mites in an Almighty hand, giving place to others when the purposes of their creation are accomplished.

In the same accident, 2 of President Tyler's Cabinet and 12 others were killed. Such repeated calamity might wipe out the executive authority and all is succession, as at present provided for. The act of 1886 provides, in case of Cabinet succession, if Congress is not and will not be in session within 20 days, a special session thereof shall be called, but it does not say what for, nor does it say for how long this succession shall last. A capital arrangement for a political squabble that would convulse the whole country and stir up all manner of schemes, hurtful to every interest. Yet this was the best that could be done by Congress without more definite constitutional authority.

In event that, pending the election and the date of declaring the result, or of the inauguration of the newly elected officials, or of both President and Vice President while in office their death should occur, election by the people can be had, provided the same shall not occur within one year of the next regular election by the people. This gives a speedy restoration to the people of their chosen, at the same time avoids the turmoil and expense of near elections.

There is no provision now, either for the compensation or the oath of office of the Vice President. This amendment provides for both. The induction into both great offices should be directed with the same solemnity.

It adopts the growing practice in the business and industrial world as well as with the educational world, of life pensions for deserving service. When learning, labor, and capital practice a policy, Government may well take heed to it.

It is the sentiment of by far the majority of the American people to-day. They are as free from snobbery as any people, yet they do not wish to see those whom they have chosen to head the Government mix in the common struggle to maintain their families any more than set an example of stilted idleness.

They have reached the places where they belong more to the people than to themselves and should be kept in a more exalted service than even when in office. Were they to devote their afterlives to travel among the different States, and the dissemination of trustworthy information about each to all, they would render one of the most needed and useful services to this country. Despite the facilities of travel and communication, how little the people of the different States and sections, even, know of each other!

Their visits would make them missionaries for American patriotism, for fair play, for better understanding by the people of each other, for study of our great system of government.

They would differ on policies to remedy what was esteemed evils in the different States. All the better. Men of similar minds learn but little from each other. The people would get what was better from either, what was best from both.

There is not a toil-hardened hand in a factory or industrial enterprise in all this country but would applaud this policy as a teaching example to the industries to which they were giving their lives.

The amendment changes what is far more important than the term or reeligibility of the President—the method of his election.

Under the present system the following States have been disfranchised by the throwing out of their electoral votes: Indiana, in 1817; Missouri, in 1821; Wisconsin, in 1857; Georgia, in 1869 and 1881; Arkansas and Louisiana, in 1873; while the same year Texas lost half of her electoral vote. A snowstorm prevented the meeting of the electors of Wisconsin on the day fixed; probably the intelligence of the electors in some States during the reconstruction days made it difficult for them to understand when, where, or how to cast their ballots, for no national law required or presumed them to have qualifications for anything.

In 1820 a "Monroe" elector voted for John Quincy Adams in order that Washington should live as the only unanimously elected President.

In 1892 a North Dakota Republican elector voted for Cleveland.

This last year, in Washington, Mr. Stream, Democratic nominee for elector, died during the campaign, and Mr. E. M. Connor was placed on the ticket in his stead. Mr. Stream received 47,977 votes; Mr. Connor, 134,481; Mr. Warren H. Lewis, highest Republican elector, 167,244. This gave Mr. Lewis the seventh highest vote for this State's electors. He, while convinced that he was legally elected, displayed an American manhood and patriotism worthy the Nation's honor by refusing to attend on the day of casting the State's electoral vote, the other electors filling the vacancy by the selection of Mr. Connor. Can this country endure a system where either accident to or ignorance of (unqualified) electors shall disfranchise the intelligent people of a State?

Disqualifications were designated. Any Member of Congress who had made and was making glorious history, or any citizen who had brains enough to hold an office of trust or profit under our Government was, and yet is barred—as near as possible assurance that no judgment or discretion should ever be expected of or exercised by an elector. In view of their faithful living up to the specifications of their political architecture in these latter years, it may be a merciful provision that such was the case, but most of us deem it an unwise oversight.

In an election as close as that of the Tilden-Hayes day, where one vote would decide the election, suppose one bought or bullheaded elector should exercise his uncontrollable constitutional power to vote for whom he pleased, what are we going to do about it? Dare we continue such risk? Not by congressional enactment, solely by constitutional provision, can we avert it.

There is sense in sending to legislate for us men of gained and gaining wisdom, special qualifications, who will have time and opportunity to study great questions of public concern, ferret through the plausible pretexts of seductive self-interest to the very bottom for accurate information, and from the clash and conference of kindred competence and character evolve laws of lasting and equal benefit to all. They can phrase our wishes as we can not. They can pour into the mold of cast and enacted law the melted heart hopes and wants of the people as we can not. They can make us profit by that Pilate who might have had eternal honor, instead of eternal infamy, had he coupled the courage of his own conviction with the matchless justice that could say, "Father, forgive; they know not what they do." Their informed, conscientious courage can resolve us from frenzied, thoughtless mobs to thinking men. It was the greatest of Lawgivers who earned and has the lasting gratitude of mankind for rebuking the call for a golden calf. The truth is not a golden nugget for which the lone prospector with bare hands digs, but the fairest of all the fair in all life's castles, for whom the days of chivalry never die, devoted suitors ever abound, and for whose winning the best and bravest of knight-errants must forever fight, and fight with best and bravest rivals. They must strain not only the born strength of strongest muscle, but be armored with the equipment of best advancement, and must ever carry the consciousness that no weak-hearted wavering ever won. The Representative who has given matters of universal concern that study that we have had neither time, environment, nor opportunity to give and stands by and tells us his honest convictions, gives reasons for his stalwart stand, has been, is, and will be the sheet anchor, the salvation of republican institutions.

This is utilizing the same developed skill and ability that is utilized in every business. There is much sense in it. But there is no sense in delegating to others the power to reexpress the expressed decision of the people. When they have made a choice, what need to have that choice retold by indiscriminate third parties whom we do not know, never heard of before, and most probably will never hear of again? Worse, what sense in setting aside our choice and giving another, an independent, irresponsible, autocratic choice to 531 out of a hundred million people? Should not such impeachment of the sense of the people for self-government, such denunciation of the very theory of government that we so loudly proclaim as the best, that is so repugnant to our entire political sentiment, existence, and experience, be eliminated from the Constitution?

Will not the adoption of this amendment do it?

There is another reason for the change of tremendous moral significance, of governmental significance.

A law that is a dead letter is a detriment. A law that is universally disregarded, a more dangerous evil. It teaches to despise and disregard all laws.

Our Constitution says that our electors shall choose our President and Vice President—commands them to do it.

Our practice says that they are so many automata—wooden Indians—to register the vote of the people.

We disregard and trample upon the letter and spirit of our highest law in the most mighty act of a great people. Our Government, itself, is teaching contempt and disregard of the law.

None of our statesmen ever left us wiser advice than Abraham Lincoln when he said: "Make reverence for the law the political religion of our country." Clothe our laws with sanctity and there will be fewer infractions of them. Let us either follow and enforce this law or repeal it.

We preach that government of, by, and for the people is the best of governments, yet make our Constitution say that the people are unfit, incapable of themselves, to choose their own President.

If incapable of themselves to choose their own President, they are unfit for, incapable of, self-government.

We are making our constant and continued practice give the lie to our professions; something that our Government can not, our people will not, stand for.

The House elect will represent either ratification or rebuke of the sitting House.

If ratification, its choice of the President would be a more fitting and emphatic voicing of the people's vote than the choice of the sitting House.

If rebuke, a displaced and resentful House would naturally choose a President who stood with it, rather than with the people who condemned it, and would, wholly or partially, thwart the final voice of the people, and balk their desired change of policy.

Of necessity the House elect will represent that final voice, and its choice give the incoming President one House in harmony with the policies the people and he stood for.

Whether ratification or rebuke, the choice by the latest elect of the people conforms to our theory of obedience to the voice of the people.

Therefore this amendment changes the existing rule, and transfers such choice from the sitting House to the House elect.

The majority of the House elect always has, and probably always will, come from the sitting House, be on hand ready for instant action, and the temporary organization of the new House for this one purpose be of prompt and economic accomplishment.

There could be no conflict between the two Houses, for the House elect would be convened for the sole purpose of choosing the President—have no powers of legislation.

Will not this amendment, in this and in many other ways, prove a needed proclamation of emancipation for the people themselves; a needed declaration of the complete rule of the people in this the country of their proclaimed rule?

It would simplify and make safe our electoral system; give us a more nonpartisan and independent Executive; lessen the frequency of country-wide agitation; be a measure of economy in dispensing with the expense of a useless and dangerous piece of electoral machinery; dispose of menacing questions of dispute; provide tribunals of highest character to settle electoral disputes in the States of their origin, and keep them from the broader and more dangerous theater of national controversy; give a settled system for the continuous filling of our highest offices, bar an interregnum that could only excite and injure; continue in our service the schooled ability that has been nearest the head and heart of our Government; make our Constitution and our national conduct voice the same sentiment—the people are competent to rule, and they do rule—self-government is not a veiled profession but an actual fact; make our Government teach respect for and obedience to law, and increase the reverence in which all law should be held in making our highest law say what it means and mean what it says; put this election where it belongs—in the direct hands of the people.

JULIUS A. COLEMAN,
Seattle, Wash.

Criminal Record of "Liquor" and "Beer" Counties Compared.

EXTENSION OF REMARKS

OF

HON. WILLIAM H. MURRAY,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 8, 1917.

Mr. MURRAY. Mr. Speaker, I avail myself of the privilege of extending my remarks by publication of the research by Judge Norman G. Kittrell, of Houston, Tex., of the comparative effect, as disclosed by the criminal dockets of what are called "beer" counties and "liquor" counties, as shown in their practical and actual operation in the several portions of Texas. I submit this letter in full, without comment, as worthy of consideration, coming from the investigation of an able jurist and a gentleman whose opinions are worthy of consideration. His letter is as follows:

HOUSTON, TEX., *January 4, 1917.*

MY DEAR SIR: I trust my purpose in sending this letter to you and other national legislators will acquit me of the charge of presumption, which I realize may be suggested by my action.

It is substantially the same letter which, wholly upon my own initiative and at my own expense, I have sent to every member of both houses of the Texas Legislature, and felt that in doing so I was rendering a public service.

It is possible that before you have received this you will have seen it in the public prints. If that should be the case, I trust, nevertheless, it may receive your careful attention in this more personal form.

My reason for preparing and sending it is this:

Just at this time, when Congress is confronted by the prohibition question, I thought it might serve a useful purpose to present facts and figures drawn from official sources, which will enable not only Members of Congress but members of the legislatures of the several States to determine whether "liquor" and "beer" are equally responsible for those consequences which authorize, require, or justify the application, to either or both, of that most elastic and comprehensive power known as the "police power."

That the manufacture of "liquor" is an economic, moral, and social evil no candid or fair-minded man will deny; and there is no legal or economic reason why its manufacture and sale should not be imperatively and without qualification or exception prohibited, while there are manifold reasons why it should be.

The right to prohibit the manufacture and sale of both "liquor" and "beer," and the right to enforce that prohibition, is conceded, because it has been so adjudicated by the judicial tribunal of last resort. That question may therefore be set aside as no longer in the realm of debate or discussion, and the opinion of no man as to the wisdom of such adjudication is now of the slightest consequence.

There is a question, however, in which every voter and every Federal and State legislator has an interest in being correctly informed, and that is whether "liquor" and "beer" are equal offenders against the public welfare, and whether they should be linked in common condemnation and prohibition. There is no way in which to determine that question except by statistics drawn from disinterested official sources. The figures herein set forth were as to taxable values taken from the reports of the comptroller of Texas, and those as to crime and enforcement of the criminal law from the report of the attorney general of that State for 1907 and 1908, which are the last years for which the reports from that office have been printed and distributed. The average population for those years was most carefully computed.

The figures were compiled with the most painstaking care and with absolute impartiality, and without the slightest idea as to what the ultimate figures would show as to the proportionate and relative results as between "liquor" and "beer." They have been verified and reverified, checked and rechecked, and "percentaged" and "repercentaged," so that they are put forth with the assurance that they are correct within a negligible fraction.

It may be proper to say that I use neither liquor nor beer, and never have and will not, and do not even enter a saloon unless imperative business necessity requires me to do so, and I neither recognize nor obey any social custom or usage which involves the drinking or tasting of any kind of liquor, alcoholic, malt, or vinous. I represent as a lawyer no manufacturer of beer, and have no financial interest in its manufacture, and, of course, have no interest in the manufacture of liquor or its sale.

It is proper to say also at this point that this communication was not written at the suggestion or request, or upon employment of any man or corporation, interested in any way in the manufacture or sale of beer.

No attempt will be made to define "liquor" or "beer" in technical or scientific terms. The term "liquor" is used as meaning whisky, brandy, rum, gin, and absinthe, and all brands and combines thereof, and "beer" is used as meaning all malt liquors and light wines. Such designation and distinction is sufficient for all practical purposes, and it will not be difficult to so phrase an amendment to the Federal Constitution that its ratification by the requisite number of States will result in the abolition of the manufacture and sale of liquor in the United States and leave beer to be dealt with by each State, or by the political subdivisions thereof, by the means of State-wide prohibition or by local option, or any other method which the people of those States may deem best. In my judgment the amendment should be so submitted, and this conclusion is based upon the figures herein set forth.

It may be safely assumed that statistics taken from official sources in Texas will, approximately at least, apply to results and conditions in any other State where both "liquor" and "beer" are sold. The only difference in the matter of crime and enforcement of law, if any difference there be, will arise out of the difference generally in public sentiment and social conditions.

Every man knows, because the experience of the ages so attests, that the liquor traffic produces idleness, thriftlessness, poverty, physical inefficiency and moral degeneracy; therefore, its prohibition comes logically within the scope of the "police power" of the Government.

If beer produces like results, then it is properly subject to have applied to it also the prohibitive force of the "police power." If it does not produce like results, and if the facts show that it is "not guilty" of the same evils which the liquor traffic invariably and inevitably brings about, then its manufacture and use should not be prohibited.

"Liquor" and "beer" should not be linked in common condemnation unless "beer" is also guilty of the offenses and results to prevent which the application of the "police power" is necessary for the protection of society. It is submitted that this is sound in logic.

In 1910 the per capita wealth of Texas was $613. The per capita wealth of six counties in which the prohibition vote was heaviest was $548. These counties in every element and incident of material and moral resources and advanced civilization are second to none in Texas. The per capita wealth in those counties in which the anti-prohibition was heaviest, and which fairly represent the most attractive and progressive part of the State, was $643, a fraction over 18 per cent more than that of the first six counties, and 4¾ per cent more than the average of the entire State.

The figures above given make it manifest that the use of beer by the people of those counties does not produce indolence, thriftlessness, or poverty. They reveal, indeed, some remarkable results which could not be, and were not foreseen until the computation was completed.

The vote in Comal County in 1911 was: For prohibition, 28; against prohibition, 1,517. The per capita wealth in that county in 1910 was $704, and the population of that county increased 2 per cent per annum between 1900 and 1910, and if it increased in the same ratio in 1911, the population was in that year 8,602. The per capita wealth of that county in 1911 was $734.

The vote in De Witt County was: For prohibition, 530; against prohibition, 2,855. The per capita wealth of the county was $745.

The fact is, of course, recognized that mere material wealth is not a safe indication of the character and sentiment of the people of any community, as relates to obedience to the law and the preservation of social order. Therefore it is necessary to see how the sale and use of beer affects the question of crime and the enforcement of the law.

There were presented, taking the whole State, one felony indictment for every 340 of population and 1 misdemeanor indictment for every 78 of population. The percentage of convictions in felony trials was 63.5. The percentage of convictions in misdemeanor cases was a very small fraction less than 76. The proportion of felony indictments to population in the six "pro" counties was 1 indictment to every 481 of population. The proportion for the State is 1 to every 340 of population. The proportion of misdemeanor indictments to population was 1 to every 67. The proportion for the State is 1 to every 78. The percentage of convictions in misdemeanor cases in the six "pro" counties was 82 per cent.

The indictments for felonies in the "beer" counties was 1 to every 506 of population. The percentage of convictions in felony cases was 64, or one-half of 1 per cent greater than the average for the entire State. The proportion of indictments for misdemeanors in the "beer" counties was 1 to every 140 of population and that of the State at large 1 to every 78, and that for the six "pro" counties 67. The percentage of conviction in misdemeanor trials was 81 per cent, or 5 per cent more than the average for the entire State and only 1 per cent less than in the "pro" counties.

Taking those counties in which both "liquor" and "beer" are sold, and in which are large cities—large, at least, for Texas—two counties in southwest Texas, two in central Texas, and two in north Texas, the figures show that there was a felony indictment returned for every 266 of population, as against 1 to every 340 for the entire State and 1 for every 481 in the "pro" counties and 1 for every 506 in the "beer" counties. The increase of crime is even more marked as to misdemeanors in the six last-named counties, an indictment being returned for every 49 of population.

"Liquor" is, of course, sold in the "beer" counties, but the population is largely of foreign birth or foreign descent, and it is evident that "liquor" must account for the increase of crime in the six last-named counties.

A summary of the foregoing figures show the following result:

Per capita wealth of the entire State	$613
Per capita wealth of "pro" counties	$548
Per capita wealth of "beer" counties	$642
Number of population for each felony indictment in whole State	340
Number of population for each felony indictment in "pro" counties	481
Number of population for each felony indictment in "beer" counties	506
Number of population for each misdemeanor indictment for whole State	78
Number of population for each misdemeanor indictment for "pro" counties	67
Number of population for each misdemeanor indictment for "beer" counties	140
Proportion of convictions to trials in felony cases for "pro" counties—per cent	63.5
Proportion of convictions to trials in felony cases for "pro" counties—per cent	66⅔
Proportion of convictions to trials in felony cases for "beer" counties—per cent	64
Proportion of convictions in misdemeanors for the whole State—per cent	76
Proportion of convictions in misdemeanors for the "pro" counties—per cent	82
Proportion of convictions in misdemeanors for the "beer" counties—per cent	81
Number of population to each felony indictment in six counties in which are cities in which both "liquor" and "beer" are sold	226
Number of population to each misdemeanor indictment in six counties in which are cities in which both "liquor" and "beer" are sold	49

That is to say, that in the last-named counties it required only 266 population to furnish a felony indictment, and only 49 to every misdemeanor indictment. How much greater the proportion of crime is in those counties, the summary above set forth clearly shows. In Comal County, in which as has been shown, there were cast only 28 votes for and 1,517 against prohibition, it required 671 population to furnish one

misdemeanor case, and the proportion of convictions to trials was 93 per cent.

These figures here submitted are believed to be worthy to be studied by every man who desires to vote intelligently upon a question which is nation-wide in interest and importance. It is, of course, not meant to be argued that the inhabitants of the "beer" counties are more prosperous or more law-abiding because they use beer, but the figures given indisputably show that prosperity and obedience to law are coincident with its use. They might be even more prosperous and peaceful if they did not use beer, but that is a matter for each individual to entertain his own opinion upon. The facts, conditions, and results are revealed by the official figures.

It will naturally be asked: How is it proposed to apply these figures to the question of State or National prohibition? The answer is, that wherever and whenever the question of prohibition is submitted, the question should be submitted separately as to "liquor" and "beer." Let each stand upon its own merits, or fall upon its own demerits. If "beer" is not guilty it should not be condemned for the sins of "liquor."

A separate vote is the only fair method, because it will give millions of good citizens the opportunity they desire to vote against "liquor," who will not so vote if, at the same time, they must vote to deny the privilege of the use of "beer" as a beverage to millions of other peaceful, prosperous, law-abiding citizens who use it as a beverage without apparently harmful results to themselves or society. If the vote could be taken separately over the whole Nation, "liquor" would be driven out by a majority that would be counted in millions, while "beer" would be left to be dealt with by the people of each State, or the subdivisions thereof, by the process of local option.

The prohibition question will not down at the bidding of any man or any party. "Liquor" is doomed, because it can not be defended, but "beer" has the defense of official statistics which show it is not guilty of such results as justify the prohibition of its manufacture and sale by the exercise of the "police power" of the State.

The preparation of this communication was inspired by the desire to place facts and figures, which it is believed will be helpful and instructive, before the representatives of the people who are called upon to deal with a question of profound and far-reaching importance to their constituents.

I feel entirely confident that if an amendment to the Federal Constitution is submitted in the form suggested it will be ratified without struggle or debate by the requisite number of States, if not by all the States, and the result will be that the question of prohibition will be forever removed from the field of National and State politics, "a consummation most devoutly to be wished" by every patriotic citizen.

The hope that such result will be attained prompted the writing of this letter, and trusting that my action will not be misjudged or misunderstood, I remain, with sentiments of respect,

Yours, very truly, MERCER G. KITTRELL.

HOUSTON, TEX., *January 4, 1917.*

Hog Cholera.

SPEECH
OF
HON. CHARLES H. SLOAN,
OF NEBRASKA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 10, 1917.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 15914) to authorize the Secretary of Agriculture to license establishments for and to regulate the preparation of viruses, serums, toxins, and analogous products for use in the treatment of domestic animals, and for other purposes.

Mr. SLOAN. Mr. Chairman, touching the question of the cost suggested by the gentleman from Pennsylvania [Mr. MOORE], I desire to submit a few facts. On January 1, 1917, we have, according to the estimates, 3,500,000 more hogs in the United States than we ever had before in its history. This represents a value of from $30,000,000 to $50,000,000. During the year 1916 more hogs were slaughtered in the great packing centers of the United States than had ever been slaughtered in any former year in the history of the country. Notwithstanding that fact, there has been a large increase in the swine stock of the country. I think it will be largely attributed to the work that is being prosecuted by the Government, together with the State instrumentalities and those of the various communities, in the work of eradicating hog cholera. It will also be shown that at the end of this year the loss from hog cholera, notwithstanding the large increase of individuals, will be less than it has been since 1894. How this was brought about is easily understood, and I am in hearty accord with this legislation.

These results were brought about largely on account of the work that has been prosecuted in the last three years. I have some tables I desire to submit. The first is a comparison of hogs raised and hogs lost in experimental and nonexperimental counties. It is as follows:

Comparison of hogs raised and hogs lost in experimental and nonexperimental counties.

Counties.	Experimental work begun.	1913			1914			1915		
		Hogs raised.	Hogs lost.	Hogs lost per 1,000.	Hogs raised.	Hogs lost.	Hogs lost per 1,000.	Hogs raised.	Hogs lost.	Hogs lost per 1,000.
Clay, Gage, Johnson, and Renville combined	1914	326,637	86,911	266	327,247	16,251	49	380,434	2,230	5
18 surrounding counties	None.	971,961	301,226	309	792,521	130,145	164	848,047	69,791	82

Members of the House are probably familiar with the fact that some three years ago this work of demonstration was begun. There were selected four areas in each of four different States. Later that has been increased to 14 States. Take the areas of Clay, Gage, and Johnson, Marshall and Renville Counties and 18 surrounding counties and compare them. These are in different States. The number of hogs in the four experimental counties named before any of this work was done was 325,637; in the 18 surrounding, 971,961. Number of hogs lost before this work was done in the experimental counties was 266 per 1,000 and 309 per 1,000 in the 18 nonexperimental counties. The first year's work reduced the loss to 49 out of 1,000 in the experimental counties, while 164 represented the loss per 1,000 in the nonexperimental counties.

Mr. SHERWOOD. Where does the gentleman get his statistics?

Mr. SLOAN. They were presented to me by Dr. M. Dorset, of the Bureau of Animal Industry, the discoverer of the serum concerning which the legislation of this afternoon relates. These statistics were handed to me within the last half hour. During the year 1915 in the experimental areas the loss per thousand was only 5, while in the nonexperimental areas it was 82.

Then, again, I desire to call attention to the increase in the average number of hogs in each of the various experimental and nonexperimental counties. To begin with, in the experimental counties there were in 1913 an average of 81,659; in each of the 18 surrounding counties, 55,000. This gives it for each year; but I call attention to the fact that in the nonexperimental counties for 1915 instead of an increase there was a decrease of hogs by 8,884, while in the experimental counties there was an average increase of 13,449.

I here submit the following table:

Hogs raised and hogs lost per county.

Counties.	Experimental work begun.	1913		1914		1915	
		Hogs raised.	Hogs lost.	Hogs raised.	Hogs lost.	Hogs raised.	Hogs lost.
Average of Clay, Gage, Johnson, Marshall, and Renville	1914	81,659	21,727	61,811	4,062	95,108	557
Average of 18 surrounding counties	None.	53,997	16,734	44,028	7,230	47,113	3,877

Mr. Chairman, I ask permission to proceed for five minutes more.

The CHAIRMAN. Is there objection to the request of the gentleman that he be permitted to proceed for five minutes? [After a pause.] The Chair hears none.

Mr. SLOAN. Further than that, taking up the various experimental counties, the number of hogs per thousand lost in 1912 was on the average 177. In 1913, the first year that any work was done in any of those counties, it amounted to 170 per thousand. In 1914 it was reduced to 53 per thousand. In 1915 it was reduced to 22 per thousand, showing very marked progress in those counties. A large part of the work being done during 1916, as I understand it, is not confined to these experimental or demonstration areas, but they include adjoining counties and areas. So that the work is being spread throughout the United States, so when gentlemen spend the afternoon in working upon this legislation they may congratulate themselves that they are accomplishing great results for the country not only to the hog raisers but to the consuming public.

I here submit a table showing statistics of hogs raised and hogs that died of cholera in 14 experimental areas in 14 different States for 1912 to 1915, inclusive:

Statistics of hogs raised and hogs that died of hog cholera in 14 experimental counties, 1912–1915, inclusive.

	Date work began	1912			1913			1914			1915		
		Hogs raised.	Number that died.	Died per 1,000.	Hogs raised.	Number that died.	Died per 1,000.	Hogs raised.	Number that died.	Died per 1,000.	Hogs raised.	Number that died.	Died per 1,000.

The following letter from Dr. S. E. Cosford, inspector in charge of the Nebraska area, outlines the character of the work being done and gives figures concerning results. Part of the area is in the district which I represent. I am pleased with the results shown and progress made.

It might be well to state that the area for intensive demonstration originally selected by the United States authorities included half of the large county of Gage and all of the small county of Johnson, constituting about equal areas. In 1916 the other half of Gage was added, as was also Pawnee, a county of small area. The combinations of results in these areas, as well as in the later added counties—Richardson, Nemaha, and Jefferson—present interesting facts for consideration.

BEATRICE, NEBR., *January 22, 1917.*

HON. CHARLES H. SLOAN,
House of Representatives, Washington, D. C.

DEAR SIR: Replying to your letter of recent date, inquiring for figures or compilation on the subject of hog cholera in Gage and Johnson Counties, Nebr., with special reference to work done during 1916.

The original demonstration area included the north half of Gage and the whole of Johnson Counties. During 1916 we have perfected hog-cholera control organizations throughout the southern half of Gage County and in Pawnee, Richardson, Nemaha, and Jefferson Counties, so that we now have six counties in a block in which an organized effort is being made to control hog cholera.

After the organization is completed we hold several meetings with the farmers in each township throughout these counties and explain measures for hog-cholera control. We make investigation of all hog sickness reported to us and advise the farmers in regard to treatment. The free treatment has been discontinued, except for demonstration and organization purposes. We have secured a uniform price for the administration of serum by qualified men. We also encourage each county organization to keep an emergency supply of serum on hand.

Below is a compilation of hogs raised and hogs lost from hog cholera in these counties during the years of 1915 and 1916. Work was started in the southern half of Gage and in Pawnee Counties in the spring of 1916; in Richardson and Nemaha Counties about July 1, 1916; and in Jefferson County on September 1, 1916. In some instances the number of hogs raised in 1915 and 1916 and lost in 1915 are conservative estimates. The losses in 1916 are approximately correct, as we have knowledge of practically all losses during the year:

County.	Hogs raised—		Hogs lost—	
	1915	1916	1915	1916
Gage	78,591	84,876	2,038	488
Johnson	41,900	40,770	463	43
Pawnee	49,722	51,570	978	495
Richardson	105,660	148,917	5,706	2,321
Nemaha	52,755	61,329	4,282	1,909
Jefferson	45,860	61,968	3,000	1,456

Very respectfully,

S. E. COSFORD,
Inspector in Charge.

Mr. RUBEY. They are working now in about 100 counties in the United States.

Mr. SLOAN. The chairman of the subcommittee announces that the Government representatives are working now in about 100 counties. This distinction ought to be made, I think, that in the original 14 they are doing what we call intensive work. In the others it is what they call extensive work. So that the work of the Government officials cooperating with the authorities in the various counties these intensive areas are being gradually extended and the extensive areas ought in the course of a few years to comprehend the whole hog-raising country of the United States.

Mr. TOWNER. Will the gentleman yield?

Mr. SLOAN. I will be pleased to do so.

Mr. TOWNER. In giving your figures of losses there, sometimes you refer to losses per thousand and other times not. As I understand, the number given as to losses is all per thousand?

Mr. SLOAN. All per thousand; yes, sir.

Now, there is another interesting fact. I submit in the table given below the per cent of the hogs that were treated, including those that were known to be sick, and those that were known to have been merely exposed and thought to be well. It is a fact, and has been for years recognized, that the number generally lost where not treated amounted to about 85 per cent of the exposed herd. Now, the sick hogs treated by the simultaneous treatment in these various areas, and which died, were 29.1 per cent. Those treated with serum alone, 28.8 per cent, or an average of 28.6 per cent. Those represent hogs that were known to be sick, and those were treated by the two methods which were explained here this afternoon. I will not take your time with that now:

Results of treatment in infected herds in the years 1913, 1914, and 1915.

	Number treated.	Number died.	Per cent died.
Hogs sick when treated (simultaneous)	2,448	713	29.1
Hogs sick when treated (serum alone)	83,099	23,990	28.8
Total	85,547	24,703	28.8
Hogs apparently well when treated (simultaneous)	81,289	3,070	3.7
Hogs apparently well when treated (serum alone)	67,300	3,063	4.5
Total	148,589	6,133	4.1
Grand total	234,136	30,836	13.1

It will be noted that the other hogs that were in the stricken herds and thought to be well, and also treated by the simultaneous method, showed an average loss of only 3.7 per cent, where otherwise it would have been about 85 per cent; when treated by the serum alone, 4.5 per cent loss; or when 148,529 hogs were treated where they were exposed in the herd known to be afflicted by cholera the loss was only 4.1 per cent, as against the usual loss of 85 per cent where treatment had not been given.

Now, Mr. Chairman, I ask leave to extend my remarks in the RECORD and to submit some other facts.

The CHAIRMAN. The gentleman from Nebraska asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. SLOAN. It is a remarkable as well as an important fact that there are more hogs in this country now than we ever had before, and more were slaughtered this year than ever before, to meet home consumption and the enormous demand from beyond the seas. During this time, while cattle and sheep have been decreasing all over the United States, swine have under this method of cooperation in eradication of cholera been constantly increasing and measurably keeping the price of the hog products down.

The one important drawback to the work has been that making this serum having been left open to the world by Dr. M. Dorset, its discoverer, many have undertaken to manufacture and sell it for a profit. Many manufacturers have been uniformly successful and good and potent serum produced and sold to the swine owners. But here and there, now and then, bad or impotent serum has been sold, followed by a lack of result or a

damaging one. In each such case last stated it tended to bring the serum and the other work into disrepute and discourage not only the users but a whole community. To obviate this the legislation now being discussed is proposed. I am convinced that it will go far to forward the eradication work.

With the extension of this work of cholera eradication I am very highly gratified, as its entering upon by the Government was the first important legislative enterprise receiving my efforts after entering Congress.

I may be pardoned with here reproducing the generous remarks made by the gentleman from South Carolina, Mr. LEVER, chairman of the Agriculture Committee, on the floor of the House when the Agricultural appropriation bill was being debated.

Referring to the estimate of reduction of cholera of 30 per cent in the country generally and the very large reduction in and about the areas of Government activity he said:

That is my information; and in this connection I want to pay my tribute to the industry of the gentleman from Nebraska [Mr. SLOAN] in helping to initiate this legislation.

Nobody Wants War!

EXTENSION OF REMARKS

OF

HON. ROBERT F. HOPWOOD,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 8, 1917.

Mr. HOPWOOD. Mr. Speaker, I desire to say a few words in support of this naval appropriation bill.

To begin with, nobody wants war. By that I mean that no American with common sense wants it, and I am of the opinion *that our people*, from the men who toil in the mines, mills, and factories, and on the farms, to the man who presides over the destinies of the Nation as its Chief Magistrate, are endowed with more of that commodity than the people of any other nation.

This endowment is due to the fact that every man in this land of freedom has the privilege of doing his own thinking, and usually his conclusions are in accord with the principles of right and justice.

Men in other lands have, unfortunately, not had the same freedom of thought and action. Rulers, who claim to rule by Divine right, with whom I feel sure God has no acquaintance, have forced their conclusions on their people and driven them into this war. The result is that millions of men have, by shot and shell, by choking gases, and torturing fires, had their bodies torn to shreds and their souls sent on the long quest, out of a world that was as sweet to them as to us, before their time. Those they loved and cherished, fathers and mothers, wives and children, homeless, hungry, heartbroken, hopelessly drag their weary footsteps to find shelter and food if they may, or a place in which to die.

These men who fight have no quarrel and no hatred in their hearts for each other, yet they fight on and starve and freeze and suffer and die like rats in the holes they have dug in mother earth to cover their defenseless heads against such horrors of war as the barbarians of the early ages never dreamed of.

The earth, the sea, the sky are filled with engines of death, and it matters not that you are a peaceful citizen going about your business in a legitimate way, no laws of civilization may secure your safety. All that mankind deemed as settled and beyond dispute as the law of nations has been ignored, torn in pieces, trampled upon.

The freedom of the seas of which men talked has become an idle dream. No man embarks thereon, no matter how peaceful his mission, nor under what flag he sails, with any assurance that he will ever reach the haven of his desire. This condition became so intolerable that when the threat was made that worse things than we had yet known were about to follow, our President was compelled, after many months of patient forbearance, to sever diplomatic relations with the nation that had been the perpetrator of many crimes against our citizens and now insolently informed us that worse would follow unless we gave up our right to cross the seas, no matter whether called to do so by matters of business or missions of mercy, carrying food and clothing to the millions of homeless and hungry widows and orphans.

To every true American or right-thinking man of any nation his action finds justification in that our people had suffered indignities and outrages such as no self-respecting nation has ever condoned. We had demanded reparation for the lives and property of our citizens wantonly and cruelly sacrificed, and instead of securing it we were met with this new threat.

Our President could have done no less than he did and preserved for the United States the honor and respect not only of its own people but also of its sister nations.

It is now up to Germany to fight her enemies in accordance with the recognized rules of warfare, or otherwise as she may deem best, and abide the consequences. It is also up to her to determine whether she prefers by her own deliberate action, in contravention of our well-known and established rights, to compel us to enter this war against her.

We expect to sail the seas as heretofore on peaceful errands without interference or harm. We defended our rights to sail the seas unmolested about a hundred years ago, when a mere handful of people, in comparison with the one hundred millions that now dwell in this fair land and owe allegiance to the Stars and Stripes, and only once since have we been challenged to fight by a foreign power. Should we be challenged to fight again does any man doubt that the land of Washington and Lincoln is as full of patriotism to-day as in the olden days.

A few days ago under the dome of the Capitol the last sad rites were paid to our greatest admiral. George Dewey has joined the immortals. The glory of his achievements remains to us as a heritage to add to that of the great company of our heroes whose memory will remain with us for the ages to come.

His spirit and theirs will ever abide to inspire the hearts of our captains who walk the decks of our battleships awaiting the day that shall call them to perform great deeds of heroic valor.

Our Navy has never failed us yet, and while some here deplore the fact that we are not better prepared with ships and men, yet when the hour strikes I doubt not the honor and traditions of our sea fighters of other years will be maintained, and that new names will be added to the roll of the great ones who have so grandly sailed the seas and given imperishable renown to our arms on old ocean in the years that are gone.

I have voted for every bill presented in this House since my service began to add to and strengthen our Army and Navy, not that we might become a warlike Nation, but that we might be able to defend ourselves against any attack that might be made on our land, its people, or its institutions.

In 1907–1909 our battleships, 16 in number, made a cruise around the world. It was a great fleet, and we were proud of it.

We have since added to that fleet 14 battleships that have three times the power and efficiency of the original fleet. We have authorized many others now under construction and not yet completed. This bill provides for—

3 battleships, costing $15,500,000 each; 1 battle cruiser, $19,000,000; 3 scout cruisers, at $6,000,000 each; 15 destroyers, at $1,300,000 each; 1 destroyer tender, $2,300,000; 1 submarine tender, $1,900,000; 18 coast submarines, to have a surface displacement of about 800 tons each, at $1,300,000 each; and the limit of the cost of the 4 battle cruisers and 3 scout cruisers authorized heretofore but not yet contracted for are increased to not to exceed $19,000,000 each for the battle cruisers and $6,000,000 each for the scout cruisers, exclusive of armor and armament; and the construction of said vessels shall be begun as soon as practicable.

I favor, Mr. Speaker, the whole naval program as provided for by this bill and preceding bills.

I believe that we should use our utmost endeavors to speed the completion of all vessels now contracted for and let contracts at the earliest possible moment for all now authorized. The patriotism of our great captains of industry has been shown in the past few days by their offers to place their plants absolutely at the Government's service, without profit to themselves, in case of necessity.

We do not want war. We have no hatred of the German people or of any other. If war comes, it will be by open acts of hostility and aggression that leave us no choice but to stand for our essential and undoubted rights against the offender.

It would certainly be the part of wisdom for any nation hunting trouble to go elsewhere to seek it than to compel this Nation to engage in war. While we are not prepared for war, yet our resources are boundless and our people loyal and courageous. If they must fight, they will, and they will never be conquered or defeated. This, I say not in a boasting way, but from a firm and abiding conviction in its truth.

Our hope is, however, that we may not be involved in war, but that we may be able to use our power and influence to bring peace to a distracted world.

The Susan B. Anthony Amendment.

EXTENSION OF REMARKS

OF

HON. WILLIS C. HAWLEY,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 8, 1917.

Mr. HAWLEY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the resolutions adopted by the Legislature of the State of Oregon.

The resolutions are as follows:

Senate joint memorial 12.

Whereas 12 States of the Union, among which is Oregon, by constitutional amendment or legislative enactments, have extended the right of suffrage to women; and

Whereas in those States where such privilege has been exercised it has brought about great improvement in the moral welfare and economic conditions throughout said States; and

Whereas there is now pending in the Congress of the United States a measure known as the "Susan B. Anthony amendment to the Constitution of the United States," the purpose of which measure is to propose an amendment to the Constitution of the United States extending and giving throughout the United States the right of suffrage to women: Therefore be it

Resolved by the senate (the house of representatives concurring), That the Congress of the United States be, and it is hereby memorialized to take favorable action on said proposed measure; be it further

Resolved, That, after the concurrence of the house of representatives herein, the chief clerk of the senate be, and he hereby is, instructed to transmit copies of this memorial to the members of the Oregon delegation in Congress.

Concurred in by the house January 25, 1917.

R. N. STANFIELD,
Speaker of the House.

Adopted by the senate January 23, 1917.

GUS C. MOSER,
President of the Senate.

—

STATE OF OREGON,
SENATE CHAMBER.

I, J. W. Cochran, chief clerk of the senate of the Twenty-ninth Legislative Assembly of the State of Oregon, do hereby certify that I have carefully compared the annexed copy of senate joint memorial No. 12, Twenty-ninth Legislative Assembly, State of Oregon, with the original thereof as adopted by the senate January 23, 1917, and concurred in by the house January 25, 1917, and that the same is a full, true, and correct transcript therefrom and of the whole thereof.

In witness whereof I have hereunto set my hand this 29th day of January, 1917.

J. W. COCHRAN,
Chief Clerk Senate,
Twenty-ninth Legislative Assembly of the State of Oregon.

—

Senate joint memorial 8.

Memorial to the Congress of the United States of America petitioning the United States Government to appropriate $3,000,000 for the purpose of securing a suitable site on the Columbia River, Oreg., and erecting thereon a naval and military base.

To the Senate and House of Representatives of the Congress of the United States of America:

We, your memorialists, the Senate and House of Representatives of the State of Oregon, jointly concurring, respectfully represent that—

Whereas the Government of the United States can and ought to establish a naval base at the mouth of the Columbia River; and

Whereas the people of that portion of the United States known as the inland empire, consisting of eastern Oregon, Washington, and Idaho and other parts of the country immediately affected, have petitioned Congress for an appropriation of $3,000,000 for such purpose, and have given in their petition the followings reasons, which are confirmed by the Legislative Assembly of the State of Oregon:

First. That upward of 2,500,000 people who live in the territory sought to be protected by the proposed naval base are demanding its immediate establishment.

Second. That the territory sought to be protected against possible hostile invasion embraces an area of 250,000 square miles of the richest and most fertile lands in the United States, a territory whose natural resources and raw products consist of wheat, corn, lumber, fish, dairy products, wool, live stock, fruit cultivation, as well as the commercial industries naturally flowing from such rich and generous resources, the aggregate value of which is approximately $2,000,000,000 annually.

Third. That the military defenses at the mouth of the river, to wit, Fort Canby and Fort Stevens, while accomplishing the purpose for which they were built at the time of their construction, have since, by reason of the deepening of the channel at the mouth of the river, the construction of the Government jetties, and the completion of the Celilo Canal, become absolutely inadequate as protective measures, for not only is it possible now for boats of the largest tonnage to enter the fresh-water harbor at the mouth of the river, but it is possible for the same boats to proceed through this wide open and inviting gate clear through the granary of the United States and right into the very heart of our country.

Fourth. Coincident with the improvements carried on by the Government at the mouth of the river, there has occurred a healthy and continuous growth, not only in population of the territory affected by this immense area but also in all the fields of industry in which its people are interested; to such an extent, in fact, has the development of this section of our country proceeded that it would now, in the event of foreign difficulties, become the first natural objective point for hostile forces. This is perhaps emphasized by the fact that the mouth of the Columbia River is nearer to Yokahoma by 294 miles than Seattle, and nearly 423 miles than San Francisco on the round trip.

Fifth. Because the harbor at the mouth of the Columbia River meets the five essential requirements of the Joint Army and Navy Board, which, under the direction of Secretary Meyer, investigated the navy-yard situation in the United States. Among the prominent members of this board were Admiral George Dewey and Rear Admiral Bradley A. Fiske. Their report was later indorsed by the General Navy Board, and in substance recommended the following essentials for a naval base:

(a) It should be located at an important strategic point.
(b) It should be accessible from the sea under all conditions.
(c) It should be near by a protected anchorage sufficient for a fleet.
(d) It must be safe from attack.
(e) It should be placed near a commercial center with plentiful labor and supply facilities.

Sixth. Because there are at least four or five sites suitable and available for the purpose which can be procured without cost or purchased at a nominal figure, and the additional revenue which will necessarily accrue to the Government by reason of the increase in commerce and industry throughout the inland empire incident to the construction and establishment of a naval base is well calculated to pay the greater cost of maintenance: Now therefore be it

Resolved by the Senate and House of Representatives of the State of Oregon (jointly concurring), That we do hereby most respectfully urge and request that the Congress of the United States of America immediately appropriate the sum of $3,000,000 to secure a suitable site on the Columbia River, Oreg., as near to the entrance as may be deemed advisable for the construction of a naval base, including the following: Building ways, for building large and small vessels; dry docks, capable of docking the largest dreadnaughts; marine railways; machine shops; boiler shops; electrical shops; pattern shops; paint shop; copper shop; galvanizing shop; joiner shop; ship-fitter shop; smithery and chain shop; sheet-metal shop; boat and aeroplane shop; sail, rigging, and flax shops; oxyhydrogen and acetylene shops; foundry; tracks and rolling stock; barracks; chemical laboratories; radio plant; magazines; hospital, dispensary; fire-engine house; stables and garages; piers; fueling plant; storehouse; office buildings; floating derrick; sawmill; and such other purposes as may be necessary or incidental thereto. Be it further

Resolved, That upon the adoption of this memorial by the house of representatives that the chief clerk of the senate be, and he hereby is, instructed to transmit a copy of the same to each Member of the Oregon delegation in Congress.

Concurred in by the house January 25, 1917.

R. N. STANFIELD,
Speaker of the House.

Adopted by the senate January 19, 1917.

GUS C. MOSER,
President of the Senate.

—

STATE OF OREGON,
SENATE CHAMBER.

I, J. W. Cochran, chief clerk of the Senate of the Twenty-ninth Legislative Assembly of the State of Oregon, do hereby certify:

That I have carefully compared the annexed copy of senate joint memorial 8, Twenty-ninth Legislative Assembly, State of Oregon, with the original thereof as adopted by the senate January 19, 1917, and concurred in by the house January 25, 1917, and that the same is a full, true, and correct transcript therefrom and of the whole thereof.

In witness whereof I have hereunto set my hand this 30th day of January, 1917.

J. W. COCHRAN,
Chief Clerk Senate,
Twenty-ninth Legislative Assembly of the State of Oregon.

Indorsement of the President's Action in the Present International Crisis.

EXTENSION OF REMARKS

OF

HON. P. DAVIS OAKEY,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 8, 1917.

Mr. OAKEY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the resolution passed by the General Assembly of Connecticut, indorsing the action of the President.

The resolution is as follows:

STATE OF CONNECTICUT,
OFFICE OF THE SECRETARY,
GENERAL ASSEMBLY,
January Session, A. D. 1917.

Resolution declaring the loyalty of the people of Connecticut to the Government of the United States in the present international crisis.

Resolved by this assembly: That the action of Gov. Marcus H. Holcomb in pledging to the President of the United States the loyal support of the people of Connecticut has the full and complete indorsement and approval of this general assembly.

That copies of this resolution be forwarded by the secretary of state to the five Members of Congress and the two United States Senators from Connecticut, with the request that it shall be read into the RECORD of Congress.

Passed senate February 6, 1917.
Passed house of representatives February 6, 1917.

STATE OF CONNECTICUT,
Office of the Secretary, ss:

I, F. L. Perry, secretary of the State of Connecticut and keeper of the seal thereof, and of the original record of the acts and resolutions of the general assembly of said State, do hereby certify that I have compared the annexed copy of the resolution declaring the loyalty of the people of Connecticut to the Government of the United States in the present international crisis with the original record of the same now remaining in this office and have found the said copy to be a correct and complete transcript thereof.

And I further certify that the said original record is a public record of the said State of Connecticut, now remaining in this office.

In testimony whereof I have hereunto set my hand and affixed the seal of said State at Hartford this 7th day of February, 1917.

[SEAL.] F. L. PERRY, *Secretary.*

Dry Dock at Boston.

EXTENSION OF REMARKS
OF
HON. JAMES A. GALLIVAN,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, February 6, 1917.

Mr. GALLIVAN. Mr. Speaker, I regret exceedingly that the gentleman from Alabama [Mr. HUDDLESTON] has made a point of order against the item for the dry dock at Boston. It so happens that this dock is located in the congressional district which I have the honor to represent here, and I am familiar with the extraordinary undertaking of the Commonwealth of Massachusetts to build this structure, which, when completed, will be the largest dry dock in the world. The gentleman has asked for some information which I did not have at hand at the very moment when he sought it, but I am glad to supply it to him now, and I have no doubt it will have his careful attention.

Mr. Speaker, the story of this great undertaking by the commission on waterways of Massachusetts is an interesting one, and it will be most unfortunate if, in the course of events, the State commission will be compelled to forego the completion of a work which was well begun, well mapped out, and which means so much not only to the Commonwealth of Massachusetts and the city of Boston but, in my judgment, to the entire Nation.

Mr. Speaker, the estimated cost of the dry dock proper, including caisson, pumping plant and buildings, as made up at the time the contract was let in June, 1914, including the addition of an intermediate sill, all on the basis of bids already received for the excavation and masonry and for the other portions on prices prevailing at that time, is $2,760,000. The cost of caisson, pumping plant, and buildings—contracts for which have not as yet been let—will undoubtedly be increased on account of the increased cost of materials and labor which has occurred since 1914. In addition to the cost of the dock and its appurtenances, the Commonwealth has expended over $500,000 in dredging and wharf construction in the vicinity and in preparation of the dock site, which work would not have been undertaken at this time except to prepare for the construction of the dock.

The cost of the Hunters Point Dry Dock, as near as can be ascertained, is $2,000,000. The Hunters Point Dock is to be about 200 feet shorter, 5 feet shoaler, and 10 feet narrower than the Boston Dock.

At the present time, of the 46 battleships and armored cruisers in commission in the United States Navy, 39 are stationed on the Atlantic coast and 7 on the Pacific coast. On the Atlantic coast dry docks of sufficient size to take the largest battleships are now available at New York, Norfolk, and Newport News. None of these will accommodate the battle cruisers, which are now being designed.

In addition to the above, the following dry docks have been authorized: One at Norfolk, one at Philadelphia, and the Commonwealth Dock at Boston. All of these will be of sufficient size to accommodate the largest proposed naval vessels, the battle cruisers.

On the Pacific coast there is only one dry dock now constructed, that at Bremerton, which will take the largest battleships. This is not large enough to take the proposed battle cruisers. The dry dock under construction at Pearl Harbor, Hawaii, and the one at Hunters Point, San Francisco, will be of sufficient size to take these battle cruisers.

The Boston Dock is within 2½ miles of the local navy yard, so that mechanics from the yard are readily accessible, while the San Francisco Dock is located 30 miles from the local navy yard.

The cost of the Boston Dock is larger than the one at Hunters Point; first, because the dock is 200 feet longer, 5 feet deeper and 10 feet wider. Secondly, the walls of the Boston Dock are faced with granite, while those at Hunters Point are faced with concrete. Also, the Hunters Point Dock is excavated almost wholly from rock, therefore requiring but a small amount of concrete compared with the Boston Dock, where simply the foundation is rock and massive side walls of concrete faced with granite have to be built. At San Francisco the natural deep water comes up to the entrance to the dock, while at Boston extensive dredging has to be done in the approach channel. Owing to the character of the excavation there is less filling to be done at San Francisco than at Boston, and the foundations for cranes and buildings are less expensive.

The contract for the Boston Dock called for the completion of the dry dock on August 14, 1918, but the work is now six months behind, due to the delay in the dredging of the site and to delay caused by repairing the break in the cofferdam and further delay in repairing the same in order to make investigations by Messrs. Ripley and Barnes, so that allowing for changed weather conditions it will probably be the spring of 1919 before it is completed ready to dock vessels, and this presupposes that the contracts for pumping plant and caisson will be let soon.

Mr. Speaker, I sincerely hope that before this Congress adjourns some legislation will be passed which will enable this Government of ours to take advantage of the wonderful facilities which will be afforded by this dry dock and at a later date I shall ask the House to consider the proposition anew.

National Park and Forest Reserve at the Head of Red River in Texas.

EXTENSION OF REMARKS
OF
HON. JOHN H. STEPHENS,
OF TEXAS,
IN THE HOUSE OF REPRESENTATIVES,
Friday, February 9, 1917.

Mr. STEPHENS of Texas. Mr. Speaker, I desire to call the attention of the country and of this House to the necessity existing for a national reserve and public park at the head of Red River, in the Panhandle of Texas, to be known as the "Paloduro National Forest Reserve and Park."

On December 6, 1915, I introduced the following bill for that purpose:

A bill (H. R. 330) providing for the purchase of a national forest reserve and part in the State of Texas, to be known as the "Paloduro National Forest Reserve and Park."

Be it enacted, etc., That the Secretary of Agriculture is hereby authorized and empowered, in his discretion, to purchase land suitable for the purpose of a national forest reserve and park within the counties of Randall and Armstrong, State of Texas, so as to include all or any part of the headwaters of Red River, known as the Paloduro and tributary canyons, in total not to exceed 100,000 acres, and to care for, protect, use, and make accessible the said reserve, the same to be known as the "Paloduro National Forest Reserve and Park."

SEC. 2. That the Secretary of Agriculture shall advertise in the State of Texas in the counties of Randall and Armstrong for lands to be purchased under the provisions hereof, and as between land of equal value, for the purposes of this act, the lowest bids shall be accepted: *Provided,* That the Secretary of Agriculture shall have the right to reject any and all bids: *Provided further,* That the Secretary of Agriculture is hereby authorized and empowered, in his discretion, to contract for and purchase as a part of said forest reserve and park and from the owners thereof the ranch lands or the herd of buffaloes and cataloes known as the Goodnight buffalo herd and ranch, situated in Armstrong County, Tex.

SEC. 3. That in the acquirement of land and other property for the purposes of this act the Secretary of Agriculture shall conform to the conditions prescribed in the present or future act or acts of the Legislature of the State of Texas ceding to the United States the right to acquire and control such land and other property, and the Secretary of Agriculture is hereby authorized and empowered to exercise, as to such lands, all rights and powers granted in said act or acts: *Provided,* That when the owners of lands sought to be acquired for the purpose of this act are unwilling to sell the same on terms satisfactory to the Secretary of Agriculture, condemnation proceedings for the acquirement of such lands shall not be had so long as the said owners shall protect and perpetuate the forests on said lands, under such regulations as may be prescribed by the Secretary of Agriculture for the control of the forests on other lands purchased by the Government under this act, so far as the same may be applicable.

SEC. 4. That the Secretary of Agriculture is hereby authorized and empowered to accept gifts of land for the purpose of this act, and such lands shall hereafter be known by such names as the donors, with the approval of the Secretary of Agriculture, may prescribe.

SEC. 5. That the Secretary of Agriculture may do all things necessary to secure the safe title in the United States to the lands herein provided to be purchased; but no payment shall be made for any land pur-

chased under this act until the title to such land shall be satisfactory to the Attorney General and conveyance thereof duly executed and accepted.

SEC. 6. That the Secretary of Agriculture shall make provision for the foresting of the lands purchased under the provisions of this act whenever such planting shall be deemed advisable or found necessary for the protection of the soil or the water supply; and if buffaloes or cataloes are purchased under this act, he shall also care for and protect them.

SEC. 7. That the Secretary of Agriculture is hereby empowered and directed to make such rules and regulations and establish such service as he may deem necessary for the care, protection, control, and use of such forest reserve, and violations of such rules and regulations shall be punished as provided by law for other forest reserves.

SEC. 8. That the Secretary of Agriculture is hereby authorized and empowered to make contracts for the purchase of lands and herd of buffaloes and accept conveyance thereof in accordance with the provisions of this act to the amount of not to exceed $500,000, and the sum of $100,000 thereof to be available immediately and until the expiration of the year ending June 30, 1915, is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, for the purchase of lands for a national forest reserve and park and otherwise to carry out the provisions of this act: *Provided*, That the Secretary of Agriculture shall each year make a detail report to Congress of his doings in the premises: *Provided further*, That no part of said sum hereby appropriated shall be expended for the purchase of land in the State of Texas, under the provisions of this act, until a valid title to the same shall be vested in the United States, and until the State in which the land lies shall have ceded to the United States exclusive jurisdiction of the same during the time the United States shall be or remain the owner thereof, for all purposes except the administration of the criminal laws of said State and the service of any civil process therein.

SEC. 9. That this act shall take effect after the approval by Congress of said survey and plats.

Mr. Speaker, this bill is now pending in the Committee on Agriculture, and I desire again to call attention to the necessity for its passage by giving a history of the movement in Texas and in Congress to secure this legislation. Texas is by far the largest State in the Union and has within its boundaries no national park or forest reserve. The Panhandle of Texas has on the headwaters of Red River the finest natural park in the entire Southwest, known as the Palo Duro Canyon, and is fully and well described in one of the reports herewith printed as part of my remarks.

Mr. Speaker, on April 28 the Hereford Brand, a paper published in the Panhandle of Texas, published the following article showing the steps taken by myself and others to secure this legislation. The article is as follows:

[From the Hereford Brand, Apr. 28, 1911.]

FOREST RESERVE IN THE PANHANDLE—TO TAKE QUESTION UP AT ONCE WITH SECRETARY OF AGRICULTURE WILSON AND BOARD OF ENGINEERS.

WASHINGTON, *April 24, 1911.*

The Congressional Red River Improvement Association, composed of Members of Congress whose districts touch Red River, met in the office of the Committee on Public Buildings and Grounds to-day for the purpose of perfecting organization for the Sixty-second Congress. Representative MORRIS SHEPPARD was reelected president and Representative CHARLES D. CARTER, of Oklahoma, secretary.

It was decided that the association would appear in a body before the Secretary of Agriculture at an early date to present the matter of a forest reserve on the headwaters of the Red River. Representative SHEPPARD was requested to arrange a date for the interview with the Secretary. Representative STEPHENS of Texas was designated to be principal spokesman of the association when the interview is held, the proposed reserve being in his district.

PANHANDLE CITIES INTERESTED.

Representative STEPHENS was also requested to notify the people of Amarillo, Canyon City, and other places immediately interested, in order that they might have an opportunity of being heard before the Secretary. It was also decided that the association should call in a body at the office of the Chief of Engineers, Gen. W. H. Bixby, and again urge the establishment of a separate engineering district for Red River, the date of the interview with Gen. Bixby to be arranged by Mr. SHEPPARD.

The question of establishing a national forest reserve at the headwaters of the Red River has been urged by Representative STEPHENS for years, he having had a bill to that effect pending in the past several Congresses. This project, which has a bright prospect under the provision of the Appalachian Forest Reserve bill, is of especial interest to the people of Amarillo, and especially of Canyon City, which place is located at the mouth of the picturesque canyon, where the waters from the Red River watershed are gathered for the formation of the stream. It is the leaching of the gypsum sands of the treeless, alkali plains of this watershed that gives the Red River its murky color, and the foresting of these plains, it is expected, would not only check the disastrous floods, but would tend to clear the waters of the stream.

PROVIDES FOR EXTENSIVE REFORESTING.

The provision of the Appalachian Forest bill, under which the Red River flood-control work might be undertaken, is section 6, which reads as follows:

"That the Secretary of Agriculture is hereby authorized and directed to examine, locate, and recommend for purchase such lands as in his judgment may be necessary to the navigable streams, and to report to the National Forest Reservation Commission the results of such examinations, provided that before any lands are purchased by the National Forest Reservation Commission said lands shall be examined by the Geological Survey and a report made to the Secretary of Agriculture, showing that the control of such lands will promote or protect the navigation of streams on whose watersheds they lie."

The following newspaper article, taken from the Evening Star, published in this city, explaining further the objects of this Red River Association, says:

[From the Washington Evening Star, Apr. 26.]

TO START FOREST RESERVE—MEMBERS OF CONGRESS PLAN ONE ON RED RIVER HEADWATERS.

An association has been formed by several Members of Congress for the establishment of a forest reserve on the headwaters of the Red River. The action will be taken under the provisions of the Weeks bill, whereby the Appalachian Forest Reserve is being created.

The members of the association are Sheppard, Stephens, and Randell, of Texas; Ferris and Carter, of Oklahoma; Craven and Goodwin, of Arkansas; and Watkins, Pujo, and Ransdell, of Louisiana. The chairman of the committee is Representative Sheppard.

A hearing will be given the association soon after May 1.

The city of Amarillo is situated within a few miles of this noted Paloduro Canyon, and on May 1, 1911, its chamber of commerce passed and sent to me as their Representative in Congress the following resolution:

Whereas Hon. JOHN H. STEPHENS, Congressman from the Amarillo district, has introduced in Congress and is pressing forward to passage bill No. 4734, House of Representatives, being a bill for the acquiring of national forests on the headwaters of the Red River, in the State of Texas; and

Whereas the national forests and national parks contemplated to be created by the enactment into law of said bill would include the beautiful and attractive Paloduro Canyon in Randell and Armstrong Counties, in close proximity to Amarillo; and

Whereas the protection and fostering of the cedar and other forest trees in said canyon and at the headwaters of the Red River would, in our opinion, be a decisive step on the part of the National Government in the direction of forest preservation and extension, with its strong influence on climatic conditions, with its tendency to lessen both droughts and floods; and

Whereas the creation and maintenance of a forest reserve and national park, which would be inclusive of far-famed Paloduro Canyon, would serve the additional purpose at this healthful and invigorating elevation of 3,600 feet of supplying an additional national playground that would be accessible to the people of the whole country, whither they might repair for recreation and the restoration of health: Therefore, be it

Resolved by the directors of the Amarillo Chamber of Commerce, That the said House bill 4734 be, and the same is, heartily approved and Congressman STEPHENS is commended for his work in the cause, and we respectfully bespeak for the passage of the bill the aid of Senators Bailey and Culberson and all the Congressmen from Texas, and we would likewise invoke the aid of the Secretary of Agriculture and the National Forest Reserve Commission.

The Secretary is instructed to furnish a copy of this resolution to each of the city papers for publication and to forward a copy of same to Congressman STEPHENS and each other Congressman from Texas and to the two Senators in Washington, and to the Secretary of Agriculture and to the National Forest Reserve Commission.

Passed and approved this 1st day of May, 1911.

F. M. SHAUGHNESSY, *Secretary.*

A little later the Medical Association of Texas indorsed my bill by passing the following resolution:

Be it resolved by the house of delegates of the State Medical Association of Texas, That the Panhandle of Texas is a healthful country and that the Paloduro Canyon is a most beautiful and wonderful natural creation worthy of national recognition and preservation, and it is the sense of this body that the Congress of the United States should take steps toward the creation of a national park and health resort at this wonderful spot.

On November 19, 1912, the Texas Federation of Women's Clubs passed the following resolution:

To the CHAIRMAN TEXAS FEDERATION OF WOMEN'S CLUBS:

Whereas in the center of the Texas Panhandle, where only the glimmering mirage meets the gaze and the vast treeless plains meet the sky at every turn of our visage, nature has formed the Paloduro Canyon, a sunken garden of grandeur and beauty which winds its way a thousand feet below, covered with the evergreen cedar and other forms of vegetation, and winding, leaping, and flashing from bowlder to bowlder at its lowest depth is the clear, cool headwaters of the Red River which helps bear on its bosom to the sea the vast commerce of the Mississippi Valley; and

Whereas the conservation of this, one of the greatest natural wonders of the American Continent, from the destructive power of the almighty dollar is pressing and of vast public concern: Therefore, be it

Resolved by the Texas Federation of Women's Clubs in convention assembled at Fort Worth, November 19, 1912, That our Senators and Representatives in Congress be urged to support the bill of Mr. STEPHENS of Texas—H. R. 4737—for acquiring a national park on the headwaters of Red River.

Resolved, That a copy of these resolutions be furnished each Texas Member of the Senate and House of Representatives of the United States.

Mrs. R. W. SIMPSON, *Chairman, Gilmer,*
Mrs. R. S. FULLER, *Van Alstyne,*
Mrs. GEO. T. JOHNSON, *Stockdale,*
Committee on Conservation,
Texas Federation of Women's Clubs.

Mr. Speaker, the following letter from Senator SHEPPARD, who was at that time a Member of the House, is self-explanatory, and shows fully the steps taken by myself and the friends of the Paloduro Canyon to secure this forest reserve and park by appropriate departmental work and legislation by Congress as a national park:

COMMITTEE ON PUBLIC BUILDINGS AND GROUNDS,
HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., June 3, 1911.

Hon. JOHN H. STEPHENS,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: The Congressional Red River Improvement Association will meet at the office of Gen. W. H. Bixby, Chief of En-

gineers of the War Department, on Monday afternoon next, June 5, at 1.45 p. m. We will take up with him the matter of a separate engineering district for Red River. After our meeting with him, we will proceed to the Department of Agriculture, where we will have a conference, at 3 p. m., with the Secretary of Agriculture, Hon. James Wilson, in regard to a forest reserve for the headwaters of the Red River. Both of these meetings will be of the greatest importance, and you are urged, as a member of the Congressional Red River Improvement Association, to be present.

Hoping to see you at the times and places herein mentioned, I am, with every expression of regard,

Yours, very truly, MORRIS SHEPPARD.

On June 5 we had the conference referred to with Secretary Wilson, and he agreed to investigate the matter fully and report on my bill No. 4734 to the chairman of the Agricultural Committee as soon as the investigation could be made by him.

This report was made November 29, 1911, and is as follows:

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, D. C., November 29, 1911.

HON. JOHN LAMB,
Chairman Committee on Agriculture, House of Representatives.

DEAR SIR: On August 8 you referred to the Department of Agriculture for examination and recommendation House bill 4734, entitled "A bill for acquiring national forests on the headwaters of the Red River, in the State of Texas." Before stating an opinion as to the advisability of the legislation proposed in this bill, it is desirable first to mention briefly the conditions as to topography, ground cover, and use of the land which prevail on the different portions of the Red River watershed.

So far as the Red River flows through the State of Louisiana, it traverses a comparatively level country. Its course is southeasterly, and on the south it has no important tributary at all. Its northern tributaries in Louisiana are short, originating nearly altogether within that State. All of these drain flat, low-lying country, generally of much fertility, and not especially subject to erosion. At the present time the watersheds of these tributaries are very largely covered with forests of hardwood and pine. The forest growth, however, is being cut away with considerably rapidity, and in many cases cutting is being followed by clearing for cultivation, pasturage, and fruit growing.

In the northwestern corner of Louisiana the Red River has an important western tributary in Sulphur Fork, whose principal watershed is in several counties of northeastern Texas. What has been said as to conditions of the tributaries in Louisiana applies with equal force to the watershed of Sulphur Fork, as conditions are similar in most respects.

In southwestern Arkansas the Red River has an important northern tributary in Little River, two of the principal branches of which drain southeastern Oklahoma and three others the extreme southwestern portion of Arkansas. The latter tributaries extend well into and drain considerable portions of the mountain section of Polk and Howard Counties. Forest still covers most of the mountain section, but many clearings have been made, some of which are on very steep slopes which ought to be kept in timber. The Arkansas National Forest protects a considerable portion of the headwaters of this stream in Arkansas. Within and adjacent to the national forest are many privately owned timber tracts, which are not of value for agriculture and which should be kept under forest cover.

In Oklahoma the Red River has many very important tributaries, some of them, like North Fork, Washita, and Kiamichi Rivers and Boggy Creek, have great length and drain hundreds of square miles of country. As is well known, the country forming the most of the watershed of the Red River in Oklahoma is fertile, rolling prairie, on which rapid agricultural development is taking place. The only important mountain sections within the Oklahoma part of this watershed are the Winding Stair and Kiamichi Mountain sections in Le Flore, Latimer, Pushmataha, and McCurtain Counties, and Wichita Mountain section in Kiowa and Comanche Counties. The Wichita Mountains are now protected by the Wichita National Forest. The Winding Stair and Kiamichi Mountains are unprotected. They are forest-producing lands of value, and to a large extent belong in fee to the Choctaw Indian Nation. In taking their individual allotments the Choctaw Indians chose the more fertile lands in the river and creek bottoms and still retain in tribal ownership the more mountainous and hilly lands above referred to, amounting to about 1,500,000 acres. These lands, with standing timber, have been appraised at $3,540,000, and are now being offered for sale by the Secretary of the Interior as trustee for the Choctaw Nation. The tributaries of the Red River which drain this important mountain section are Little River, already referred to, and Kiamichi River, which has its entire drainage basin in southeastern Oklahoma. Together these two streams drain large portions of the four counties named above.

In Texas the Red River has no important tributaries between Sulphur Fork, already referred to, and Little Wichita River, which flows into it in Clay County. The Little Wichita, Wichita, and Pease Rivers are the only important tributaries in western Texas, unless we include the Salt Fork, which rises in the Panhandle of Texas but comes into the Red River through the North Fork in Oklahoma. The three southern tributaries all take their rise in a prairie section, the topography of which is in places flat, in places rolling, and only at their extreme headwaters considerably broken. They drain a section which has made great agricultural advancement during the past 10 years and promises good results from dry farming and grazing.

There remain to be considered only the extreme headwaters of the Red River. This river rises in the flat, elevated, prairie country of eastern New Mexico. It flows eastward through the same kind of country to Randall County, Tex., where it reaches the escarpment of the high plateau on which it rises. It then drops rapidly into a deep canyon known as Paloduro Canyon, through which it flows for some 20 miles. Paloduro Canyon is a physical feature of great interest occurring in a flat, elevated, prairie country. It is a great chasm 20 miles long and from a half mile to 2 miles or more across at the rim and in places 600 to 800 feet deep. The bed of the canyon proper contains 19,430 acres, with 1,760 acres of sloping ground at the rim. This area all occurs in what is called block 6 of Randall County. A minor portion of the canyon occurs below block 6, but is relatively unimportant. About one-fifth of the canyon bed is covered by forest which consists of cedar and hardwoods.

As showing the character of the canyon bed as to soil and erosion and of the stream as to flow, I quote the following from a Forest Service report prepared in 1903:

"The stream flowing through Paloduro Canyon, called usually Paloduro Creek, is the headwaters of the Red River. It flows continuously, in scanty volume during the dry season, being fed by several permanent springs which issue from the sides of the canyon just at the base of the lower cap rock. In time of sudden heavy rains it is greatly increased in volume. These downpours start streams in all the lesser channels, and a small flood pours down each little gully, heavily charged with sediment, some of which spreads out and is dropped on the red-bed flats, while the rest is swept into the stream to travel east into the Mississippi. On the steeper slopes and exposed red beds the progress of erosion is so rapid that it can be noted from year to year. This is most striking in the case of old roads. In one instance, in the course of 15 years, the entire roadbed has been swallowed up in a peculiar sinkhole, and further up this same road was completely blocked by big pieces split off the upper cap rock. Trails and cow paths offer a channel for the water, and in two or three years become little gullies, necessitating the formation of new paths. On the prairie above, wherever the sod is broken by cattle, the ends of the gullies leading down to the edge of the upper cap extend themselves quite rapidly.

"Sod, as well as brush and tree growth, prevent a certain amount of erosion. The thickets of oak shrub found on certain of the higher slopes are very effective, but are confined to a small area. The general progress of erosion, however, is not and can not be effectually checked by any kind of natural or artificial growth. The slopes are too steep and easily washed away. The difficulties of clothing them with vegetation are too great, on account of their exposure to the sun, and the thinness and rapid shifting of the soil. The gullying and undermining by heavy rains and sudden rises in the streams could not be checked in the canyon by any kind of soil cover."

Unquestionably the two portions of the Red River watershed which are most subject to erosion and which are influential in silting up the channel are Paloduro Canyon and the mountain region of southeastern Oklahoma and southwestern Arkansas. Paloduro Canyon, on account of its comparatively small area, can have but little influence on the navigable stretches of the stream from which it is far removed. That it should be protected there is no doubt, but its protection is probably more desirable on account of its scenic importance than on account of its importance as a watershed. Through forestry, however, the tendency to erosion might to some extent be reduced.

The most important area on the entire Red River watershed is the mountain section of southeastern Oklahoma already referred to as belonging to the Choctaw Indian Nation and now being offered for sale by the Department of the Interior. If this section containing approximately a million and a half acres could be purchased and kept under protection there is no question but what the flow of the Little River and the Kiamichi River would be kept more steady and that their betterment would in turn be influential on the flow of the Red River.

Other sections of the Red River watershed in Texas and Oklahoma are, of course, likely to furnish much sediment which may influence navigation, but this sediment, to a large extent, originates on farm lands, and the problem here must be solved by careful methods of agriculture rather than by taking the lands out of agricultural uses and turning them to forest growth.

I accordingly recommend that if considered practicable by your committee, and the matter meets with the approval of the Secretary of the Interior, that House bill 4734 be modified to permit of the purchase of the allotted lands of the Choctaw Indian Nation and of other lands more important for the protection of stream flow than for other uses in Oklahoma, Arkansas, and Texas.

I attach for the use of the committee a copy of an unpublished report by William T. Cox, formerly of the Forest Service, on the unallotted lands of the Choctaw Nation.

Very truly, yours, JAMES WILSON, *Secretary.*

SECTION D.

Mr. Speaker, it will be seen by this report that the Secretary favored my bill, No. 4734, for the creation of this park and forest reserve if coupled with the purchase of the Choctaw land. This adverse report practically killed the bill, for the reason that the amount of money to purchase the Indian lands was more than the committee would recommend. I have continued the fight up to this time, hoping that the time would come when Texas could by act of Congress secure an appropriation for this park without being tied up with the Choctaw land purchase. I would, however, suggest that if the Texas Legislature would pay one-half of the amount appropriated by my present bill, which would amount to only $250,000, I believe Congress will pay a like amount, and thus we would secure one of the finest parks and forest reserve in the country. Congress has set the example of cooperation with the States by paying, on stated terms and conditions, one-half the money for public roads in the States, and I believe that this cooperation should extend to public parks, public Federal buildings, and also to all river and harbor improvements. If this policy were adopted, we would hear no more of pork-barrel legislation, but more of harmony and cooperation between the States and the Federal Government, and of economy in the expenditures of the public funds from the Treasury of the United States.

In conclusion I desire to thank the Chamber of Commerce of Amarillo and its committee, who, in order to secure this reserve and park, attended two of the annual meetings of the Red River Improvement Association and aided me in getting the indorsement of this body for our reserve and park.

Amarillo was represented in these annual meetings by the Hon. W. J. Crugington and W. M. Cunningham, the present postmaster. Mr. Speaker, I will insert as part of my remarks the report of W. T. Cox, mentioned by Secretary Wilson in his letter to Chair-

man Lamb, of the Agricultural Committee of the House. It is as follows:

FAVORABLE REPORT ON THE PROPOSED CHOCTAW NATIONAL FOREST, OKLA.

[By W. T. Cox, forest inspector, Forest Service.]

LOCATION AND AREA.

The proposed national forest is situated in the southeastern part of Oklahoma and in the Cherokee and Choctaw Nations, extending from the Missouri, Kansas & Texas Railway on the west to the Arkansas line on the east, and from Little River on the south to Illinois River on the north.

The area within which reserve lands should be selected is approximately 4,000,000 acres. Of this it is doubtful if more than 40 per cent, or 1,600,000 acres, will be available for reserve purposes. Definite information concerning allotments will determine how much of the suitable timbered area can still be saved.

TOPOGRAPHY.

The country is mountainous throughout. The series of ranges running generally east and west are cut by numberless rocky gorges, through which tumble the clearest of mountain streams. The ridges are narrow and steep, varying in altitude from 700 to nearly 3,000 feet, and the valleys for the main part are merely canyons or rugged defiles.

CLIMATE.

The climate of the region is almost identical with that of Fort Smith, for which Weather Bureau data is available. In the valleys cotton is grown, corn is an excellent crop, most vegetables do well, and undoubtedly as soon as restrictions are removed and settlement encouraged, much fruit will be produced in certain localities in this part of the Territory.

The moisture-laden winds come mainly from the Gulf, but in the winter season "northers" are liable to sweep down. The precipitation is about 40 inches.

THE FOREST.

The accompanying map, prepared by the Geological Survey, shows the timbered lands. The entire area may be considered merchantable forest. In the southeastern portion shortleaf pine is the most valuable species, and it is found in merchantable quantities most all through the proposed reserve. In the rougher mountain region at the head of Little River, Mountain Fork, and the Kiamichi hardwoods are more important. White oak, hickory, red oak, and excellent post oak are found most all through the mountainous region, both on the ridges and the rocky slopes. Black and sweet gum and black walnut are found in merchantable quantities along most of the streams. Red cedar is also quite common in a number of localities. On the quadrangles have been indicated the most important species of each locality. On 50 per cent of the area merchantable pine averaging a thousand feet to the acre occurs, and on the whole area there is an average hardwood stand of about 800 feet, besides large quantities of immature timber.

At present much of the region is inaccessible for logging, but a number of rivers are drivable, and timber can be marketed in this way to the Choctaw, Oklahoma & Gulf Railway. The upper country will remain inaccessible until the proposed railroad from Antiers to Arkansas is completed. Considerable areas have been cut over, or rather merely culled, for the choice pine and for ash and walnut, and some of the choicest white oak has been cut for staves.

Fires are very common throughout the proposed reserve, nearly the whole area being burned over every year. The fires are caused mainly by reckless hunters from Texas, Arkansas, and cities of the Mississippi Valley. The damage from fires, while important in the mature timber, is exceedingly great in the case of reproduction, mast, and range.

Along the rivers and in places on the hills good land is found, but this is generally very limited. There are but few settlers except in the vicinity of Smithville, Hoochetown, Bethal, and Lukfata. The area in cultivation can probably be doubled, but nearly all the cultivable land is either allotted or has been omitted from the area recommended for reservation.

On the upper slopes of Winding Stair Mountain, Buffalo Mountain, and the Kiamichi Range are a number of sections which might be considered barren land, as it is too rocky even for the growth of timber.

All of the rivers that rise in this mountainous region are swift, and on account of the rocky formations are subject to severe floods. They carry but little silt, but with any attempted clearing on the higher slopes disastrous results may be expected through erosion and increased flood damage. None of the streams are used for development of power, but there are numerous opportunities for such development, especially on Little River, Mountain Fork, and Glover. Irrigation is not practiced, though there are places where undoubtedly it would be profitable.

With the settlement of the country along Red River and the valuable agricultural lands west of the proposed reserve, there will be a demand for all sorts of timber used on ranches; and with the development of the immense coal deposits and asphalt beds, mining timber will be in great demand; and there is already a steady market for railroad ties and fence posts, of which this reserve will have an enormous supply. Lying, as it does, on the edge of the Great Plains, the demand for this material is certain to increase rather than diminish.

The region is crossed by the Frisco Railroad, the Rock Island, and the Kansas City, Pittsburgh & Gulf. Wagon roads have been constructed along some of the streams, but most of the country is accessible only by means of steep, rocky trails, and to a limited extent by canoe.

There has been little actual lumbering, but culling has been done, and the walnut has been cut out except in very inaccessible places. White pine was cut; much young timber remains merchantable, though severely damaged by fire. Undoubtedly the creation of a reserve in this part of the Territory will make lumbering permanent and insure the perpetuation of the small mill industry now found here. Unless a reserve is created, the timber, at the rate it is now being acquired, is certain within two or three years to pass into the hands of a few large timber companies, chief of which are the Chicago Lumber & Coal Co. and the Southern Trust Co. The prices being paid for stumpage are exceedingly low. Oak has scarcely any value in the back districts, and estimates made by cruisers are invariably far below the actual stand. The Indians will, therefore, under present conditions receive practically nothing for their valuable timber holdings, and monopoly of timber in the Territory will be certain.

Some years ago grazing was important throughout this region, but on account of the persistent burning of the woods many of the small ranchers have been compelled to go out of the stock business and others suffer great loss. One of the most desirable results than can be brought about by a forest reserve will be the encouragement of stock raising in this country so well adapted to the industry. At present it is doubtful if there are 3,000 head of cattle in the entire area, and nearly all are owned by residents of the valleys immediately adjacent. Under proper regulations the range is capable of supporting eight times that number during the grazing season. In addition to the cattle, a considerable number of hogs range in the hills, but these, too, are suffering from forest fires, and great losses are reported. Wolves also are causing much loss to the ranchers. Some of the area is well suited to sheep and Angora goats, but none are owned or run here.

Although fires are so prevalent they are easily controlled in this kind of forest and with the help of the ranchers can be almost entirely prevented, the people are heartily in favor of stopping them, and will welcome any regulations that will tend to bring this about. They can also be counted on to render assistance whenever called upon to fight fires.

SITUATION.

From personal observations on the ground and conversation with prominent men in the Territory it is very desirable that an effort be made at once to provide for a reserve in this locality. Principal Chief McCurtain, of the Choctaw Nation, is in favor of the Government buying all unallotted timberlands and administering them according to the regulations now in force on western reserves. This is advisable for many reasons, he says, but principally because it will close up once and for all the unsatisfactory and annoying relations between the Indians and the Government over land. Under present laws there is bound to remain, after all allotments are completed and advertised sales made, a large amount of rough mountain land which will be only a source of trouble, complications, and disproportionate expense. Inspector Wright, of the Indian Service; Hon. Tams Bixby, of the Dawes Commission; Peter J. Hudson, auditor of the Choctaw Nation; Mr. B. F. Hackett, United States commissioner at Antlers; and Judge Humphrey, of Atoka, are all in favor of a reserve. There are said to be about 3,000,000 acres of rough timbered lands remaining unallotted in the Choctaw and Chickasaw Nations. Possibly one-third of this is suitable for agricultural purposes, but upward of one and one-half million acres are decidedly unfit for farming, although well suited for the growth of timber such as is found here. Practically every man in the Territory who has expressed his sentiments on the subject is most pronounced in his desire to have this wild timberland placed under Government control so that fires may be prevented and the timber and range properly administered.

There is a tremendous future in coal mining in the Territory between Fort Smith and the Chickasaw country. The present and rapidly increasing mining developments and the varied activities of the surrounding region are dependent upon a continuous and convenient supply of timber. The timber resources of these mountains would be entirely adequate if judiciously used and properly protected. Under the present conditions the standing timber will be rapidly destroyed and reproduction rendered impossible; moreover, the denudation of these important watersheds will enormously increase the destruction by floods of the rich bottom lands along the Red and Arkansas Rivers.

The opposition to a reserve will come mainly from speculators, who for some time have been wrongfully taking advantage of the Indians and depriving them of their rights. The activity in this respect is very great, and it will be but a short time until all the valuable timber is lost to the Indians and Government if the present policy is to continue.

Another source from which some opposition may be expected is the so-called Gordon-Choctaw Game Preserve Association. It was through the efforts of this association to obtain title to a large tract of mountain land that the proposition to establish a reserve in this locality was brought up. Considering the nature of the land which Mr. Gordon and his associates desire, it would be inadvisable to permit the purchase by private parties of such a large area in the midst of what should be a Federal reserve. Although the purpose of Mr. Gordon to establish a game preserve may be a worthy one, there is no necessity for a private preserve covering such an immense area, especially when there is a merchantable stand of hardwood over nearly all of it, and great quantities of pine. If Mr. Gordon is to be allowed to purchase any of the land, it should be not to exceed 60,000 acres immediately south and east of Tuskahomma, as indicated on attached map forming a part of this report; and even this tract could be handled more efficiently by Government rangers and the game even better protected under proper regulations than would be possible by an association of citizens. Dr. Miller, one of the charter members of the association, expressed his willingness to have the proposed game preserve reduced to 50,000 acres.

Segregated coal land is said to be worked now by paying Indians a royalty of 8 (?) cents per ton. Why not handle coal land in connection with the timber? The revenues would thus be enormous. Asphalt could be handled in the same way.

RECOMMENDATIONS.

It is respectfully and urgently recommended that all unallotted lands within the lines indicated on the attached map of the Territory be purchased at the value placed upon land and timber by the Dawes Commission. This will be satisfactory to the Indians, to the Dawes Commission, and, no doubt, to the Indian Office; certainly to the white people of the Territory. The valuation varies from 25 cents to about $3 per acre, and the pine is rated at 50 cents per thousand. No value has been placed upon hardwood. It will thus be seen that purchase by the United States will be a good bargain. The revenue from the reserve should, within a very few years, pay for the entire tract besides maintaining an efficient administrative force. Especially would this be true if the coal lands and asphalt can be handled in connection. It is recommended that immediate steps be taken to stop all allotments within the lines indicated on the attached map, for there is plenty of desirable farming land outside this area to complete all allotments.

It is confidently believed that a forest reserve here would be vastly more effective in controlling the Arkansas and Red Rivers than all the contemplated "improvements" and those that have been made at enormous expense in the channels of these streams.

As a game refuge the reserve could be made exceedingly valuable, for then the game laws would be enforced. At present deer are hounded winter and summer until, even in the roughest mountains, they are well nigh exterminated. Two or three years ago turkeys were abundant; now they are everywhere scarce. With the enforcement of even very ordinary game laws, such as a short open season and reasonable bag for turkeys and prohibiting the use of dogs in hunting deer, the reserve would soon become very attractive to sportsmen and a delightful summer camping ground for people of the lower Mississippi Valley. In this connection it is recommended that the patenting of home lots be

provided for in the reserve, so that people from the thickly settled States round about may actually own homes here in the hills, where they can breathe in air that is pure and enjoy mountain scenery which compares favorably with the best of the Appalachians.

The accompanying copies of telegrams, letters, and maps are pertinent and should be considered part of this report.

WM. T. COX.

MUSKOGEE, IND. T., *November 28, 1906.*

Forest Inspector COX,
Hotel Main, Fort Smith, Ark.:

I am willing to recommend purchase by Government of large tracts of rough timbered land in Indian Territory, to be administered like western forest reserves and for protection of streams, the reservation to be reserved as hunting grounds for Indians by blood.

BIXBY, *Commissioner.*

Mr. Speaker, I have in this Congress succeeded in securing a fish hatchery station for my district, which will, I understand, be located on this Paloduro Canyon above and near this park. The small fish escaping from this hatchery will continually stock this park, and ultimately the whole length of Red River and its tributaries will be stocked with the many varieties of Government food fish that are suitable to this climate. The fishing facilities offered by this hatchery will greatly add to the beauty, utility, and value of this wonderful park and health and pleasure resort.

State Game Laws.

EXTENSION OF REMARKS
OF
HON. DORSEY W. SHACKLEFORD,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 8, 1917.

Mr. SHACKLEFORD. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following letter:

STATE OF MISSOURI,
STATE GAME AND FISH DEPARTMENT,
St. Louis, Mo., February 5, 1917.

Hon. DORSEY W. SHACKLEFORD,
House of Representatives, Washington, D. C.

MY DEAR SIR: I am taking the liberty of writing you with relation to a bill that is now pending in Congress, and which will affect the present State game laws of the State of Missouri should the bill be enacted into law.

On January 13, 1917, there was introduced into the Senate a bill by Senator HITCHCOCK, which is known as Senate bill 7858, and on the same date there was a bill introduced into the House by Congressman FLOOD, a bill which is known as H. R. 20080. Both bills are identical, and their object is to give effect to the migratory-bird treaty ratified between this country and Canada on December 6, 1916.

The above bill was referred to the Committee on Foreign Affairs of the Senate and the House, and as you are a member of the Committee on Foreign Affairs in the House I desire to explain to you some of the facts about this bill and its objects.

In the year 1913 there was enacted into law by Congress a bill known as the Weeks-McLean bill for the protection of migratory birds, but the Government has made no effort to enforce that law, due to the fact that two United States district courts and the State Supreme Court of Maine have held the Weeks-McLean law unconstitutional, and no court, State or Federal, has upheld that law. Senator MCLEAN, of Connecticut, has openly stated on the floor of the Senate that his law (Weeks-McLean) is unconstitutional, but the Senator also stated that if Congress would ratify the treaty with Canada then the Weeks-McLean law would be constitutional; but the promoters of the Weeks-McLean law are now mailing out letters to the public advising the public to write or wire their Senators and Congressmen to support the Hitchcock-Flood bill, which your committee now has under consideration, and they state in their letters that if the above bill is not passed at the present session of Congress all Federal legislation for the conservation of migratory birds will become a dead letter; therefore they admit the Weeks-McLean law is unconstitutional, and that the right to legislate for the protection of migratory birds and game is a right within each State and not within the power of the Federal Government, but they are now asking you to support a bill that they openly state will take the sovereign rights of the States under the Federal Constitution and put them in the hands of the Federal Government without the amendment of the Federal Constitution, as set forth by the tenth amendment in the Federal Constitution.

I desire to state that all the above activity is being carried on by the arms and ammunition makers in the East, and they are now making every effort possible to get the Hitchcock-Flood bill passed at the present session of Congress; and I will say that the movement for Federal conservation of migratory birds is being carried on for financial gain by the Winchester Repeating Arms Co., of New Haven, Conn.; Remington Arms-Union Metallic Cartridge Co., of 233 Broadway, New York City; and many other arms and ammunition makers, of which I have a list. The American Game Protective Association, of 233 Broadway, New York City; National Association of Audubon Societies, of 1974 Broadway, New York City; and the Permanent Wild Life Protection Fund, also of New York City, are the official representatives of the large arms and ammunition makers, and the above associations are carrying on the activity at Washington, D. C., for the passage of the Hitchcock-Flood bill, and I can submit the evidence to prove my statements before a committee from Congress.

I have submitted some of the evidence to Senator REED, and as you know, the Senator has always been against this Federal legislation for conservation of migratory birds and will oppose the legislation at this session of Congress.

The arms and ammunition makers, through their representatives, the above associations, have boasted in the newspapers and sportsmen's press that the treaty with Canada and the Hitchcock-Flood measure passed in Congress will bind the hands of the United States Supreme Court from giving a decision in the Shauver case, which is the test of the constitutionality of the Weeks-McLean law.

I feel certain that you are not in favor of a bill (Hitchcock-Flood bill) which will bind the hands of the United States Supreme Court so that the sovereign rights of the great State of Missouri can not be protected and restored to the people of this State by the United States Supreme Court. I assure you that any support you give the people and sportsmen of the State of Missouri will be greatly appreciated.

With best wishes, I am,

Sincerely, yours,

ARTHUR D. HOLTHAUS,
Deputy Commissioner.

P. S.—You may use this letter as you see fit in the interest of the people of this State.

Appropriations for Army and Navy.

EXTENSION OF REMARKS
OF
HON. SAMUEL H. MILLER,
OF PENNSYLVANIA.
IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 8, 1917.

Mr. MILLER of Pennsylvania. Mr. Speaker, in the remarks that I shall make on this bill—the Naval appropriation bill—I criticize no member of the Appropriation Committee. At the outstart I desire to state that I approve, without qualification, the action taken by the President as set forth in his address delivered before the joint session of Congress February 2, severing diplomatic relations with the Imperial German Government. Should it become necessary in the future, in the opinion of the President, for the protection of American citizens, to take further and more drastic action, I shall willingly and ungrudgingly support him in every effort put forth by him, and every request made by him, to enable him to maintain the honor of our Nation.

I believe, however, that many of the expenditures recommended by this bill, and a supplement thereto (H. R. 20781) introduced in the House February 6, and referred to the Committee on Appropriations, are not necessary at this time. The two bills recommend an appropriation of the very large sum of $501,453,245.

I believe a résumé of the appropriations for the Army and Navy, including the appropriations for fortification, for the Sixty-second, Sixty-third, and first session of the Sixty-fourth Congresses, and the recommendations for the second session of the Sixty-fourth Congress, would be illuminating at this time.

The appropriations for these purposes—Army, Navy, and fortifications—for the Sixty-second Congress were $466,551,559.

For the Sixty-third Congress, $513,969,563.

For the first session of the Sixty-fourth Congress, $611,556,287.

Recommended for the second session of the Sixty-fourth Congress, $501,453,245. This amount has already been increased by

amendment in the Committee of the Whole House over $10,000,000, and we may reasonably expect that by the time the bills are finally passed by Congress the amount will be much larger. But if the amounts as finally passed do not exceed the amount recommended, the total amounts appropriated by the Sixty-fourth Congress for the Army, Navy, and fortifications will reach the startling sum of $1,420,926,733.

The amounts appropriated for the Army, Navy, and fortifications by the Sixty-second, Sixty-third, and first session of the Sixty-fourth Congresses, and recommended for this session, are as follows:

Year.	Navy.	Army.	Fortifications.	Total.
1913	$129,739,055	$90,558,712	$4,036,235	$224,334,002
1914	142,743,162	94,266,145	5,218,250	242,217,557
1915	148,254,332	101,019,212	5,627,700	254,901,244
1916	151,033,908	101,974,195	6,060,216	259,068,319
1917	318,212,207	267,596,530	25,747,550	611,556,287
1918	351,453,245	247,061,108	60,855,593	659,369,946
Total	1,241,435,909	902,475,902	107,545,544	2,251,447,355

To the amount of $659,369,946 for the second session of the Sixty-fourth Congress, the $150,000,000 recommended by the supplementary bill H. R. 20781, referred to above, brings the total for the second session of the Sixty-fourth Congress to the sum of $809,369,946.

I can not believe the very able and efficient chairman of the Appropriations Committee, Mr. FITZGERALD, of New York, approves of this unusual increase of expenditures.

I do not believe the able and efficient chairman of the Ways and Means Committee, Mr. KITCHIN, of North Carolina, approves of this increased expenditure at this time. He has already exhausted all visible and invisible sources of raising revenue to meet the expected appropriations of this Congress.

And for what purpose are we now so energetically exploiting the preparedness hobby? Does any member of the Naval Committee believe that Germany has an intent to attack any city, or any of the coasts, of the United States? Can she spare a soldier or a battleship to invade or menace our land? She has all, and more, than she can attend to in Europe. Her object is to weaken the allies and if possible destroy, in the ocean zone prescribed by her, shipping carrying munitions, food, and so forth, to the allies, or to neutral countries that may reach the allies.

No one can defend her course. It is inhuman. It is brutal. It is barbarous. But war is all this. Gen. Sherman summed it all up in one word—hell!

But when we appropriate all this money, then what? The war will be over before we can have a battleship built and paid for out of the excess naval appropriation, or an army division raised, armed, and equipped, and the expenses thereof defrayed out of the excess Army appropriation.

Do the gentlemen who advocate these exorbitant appropriations propose to send a battleship or a regiment across the ocean to participate in the European war? Has not our fears warped our judgment? Have we not become hysterical?

We have already in the last four years increased our annual taxes by new sources of revenue over $900,000,000 a year. How many more million dollars new taxes do we propose to assess and collect next year, and each year for the next four years?

Sometime the overburdened taxpayer will "turn," then the deluge.

National Prohibition of the Liquor Traffic.

"How much longer are we, the people of the United States, going to tolerate an institution which is eating at the very heartstrings of the people and undermining the foundations of our Government?"

EXTENSION OF REMARKS

OF

HON. JOHN G. COOPER,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 9, 1917.

THE CHALLENGE OF A CRISIS.

Mr. COOPER of Ohio. Mr. Speaker, in the fall of 1914 there came a message across the Atlantic that Europe was at war. To the American people it was like a bolt of lightning coming from the clear sky. But nevertheless it was true, and from that day to this there has been raging in Europe the most inhuman, bloody war since the world began. Millions of men have lost their lives, entire countries have been torn asunder by shot and shell, the life's blood of the best young manhood has clotted upon the battle field, millions of widows and orphans have been left desolate, with no father's hand to guide and protect them. Words would fail me were I to attempt to describe to you the terrible suffering, misery, and want that has been brought to the people of these warring nations during the more than two years of this terrible struggle.

On that eventful day when the bugle sounded the call for men to join the colors and go to the front, there was no hesitating. Brave men left their homes and firesides and answered the call by the millions. Why? They had heard the challenge of a crisis, and that is the message that is being brought to the American people to-day, "The challenge of a crisis."

THE GREAT AMERICAN CRISIS.

The great crisis which is facing the American people at this time is how much longer are we going to tolerate an institution that is eating at the very heartstrings of our people and undermining the foundations of our Government. I refer to the un-American licensed liquor traffic. How much longer will the United States Government be a partner to this evil, which is the greatest enemy to the home, to the church, to the schools, to the State and the Nation that we have to-day? Yes, my fellow countrymen, this is the question that is facing the American people to-day. But we thank God that the battle to drive the liquor traffic out of our land is well under way, and to-day our hearts rejoice as we see the temperance forces steadily marching forward in this great fight to the final victory, when we shall see the total abolition of the liquor traffic from the United States of America.

That day is not very far away, for I believe that when the year 1920 shall have passed there will not be a drop of intoxicating liquor legally manufactured or sold in the United States of America for beverage purposes. Yes, my friends, we have reason to rejoice to-day for the wonderful progress that the temperance movement has made during the last 20 years. Over half the States in the Union have eliminated old John Barleycorn from within their borders; 27 out of the 48 States have entered the dry column; of the 2,543 counties in this country there are only 355 in which liquor is sold; 85 per cent of our country is dry area and 65 per cent of our people live in dry territory. To-day we can travel from coast to coast without going into a wet State; starting at the Atlantic coast in old Virginia we go south into North Carolina, then west through Tennessee, Arkansas, and Oklahoma, then northwest through Kansas, Nebraska, North Dakota, Montana, Idaho, and Oregon to the Pacific coast without touching a wet State. And so the temperance forces have gone steadily marching on, until the prospect for Nation-wide prohibition looks brighter than it ever did before.

The next logical step to progress and the abolition of the liquor traffic will be the submission by Congress to the several States of an amendment to the Federal Constitution for national prohibition, which when ratified by three-fourths of the States of the Union will prohibit the manufacture and sale of intoxicating liquor throughout the Nation.

THE LIQUOR TRAFFIC CORRUPTS POLITICS.

The liquor traffic ought to be abolished from the standpoint of clean politics. Wherever the traffic exists we have corruption in politics. To carry out their corrupt practices the liquor business will resort to anything that is unlawful. It will not stop at violating the laws of God and man, there is no legislator it will not bribe, and no voter it will not buy if it can. It has its powerful lobbies at the doors and on the floors of our legislative halls, hounding our public officials night and day trying to force them to enact laws that will be for its benefit and in the interest of the corrupt business.

The last State-wide fight for prohibition in Texas gives us an example of what it will do in trying to corrupt voters. During this campaign in Texas the liquor interests poured into that State more than $1,000,000 in trying to buy up the electorate. A fearless attorney general in this State was determined to prosecute them. He seized the books of one brewery, and the evidence that he found should make the blush of shame come to every American citizen that believes in clean, honest politics.

When they knew they were caught for violating the election laws they came into court and paid $275,000 fines and $50,000 court costs. In the books that the attorney general seized were some very interesting letters. One of these letters was from Adolphus Busch, the big brewer from St. Louis; and I have here an extract from it in which he says:

It may cost us millions and even more to win this fight, but what of it? I will give $100,000 extra if necessary. I mean to say by the above that everyone interested in the business should be willing to sacrifice all and everything he possesses to save our business from being ruined by a fanatical part of the people.

OTHER EXAMPLES OF CORRUPTION.

My friends, we do not need to go as far as Texas to find this corrupt hand in politics. We have recently heard from them in the States of Indiana and Pennsylvania. The disgraceful record of liquor corruption in Terre Haute is still fresh in the minds of the people of our country. In this city the saloon was the meeting place of corrupt politicians, and they had a great system established for collecting money to help them win at the elections.

An investigation was made with regard to the corrupt condition in politics in this city, and as a result 16 men were sent to the Federal prison at Fort Leavenworth, Kans. When these men were sentenced, the judge who presided at their trials made the statement that 90 per cent of the corruption in politics in Terre Haute could be traced to the saloon.

Again, in Pennsylvania we see the liquor people violating the corrupt-practices law, and out of the 100 indictments made a short time ago for violation of the election laws 70 of those indicted were brewery officials. Now, according to press reports they are trying to have the laws of the United States set aside, claiming they are within their lawful rights when they spend $3,000,000 to corrupt politics in Pennsylvania. And at this point I desire to insert in the RECORD an article which appeared in the daily newspapers on December 16, 1916:

BREWERS UPHOLD USE OF MONEY IN ELECTON—COURT PLEA DENIES NATION'S RIGHT TO CURB ACTIVITIES—"MONEY THEIR ONLY LANGUAGE."

PITTSBURGH, PA., *December 16.*

Attacking the Federal corrupt-practices act as unconstitutional, attorneys for 75 brewing corporations indicted for the alleged illegal use of money in the congressional campaign of 1914 to-day in the United States district court here attempted to have the indictments set aside.

D. P. Hibbard, of Philadelphia, in his argument, declared that Congress had no more right to abridge the rights of the defendants than it had to abridge the right of free speech or a free press, as the campaign carried on by the brewing interests had been "educational, not corrupting."

George E. Shaw, of Pittsburgh, cited principles laid down by Alexander Hamilton in support of his contention that the Federal Government had no right whatever to regulate elections, and in defining the word "money" as used in the act said: "The only language through which a corporation can speak is through spending money."

Mr. Speaker, the liquor people themselves admit the corruption and evil of their business, and to verify this statement I quote from the exact words which appeared in an editorial in the National Liquor Dealers' Journal of September 10, 1913, which is as follows:

[Editorial, National Liquor Dealers' Journal.]

To us there is the handwriting on the wall, and its interpretation spells doom. The liquor business is to blame. It seems incapable of learning any lesson of advancement or any motive but profit. To perpetuate itself, it has formed alliances with the slums that repel all conscientious and patriotic citizens. It deliberately aids the most corrupt political powers, and backs with all of its resources the most unworthy men, the most corrupt and recreant officials. It does not aid to the purification of municipal, State, or National administrations. * * * There are billions of property involved, and an industry of great employing and tax-paying ability; but when the people decide that the truth is being told about the alcoholic liquor trade, the money value will not count, for conscience aroused puts the value of man above all things.

Mr. Speaker, this terrible indictment against the liquor traffic is not the statement of the temperance orator, but the words of the editor of the National Liquor Dealers' Journal.

THE SALOON IS THE BREEDING PLACE FOR PROSTITUTION AND CRIME.

That the saloon is largely responsible for immorality and prostitution was demonstrated by the report of the Chicago vice commission on the social evil in Chicago. On page 34 of the report the commission has the following to say about prostitution and the saloon:

The commission has found in its investigation that the most dangerous immoral influence and the most important financial influence, outside of the business of prostitution as carried on in houses, is the disorderly saloon. The proprietors of these places are using prostitutes as an adjunct to the sale of beer and liquor, and are allowing them to openly solicit for immoral purposes in their rear rooms. This is done in spite of the constant statement of the brewers and liquor dealers that they are against the use of prostitutes in saloons which they supply.

During the period of its investigation the commission has secured definite information regarding 445 saloons in different parts of the city. The investigators have counted 929 unescorted women in these saloons, who by their actions and conversation were believed to be prostitutes. In fact, they were solicited by more than 236 women in 236 different saloons, all of whom, with the exception of 98, solicited for rooms, "hotels," and houses of prostitution over the saloons.

Another feature of the saloon which is pernicious is the vaudeville shows of lewd nature conducted in the rear rooms. This is so widespread in the saloons mentioned in the class above that the public and police seem to have taken the attitude that because it exists it should be allowed to continue. Many young men, to say nothing of women, have been lured by the entertainment provided in these resorts to acts which they never contemplated when they entered the saloon for drinks only. Could the general public know the extent of the saloon's degrading influence in so many instances it would insistently demand an immediate and permanent change in the situation.

Throughout its report the commission cites instance after instance showing how the use of intoxicating liquors as a beverage and immorality are closely associated.

The Chicago vice commission must be regarded as a fair and unbiased authority. It was appointed by the mayor and city council of Chicago to investigate immorality in that city, and was composed of a representative group of business and professional men of all religious beliefs, headed by Dean Walter T. Sumner.

Dr. E. O. Taylor, of Boston, in his message of science to legislatures, says:

The principal agency by which 300,000 girls are led astray every year in this country is liquor. * * * And this statement is confirmed by the report of the legislative antivice committee of Wisconsin, which was filed with the secretary of state December 5, 1914. This report says: "The greatest cause for commercialized vice is the use of intoxicating liquor."

Mr. Speaker, what a revelation this is. That we, the people of the United States, living in a so-called Christian, civilized country should permit such an institution as the saloon, which lures 300,000 of our young girls along the downward path of prostitution every year.

THE SALOON AS A CRIME BREEDER.

Mr. Speaker, that the saloon has no rival as a crime breeder no one will deny. The chaplains of penitentiaries of Ohio, Indiana, and Illinois give the following figures showing the percentage of inmates who owe their imprisonment wholly or in part to liquor:

	Per cent.
Ohio Penitentiary	80
Indiana Penitentiary	83
Illinois Penitentiary	90

Mr. Speaker, it is not necessary for me to say any more with regard to the relation of the saloon and crime, but at this time I ask permission to insert as part of my remarks a letter relating to this subject which I received some time ago from a very distinguished Member of this body:

HOUSE OF REPRESENTATIVES OF UNITED STATES,
COMMITTEE ON PATENTS,
Washington, D. C., December 11, 1916.

Hon. JOHN G. COOPER,
Washington, D. C.

MY DEAR CONGRESSMAN: I am writing this letter at your request, stating to you the effect of intoxicating liquor as a producer of crime in so far as it has come within my personal observation.

It was my privilege to serve in the courts of the State of Mississippi during a period of about seven years in the several capacities of county attorney, district attorney, and circuit judge. The county attorney is a county prosecuting officer and assistant to the district attorney in the circuit court, the district attorney is a district prosecuting officer trying all misdemeanors and felonies in the circuit court, which has jurisdiction of all civil cases brought at law in contradistinction to equity and also plenary jurisdiction of all misdemeanors and felonies.

It will thus be seen that my opportunities for observation were excellent.

During my service I busied myself in the effort to learn the causes of crime in my district, which I believe to be typical of the State at large. I carefully prepared my cases, as was necessary, and learned the history of the cases as thoroughly as possible.

I found that from 85 to 95 per cent of all crimes committed in my district from murder through the entire category of crime was directly due to whisky or kindred beverages.

In one county, the most populous of the district, I tried from 10 to 20 men for murder each year, and almost without exception I found that whisky was the cause of the homicide. In short, in one county alone, we had each year from 10 to 20 dead men, from 10 to 20 men sent to the penitentiary for life or hanged, from 10 to 20 widows, and from 10 to 20 or 30 or 40, as the case might be, orphans or half orphans thrown more or less upon the mercies of a rather thoughtless world, and all of this with its attendant sorrow, suffering, and heartbreak, with other attendant evils was due to intoxicating liquor. This in respect to murder in one county alone. In addition, there were the rapes, embezzlements, highway robberies, larcenies, assaults and batteries with intent to kill, potential murders, etc.

Whisky is the greatest crime producer, in my opinion.

If we could get rid of whisky in Mississippi we would rid ourselves of from 85 to 95 per cent of our criminal-expense account, of our criminal population, of our inmates of penal institutions, and of the suffering and sorrow that crime brings not alone to the criminal but also to the innocent.

Mississippi is a prohibition State, but I am thoroughly convinced that we can not be dry until our neighboring States also prohibit the sale of liquor.

If you think that this letter can be of use to you in the great and worthy work that you are doing for prohibition, you are at liberty to use it whenever or wherever you like.

Sincerely, yours,
WEBB VENABLE.

ECONOMIC BENEFITS OF PROHIBITION.

Mr. Speaker, the supporters of the liquor traffic are working overtime in trying to leave the impression in the minds of the voters that prohibition is a deplorable thing for any community to adopt. They are forever making the assertion that wherever prohibition has been adopted the result has been a general business depression in all lines of commercial activity; that prohibition has the result of throwing thousands of people out of

work, and that there would be hundreds of vacant store buildings in our large cities, and that there would be more liquor sold and drunk, there would be more crimes committed, and more arrests for drunkenness under prohibition than under license.

Now, no one can blame the liquor people for making these assertions, for to-day they are fighting for the very existence of their business; but let us be fair and examine the facts. Let us call in the witness and examine the testimony. The defendant in this case is prohibition and the prosecutor is the liquor traffic.

The supporters of the liquor traffic, and most of the witnesses on this side are people who are financially interested in the business, say that prohibition tends to retard the development of the community from the social, moral, industrial, and business standpoint.

A good indication as to what prohibition will do is what it has done in the cities, counties, and States where it has been tried. So in order to be fair and give prohibition an impartial trial we should listen to the testimony of the people who live in districts where prohibition of the liquor traffic has been in force, and not listen to the testimony of paid hirelings of the liquor interests, some of whom have never been within thousands of miles of the prohibition territory that they are so eager to condemn.

SOME WET EVIDENCE.

A few days ago I read an article in one of the Washington daily papers which was given to the press by a Col. J. A. Ownbey, in which he states:

Prohibition has been in force just about a year in Colorado. Denver, the metropolis of the State, has suffered perhaps more than any other city. This year, I believe, is the first year in the history of the city that the population has failed to show an increase; instead the number of inhabitants has decreased 15,000 to 20,000.

The value of property has depreciated to a great extent, wages have been reduced, and it is next to impossible to sell real estate. The big hotels that once did a record business now are barely able to pay expenses. Moreover, prohibition has driven fully 80 per cent of the coal miners out of the State. Mine owners have the greatest difficulty getting men to work. Prohibition might be all right in theory, but not in practice, and while the State of Colorado is dry, it is easy for those who want it to get their liquor by sending across the State line into Wyoming or New Mexico. Cheyenne, Wyo., and Raton, N. Mex., are doing a big business in the sale of liquors, one firm in Cheyenne having receipts of $1,500 a day for liquor that goes into Colorado.

You will notice in one place of Mr. Ownbey's statement he says that prohibition has driven thousands of workmen out of Colorado because they could not get their liquor, and then a little later on he makes the statement that anyone who wants liquor in Colorado can get it without any trouble.

EVIDENCE IN REBUTTAL.

But, Mr. Speaker, let us call in citizens of Colorado and Denver of recognized position and credability and hear what they have to say. It is a pretty good idea if you want to find out what are the popular issues that take well with the people of the States to watch the platforms of the political parties. The party leaders always try and insert in their State platforms the issues which are most popular with the people. In 1916 for the first time in the history of Colorado the Democratic and Republican Party platforms indorsed prohibition. Why? Because they knew that the people of Colorado were overwhelmingly in favor of prohibition in their State.

My friends, let us get to the truth about this matter, and let the people of Colorado and Denver speak for themselves. Their opinion is reflected in the votes on prohibition since the year 1910, at which time the city of Denver voted wet by 17,000, in 1912 by 22,000, in 1914 by 8,500, in 1915 for a so-called home-rule amendment by 3,500. When the State of Colorado voted on State-wide prohibition in 1914, although the State as a whole went dry, the city of Denver voted wet by 8,000 majority, and on January 1, 1916, the State prohibition law went into effect, thereby closing the saloons and liquor stores in Denver. In November, 1916, at the general election the liquor people tried to repeal the State-wide prohibition law by submitting to the voters an initiative petition for an amendment to the State constitution declaring beer not to be an intoxicant. Now, please bear in mind that Denver voted 8,000 wet in the State-wide fight, but after the people of this city had lived under prohibition for nine months they went to the polls in 1916 and voted dry by a majority of 10,960. In the same election the majority for prohibition in the State of Colorado was 85,000. Yes, my friends, the people of Colorado and Denver spoke for themselves with regard to what their sentiments were toward prohibition, and yet in face of these facts we still hear the thundering voice of the chief exhorter of the liquor interests who lives down in Cincinnati, 3,000 miles away from Denver, proclaiming with a loud voice that prohibition has been a deplorable thing for Denver. On December 12, 1916, one of the daily papers of Denver had this to say about prohibition after it had made a very careful investigation of conditions in that city during the first 10 months without saloons:

Taxes have decreased.
Finances of municipality never were so good.
Business is better than it has ever been.
Every man who wants work can get it.
There are fewer vacant houses and stores than ever before.
Building permits, especially for the last six months, show a decided gain, particularly in the matter of small homes.
Collections are 40 per cent better.
Savings accounts in Denver have broken all records.
Hotels whose proprietors predicted they would be driven out of business within three months are planning extensions, and two new million-dollar hotels are assured within a year.
Divorce suits filed show a decrease of 40 per cent.
Arrests for all causes have decreased 31 per cent.
Arrests for drunkenness have decreased 59 per cent.
Arrests for vagrancy have decreased 55 per cent.
The cost of maintaining the city jail has decreased 28 per cent.
The cost of maintaining the county jail has fallen 27 per cent.
The number of murders, suicides, and burglaries has fallen off at an astonishing rate.
There has only been two murders in Denver in 1916. One of these was so clearly a case of self-defense against a demented man that the jury reached a verdict of not guilty in less than 20 minutes. The other case has not come to trial. At least a half a dozen murders a year formerly was Denver's average.
Police Chief Hamilton Armstrong says crime is decreasing at a phenomenal rate. He attributes this to prohibition.
District Attorney John A. Bush stated in open court recently that the work of his office has decreased 50 per cent since the city went dry.
Every newspaper in Denver has cut its staff of police reporters from one-half to two-thirds.
The State penitentiary has one-fourth fewer prisoners than formerly, and about February 1 will close one whole wing of its chain of buildings.
Just before Denver went dry saloon interests predicted that property occupied by saloons would remain vacant, as the locations were fit for nothing but saloons; that saloon men, brewery workers, and others dependent upon the liquor trade would move away from Colorado, causing houses to become empty and real estate values to depreciate; that ice plants, which were supposed to rely upon the saloons as their best customers, would reduce their output at least 50 per cent; that merchants in every line would encounter the worst times in the history of the city; that taxes would be heavily increased to make up the loss of $341,000 annually paid by saloon licenses.
Then follows this statement: The best of saloon locations were rented before the bars moved out. Proprietors of other businesses had their fixtures built in advance; saloons closed and moved out on Saturday night; new concerns installed fixtures and stock on Sunday and opened for business Monday.
Merchants in all lines are commenting on the increased business during 1916. Their customers pay their bills promptly, they say. Nearly every merchant tells of accounts owing so long he had written them off the books. Since the saloons closed the men who owed these bills have drifted unsolicited into the stores and commenced to pay up on the installment plan.

MR. WAYNE C. WILLIAMS TESTIFIES.

Mr. Speaker, on December 21 I wrote to Mr. Wayne C. Williams, of Denver, Colo., who is a member of the Industrial Commission of Colorado, and requested him to give to me in writing his views as to what the effect of prohibition had been to the people of that State, and I desire to have printed in the RECORD his answer to my request.

THE INDUSTRIAL COMMISSION OF COLORADO,
Denver, December 28, 1916.

Hon. JOHN G. COOPER,
House of Representatives, Washington, D. C.

MY DEAR MR. COOPER: It is a pleasure to comply with your request for information about the results of prohibition in Colorado. The Nation has been lied to so flagrantly and persistently on this matter that I welcome a chance to state the truth through such an influential channel as you offer.

Summing up in one sentence, the plain truth is that the success of prohibition in Colorado exceeds the fondest predictions and expectations of its most ardent supporters.

In the early days when we were fighting for prohibition in this State and the saloon was enthroned in power everywhere, the favorite arguments of the "wets" were these:

1. That prohibition would result in a general business depression in all lines.

2. That specifically it would result in throwing thousands of people out of work and leaving hundreds of our store buildings empty and in practically stopping the tourist travel to Colorado.

3. That the drinking of liquor bore no relation to crime, and that there would be more crime and more arrests for crime under prohibition than under the saloon.

These were the arguments which defeated us in the early fights. Without a single exception, they have been utterly shattered by the results under prohibition. There is not a prominent public official or business man in the State of Colorado who will not now admit this.

Taking up these arguments in turn, and the results which have furnished the answer to them, we will look first at the business side of the matter.

Instead of a general business depression in Colorado since prohibition went into effect, we have enjoyed the greatest prosperity the city and State has ever known. This is verified by the weekly reports of Dun and Bradstreet in every line of business, by the bank clearings of Denver, which have practically doubled, and by the unprecedented industrial activities throughout the State. As a member of the industrial commission, I am in the closest touch with all branches of industry, and can state reliably that the wage increases under prohibition have never been equaled in the history of our State, and that these increases amount to millions of dollars. The beneficial effects of prohibition to laboring men are so conspicuous that it is a matter of general comment throughout the State.

Instead of empty stores in Denver, we had our store buildings filled up so rapidly that we now have fewer vacant buildings than ever before, and never have we had so few men out of employment as now.

Instead of prohibition resulting in the tourists refusing to come to Colorado, our tourist travel to Colorado last year was double that of any previous year in the history of the State. The argument which the "wets" made, to the effect that no tourist would drive an automobile up a mountain highway unless he was tanked up with intoxicating liquors, is about the silliest piece of moonshine ever invented, and it has been blasted by the facts. The other false assumption of the "wets" was that if a man could not spend a dollar in a saloon he would never spend that dollar anywhere else.

On the question of crime the success of prohibition is possibly even more satisfying than any other phase of the policy. The arrests in Denver alone have decreased nearly one-half during the past year.

Every assertion that I make above is based upon absolute facts. I am sending you data covering the question of arrests and business conditions to verify the statements I make.

To my mind the two most striking facts which show the success of prohibition are:

1. The fact that this year all political parties in Colorado declared for prohibition without reservation or qualification. I know of no group or bodies of persons that can so quickly and unerringly detect the failure or success of a policy as that group of persons who control a political party.

2. The remarkable vote which Colorado has given against the liquor traffic. I submit a table showing the successive votes on the question of prohibition in Denver and Colorado and the progressive trend of this vote toward prohibition, culminating, as it does, in the overwhelming majority of this year against the beer amendment, presents to my mind an unanswerable argument. When the people voted on the beer amendment in Colorado this year it must be remembered that they were not voting for the return of the open saloon. If that had been the issue the majority against the saloon would have been far greater; but the liquor interests knew that they did not dare to present a proposition for the return of the saloon, so they offered a much milder proposition, and the 85,000 majority against it speaks in trumpet tones for the success of prohibition in Denver and Colorado. The table is as follows:

VOTES IN DENVER.

1910 Denver voted wet by 17,000.
1912 Denver voted wet by 22,000.
1914 Denver voted wet by 8,500.
1915 (home-rule amendment) Denver voted wet by 3,500.
1916 Denver voted dry by 10,960.

VOTES IN COLORADO.

1912 Colorado voted wet by 40,000.
1914 Colorado voted dry by 11,500.
1916 Colorado voted dry by 85,789.

The figures in some cases are exact and in others approximate, but they are so nearly exact that the table may be given as an approximate one, substantially showing the change in sentiment.

Very truly, yours,

WAYNE C. WILLIAMS.

THE LIQUOR TRAFFIC AND LABOR.

Mr. Speaker, now just a word in regard to the liquor traffic and organized labor. There is at this time an effort to leave the impression that the labor unions of our country are opposed to prohibition of the liquor traffic, and the Members of this Congress are being flooded with numerous memorials from certain labor organizations protesting against the passage of prohibition laws.

Now, Mr. Speaker, I deny the statement that the laboring people and the thousands of members of organized labor are in sympathy with the un-American licensed liquor traffic and that the "beer keg and whisky bottle shall become their emblem." It is true that certain labor organizations are opposed to the prohibition of the liquor traffic. But these organizations represent various crafts that are engaged in the manufacture, sale, and distribution of alcoholic liquors. I hold no brief against these men and I have no quarrel with them, and I assure you I would do them a good turn if it lay in my power so to do. But this fact remains, that they are engaged in the manufacture, production, and distribution of that which is the greatest enemy of the workingman to-day. There are many labor organizations in our country that are not opposing prohibition of the liquor traffic, and some of them have gone on record as opposed to the open saloon.

I feel proud of the fact that my name is recorded upon the rolls of one of our great labor organizations, the Brotherhood of Locomotive Engineers, which has declared in favor of prohibition of the liquor traffic. At the biennial convention of this organization held in Cleveland in June, 1915, a resolution was introduced and passed unanimously placing this order on record as being in favor of State and National prohibition, and I desire to insert as part of my remarks a statement made some time ago by Warren S. Stone, grand chief of the Brotherhood of Locomotive Engineers, concerning the stand that this organization takes upon this question:

WHY HE FIGHTS LIQUOR—GRAND CHIEF OF BROTHERHOOD OF LOCOMOTIVE ENGINEERS SPEAKS.

CLEVELAND, OHIO.

In a letter recently made public, Mr. W. S. Stone, of this city, grand chief of the Brotherhood of Locomotive Engineers, has this to say concerning the position of his organization on the liquor question:

"We fight the liquor evil perhaps as hard as any of the churches. Liquor has no place in our modern railroading. I never expect to be manager of a railroad, but, if I were, a man could not work for me who did take a drink of liquor either on or off duty. I would not make a difference between the two, because a man who will drink off duty is not fit to go on duty when the time comes. I fail to understand why our men do not come out in the open in certain localities and fight this enemy. It tends to destroy the home life, to lower the tone of the citizenship of the community and the morals of the individual as well, to say nothing of his mental and physical health.

On December 21, 1916, I wrote the following letter to—

W. C. Thornton, president of the Denver Trades and Labor Assembly, Denver, Colo.

Chester J. Common, president of the Denver Building Trades Council, Denver, Colo.

Clint C. Houston, editor Denver Labor Bulletin, Denver, Colo. The Bulletin is the official organ of the Colorado State Federation of Labor.

Otto F. Thum, former city clerk, Denver, Colo.

DEAR SIR: I am taking the liberty of writing to you for some information which I would like to secure. At the present time I am a Member of the United States Congress, having been reelected last November to my second term. For 20 years before I began my services in Congress I was employed as a locomotive fireman and engineer. I am a member in good standing in the Brotherhood of Locomotive Engineers. I am also a member of the Committee on Labor of the House of Representatives.

For these reasons I am intensely interested in anything that affects the welfare of the working classes.

The information I desire to obtain is this: Will you please state to me in a letter your opinion as to prohibition of the traffic in intoxicating liquors in Colorado and what effect it has had on the working people of your city and State?

Very truly, yours,

JOHN G. COOPER.

Mr. Speaker, I desire to place in the RECORD the answers which I received from these various leaders of organized labor in reply to the inquiries which I made of them:

CLINT C. HOUSTON, EDITOR THE DENVER LABOR BULLETIN.

DENVER, COLO., *December 26, 1916.*

Hon. JOHN G. COOPER,
House of Representatives Office Building, Washington, D. C.

MY DEAR MR. COOPER: Replying to your letter of the 21st instant, inviting my opinion as to the effect of prohibition in Colorado upon the working people of this city and State, I am pleased to give you the substance of a letter written by me some three months ago, which was used in the antisaloon crusades successfully conducted in Nebraska and Michigan. This letter was written to a Mr. John Josselyn, of Gothemburg, Nebr., from which I quote as follows:

"You ask about the effect of prohibition in Colorado so far as it affects the working people. The law in nine months has worked a wonderful revolution for good, and at least 75 per cent of the union voters who were against the amendment would support it now. The wage earners have ceased to spend their money for booze and are buying bread and clothing for their families. I would say, on the whole, the condition of Colorado working people is at least 50 per cent better as a result of State-wide prohibition and the city of Denver is a great deal more prosperous. All the storerooms vacated by saloons are now occupied by legitimate enterprises, and the citizens only wonder why they tolerated the booze joints as long as they did. The increase in savings deposits has been remarkable, and the merchants report collections from 40 to 60 per cent better.

"It was claimed by the liquor interests that prohibition in Colorado would ruin the summer-tourist business in Colorado. As a matter of fact, statistics of the Denver tourist bureau show that during the past summer the number of tourists visiting and remaining one week and longer in this State was almost double that of any previous year. It was further shown that at least 75 per cent more money was spent in the State by tourists than during any season on record. This notwithstanding the absence of saloons and the "dryness" of hotels. Plans are now under way for the erection of several additional large tourist hotels in this State.

"Take the Bulletin as a concrete illustration. It was prophesied by our 'wet' friends that a labor paper couldn't exist in a dry town. We lost about $50 a month in liquor advertising and some 350 bartender and brewery-worker subscribers. To-day we are doing four times the advertising business and have five times the number of subscribers as when Denver had 350 saloons and 5 breweries in operation. Besides, the subscribers and advertisers pay their bills much more promptly and we don't have to degrade ourselves by 'settin' 'em up' to a lot of barroom flies when we collect a bill.

"One of the notable improvements is the decrease in crime of every grade. There hasn't been a murder in Denver since the saloons were driven out, whereas hitherto the record was from one to five a month. The city has been ridden of bums, pickpockets, and badger gangsters; in fact, it is much more of a privilege than ever to live in Colorado, and other States will find the same cause for congratulation when they drive the saloons and breweries from their border. And I used to be a pretty good patron of the liquor business myself."

During the past year, the first of State-wide prohibition in Colorado, the wage earners have been especially prosperous. Merchants in Denver report new high records for sales. The week preceding Christmas the banks of Denver paid out over half a million dollars to members of Christmas savings clubs, practically all of which had been deposited by wage earners. It is needless to say that this large sum was in a great measure accumulated by reason of saloons being abolished on January 1, 1916.

It is my opinion that abolishment of saloons in America would do as much to advance the wage earner as has organized labor. At the recent November election there was on the ballot in this State a proposition known as the "beer amendment," which would permit the manufacture and sale of beer in this State. It was defeated by a majority of 85,789. I would say that fully 80 per cent of the organized-labor vote in Colorado went against this "beer amendment," and among the 50,000 members of trade and railway labor organizations in this State it would now be a rare exception to find one who would declare himself or herself in favor of rehabilitation of the saloon.

Trusting this information will serve the purpose requested in your letter, I am,

Fraternally, yours,

CLINT C. HOUSTON, *Editor.*

OTTO F. THUM, ONE OF THE PROMINENT LABOR LEADERS AND UNION ORGANIZER IN DENVER FOR YEARS.

THE UNION PRINTING & PUBLISHING CO.,
Denver, Colo., December 28, 1916.

Hon. JOHN G. COOPER, M. C.,
Washington, D. C.

DEAR SIR: I have your letter of the 21st. You ask for information as to my opinion of prohibition in Colorado, and (2) what effect it has on the working people of the State and of the city (of Denver).

(1) My personal opinion is likely to be prejudiced and warped by my own inclination. I have been a lifelong teetotaler, and have for many years been opposed to the open saloon and opposed to the traffic in liquors of all kinds. When a member of the city council three years ago in Denver I voted against an ordinance to license saloons, largely because I am opposed to the Government deriving taxes from such sources. But temperance man that I am, I must say that the benefits that we have derived since we abolished the saloon are vastly greater than I had any reason to hope for. I am not alone in this. It is a conclusion that you hear on all sides, reached by men in every walk of life—professional, business, and labor.

(2) In reciting the effect the new law has on the working people of the State I can truthfully begin by saying that the things that the liquor interests (and with them the banking and business interests) said would happen to labor and to business never happened at all. They said thousands of laboring men would be thrown out of employment if the saloons were closed. They said the brewery workers' unions would be destroyed, that the plumbers would find less work, that the cooks and waiters would walk the streets, that the musicians would find no jobs, that the barber chairs would be empty, and, lastly, that the rooms occupied by saloons would remain empty (till the crack of doom and 40 days more).

Our law closing the saloons went into effect just one year ago, and we can come to a pretty fair conclusion as to what actually did happen. In the first place, thousands of workers were not thrown out of jobs. In fact, there wasn't even a ripple of that kind. The brewery workers have lost one branch (the brewers). There are no brewers employed in Colorado, and those either found other employment or else went to other States to work at their trades. But the drivers, the stablemen, the bottlers, and the engineers, all connected with the Brewers and Malsters' International, find just as much work in their own line as before. The bottlers work on soft drinks and the drivers deliver the goods as before. The engineers are all employed. So we find no unusual conditions here. The plumbers and pipe men have more members and more men at work than ever before, and the cooks and waiters are so astonished at what has happened that they are all prohibitionists now. When the saloons were closed, patrons immediately began to eat in a natural way, and the culinary trades have benefited probably more than any others. The musicians were wont to play engagements in saloons, now nearly twice as many of them are engaged in the moving-picture houses. (You can readily see that there has been a shift of employment in the amusement fields. We now have a strong moving-picture operators' union, which was not possible before because not so many persons patronized the movies.) And the barbers—they are all tickled at the increased trade. Really, you have no idea, till you experience the results, how much money was released to go into the legitimate channels of trade as soon as the saloon keeper got off the workingman's back. Milk dealers and grocery stores are the most benefited by this result.

We had about 600 saloons in Denver a year ago, and when they closed many of the rooms were empty. Some were kept open as soft-drink parlors, but most of them were rented at once by other and entirely different classes of business, in many cases at a somewhat smaller monthly rental, but the absence of the saloon made it possible to rent other rooms in the same block for more money. This is so palpable that it is a wonder the owners never saw it before. Many of the rooms occupied by saloons are yet empty, and will likely remain empty for a long time, as they are mere hovels and not fit for anything but saloon bums, of which we have no more.

Some workers have left Colorado on account of prohibition—they personally detest the idea of prohibition and would not stay in "gay Paree" under that rule. But Denver has grown during the year both in population and materially. So I should say without hesitation that a dry Denver has been of vast benefit to the city; that a dry Colorado has been of vast benefit to the State.

Yours, fraternally,

OTTO F. THUM.

CHESTER J. COMMON, PRESIDENT DENVER BUILDING TRADES' COUNCIL.

LOCAL UNION, NO. —,
Denver, Colo., December 27, 1916.

Mr. JOHN G. COOPER, *Congressman,*
House of Representatives United States, Washington, D. C.

DEAR SIR: Your letter of recent date asking my opinion on prohibition in Colorado received, and I am glad to give you any information I can on this subject, and you are at liberty to use it any way that will help prohibition.

Having been a drinking man myself for many years, I, like a great amount of people, was against prohibition, thinking it would be harmful in a general way. However, after the first three months I began to see the benefits it was bringing to the men of labor, their wives, children, and dependents. More efficiency in the men and far more happiness and contentment for everyone. And now, after 12 months, I am absolutely of the opinion that prohibition is the proper thing, and has come to Colorado to stay.

Hoping this is a satisfactory reply to your question, and wishing you and your colleagues on the Labor Committee every success, I am,

Fraternally, yours,

CHESTER J. COMMON,
1340 South Downing Street, Denver, Colo.

W. C. THORNTON, PRESIDENT TRADES AND LABOR ASSEMBLY, DENVER, COLO.

DENVER, COLO., *December 27, 1916.*

Mr. JOHN G. COOPER, M. C.,
House of Representatives, United States of America.

MY DEAR MR. COOPER: Yours of recent date, in re my opinion on prohibition in Colorado, to hand.

I might state primarily that I voted against prohibition. In my humble opinion the workers of Denver and Colorado are a lot better off mentally, morally, financially, and physically than they were when the State was "wet." True, it hurt the trades which depended on the liquor traffic to keep them going, but it can be safely said that business this year is 50 per cent better than it was last year, and as a consequence those who were employed in the liquor traffic here gradually became engaged in other more legitimate lines of endeavor. You can not gather together in this city a good-sized "company" who would proclaim openly for the return of the saloon. It is gone forever in Colorado, and for my part I say, "Good riddance." We are all better off without it, as I stated before, for it never did anybody any good.

Please give my regards to Mr. BEN HILLIARD, if possible. Also to your colleague on the Labor Committee, Mr. JOHN I. NOLAN, of San Francisco, Cal. Tell him I went to school with his wife.

In conclusion, as the fellow said, "I don't know which gang yer wid," but you asked for my opinion and I have given it to you, and anything further I can do for you, Mr. COOPER, I am yours to command.

WILLIAM C. THORNTON,
1766 Lafayette Street.

Mr. Speaker, these letters come from prominent members, leaders, and organizers of labor unions in one of the great States and large cities of the Nation which have experienced the benefits of prohibition. They do not express theories or sentiment, but come as testimony of the actual results of abolishing the liquor traffic in a big center of population, especially upon the welfare of the working men and women.

SYMPATHIZES WITH WORKERS.

Ever since I was a small lad it has fallen my lot to associate with the working people of this country, and I have a warm feeling of brotherly love for all of those that toil. I have no authority to speak for organized labor, but as a member of one of the great labor organizations and as a citizen who has the interests of the working people at heart, I feel that I can render no greater service to my fellow men than to work and vote for an amendment to the Federal Constitution providing for national prohibition of the liquor traffic.

Mr. Speaker, I do not stand on the floor of this House and advocate the adoption of national prohibition because I live in a district that is without saloons. There are saloons in every one of the three counties which comprise the nineteenth Ohio congressional district which I have the honor to represent. There are over 200 saloons in the city in which I live, and many more scattered throughout the three counties. But, Mr. Speaker, I am for prohibition because I believe it will be the greatest step toward the conservation of our people that we have ever taken. I am for it from the standpoint of the preservation of the American home, and, after all, the home is the foundation of all government. I am for it because all over this land of ours to-day there are tens of thousands of mothers down on their knees pleading with the Members of Congress for prohibition legislation in order that our country may be made a better, cleaner, and purer place in which to rear their sons and daughters. I say it is to the everlasting shame of the manhood of our country that God-fearing Christian wives and mothers must go down on their knees and beg of big, strong men to stand for decency, morality, and good government. Mr. Speaker, I have always regarded the liquor question as a moral issue, but at this time I have a firm conviction that the hour is here when the great political parties can not afford to ignore this question any longer. It is sweeping the country by leaps and bounds. As I have stated previously, over half the States of our Union have adopted prohibition, 85 per cent of our country is dry area and 65 per cent of our people live in dry territory. Yes; the time has come when the Republican and Democratic Parties must stand on one side or the other of this great question.

I am glad that my name is recorded as a member of the Republican Party. During the last 60 years, under the leadership of Lincoln, Grant, Garfield, and McKinley, our country has made wonderful progress, and I want to see my party keep up the good work along the lines that it has done in the past. The Republican Party has always stood for the higher, better, and nobler elements in national life; and at this time I want to express my honest conviction to the Republicans of this House and say that I know of no greater service you could render to your God, your country, and its people than to support the resolution to submit to the States an amendment to the Federal Constitution to prohibit the sale and manufacture of intoxicating liquors.

Mr. Speaker, at present there are two measures pending before this Congress with regard to this question. One of them is for prohibition in the District of Columbia and the other is to submit a constitutional amendment for national prohibition. What action Congress may take at this session upon these measures it is impossible to say at this time. Regardless of such action, the fight will go on, and when we are asked how much longer will this fight continue, our answer is we will fight on and on and on and on until we see the dawning of a brighter day when the black shadow of alcohol shall have passed away from over this fair land of ours, and in its place will appear the shining light of sobriety, purity, and righteousness.

Patriotism of the Alien Born—Hibernians Ready to Defend Nation.

EXTENSION OF REMARKS
OF
HON. JOHN M. MORIN,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Friday, February 9, 1917.

Mr. MORIN. Mr. Speaker, at a time when the shrill alarm of war is in our ears, when hearts are beating in anxiety, when foreboding is casting a dark shadow across our fair land, when fear in its varying form is being expressed and manifested, it is consoling and inspiring to feel that there is a large percentage of foreign born who regard their American citizenship as priceless. Those who, although they can not say, in the words of Scott, "This is my own, my native land," can by their acts prove that patriotism and loyalty for their adopted country is the motive power of every deed. This fact was impressed on my mind by an editorial which appeared in the National Hibernian, organ of the Ancient Order of Hibernians, published in Philadelphia.

The dark visage of war was but seen when Joseph McLaughlin, president of the organization and Congressman at Large elect of Pennsylvania, sent a message to the President pledging the support of all Hibernians in any conflict that might occur between the United States and any nation of the world. In this editorial he said:

Hibernianism, representing through its organization the millions of the Irish race in America, stands to-day, as it has ever stood, unquestioned in its loyalty and foremost in its devotion to the great Republic. In peace our citizenship is notable for its energetic activity in all the areas of social, industrial, and political organization. In war the genius and courage of the Irish soldier have covered the Irish names with immortal luster on every field since the Star-Spangled Banner was first raised by Barry on the sea and since Montgomery fell under its folds on the land.

In this crisis our people will exhibit the ancient character, for we are still "the fighting race." Our proudest memories are of war, and the shrill sound of the pipes on the hills of Ireland never gathered the clans with fiercer enthusiasm than have the drum and fife marshaled the exiles of Erin for the defense of the land which gave them shelter and for whose honor and safety they have ever been eager to die.

The Ancient Order of Hibernians—the whole race in America—stands behind the President and the Government. We are not Democrats, not Republicans, not "hyphenated" by any alien sympathy or chilled by any prejudice. We are Americans, ready to do the full duty and pay the full price of citizenship in the land we helped to create and have ever been eager to defend.

To read of the past is an inspiration in an hour of crisis, for the past is blazoned with Irish-American names which illuminate our annals like splendid stars. When the membership of the Ancient Order of Hibernians rushed to the defense of the Union our order was destroyed, but we gave the names of Meagher, Corcoran, Sweeney, and myriads of lesser names to save the imperiled Nation. Even in the silence of peace the names of Moylan and Wayne speak from the Revolution, of Shields and Kearney from the march into Mexico, and McClellan and Sheridan from the great campaigns that ring their names like a halo.

Yet memories are apt to be dimmed by peace, for the voice of the Irish speaks most loudly and loyally from the mouths of cannon. Let our words of loyalty be uttered now for America, and let our order, which has given all it had to give in other days, once again exhibit the decisive quality of its patriotism.

The United States is frequently called the great melting pot of the world. Into this racial crucible has been poured the people from many lands. From this blending emerged a type whose proudest boast is that they love the land of their adoption and are Americans. Especially is this true of that sterling element of citizenship which hails from the Emerald Isle—a land famed alike by song and verse; a land of high ideals; a land where the one and great desire of its people is for liberty, a principle which is sacred and eternal. And while they glory in American fealty, it is not because they love Ireland less, but because they love America more and the liberty which it insures. America has welcomed them, appreciating fully their true worth. In the fires of persecution the gold of their character has been refined and purified. They are a race ever ready to forgive, but quick to oppose injustice and tyranny. Faithful, even unto death, in their fealty to a cause or in their fidelity to a friend, this happy, buoyant, witty, loyal, patriotic, and God-fearing race is a part of our country's great wealth—not the wealth that men call gold, but the wealth of sterling merit backed by worthy deeds. And should there ever come a times of stress or need to this the country of their adoption there will be no sacrifice too great for the liberty-loving sons of Erin to make.

To-day men are asking each other in tones of concern just what the times portend. We are facing problems which are going to have a far-reaching and potent effect on the future, not only for our own country, but for the world at large. If these problems are solved in a manner that will bring us prestige, peace, and abiding honor, the solution must of necessity be in accordance with those principles for which all Americans stand, which are inherent in the virtues of liberty, equity, and justice, founded on the corner stone of eternal right. These principles can never be obliterated; they will everlastingly endure; and while at times they may appear to be overshadowed, yet they can never be overthrown. These are the principles which form the basic fabric of Irish character and find expression in a willingness to toil, sacrifice, and, if need be, die for their preservation.

Bridge Across Both Arms of Fox River.

EXTENSION OF REMARKS
OF
HON. GEORGE EDMUND FOSS,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, February 8, 1917.

Mr. FOSS. Mr. Speaker, on April 8, 1916, I introduced a bill for the construction of a bridge across both arms of Fox River at the point or near the intersection of the Pistakee and Nippersink Lakes. The bill is as follows:

A bill granting the consent of Congress to the village of Fox Lake, in the county of Lake, State of Illinois, to construct a bridge across both arms of the Fox River which passes through Pistakee Lake and Nippersink Lake, a point suitable to the interests of navigation, at or near their point of intersection, in the county of Lake, State of Illinois.

Be it enacted, etc., That the consent of Congress is hereby granted to the village of Fox Lake, in the county of Lake, State of Illinois, and its successors and assigns, to construct, maintain, and operate a bridge and approaches thereto across both arms of the Fox River which passes through Pistakee Lake and Nippersink Lake, a point suitable to the interests of navigation, at or near their point of intersection in the county of Lake, in the State of Illinois, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

On the introduction of said bill I was requested by the officials of the village of Fox Lake not to press the matter, for reasons which seemed best to them, but later, on January 18, I received a letter from the village clerk, in which they requested action, and at once I took the matter up with the Committee on Interstate and Foreign Commerce. On the 6th day of February Mr. STERLING, from the Committee on Interstate and Foreign Commerce, submitted the following report:

The Committee on Interstate and Foreign Commerce, to whom was referred the bill (H. R. 14074) granting the consent of Congress to the village of Fox Lake, in the county of Lake, State of Illinois, to construct a bridge across both arms of the Fox River which passes through Pistakee Lake and Nippersink Lake, a point suitable to the interests of navigation, at or near their point of intersection, in the county of Lake, State of Illinois, having considered the same, report thereon with amendment, and as so amended recommend that it pass.

The bill as amended has the approval of the War Department, as will appear by the letter attached and which is made a part of this report.

Amend the bill as follows:

Page 1, line 7, strike out the words "which passes through," and insert in lieu thereof the words "where it connects."

Page 1, line 8, after the word "Lake," insert the word "at."

Page 1, lines 8 and 9, strike out the words "at or near their point of intersection."

At the end of section 1 insert the following:

"SEC. 2. That the act approved October 22, 1914, entitled 'An act to authorize Frank H. Gardiner to construct a bridge across the waters of Pistakee Lake and Nippersink Lake at or near their point of intersection,' is hereby repealed."

Renumber section 2 to be section 3.

Amend the title to read as follows: "Granting the consent of Congress to the village of Fox Lake, in the county of Lake, State of Illinois, to construct a bridge across both arms of the Fox River where it connects Pistakee Lake and Nippersink Lake at a point suitable to the interests of navigation, in the county of Lake, State of Illinois."

[Second indorsement.]

WAR DEPARTMENT, *April 18, 1916.*

Respectfully returned to the chairman Committee on Interstate and Foreign Commerce, House of Representatives.

The object of the accompanying bill, H. R. 14074, Sixty-fourth Congress, first session, is to grant the consent of Congress to the village of Fox Lake, in the county of Lake, State of Illinois, to construct a bridge across both arms of the Fox River where it connects Pistakee Lake and Nippersink Lake at a point suitable to the interests of navigation in the county of Lake, State of Illinois.

The Chief of Engineers, to whom the bill was referred, reports that by act of Congress approved October 22, 1914, Public, No. 219, Sixty-third Congress, Mr. Frank H. Gardiner was authorized to construct a bridge in this same locality, plans for which were approved by the

Chief of Engineers and the Secretary of War by instrument dated July 8, 1915, but it appears that the only work so far done by Mr. Gardiner has been to drive half a dozen stakes at one margin of the crossing, presumably to make a technical commencement to retain, under the act of March 23, 1906, the right to construct the bridge. He further reports that the present bill, H. R. 14074, Sixty-fourth Congress, first session, makes ample provision for the protection of the interests committed to the War Department, and I know of no objection to the favorable consideration of the bill by Congress so far as those interests are concerned. The bill has been amended to more accurately describe the geographical location of the proposed bridge and to make its purpose clearer.

In view of the undesirability of having two bridges at this side where apparently one will amply serve the public need, it is suggested that should H. R. 14074, Sixty-fourth Congress, first session, which provides for a free, publicly owned bridge, be now passed, it be also amended so as to repeal the act of Congress approved October 22, 1914, Public, No. 219, Sixty-third Congress, above referred to, which provides for a toll bridge.

JOHN C. SCOFIELD,
Assistant and Chief Clerk.

The following is the letter above referred to from the village clerk, Mr. William G. Nagle, which explains itself:

FOX LAKE, ILL., *January 18, 1917.*

Congressman GEORGE EDMUND FOSS,
Washington, D. C.

DEAR SIR: Your letter of the 16th instant in reference to bill granting authority to this village to construct a bridge over the Fox River received. I was mistaken when I told you congressional authority was not necessary. At that time I did not know that the War Department considered the Fox River a navigable stream connecting this State and the State of Wisconsin.

I am sending you herewith two blue prints of the proposed bridge—one showing the general location, the other one a plan of the bridge itself.

The village has set aside $7,000 of ths year's income for the construction of this bridge, and we are going to vote on a bond issue of five or six thousand dollars at the next village election, which will be held in April. We will also be able to set aside another seven thousand out of next year's income for the same purpose. As this will be a public bridge, and a big benefit not only to the lake region but to the entire Lake County, we expect the county to stand a part of the cost of the construction. We have had the matter up before the board of supervisors, and while they have taken no official action in regard to appropriating money for this purpose they have signified they are willing to do so when we get the necessary permits.

The entire cost of this improvement is estimated to be about $25,000, and I feel sure we can finance it—in fact, it is asserted by several who have talked to the people living just north of here that $5,000 can be raised by public subscription.

If there are any objections to the passing of the bill because of the consent granted to Mr. Gardner for a toll bridge, I think Col. Judson's report that, in his opinion, Gardner's rights have expired should be sufficient. Further, the bridge the village proposes to build is to be a free public bridge; also, the fact that Gardner has done nothing in the way of even starting his bridge.

Should there be any objections to a stationary bridge, you may state that all bridges over the Fox River, except the railroad bridge at Fox Lake, are stationary, and the clearance of the proposed bridge is as great as the bridge at Johnsburg, Ill., which has the largest clearance of any of the present bridges. There are stationary bridges at McHenry, Johnsburg, and Wilmot. The present drawbridge of the St. Paul Railroad Co. is an old type, and will undoubtedly be replaced by a modern bridge when the life of it runs out. This, I am informed by the railroad company, is about four years more.

We should like to have this bill passed as soon as possible, as we must have all the necessary permits before we can vote on the bond issue.

Trusting this information will help you in securing the passage of the bill, I remain,

Yours, truly,

WM. G. NAGLE.

The Control and Regulation of Niagara River Above the Falls and Its Connecting Waters for Navigation and Other Purposes by the Federal Government.

EXTENSION OF REMARKS
OF
HON. CYRUS CLINE,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, February 10, 1917.

Mr. CLINE. Mr. Speaker, in order to intelligently discuss the bill which passed the House on February 8, it is necessary to give a brief history of the facts that led to its introduction. The bill was introduced for the purpose of controlling and regulating the waters of Niagara River and its connecting waters above the Falls of Niagara, and for other purposes that will be developed as this discussion proceeds. The direct assumption of jurisdiction over Niagara River by the Federal Government grew out of a message to Congress by President Roosevelt during the first session of the Fifty-ninth Congress. The message was dated March 27, 1906, with which was transmitted a report made to Congress by the International Waterways Commission, regarding the preservation of the Falls of Niagara. The report of the International Waterways Commission was requested by a joint resolution of Congress passed March 15, 1906, directing the commission to report to Congress at an "early date what action is in their judgment necessary and desirable to prevent the further deflection of the waters flowing over Niagara Falls." President Roosevelt's message recommended legislation for the preservation for the Falls of Niagara. The report of the International Waterways Commission was made in answer to a joint resolution reported by the Committee on Rivers and Harbors. This resolution asked for a report on the conditions at the Falls and for the cooperation of three members of the United States with a like number from Canada in taking feasible steps to prevent further depletion of the waters going over the cataract.

The International Waterways Commission was created by Congress in June, 1902, and consisted of three members to act with a like commission from Canada in relation to the boundary waters between the United States and Canada, which belonged to and are connected with the Great Lake system. The report made pursuant to the joint resolution by Congress was transmitted to it by President Roosevelt March 22, 1906. The report exhibits the legislative action of the State of New York and the Canadian Government in granting water rights to numerous corporations for the development of electricity for commercial purposes. This report of the International Waterways Commission disclosed the fact that there were at least five corporations engaged in furnishing or preparing to furnish electricity for commercial purposes, developed by water power. The first two of these are American and three of them Canadian corporations. The total amount of water to be taken from the river then authorized by these corporations is as follows:

	Cubic feet per second.
Niagara Hydraulic Power Co	9,500
Niagara Falls Power Co	17,500
Canadian Niagara Power Co	9,500
The Ontario Power Co	12,000
The Electrical Development Co	11,200
Niagara Falls & Park Ry. Co	500

Or a total of 60,950 cubic feet per second. This constitutes 27 per cent of the average discharge over the cataract. The report further finds "that this discharge will, in general, have an injurious effect upon the Falls, seems self-evident." The summary of the report was expressed, in part, in this language:

(a) The glory of Niagara Falls lies in the volume of its water rather than in its height and in the surrounding scenery.

(b) Works are now authorized and partly completed at the Falls which will divert from the Niagara River above the Falls about 27 per cent of the average discharge. In addition to this, water naturally tributary to the Niagara River is being diverted through the Chicago Drainage Canal and for power in addition to navigation purposes through the Erie and Welland Canals.

(c) The effect of this withdrawal of water is to injure both the American and Horse Shoe Falls to nearly equal proportion.

(d) Improvements in the transmission of electric power and the increased demand will make a market for all the power which can be developed at Niagara Falls.

(e) Charters have been granted to corporations which propose to divert additional amounts in quantities not now limited.

This report alarmed the President, and in transmitting the same to Congress he used the following language:

I earnestly recommend that Congress enact into law the suggestions for the American members of the International Waterways Commission for the preservation of Niagara Falls without waiting for the negotiation of a treaty between the United States and Great Britain.

In less than 100 days from the date of the transmission of the report and message to Congress, namely, June 29, 1906, a law was enacted known as the Burton law for the control and regulation of the waters of Niagara River, for the preservation of Niagara Falls, and for other purposes. The Burton law provides that no waters from the Niagara River or its tributaries in the State of New York could be diverted without the consent of the Secretary of War, except for sanitary or domestic purposes, or for navigation, the amount of which should be fixed by Congress. It also provided that the Secretary of War was authorized to grant permits for the diversion of water for the creation of electrical power to individuals, companies, and corporations, and for the importation of power from Canada. It respectfully requested the President to open negotiations with Great Britain providing for certain treaty relationships for the regulation and control of the waters of Niagara River and its tributaries as shall preserve the scenic grandeur of Niagara Falls and the rapids of said river. The law was to remain in force for three years, during which time it was expected that treaty obligations might be entered into by the two Governments and definite conclusions be reached and a method prescribed upon which legislation would be based to completely

protect each Government in its respective rights. Treaty negotiations were immediately taken up and the treaty between the United States and Great Britain proclaimed May 13, 1910.

The Burton law expired by limitation in June, 1909. It provided for the negotiation of a treaty that I have referred to. The Burton law was enacted only as a modus vivendi until a full and complete investigation could be made by the General Government, with the aid and assistance of the Army Engineers, as a basis for necessary legislation. The Burton law expired before any legislation was had, and it was continued by joint resolution for short periods three different times since it was first enacted. Immediately upon the passage of the Burton law the President directed the Secretary of War to make a thorough investigation covering the amount of water per second flowing over the Falls of Niagara, the effect of the diversion on Niagara River above the Falls, the effects upon the level of Lake Erie and its connecting waters, the amount of water diverted to the several power companies, and the effect of such diversions upon the commerce of the Great Lakes. I submit herewith a copy of the findings of the Chief of Engineers of the War Department to the Secretary of War January 21, 1909, found in Senate Document No. 105, Sixty-second Congress, first session. I quote from pages 7 and 8.

Omitting the first four items of the report by W. L. Marshall, Chief of Engineers, United States Army, and beginning with item 5, as follows:

He further states that, in his opinion, the damage already done and that which may be anticipated from further diversions and from lower stages in Lake Erie may be largely, if not entirely, remedied by a submerged dam placed in the bed of the river immediately above Horse Shoe Falls with the object of diverting a portion of the great volume passing over the center or apex of the Horse Shoe, so as to increase the streams feeding the depleted ends of that fall and incidentally diminishing the rate of recession of the apex.

6. He also shows that the investigations have established a real, though relatively small, reduction in the depth of Lake Erie and all of its harbors amounting to seven-hundredths of a foot for the present authorized diversion. As each inch of draft for a modern lake freighter is the equivalent of from 80 to 100 tons of profitable cargo, the aggregate loss per season for the entire fleet using Lake Erie ports as terminals becomes a very large amount. The harbors on Lake Erie have been dredged and improved at large expense to the United States, and the right of the National Government to prevent even slight injury to these public works would seem a matter absolutely beyond question. He suggests the prohibition of all diversions when the lake reaches elevation 571.5, and the total authorized diversion only when the elevation is 572 or more. In this connection he presents as worthy of consideration the suggestion of Assistant Engineer F. C. Shenehon that the power companies be permitted to use half the flow of the river between sunset and sunrise as compensation for restrictions necessarily imposed.

7. He also discusses the possibility of further concessions to the power companies, and suggests, in case such course seems advisable, certain conditions designed to bring about a greater economy in the production of power and the elimination of unsightly features.

8. These investigations were undertaken primarily for the assistance of the Secretary of War in connection with the responsibilities committed to him by the act of Congress of June 29, 1906 (the Burton Act), but in view of the widespread interest in the matter and the gravity of the situation as disclosed by the careful and unprejudiced observation of the lake survey I recommend that Maj. Keller's report be transmitted to Congress, together with the report of Assistant Engineer Shenahon and its accompanying illustrations.

Very respectfully,

W. L. MARSHALL,
Chief of Engineers, United States Army.

I desire at this place to make a further quotation from Maj. Keller's report, found on page 44, Senate Document No. 105, first session Sixty-second Congress, as follows:

EFFECT ON LAKE ERIE.

If the diversions of water at Niagara Falls for power purposes have the effect of draining Lake Erie to a lower level, navigation interests are correspondingly injured. The freighters of the Lakes load to the limit of existing depth, and every inch of draft lost by reason of shallower harbors or channels makes to each large freighter a loss of over 80 tons in carrying capacity each trip. As the movement of freight on the Lakes has reached an aggregate of over 75,000,000 tons a year, and as 84 per cent of this traverses Lake Erie, any interference with the surface level of this lake is a matter of vital concern to commerce.

Furthermore, the surface levels of the Detroit River and Lake St. Clair, critical links in the lake commerce, are immediately, and those of the St. Clair River, Lakes Michigan and Huron, and St. Marys River to the locks at Sault Ste. Marie are in a measure, dependent on Lake Erie levels. It has been estimated that Lakes Michigan and Huron will be lowered 4 inches by a lowering of 1 foot on Lake Erie.

This bill is submitted to determine the jurisdictional rights of the State of New York and the Federal Government over the waters of Niagara River. Let me state the contention of the power companies now diverting water for the generation of electricity, the State of New York, and the Federal Government, respectively. The contention of the power companies is that they established their respective plants upon their own ground as riparian owners under a charter issued by the State of New York, giving them license to divert enough water to create a given number of horsepower; that the State of New York owns the bed of the river and has sovereign power over the surplus water; that they established their plant in good faith, are pioneers in development, and under their riparian rights and respective charters certain vested rights have accrued to them that they can not now be dispossessed of by legislation.

The State of New York bases its right to divert the surplus water not needed for navigation to whom it pleases under what conditions and what regulations it may elect, and from what point in the river that it may choose to divert the water, on the grounds that it is a sovereign State; that it owns the bed of the river and the use of the surplus water for the State of New York in trust for the people of the State. The Federal Government represents that under the commerce clause of the Constitution it has absolute jurisdiction over the Niagara River, when once asserted, to protect and develop navigation; that its authority is paramount and plenary; that the State of New York in coming into the Union surrendered its sovereign power over the navigable waters of the Niagara River; that its decision is final and not reviewable by any State when it has assumed jurisdiction for the purpose of promoting commerce; that it will not divide jurisdiction with any State with reference to any subject touching navigation or the means necessary to protect navigation, promote or develop it—these rest wholly with the United States. The chief controversy that arises in this bill has been precipitated by the State of New York. That I may correctly represent the State of New York, I will quote from the language used by Attorney General Carmody, representing the State in the hearings before the Committee on Foreign Affairs, January 22, 1913, as follows:

The State of New York is entitled to control, after the Government has decided how much water may be diverted from the Niagara River, the diversion of the water and decide the parties to whom it shall go.

I also supplement this statement by that of Senator JAMES A. O'GORMAN, who appeared before the committee in the same hearing on behalf of the State. I quote from page 17, in which he is discussing the powers of the Federal Government under the Constitution:

Now, therefore, I urge that the State of New York be permitted to make such disposition as the people of that State care to make of this water within the limitations fixed in the treaty, and that the only rights reserved, the only right that should be exercised by the Federal Government, is to so supervise the use of that water afterwards that the treaty entered into between the Federal Government and Great Britain be not violated.

It is admitted that the serious question in the case, if there is a serious one, lies in the claim of the State of New York to the right to invade the jurisdiction of the Federal Government and divert the waters of Niagara River, as before stated, to whom it may elect and under what conditions it may impose. The position of the committee is that the Federal Government has absolute jurisdiction over every interstate navigable river in the United States, and in the exercise of its power to protect, promote, or develop commerce under the commerce clause of the Constitution it is free from the interference of any State.

In the language of Justice Day (194 U. S., 623)—

State legislation which seeks to impose the direct burden on interstate commerce or to interfere unduly with its freedom does encroach upon the exclusive powers of Congress.

The issue is clearly stated. I propose to discuss briefly the absolute and unlimited power of the Federal Government over navigation, in which is involved interstate commerce, and briefly the relative rights of the riparian owner, the State and Federal Government, in navigable interstate waters. It was asserted with much vehemence by the representatives of New York in their appearance before the Committee on Foreign Affairs that the Federal Government was a Government of expressed powers, delegated to it by the several States of the Union at its formation, and unless we could show express authority in the Constitution to divert the surplus waters of Niagara River to whom we might elect and under what limitations we might prescribe, we were precluded from doing so. We admit that the Federal Government is one of delegated powers, but not one of explicitly defined and limited powers; but one sufficiently elastic with reference to the commerce clause, to meet the growing demands of an expanding commerce. It is a Government of expressed powers, in which are resident all those involved powers necessary to make the expressed power effective for the accomplishment of the purposes for which they were delegated. I am surprised that gentlemen who profess to be lawyers demand that the powers vested in the Constitution shall be set out in detail—that there are no presumed powers incorporated into the general comprehensive delegated powers. I bottom what I have to say in these discussions on the feature on what Chief Justice Marshall said in Fourth Wheaton, page 316:

A constitution to contain an accurate detail of all the subdivisions of which its great powers will admit, and of all the means by which they may be carried into execution, would partake of the prolixity of a legal code, and could be scarcely embraced by the human mind. It probably never would be understood by the public. Its nature, there-

fore, requires that only its great outlines be marked, its important objects be designated, and the minor ingredients which compose those objects be deduced from the nature of the objects themselves.

I shall attempt to show the wide and almost unlimited range to which the Congress and the Supreme Court of the United States have carried us in their broad and well-defined legislation and jurisprudence under the commerce clause. I do this to show the utter fallacy and the absolute absurdity and impracticability of the proposition asserted by New York that every power invoked must be specifically designated in the Constitution. I proceed at some length with quotations from decisions and observations upon the same to show that New York, having delegated all her sovereign rights over interstate commerce in her admission to the Federal Government, is powerless now to dictate to the General Government in any respect as to what it may do or not do with the surplus waters of Niagara River.

POWER BROAD AND UNLIMITED.

Before the Constitution was adopted the power of each State to regulate its own commerce was complete and unquestioned, but that power was surrendered by each State to Congress upon the adoption of the Constitution, and Congress succeeded to the power among all the States which each State had formerly possessed over its own commerce. Hence the broad and almost unlimited power of Congress over commerce among the States. (Watson on the Constitution, vol. 1, p. 484.)

I quote from Justice Harlan, One hundred and eighty-eighth United States, page 356, wherein he says:

The power which Congress possesses to regulate commerce among the States is plenary, is complete in itself, and is subject to no limitations except such as may be found in the Constitution.

It was also said in Leovy *v.* United States (177 U. S., 621) that—

the power of Congress to regulate the navigable waters of the United States is an incidental power to the expressed power to regulate commerce.

The court found directly in the case cited that incidental powers are never expressed. Incidental powers are correlative powers always and are as effective in the execution of authority to which they relate as are the expressed powers themselves. With reference to the power with which Congress was invested under the commerce clause of the Constitution, I also quote from the Louisiana Lottery case, One hundred and eighty-eighth United States, page 356. The Court said:

It must not be forgotten that the power to regulate commerce among the States is plenary.

Inasmuch as the courts have found it proper to use the word "plenary" in expressing the power of Congress over the subject of interstate commerce, it is proper to know what that term means. The Standard Dictionary says:

It is a power full in all respects; entire; absolute.

Webster's International Dictionary:

It is a full, complete, absolute, unqualified power.

In Brown *v.* Houston (114 U. S., 622) the Supreme Court, speaking through Justice Bradley, said:

The power to regulate commerce among the several States is granted to Congress in terms as absolute as is the power to regulate commerce with foreign nations.

There is an unbroken line of decisions covering the whole history of American jurisprudence from Gibbons *v.* Ogden (9 Wheat.) adhering to the doctrine announced in the cases cited. If it be true, then the States have no reserve power to exercise under the commerce clause of the Constitution in contravention of the jurisdiction of Congress. The correlative duties of Congress under the power granted to it by the sovereign States is the protection, promotion, and development of navigation. If its power is plenary in the promotion of navigation or in the protection of navigation, it is likewise plenary in the development of navigation. We are not required to consider the powers enumerated in the Constitution as in any manner constituting a limitation on the methods and means of either protecting, promoting, or regulating navigation and commerce. The Constitution does not pretend to set out the means by which this may be done. Means and methods are wholly in the hands of Congress and the administrative officers detailed to carry out the purposes of this power as Congress shall legislate under the authority of the Constitution. I quote from McCulloch *v.* Maryland (4 Wheat., 316):

While our Government must be acknowledged by all to be one of enumerated powers, the Constitution does not attempt to set forth all the means by which such power may be carried into execution. It leaves to Congress a large discretion as to the means that may be employed in executing a given power.

The sound construction of the Constitution, the Supreme Court has said—

must allow to the National Legislature that discretion with respect to the means by which the power it confers are to be carried into execution which will enable that body to perform the high duties assigned to it in the manner most beneficial to the people. Let the ends be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to the end, which are not political but concur with the letter and spirit of the Constitution, are constitutional.

This decision directly confronts New York in its position, namely, that the Federal Government must find expressed warrant for its act in the Constitution by declaring that Congress must be "allowed that discretion with respect to the means by which powers it confers are to be carried into execution."

It can not be denied that in the grant of executory power, as, for example, the power to regulate commerce, that there is necessarily interpolated into that grant the power and authority to adopt all necessary and lawful means to carry the expressed grant into execution. No additional authority need be cited in addition to Fourth Wheaton, 421.

Let us pursue the inquiry. What is this power conferred by the Federal Government upon the States with reference to interstate commerce? I quote again from Justice Harlan, One hundred and eighty-eighth United States, 347, supra:

It is the power to regulate; that is, to prescribe, the rule by which commerce is to be governed. This power, like all other vested in Congress, is complete in itself, may be exercised to its utmost extent, and acknowledges no limitations other than that prescribed in the Constitution.

No man will assume in this discussion to assert that there are any limitations expressed in the Constitution on the methods or manner legitimately required in the protection, regulation, or promotion of commerce set out in the commerce clause of the Constitution. To proceed with the quotation from the same case:

If, as has always been understood, the sovereignty of Congress, though limited to specific objects (delegated powers) is plenary as to these objects, the power over commerce with foreign nations and among the several States is vested in Congress as absolutely as it would be in a single government having in its constitution the same restrictions on the exercise of power as are found in the Constitution of the United States.

What are we to understand by the expression, "The power to regulate commerce," which, it is admitted, was granted respectively by the several States to the Federal Government by their admission to the Union? You understand it was the power that previously existed in the several States; it was the power, the absolute, unconditional power represented in the sovereignty of every individual State. That power the States collectively delegated to the General Government. In the absence of the exercise of jurisdiction by the Federal Government, with the States in full possession of their original undelegated power, the State of New York, in her sovereignty, could have performed every act proposed in this bill to be performed by the Federal Government. If so, and if in any manner the act related to the protection, development, or promotion, then that State may not now exercise any right to interfere in any way with the Federal Government in the discharge of its duty to the people of the United States in the protection and development of commerce. To illustrate, could not the State of New York in the absence of Federal interference control the volume of water in Niagara River, the diversion of its surplus waters, if any; institute the methods of control, the persons to whom its surplus waters may be diverted, and the terms under which the diversion may be made? Are not those acts, each and all of them, acts of sovereignty performed in the interests of all of the people of the State from whom it held in trust the authority to promote and protect navigation? There can be no question about it. If so, then the Federal Government may now do and should do what could have been done by New York, because the State was unqualifiedly supreme, and possessed that power over commerce acknowledged to reside in every sovereign State, and which New York stripped itself of and delegated to the Federal Government on its admission into the Union. Let me inquire what provision exists in the Constitution that can in any manner be regarded as limiting the exercise of that power over the commerce not only of Niagara River but the commerce connected with its chain of vast inland seas that would be directly hazarded if the Federal Government may be subjected by any interference in its regulation by New York? What clause can be cited which even intimates in the slightest degree the suggestion that the State may intervene and control the disposition of surplus waters in interstate navigable streams? The interests are too vast to permit it. Other States with immense commercial interests demand that the complete plenary power of the Federal Government shall be exercised over their waters so long as they or any part of them are within the jurisdiction of the Federal Government. Congress alone, absolutely alone, has the power to occupy and does occupy by legislation the entire field of interstate commerce.

In the face of this observation, however, it is insisted that the Federal Government exceeds its delegated powers in directing whom shall have the surplus waters, because in so doing it is not in that act promoting or developing commerce

or navigation. In other words, unless the act of the delivery of the water to a certain-named person designated by the Secretary of War tends to improve affirmatively the commerce of Niagara River and its connecting waters, the Federal Government was exercising a power without constitutional warrant. The contention can not be a serious one. The act of the Federal Government need not necessarily be an act to develop or promote commerce directly. It may frequently be an act destructive or prohibitive of commerce, and the act still be within the power to regulate. For example, Congress may prohibit the interstate transportation of diseased cattle. It may prohibit the transportation of stock known to be infected with a contagious disease. It may quarantine cattle and stock and prohibit their transportation out of a State in which they were discovered to be diseased, and such prohibition of commerce has been upheld by the Supreme Court. Congress passed the Sherman Antitrust Act, not to increase and develop commerce but to defeat commerce in its abstract sense. The court said, in One hundred and eighty-eighth United States, page 359, supra:

The act was to protect trade and commerce against unlawful restraints and monopoly.

Congress invaded the field of private contracts and declared them to be illegal. Not that the subject matter of the contract was, per se dangerous, but because it was contrary to sound public policy. The very act was a prohibitive one, and its prohibition has been sustained as a valid exercise of the power to regulate commerce. (Addyston Pipe & Steel Co. *v.* U. S., 175, U. S., 211.)

Let me call your attention to the further expression of the justice in deciding this case in direct connection with the expressed power cited:

Under the grant of power to Congress that body, in our judgment, may enact such legislation as shall declare void and prohibit the performance of any contract between individuals or corporations when the natural and direct effect of such a contract would be, when carried out, to directly, and not as a mere incident to other and innocent purposes, regulate to any substantial extent interstate commerce.

I direct your attention to the fact that no limitation was included in the grant which excludes private contracts in restraint of trade or monopolies from the power of Congress to legislate respecting them. The State of New York clamors for expressed constitutional power on the part of the Federal Government to divert the surplus waters of Niagara River not needed for navigation. Gentlemen concede that regulation of commerce includes regulation of navigation, and there is not a word in the Constitution with reference to navigation.

I am illustrating the almost unlimited power Congress is invested with in developing the means and methods to carry on commerce. Congress covers the entire field in passing the interstate commerce act. It conferred power upon the commission to compel the attendance of witnesses in suits before it, to inquire into the business management of all common carriers, to provide the method of publicity to be given to rates, to require annual reports, to make rules for its own government, to compel by mandamus the officers of railroads to obey the commerce law. But Congress did not prescribe the rules for the enforcement of the law; that was left wholly with the commission—to its judgment in the administration of the law. But if we were to adopt the suggestion made by the Representatives of New York the commission would be powerless, because of the want of express authority declared in the Constitution. Before closing this branch of the discussion I call attention to Green-bay & Mississippi Canal Co. *v.* Patton Paper Co. (172 U. S., p. 80), quoting from the court's opinion, by Justice Shiras, as follows:

So far, therefore, as the water power and appurtenant lots are regarded as property, it is plain that the title of the canal company can not be controverted.

The canal company had reserved those elements of property and the use of the surplus waters above that required to maintain navigation, when the canal company had deeded its other property rights to the United States. Quoting still further from the same opinion, the court said:

And we think it is equally plain that the mode and the extent of the use and enjoyment of such property by the canal company fall within the sole control of the United States. At what points in the dam and canal the water may be withdrawn and the quantity which can be treated as surplus water, with due regard to navigation, must be determined by the authorities which own and control the navigation. There can be in such matters no divided empire.

It would seem that such language foreclosed this entire subject. In the case cited the canal company, by its contract, owned the use of all the surplus water. Yet it did not have such an ownership, such a proprietory interest in but what the "mode and extent of the use and the enjoyment of such property by the canal company fell within the sole control of the United States." It could not use the water it expressly reserved in a written contract with the Government without the Government's supervision. If the Federal Government may determine the mode and extent of the use of the water—when it shall be taken from the canal—may it not be fairly concluded that it may also, in the absence of a contract, determine to whom it may be diverted? Representatives of the State of New York recognizing the fatality of this decision when applied to the theory they were proclaiming, sought to escape the results by saying that the ownership of the canal company grew out of a land grant made by the Federal Government for the purpose of improving the navigability of the Fox and Wisconsin Rivers, and that therefore a different rule obtained although the rule was not stated. Granted that in the original improvement the Government did set aside land for the promotion of navigation in the Fox and Wisconsin Rivers. What of it? The Federal Government was there engaged in improving navigation. It could not have been there for any other purpose. The doctrine in this case is fully supported by Kankanna Water Power Co. *v.* Green Bay Canal Co. (142 U. S.). This case is not relied upon by the State rights advocates and rarely cited except for avoidance.

What significance is to be attached to the concluding phrase of the citation, "in such matters there can be no divided empire?" For the purpose of this discussion that is the most important declaration in the opinion. It distinctly affirms the proposition that the Federal Government will not divide its jurisdiction with any State in navigable streams when it is promoting or protecting the navigabilty of such a stream under the commerce clause. To emphasize what I desire to say and to show under exactly what conditions the State is precluded from exercising either concurrent or independent jurisdiction, I quote from Leisy *v.* Hardin (135 U. S., 109):

First. When the power is lodged exclusively in the Constitution.
Second. When it was given to the United States and prohibited to the States.
Third. When from the nature and subject of the power it must be necessarily exercised by the National Government exclusively.

Considering the subject under discussion, the State of New York falls wholly within both the first and third exception. It may be insisted, however, that so long as the Federal Government did not act it was presumed that the State had the right to assume the discharge of the same duties that the Federal Government would have been entitled to; but Justice Fuller in this same case met that assumption in the following language:

Whenever, however, a particular power of the General Government is one which must be necessarily exercised by it, and Congress remain silent, this is not only not a concession that the power reserved by the State may be exerted as if the specific power had not been elsewhere reposed, but, on the contrary, the only legitimate conclusion is that the General Government intended that power should not be affirmatively exercised, and the action of the States can not be permitted to effect that which would be incompatible with such contention.

The Federal Government will not open the door to vexatious complications that would be sure to arise. If it did it would destroy its own sovereignty. It is responsible to the whole people of the United States for the protection of Niagara River and its connecting waters. It can not divest itself of that responsibility and shift the burden to a State that has no reciprocal duties to perform. The owners of 200,000,000 tons of freight, the 15,000,000 passengers that annually seek passage over the connecting waters of Niagara demand the highest possible efficiency and authority in the preservation of the normal conditions of navigation; and the Federal Government will not be shorn of any of the agencies or means that are auxiliary to such maintenance. The power of the Federal Government is not confined to the use of the waters within the banks of the stream. It may follow it sufficiently to dispose of it in the public interests if a surplus in any manner arises from the maintenance or improvement of navigation. In support of that declaration, I quote from the One hundred and forty-second United States, page 254, Kaukauna Water Power Co. against Greenbay & Minnesota Canal Co., as follows:

If, for the purpose of improving the navigability of a stream carrying interstate commerce, the Federal Government constructs and maintains a dam with locks and gates, the Government has the undoubted right to establish and maintain in connection with such dam an electrical power plant to operate such locks and gates. And the Federal Government has the right to sell, lease, or rent for compensation any surplus power that may arise from and be incident to such an improvement of navigation.

I can not pass this part of the argument without directing attention to the statute fixing the authority of the Federal Government as paramount to all State authority in protecting commerce. I quote from existing law, section 10 of the river and harbor act approved March 3, 1899 (30 Stat., 1121–1151):

It shall be unlawful to excavate or fill or in any manner to alter or modify the course, location, condition, or capacity of any port, roadstead, haven, harbor, canal, lake, harbor of refuge, or inclosure within

the limits of any breakwater, or of any canal of any navigable water of the United States, unless the work has been recommended by the Chief of Engineers and authorized by the Secretary of War prior to the beginning of the same.

The State of New York in further declaration of its power to appropriate the surplus waters in Niagara River bases that right upon the fact that it is itself a riparian owner, and the further fact that it owns the bed of the river in trust for the people of the State. The riparian owner and the State, although a trustee, must take notice that if they use the water in an interstate navigable river that the Federal Government can, at any moment, displace them and proceed with its own improvement of navigation. Keeping in mind that we are discussing the power of Congress with reference to interstate commerce, the decision of Congress to develop the navigability of an interstate river is absolutely decisive and not subject to review. So unconditionally does Congress possess the full measure of power that it may not be compelled by virtue of any authority to change its purpose. It is not subject to mandate, and no executive can control it. That power was given to Congress by the people. It was the supremest power they possessed. The State of New York claims to be a riparian owner of a considerable portion of land bordering upon Niagara River, and because of that fact asserts some supposed right on an equality with those asserted by the Federal Government. The State, resting its rights on the law governing the rights of the riparian owner, can have no greater rights than the riparian because it is a State for the improvement of the river for navigation. The law expressed in Scranton *v.* Wheeler (179 U. S., 163) is decisive. The Government had constructed a long dike or pier upon submerged land in the river to aid navigation. This cut off access to deep water from the adjoining land of the riparian. He sued for damages, declaring that his rights had been invaded and his property taken without compensation. But the court held that there had been no property "taken" which was not primarily taken for the very use it was put to, and his claim for damages was dismissed. In deciding the case the court said:

The primary use of water and the lands under them was for the purpose of navigation, and the erection of piers in them to improve navigation for the public is entirely consistent with such use and infringes no right of the owner. Whatever the nature of the interest of the riparian owner in these submerged lands in front of his upland, bounding on a public navigable river, his title is not as full and complete as his title to the fast land which has no direct connection with navigation of such waters. It is a qualified title, a bare technical title, not at his absolute disposal as is his upland, but to be held at all times subordinate to such use of submerged lands and the water falling over them as may be consistent with or demanded by the public right of navigation.

So unfettered is the control of Congress over the navigable streams of the country that its judgment as to whether a construction in or over a river is or is not an obstruction or hindrance is conclusive. Such judgment and determination is the exercise of legislative power in respect of a subject wholly within its control. (United States *v.* Dunbar Water Power Co. See opinion, p. 7.)

So the State as a riparian owner has no right against the Federal Government it can enforce when that right would be in conflict with any purpose of the Government to improve navigation. The State also claims to be the owner in trust of the bed of the river, and because of that fact claims to own the water or, at least, a proprietary interest in the water sufficient to control the diversion. Conceding the title to the bed of the navigable rivers to be in the State, it does not have such a title that it may appropriate it to its individual use; it holds it as a trustee for the people, and always in subrogation of the rights of the Federal Government to promote commerce. In United States against Chandler-Dunbar Co., supra, the company was the owner of land along the St. Marys River. The Federal Government condemned the land for the improvement of navigation. This question arose, namely, Had the Chandler-Dunbar Co. any private property rights in the water-power capacity of the rapids and the falls of St. Marys River, because it was the riparian owner, which had been taken and for which compensation must be made under the fifth amendment of the Constitution. The Federal Government paid for the upland. Were there such property rights in the bed of the stream owned by the company that it was entitled to receive pay separate and apart from what it received from the upland? The title of the remote grantors in the bed of the river had passed up to the Chandler-Dunbar Co., which owned the upland on the bank to the middle thread of the stream. Over that bed flowed two-thirds of the water in St. Marys River. By reason of that fact and the ownership of the shore the company's claim was that it was the owner of the water and the inherent power in the falls and rapids subject only to the public right of navigation. Now, I call attention to the following language in the case:

While the company did not deny that the protection or promotion of navigation by the Federal Government was a dominating right, yet the claim was made that in the exercise of the power to regulate commerce the Government may not exclude the right of the riparian owner to construct in the river upon its own submerged land such appliances as are necessary to control and use the current for commercial purposes, provided only that such structure and use does not impede or hinder navigation and the flow of the stream is not so diminished as to leave less than every possible requirement for navigation for present and future.

This property right in the bed of the river and the flow of the stream in excess of the wants of navigation constitute the ground upon which the company asserts that its property has been taken without compensation. The court in deciding the case said:

The title of the owner of the fast land upon the shore of a navigable river to the bed of the river is, at least, a qualified one. It is a title which inheres in the ownership of the shore and, unless reserved or excluded by implication, passes with it as a shadow follows a substance. It is subordinate to the public right of navigation and of no avail against the exercise of the great and absolute power of Congress over the improvement of navigable rivers.

Proceeding with the proposition that the General Government is liable for damages or for compensation for asserting jurisdiction over the bed of the stream and appropriating the inherent water power in the rapids, the court said:

It is little difficult to understand the basis for the claim that in appropriating the upland bordering on the stretch of water the Government not only takes the land but also the great water power which potentially exists in the river. The broad claim that the water power of the stream is appurtenant to the bank owned by it and not dependent upon ownership of the soil over which the river flows has been advanced. But whether this private right to the use of the flow of the water and the flow of the stream be based on the qualified title which the company had to the bed of the river over which it flows, or the ownership of the land bordering on the river, is of no prime importance. In neither event can there be said to arise any ownership of the river. The ownership of a private stream wholly upon the lands of an individual is conceivable, but that the running water in a navigable stream is capable of private ownership is inconceivable.

I recognize that in the Chandler-Dunbar case the ownership was in the riparian and that the title to the bed of the stream was not held in trust by the State. But what difference does it make whether the bed was in the riparian or in the State? The State could not succeed to greater rights than the riparian as against the absolute power of the Federal Government.

But aside from all the foregoing that from every angle I believe constitutes a complete defense to the claims of New York to interfere with the jurisdictional powers of the Federal Government, there is another reason that reaches to the dignity of the highest and soundest public policy. The Niagara and its connecting waters for nearly 2,000 miles is a means of natural defense and constitutes the boundary line between the two greatest Anglo-Saxon races in the world. These waters wash the southern shore of an empire and pass the northern boundary of many of the great States of this Republic, and it is a matter of the highest moment and of the utmost expediency that the power of the Federal Government over our commerce, over our boundary lines—which is also a means of national defense—shall be absolute and plenary.

Sentiment Among the Plain People on War.

EXTENSION OF REMARKS
OF
HON. WARREN WORTH BAILEY,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 10, 1917.

Mr. BAILEY. Mr. Speaker, out of a large number of letters and telegrams which have reached me during the last week it is my desire to lay before Congress and the country a few which are typical of all the rest, reflecting a sentiment among the plain people back home which I feel worthy of consideration. Some of these communications were voluntary, while others were in response to an inquiry directed by me to some of my friends whom I know to be trustworthy and well informed. The letters and telegrams speak for themselves. They follow:

READING, PA., *February 9, 1917.*

Hon. WARREN WORTH BAILEY,
House of Representatives, Washington, D. C.

MY DEAR MR. BAILEY: In reply to your favor of the 7th instant, relative to sentiment among working people regarding participation in the European war, will say I am without doubt in closer touch with the working class of Pennsylvania than any other man in the State. My official position gives me this advantage.

I am convinced from what I have seen and heard that if this country was threatened with invasion by some foreign nation fully 90 per cent of the workers would unhesitatingly offer their services to repel such invasion. Just as strongly as they are loyal to our country in case of invasion, just so strongly are they opposed to our country becoming entangled in foreign complications or becoming part of the European conflict. It is to be hoped, therefore, that a way out of the unfortunate situation may be found.

Yours, very truly, JAMES H. MAURER,
President Pennsylvania State Federation of Labor.

ALTOONA, PA., *February 6, 1917.*

Hon. W. W. BAILEY,
Washington, D. C.

DEAR SIR: I petition you to use your influence and vote against a declaration of war which the papers tell us is pending.

Respectfully,

F. O. NICOLAI.

—

JUNIATA, PA., *February 5, 1917.*

Hon. WARREN WORTH BAILEY,
Washington, D. C.

DEAR SIR: Relating to the present crisis, comment is heard on all sides of pity and regret that the English statesmen were cleverer than ours in allowing them to make us a party to their aid. In a group of 35 men, all American born, all but 2 feel that we have no right abroad and could not support the issue as it now stands. But if in defense of the country, to keep out an enemy, it is different. They all think munitions makers are prime leaders in the movement.

Yours, most respectfully,

WALTER SHLUNMIRE.

—

JOHNSTOWN, PA., *February 7, 1917.*

Hon. WARREN WORTH BAILEY,
Washington, D. C.

DEAR MR. BAILEY: My feelings for your conservative policy to keep out of war and your speech which was printed in your Johnstown paper on February 6 is certainly indorsed by thousands of Johnstown people, and I pray the good Lord will give you more power.

Very sincerely, yours,

L. L. LAMBERT.

—

WASHINGTON, D. C., *February 8, 1917.*

Hon. WARREN WORTH BAILEY.

HONORABLE SIR: I have just returned from a visit in your congressional district, and I find the majority of people are averse to a war with Germany if it can possibly be avoided.

Knowing that you represent the common people more than the majority of Representatives, I trust you will use your influence to avert the war if possible.

Very respectfully,

R. L. JACKSON.

—

WASHINGTON, D. C., *February 6, 1917.*

The Hon. W. W. BAILEY,
House of Representatives, Washington, D. C.

SIR: May I not take this opportunity to express my appreciation for the stand you have taken against militarism and our entangling alliances with foreign countries? You have had the courage to stand for what you honestly believed to be the opinion of your constituents.

The personal popularity of the President in the election has shown that the people of the United States desire peace and are opposed to militarism.

We agree with Mr. Bryan's views as expressed in his address that the people of this country will not send one boy across the ocean to fight under any European monarch for a foreign cause. If we have any grievances justifying a resort to arms it must be postponed until the close of the present war.

Wishing you success in your independent effort, I am,

Yours, respectfully,

AMOS R. EBERSOLE.
4133 Conduit Road.

P. S.—I am a citizen of the ninth congressional district of Pennsylvania.

—

JOHNSTOWN, PA., *February 9, 1917.*

Hon. WARREN WORTH BAILEY, M. C.,
Washington, D. C.:

As a traveling salesman, who covers your own and parts of several other congressional districts, and who comes in contact with all classes of business men and workingmen, I assure you that the sentiment of this section is almost unanimously opposed to a declaration of war against Germany or any other country, except only in case of actual invasion. A referendum will substantiate this.

FRANK C. HOERL.

—

ALTOONA, PA., *February 8, 1917.*

Hon. W. W. BAILEY,
Washington, D. C.

DEAR SIR: I write to you to protest against our country being forced into the terrible war against the desire of the people. I ask you to use your vote to keep Americans at home and out of danger, and finally I demand that the plain people who must do the fighting be allowed to vote on war before it is declared, and that they be not compelled to fight in a war brought on by unscrupulous capitalists and politicians.

Very truly,

THOS. B. WEHRLE,
1234 Nineteenth Ave.

—

NEW YORK, *February 7, 1917.*

Hon. W. W. BAILEY,
House of Representatives, Washington, D. C.

DEAR MR. BAILEY: A most encouraging meeting, which I was invited to address, was held at Columbia University this late afternoon and was attended by a large body of students and faculty representatives. The meeting was called as an open discussion of the present situation in direct contrast to the one of the previous day at which President Butler, Prof. Giddings and Prof. Erskine spoke. The last-named speaker told us that he was completely taken back by the tone of the meeting. His was the only constructive peace talk and he did not have any idea that he was to be a part of an intellectual autocracy whose ideas were to be forced on the world as an expression of the majority of the student body and faculty.

More than 20 speakers rose from the floor, all unanimously for going on record against entering the war, and a motion to that effect was carried unanimously. Among the alternatives suggested were a neutral conference and an embargo. A referendum to the people was demanded and the following resolutions passed unanimously; the first was cabled to Germany:

"*Resolved*, That we, members of Columbia University, are striving to preserve peace and call on you, members of the universities of Germany, to exert your influence to prevent any overt act which may lead us to war.

"*Resolved*, That we, members of Columbia University, in mass meeting assembled, go on record as firmly opposed to any attempt to force conscription upon the country under cover of the present crisis."

The committee asked me to bring this to your attention, with the request that you endeavor to place it before the House as a strong assurance that most of the students and members of the faculty are opposed to departing from neutrality, and are ready to do their utmost in the preservation of peace while the European belligerents are in this their death struggle.

We appreciate the difficulties of the antimilitarist Congressmen and wish we could help in a definite way. But since encouragement is about all we can give, let me assure you that we are pulling strongly against the war tide, and, as a result of the awakening following the autocratic pronouncement of President Butler, I am greatly pleased at the energy behind this movement for sanity.

With appreciation and best personal wishes,

JOHN H. COVER.

—

ALTOONA, PA., *February 8, 1917.*

Hon. W. W. BAILEY,
Washington, D. C.

DEAR MR. BAILEY: The time is fast passing when the working class can be roused to pitches of patriotic frenzy by a waving of the flag in the hands of ignorant fanatics or cunning hirelings of those who have commercialized patriotism.

You ask, "What is the sentiment of the working class toward the crisis toward which we are heading?" It is well to ask this question, because in the final analysis it is the working class that will do the fighting and dying; it is upon the working class that the burdens of war will bear most heavily while it is being waged; and it is upon the working class that the final burden of war debt in the shape of taxes will be levied, and in spite of all this the scheming munition makers and market grabbers would coin their blood and tears into gold without even as much as a "by your leave."

Candidly, among the rank and file of the workers with whom I have come in contact there is no desire for war; there is a feeling, deep seated and sullen, that just as in Germany, just as in England, just as in every country in Europe that is striding toward savagery with "seven-league boots" the working class is used merely as pawns, to be manipulated by the skilled hands of the profit mongers.

Do not misunderstand me. I do not mean that they have all arrived at this conclusion through intelligent investigation, but the feeling is there nevertheless, and is really of a more dangerous character, founded as it is on distrust and suspicion, than it would be were it based upon a solid foundation of understanding.

The workers realize that in the past their trustful ignorance has been taken advantage of; that through their love of country they have been taken advantage of and then left to "hold the bag."

My socialistic convictions have nothing whatever to do with my reply to your question. I am answering your query fairly, as the current of feeling among the working class is revealed to me. It may be that some momentous thing would occur that would completely reverse this feeling or that a continuous furore kept up by a perverted press might finally accomplish this end, but as yet little impression has been made by fanatical appeals to race prejudice and bigotry.

Thanking you for this opportunity to convey to you the general trend of thought among the workers, I am,

Sincerely, yours,

H. A. MCCALEB.

—

JOHNSTOWN, PA., *February 9, 1917.*

Hon. W. W. BAILEY,
House of Representatives, Washington, D. C.

DEAR MR. BAILEY: Replying to your inquiry of the 7th instant as to the sentiment of the laboring people regarding our participation in the European war, I would say that, being profoundly stirred myself not only by what has occurred already pointing to our possible entrance into this great world tragedy, but also by what is likely to occur any minute to draw us into the maelstrom, I have taken particular pains to sound out practically every man with whom I can engage in conversation, and I have yet to find a person who takes the stand that we should even think of going to war with Germany over the present controversy. I find absolutely no "war spirit." I find not one who thinks there will be any war. Party lines are scarcely discernible. Somehow everybody seems to think that Wilson, having kept us out of war thus far, will be able to guide the old ship of state clear of the jagged rocks that appear just ahead.

The disturbing thing about this, however, is that Mr. Wilson is hearing from that small but loud and influential minority that is at present moving heaven and earth to bring on war, while the great common people who would be called upon to furnish the boys and pay the bills is not heard. They have no way to crystalize their sentiments and but few mediums through which to reach the President, the great newspapers serving as the mouthpiece of the "patriots for profit."

The feeling here is that the German people have neither cause nor intention to injure us as a people; that the injury that may befall us in her life-and-death struggle with her enemies is incidental; that this injury, if it shall occur, is more than counterbalanced by our shipment of munitions to the allies, also not with any intention to injure Germany, though incidentally all this material is likely to be used in the effort to conquer Germany. Germany has not declared war against us because of our shipments of war material to the allies, simply because it must have been recognized that while in practice it made us one of the allies yet it was not so intended. So why should we not so consider the submarine policy—in practice it injures us but is not so intended.

Here is another difference that we must not fail to consider: Germany can not avoid the injury we do her indirectly and unintentionally in shipping munitions to the allies, while we can avoid injury by our people temporarily foregoing their legal rights. Just as with individuals, there are times when it is wise to forego legal rights; so there are times when a nation should do likewise.

Here comes in the question of national honor. Oh, what horrors have been committed in thy name! The people here in Johnstown with whom I have talked are strongly of the conviction that national honor, like that of the individual, is not a thing that another can injure. Our honor is in our own keeping. Germany can not injure our honor, nor is she trying to. She is in desperate straits. She has proclaimed this to

the world. She now asks neutral nations to stand back just a little while she administers to the allies some more effective doses of the same medicine which they have been forcing down her throat. In view of what we have done in the name of trade to furnish the medicine which the allies have been administering to Germany, we would be doing little enough to step aside temporarily and let them fight it out.

After the war is over and the red disappears from the combatants' eyes will be plenty of time to discuss and settle the matters of dispute.

Let the President make no mistake. If he shall take the blatant yawpings of the war dogs as the sentiment of the great common people, and proceed on the world-old theory that right, honor, and justice can be defended and maintained by physical force, and shall go before Congress and ask that it permit this method to be used against Germany or any other country for any other cause except actual invasion, he will find his mistake when he comes to call for the boys from the factory, the mines, and the farms to go forth to fight a people with whom they have no grievance and who have no grievance against them. We do not want war. We do not expect war. We expect the name Wilson to go down through the ages to come coupled with the old campaign cry of 1916 that reelected him—"He kept his Nation out of war." Oh, what a disappointment, what a loss there would be to the pages of future history if for any reason he should fail now!

If we of the nineteenth district were to send him a message, I imagine it would be something like this: "Fight! Fight! Fight to the last ditch to keep your country out of war!"

Above are the views, expressed as best I can, of the sentiments of the people with whom I have come in contact. Of course in individuals there have been slight variations as to details, but it all amounts to the same general sentiment—no war.

Hoping that the dark clouds that are threatening will pass away, and with kindest personal regards, I remain,

Very truly, yours,

H. S. BENDER.

VINTONDALE, PA., *February 7, 1917.*

Hon. WARREN WORTH BAILEY, M. C.,
Washington, D. C.

DEAR MR. BAILEY: I see by the Democrat of February 6 that you are still advocating peace, and I want to say to you that I am proud of you, standing up in the midst of so many that want war, and giving your honest views on peace as well as your views on war.

I know and you know that the common people do not want war, and they are the ones that would have to bear the burden and the suffering that goes with war.

In our town I haven't heard one person say as yet that they want war, but I have heard many say they only hoped there would be no war.

Even our foreign born ask me what is the matter with the United States that they want to go to war now. So you see, my brother, the common people do not want war, but they are praying that we may stay in peace, for they love their country, but they also love their families and their home, and they know that only peace will leave them in their homes and with their families.

I am also convinced that our President of these United States, Mr. Woodrow Wilson, is feeling the weight of the prayers of all God's people going up to God continually that he may be guided by the hand of God, that we may always have peace.

Most everybody knows the wonderful strain that must be on our President, and the majority of the people, I believe, knows that he loves peace, for there are many that heard him say so, and I believe the people are satisfied that he will keep us out of war just as long as he can with honor.

Further, dear Mr. Bailey, keep on talking peace as you see it and believe in it. Do not be afraid that they will interne you as they wanted to interne Mr. Bryan.

I know that those of us that want peace have just as much right to our views on same for peace as those have that want war.

I sincerely hope that all who have to do with our Government may receive the vision that stands for peace.

Hoping my few lines in the way of remarks may cheer you and make you feel that you are not alone in your peace thoughts, but that many others have the same thoughts but are not in a position that they can give voice to their thoughts the way you can and be heard, will close, with my best wishes to you and God's richest blessing to comfort you and His all-seeing eye to guide you, I remain,

Yours, truly,

J. H. KRUMBINE.

The Submarine Controversy.

EXTENSION OF REMARKS
OF
HON. S. D. FESS,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 8, 1917.

Mr. FESS. Mr. Speaker, the submarine controversy which induced severance of diplomatic relations with Germany began four months after the war opened.

On November 2, 1914, the announcement of England's blockade of Germany was made as follows:

During the last week, the Germans have scattered mines indiscriminately in the open sea on the main trade route from America to Liverpool via the north of Ireland.

Peaceful merchant ships have already been blown up, with loss of life, by this agency.

The White Star liner *Olympic* escaped disaster by pure luck and but for warnings given by British cruisers other British and neutral merchant and passenger vessels would have been destroyed.

These mines can not have been laid by any German ship of war. They have been laid by some merchant vessel flying a neutral flag, which has come along the trade route as if for purpose of peaceful commerce, and, while profiting to the full by the immunity enjoyed by neutral merchant ships, has wantonly and recklessly endangered the lives of all who travel on the sea.

In these circumstances, having regard to the great interests intrusted to the British Navy, to the safety of peaceful commerce on the high seas, and to the maintenance within the limits of international law of trade between neutral countries, the Admiralty feels it necessary to adopt exceptional measures appropriate to the novel conditions under which this war is being waged.

It therefore gives notice that the whole of the North Sea must be considered a military area. Within this area merchant shipping of all kinds, traders of all countries, fishing craft and all other vessels will be exposed to the gravest dangers from mines it has been necessary to lay and from warships searching vigilantly by night and day for suspicious craft.

All merchant and fishing vessels of every description are hereby warned of the dangers they encounter by entering this area, except in strict accordance with Admiralty directions. Every effort will be made to convey this warning to neutral countries and to vessels on the sea, but from November 5 onward the Admiralty announces that all ships passing a line drawn from the northern point of the Hebrides through the Farne Islands to Iceland do so at their own peril.

Ships of all countries wishing to trade to and from Norway, the Baltic, Denmark, and Holland are advised to come, if inward bound, by the English Channel and the Strait of Dover. There they will be given sailing directions which will pass them safely, so far as Great Britain is concerned, up the east coast of England to the Farne Islands, whence a safe route will, if possible, be given to Lindesnas Lighthouse.

From this point they should turn north or south, according to their destination, keeping as near the coast as possible. The converse applies to vessels outward bound.

By strict adherence to these routes the commerce of all countries will be able to reach its destination in safety so far as Great Britain is concerned, but any straying even for a few miles from the course thus indicated may be followed by fatal consequences. (The New York Tribune, Nov. 3, 1914.)

On February 4, 1915, the German Government announced the famous war-zone order placing the British Isles within the danger zone after the 18th of February, 1915. It will be noted this was not a blockade. The order follows:

Since the commencement of the present war Great Britain's conduct of commercial warfare against Germany has been a mockery of all the principles of the law of nations. While the British Government have by several orders declared that their naval forces should be guided by the stipulations of the declaration of London, they have in reality repudiated this declaration in the most essential points, notwithstanding the fact that their own delegates at the maritime conference of London acknowledged its acts as forming part of existing international law. The British Government have placed a number of articles on the contraband list which are not at all, or only very indirectly, capable of use in warfare, and consequently can not be treated as contraband either under the declaration of London or under the generally acknowledged rules of international law. In addition, they have in fact obliterated the distinction between absolute and conditional contraband by confiscating all articles of conditional contraband destined for Germany, whatever may be the port where these articles are to be unloaded, and without regard to whether they are destined for uses of war or peace. They have not even hesitated to violate the declaration of Paris, since their naval forces have captured on neutral ships German property which was not contraband of war. Furthermore, they have gone further than their own orders respecting the declaration of London and caused numerous German subjects capable of bearing arms to be taken from neutral ships and made prisoners of war. Finally, they have declared the North Sea in its whole extent to be the seat of war, thereby rendering difficult and extremely dangerous, if not impossible, all navigation on the high seas between Scotland and Norway, so that they have in a way established a blockade of neutral coasts and ports, which is contrary to the elementary principles of generally accepted international law. Clearly all these measures are part of a plan to strike not only the German military operations but also the economic system of Germany, and in the end to deliver the whole German people to reduction by famine by intercepting legitimate neutral commerce by methods contrary to international law.

The neutral powers have in the main acquiesced in the measures of the British Government; in particular they have not been successful in securing the release by the British Government of the German subjects and German merchandise illegally taken from their vessels. To a certain extent they have even contributed toward the execution of the measures adopted by England in defiance of the principle of the freedom of the seas by prohibiting the export and transit of goods destined for peaceable purposes in Germany, thus evidently yielding to pressure by England. The German Government have in vain called the attention of the neutral powers to the fact that Germany must seriously question whether it can any longer adhere to the stipulations of the declaration of London, hitherto strictly observed by it, in case England continues to adhere to its practice and the neutral powers persist in looking with indulgence upon all these violations of neutrality, to the detriment of Germany. Great Britain invokes the vital interests of the British Empire, which are at stake, in justification of its violations of the law of nations, and the neutral powers appear to be satisfied with theoretical protests, thus actually admitting the vital interests of a belligerent as a sufficient excuse for methods of waging war, of whatever description.

The time has come for Germany also to invoke such vital interests. It therefore finds itself under the necessity, to its regret, of taking military measures against England in retaliation for the practice followed by England. Just as England declared the whole North Sea between Scotland and Norway to be comprised within the seat of war, so does Germany now declare the waters surrounding Great Britain and Ireland, including the whole English Channel, to be comprised within the seat of war, and will prevent by all the military means at its disposal all navigation by the enemy in those waters. To this end it will endeavor to destroy, after February 18 next, any merchant vessels of the enemy which present themselves at the seat of war above indicated, although it may not always be possible to avert the dangers which may menace persons and merchandise. Neutral powers are accordingly forewarned not to continue to intrust their crews, passengers, or merchandise to such vessels. Their attention is furthermore called to the fact that it is of urgency to recommend to their own vessels to steer clear of these waters. It is true that the

German Navy has received instructions to abstain from all violence against neutral vessels recognizable as such; but, in view of the hazards of war and of the misuse of the neutral flag ordered by the British Government, it will not always be possible to prevent a neutral vessel from becoming the victim of an attack intended to be directed against a vessel of the enemy. It is expressly declared that navigation in the waters north of the Shetland Islands is outside the danger zone, as well as navigation in the eastern part of the North Sea, and in a zone 30 marine miles wide along the Dutch coast.

The German Government announces this measure at a time permitting enemy and neutral ships to make the necessary arrangements to reach the ports situated at the seat of war. They hope that the neutral powers will accord consideration to the vital interests of Germany equally with those of England, and will on their part assist in keeping their subjects and their goods far from the seat of war; the more so since they likewise have a great interest in seeing the termination at an early day of the war now ravaging.

Six days after the announcement of the war-zone order by Germany the President of the United States sent the famous "strict accountability" note, in the following language:

THE SECRETARY OF STATE TO THE AMERICAN AMBASSADOR AT BERLIN.

Please address a note immediately to the Imperial German Government to the following effect:

The Government of the United States, having had its attention directed to the proclamation of the German Admiralty issued on the 4th of February, that the waters surrounding Great Britain and Ireland, including the whole of the English Channel, are to be considered as comprised within the seat of war; that all enemy merchant vessels found in those waters after the 18th instant will be destroyed, although it may not always be possible to save crews and passengers; and that neutral vessels expose themselves to danger within this zone of war because, in view of the misuse of neutral flags said to have been ordered by the British Government on the 31st of January and of the contingencies of maritime warfare, it may not be possible always to exempt neutral vessels from attacks intended to strike enemy ships, feels it to be its duty to call the attention of the Imperial German Government, with sincere respect and the most friendly sentiments but very candidly and earnestly, to the very serious possibilities of the course of action apparently contemplated under that proclamation.

The Government of the United States views those possibilities with such grave concern that it feels it to be its privilege, and indeed its duty in the circumstances, to request the Imperial German Government to consider before action is taken the critical situation in respect of the relations between this country and Germany which might arise were the German naval forces, in carrying out the policy foreshadowed in the Admiralty's proclamation, to destroy any merchant vessel of the United States or cause the death of American citizens.

It is of course not necessary to remind the German Government that the sole right of a belligerent in dealing with neutral vessels on the high seas is limited to visit and search, unless a blockade is proclaimed and effectively maintained, which this Government does not understand to be proposed in this case. To declare or exercise a right to attack and destroy any vessel entering a prescribed area of the high seas without first certainly determining its belligerent nationality and the contraband character of its cargo would be an act so unprecedented in naval warfare that this Government is reluctant to believe that the Imperial Government of Germany in this case contemplates it as possible. The suspicion that enemy ships are using neutral flags improperly can create no just presumption that all ships traversing a prescribed area are subject to the same suspicion. It is to determine exactly such questions that this Government understands the right of visit and search to have been recognized.

This Government has carefully noted the explanatory statement issued by the Imperial German Government at the same time with the proclamation of the German Admiralty, and takes this occasion to remind the Imperial German Government very respectfully that the Government of the United States is open to none of the criticisms for unneutral action to which the German Government believe the governments of certain other neutral nations have laid themselves open; that the Government of the United States has not consented to or acquiesced in any measures which may have been taken by the other belligerent nations in the present war which operate to restrain neutral trade, but has, on the contrary, taken in all such matters a position which warrants it in holding those Governments responsible in the proper way for any untoward effects upon American shipping which the accepted principles of international law do not justify; and that it therefore regards itself as free in the present instance to take with a clear conscience and upon accepted principles the position indicated in this note.

If the commanders of German vessels of war should act upon the presumption that the flag of the United States was not being used in good faith and should destroy on the high seas an American vessel or the lives of American citizens, it would be difficult for the Government of the United States to view the act in any other light than as an indefensible violation of neutral rights which it would be very hard indeed to reconcile with the friendly relations now so happily subsisting between the two Governments.

If such a deplorable situation should arise, the Imperial German Government can readily appreciate that the Government of the United States would be constrained to hold the Imperial German Government to a strict accountability for such acts of their naval authorities and to take any steps it might be necessary to take to safeguard American lives and property and to secure to American citizens the full enjoyment of their acknowledged rights on the high seas.

The Government of the United States, in view of these considerations, which it urges with the greatest respect and with the sincere purpose of making sure that no misunderstanding may arise and no circumstance occur that might even cloud the intercourse of the two Governments, expresses the confident hope and expectation that the Imperial German Government can and will give assurance that American citizens and their vessels will not be molested by the naval forces of Germany otherwise than by visit and search, though their vessels may be traversing the sea area delimited in the proclamation of the German Admiralty.

It is added for the information of the Imperial Government that representations have been made to His Britannic Majesty's Government in respect to the unwarranted use of the American flag for the protection of British ships.

BRYAN.

On the 15th of February, 1915, Germany addressed this country on the question of foodstuffs:

THE GERMAN AMBASSADOR TO THE SECRETARY OF STATE.

1. The federal council's decision concerning the seizure of food products, which England alleges to be the cause of food products shipped to Germany being treated as contraband, is exclusively on "wheat, rye, both unmixed and mixed with other products," and also "wheat, rye, oats, and barley flour."

2. The federal council makes an express exception in section 45 of the order. Section 45 provides as follows: "The stipulations of this regulation do not apply to grain or flour imported from abroad after January 31."

3. Conjunctively with that saving clause, the federal council's order contains a provision under which imported cereals and flours could be sold exclusively to the municipalities of certain specially designated organizations by the importers. Although that provision had for its object simply to throw imported grain and flour into such channels as supply the private consumption of civilians, and, in consequence of that provision, the intent and purpose of the federal council's order, which was to protect the civilian population from speculators and engrossers, were fully met, it was nevertheless rescinded so as to leave no room for doubt.

4. My Government is amenable to any proposition looking to control by a special American organization under the supervision of the American consular officers, and, if necessary, will itself make a proposition in that direction.

5. The German Government further calls attention to the fact that municipalities do not form part of or belong to the Government, but are "self-administrative bodies," which are elected by the inhabitants of the commune in accordance with fixed rules, and therefore exclusively represent the private part of the population and act as it directs. Although these principles are generally known and obtain in the United States, as well as in England itself, the German Government desired to point out the fact so as to avoid any further unnecessary delay.

6. Hence it is absolutely assured that imported food products will be consumed by the civilian population in Germany exclusively, and there remains no doubt upon which England can prevent the exportation of food products from America to Germany for the use of civilians.

The Imperial Government expresses the firm hope that the American Government will stand on its right in this matter. (The New York Times, Feb. 18, 1915.)

On the same day Germany addressed a second note on three items:

PARAPHRASE OF A NOTE FROM THE GERMAN AMBASSADOR TO THE SECRETARY OF STATE.

According to absolutely reliable information British merchant ships intend to oppose armed resistance to German men-of-war in the area declared as war zone by the German Admiralty.

Some of these ships were already armed with British naval guns. Now all the others are speedily being equipped in a similar way. Merchant ships have been instructed to sail in groups, and to ram German submarines, while the examination is proceeding, or should the submarines lie alongside, to throw bombs upon them, or else to attempt to overpower the examining party coming on board.

A very high premium has been offered for the destruction of the first German submarine by a British merchant vessel. Therefore, British merchant ships can not any more be considered as undefended, so that they may be attacked by German war vessels without warning or search. The British admitted that instructions had been given to misuse neutral flags. It is almost certain that British merchant vessels will by all means try to conceal their identity. Thereby it also becomes almost impossible to ascertain the identity of neutral ships, unless they sail in daylight under convoy, as all measures suggested by neutrals, for instance painting of the ships in the national colors, may be promptly imitated by British ships. The attacks to be expected by masked British merchant vessels make a search impossible, as the examining party and the submarines themselves would thereby be exposed to destruction.

Under the circumstances, the safety of neutral shipping in the war zone around the British Isles is seriously threatened. There is also an increased danger resulting from mines, as these will be laid in the war zone to a great extent. Accordingly, neutral ships are urgently warned against entering that area, while the course around Scotland will be safe.

Germany has been compelled to resort to this kind of warfare by the murderous ways of British naval warfare, which aims at the destruction of legitimate neutral trade and at the starvation of the German people. Germany will be obliged to adhere to these announced principles till England submits to the recognized rules of warfare established by the declarations of Paris and London, or till she is compelled to do so by the neutral powers. (The New York Times, Feb. 16, 1915.)

Six days after our note and two days before the German order was to take effect the German Government replied to our "strict accountability" note as follows:

THE MINISTER FOR FOREIGN AFFAIRS TO THE AMERICAN AMBASSADOR.

In reference to the note of the 12th instant, foreign office No. 2260, relative to the German measures respecting the theater of war in the waters surrounding England, the undersigned has the honor to reply to his excellency the ambassador of the United States, James W. Gerard, as follows:

The Imperial German Government have examined the communication of the Government of the United States in the same spirit of good will and friendship which seems to have prompted this communication.

The Imperial German Government are in entire accord with the Government of the United States that it is in the highest degree desirable for all parties to avoid the misunderstanding which might arise from the measures announced by the German Admiralty and to avert the intrusion of events calculated to interrupt the most friendly relations which have so happily existed between the two Governments up to this time.

On this assurance the German Government believe that they may depend on full understanding on the part of the United States, all the more because the action announced by the German Admiralty, as was dwelt upon at length in the note of the 4th instant, is in no wise directed against the legitimate trade and navigation of neutral States, but merely represents an act of self-defense which Germany's vital interests force her to take against England's method of conducting maritime war in defiance of international law, which no protest on the part of neutrals has availed to bring into accordance with the legal status generally recognized before the outbreak of hostilities.

In order to exclude all possible doubt on this cardinal point the German Government beg to set forth once more the actual situation.

Up to now Germany has scrupulously observed the existing provisions of international law relative to maritime war. In particular she assented without delay to the proposal made by the American Government directly after the war began to ratify the declaration of London, and embodied the contents thereof without change in her prize law, even without formally binding herself in this direction. The German Government have adhered to these provisions, even where they conflicted with military interests. Our Government at the same time have permitted the supply of food by Denmark to England until the present, although they could well have prevented this traffic by reason of their naval forces.

In direct opposition to this, England has not shrunk from grave violations of international law wherever she could thereby cripple Germany's peaceable trade with neutral countries. It will not be necessary for the German Government to go into great detail on this point, especially since the American note to the British Government dated December 28, 1914, which has been brought to their knowledge, has dealt with this point very aptly if not very exhaustively on the ground of the experiences of months.

It is conceded that the intention of all these aggressions is to cut off Germany from all supplies, and thereby to deliver up to death by famine a peaceful civilian population, a procedure contrary to law of war and every dictate of humanity.

The neutrals have not been able to prevent this interception of different kinds of trade with Germany contrary to international law. It is true that the American Government have protested against England's procedure, and Germany is glad to acknowledge this; but, in spite of this protest and the protests of the other neutral Governments, England has not allowed herself to be dissuaded from the course originally adopted. Thus, the American ship *Wilhelmina* was recently brought into port by England, although her cargo was destined solely for the civil population of Germany and was to be used only for this purpose, according to an express declaration of the German Government.

In this way the following has been created: Germany is to all intents and purposes cut off from over-sea supplies with the toleration, tacit or protesting, of the neutrals, regardless of whether it is a question of goods which are absolute contraband or only conditional contraband or not contraband at all, following the law generally recognized before the outbreak of the war. On the other hand, England, with the indulgence of neutral Governments, is not only being provided with such goods as are not contraband or merely conditional contraband, namely, foodstuffs, raw material, etc., although these are treated by England when Germany is in question as absolute contraband, but also with goods which have been regularly and unquestionably acknowledged to be absolute contraband. The German Government believe that they are obliged to point out very particularly and with the greatest emphasis that a trade in arms exists between American manufacturers and Germany's enemies which is estimated at many hundred million marks.

The German Government have given due recognition to the fact that as a matter of form the exercise of rights and the toleration of wrong on the part of neutrals is limited by their pleasure alone and involves no formal breach of neutrality. The German Government have not, in consequence, made any charge of formal breach of neutrality. The German Government can not, however, do otherwise, especially in the interest of absolute clearness in the relations between the two countries, than to emphasize that they, in common with the public opinion of Germany, feel themselves placed at a great disadvantage through the fact that the neutral powers have hitherto achieved no success, or only an unmeaning success, in their assertion of the right to trade with Germany, acknowledged to be legitimate by international law, whereas they make unlimited use of their right to tolerate trade in contraband with England and our other enemies. Conceded that it is the formal right of neutrals not to protect their legitimate trade with Germany, and even to allow themselves knowingly and willingly to be induced by England to restrict such trade, it is, on the other hand, not less their good right, although unfortunately not exercised, to stop trade in contraband, especially the trade in arms, with Germany's enemies.

In view of this situation the German Government see themselves compelled, after six months of patience and watchful waiting, to meet England's murderous method of conducting maritime war with drastic counter measures. If England invokes the powers of famine as an ally in its struggle against Germany with the intention of leaving a civilized people the alternative of perishing in misery or submitting to the yoke of England's political and commercial will, the German Government are to-day determined to take up the gauntlet and to appeal to the same grim ally. They rely on the neutrals who have hitherto tacitly or under protest submitted to the consequences, detrimental to themselves, of England's war of famine to display not less tolerance toward Germany, even if the German measures constitute new forms of maritime war, as has hitherto been the case with the English measures .

In addition to this, the German Government are determined to suppress with all the means at their disposal the supply of war material to England and her allies and assume at the same time that it is a matter of course that the neutral Governments which have hitherto undertaken no action against the trade in arms which (sic) [with] Germany's enemies do not intend to oppose the forcible suppression of this trade by Germany.

Proceeding from these points of view, the German Admiralty has declared the zone prescribed by it the seat of war; it will obstruct this area of maritime war by mines wherever possible and also endeavor to destroy the merchant vessels of the enemy in any other way.

It is very far, indeed, from the intention of the German Government, acting in obedience to these compelling circumstances, ever to destroy neutral lives and neutral property; but, on the other hand, they can not be blind to the fact that dangers arise through the action to be carried out against England which menace without discrimination all trade within the area of maritime war. This applies, as a matter of course, to war mines, which place any ship approaching a mined area in danger, even if the limits of international law are adhered to most strictly.

The German Government believe that they are all the more justified in the hope that the neutral powers will become reconciled with this, just as they have with the serious injury caused them thus far by England's measures, because it is their will to do everything in any way compatible with the accomplishment of their purpose for the protection of neutral shipping even within the area of maritime war.

They furnish the first proof of their good will by announcing the measures intended by them at a time not less than two weeks beforehand in order to give neutral shipping an opportunity to make the necessary arrangements to avoid the threatening danger. The safest method of doing this is to stay away from the area of maritime war. Neutral ships entering the closed waters in spite of this announcement, given so far in advance, and which seriously impairs the accomplishment of the military purpose against England, bear their own responsibility for any unfortunate accidents. The German Government, on their side, expressly decline all responsibility for such accidents and their consequences.

Furthermore, the German Government announced merely the destruction of enemy merchant vessels found within the area of maritime war, and not the destruction of all merchant vessels, as the American Government appear to have erroneously understood. This limitation which the German Government have imposed upon themselves impairs the military purpose, especially since the presumption will prevail, even in the case of neutral ships, that they have contraband on board, in view of the interpretation of the idea of contraband in which the English Government have indulged as regards Germany and which the German Government will accordingly apply against England.

Naturally the Imperial Government are not willing to waive the right to establish the presence of contraband in the cargoes of neutral ships and, in cases requiring it, to take any action necessary on the grounds established. Finally, the German Government are prepared to accord, in conjunction with the American Government, the most earnest consideration to any measure that might be calculated to insure the safety of legitimate shipping of neutrals within the seat of war. They can not, however, overlook the fact that all efforts in this direction are considerably hampered by two circumstances: First, by the misuse of the neutral flag by English merchant vessels, which, in the meantime, has probably been established beyond a doubt by the American Government likewise; second, by the above-mentioned trade in contraband, especially war materials, by neutral merchant vessels. In regard to the latter point, the German Government ventures to hope that the American Government, upon reconsideration, will see their way clear to a measure of intervention in accordance with the spirit of true neutrality.

As regards the first point, the secret order of the British Admiralty has already been communicated to the American Government by Germany. It recommends English merchant vessels to use neutral flags and has in the meantime been confirmed by a statement of the British foreign office, which refers to the municipal law of England and characterizes such action as quite unobjectionable. The English merchant marine has followed this counsel without delay, as is probably known to the American Government from the cases of the *Lusitania* and *Laertes*. Moreover, the British Government have armed English merchant vessels and instructed them to resist by force the German submarines. In these circumstances it is very difficult for the German submarines to recognize neutral merchant vessels as such, for even a search will not be possible in the majority of cases, since the attacks to be anticipated in the case of a disguised English ship would expose the commanders conducting a search and the boat itself to the danger of destruction.

The British Government would then be in a position to render the German measures illusory if their merchant marine persists in the misuse of neutral flags and neutral vessels are not marked in some other manner admitting of no possible doubt. Germany must, in the exigency into which she has unlawfully been forced, make her measures effective at all events in order thereby to compel her adversary to conduct maritime warfare in accordance with international law, and thus to reestablish the freedom of the seas, which she has even advocated and for which she is fighting likewise to-day.

The German Government, therefore, welcomes the fact that the American Government have made representations to the British Government relative to the use of their flag contrary to law, and give expression to the expectation that this action will cause England to respect the American flag in future.

In this expectation the commanders of the German submarines have been instructed, as was already stated in the note of the 4th instant, to abstain from violence to American merchant vessels when they are recognized as such.

In order to meet in the safest manner all the consequences of mistaking an American for a hostile merchant vessel, the German Government recommended that (although this would not apply in the case of danger from mines) the United States convoy their ships carrying peaceable cargoes and traversing the English seat of maritime war in order to make them recognizable. In this connection the German Government believe it should be made a condition that only such ships should be convoyed as carry no merchandise which would have to be considered as contraband, according to the interpretation applied by England against Germany. The German Government are prepared to enter into immediate negotiations with the American Government relative to the manner of convoy. They would, however, be particularly grateful if the American Government would urgently advise their merchant vessels to avoid the English seat of maritime war, at any rate until the flag question is settled.

The German Government resign themselves to the confident hope that the American Government will recognize the full meaning of the severe struggle which Germany is conducting for her very existence, and will gain full understanding of the reasons which prompt Germany and the aims of the measures announced by her from the above explanations and promises.

The German Government repeat that in the scrupulous consideration for neutrals hitherto practiced by them they have determined upon the measures planned only under the strongest compulsion of national self-preservation. Should the American Government at the eleventh hour succeed in removing, by virtue of the weight which they have the right and ability to throw into the scales of the fate of peoples, the reasons which have made it the imperative duty of the German Government to take the action indicated; should the American Government in particular find a way to bring about the observation of the declaration of London on the part of the powers at war with Germany and thereby to render possible for Germany the legitimate supply of foodstuffs and industrial raw materials, the German Government would recognize this as a service which could not be too highly estimated in favor of more humane conduct of war, and would gladly draw the necessary conclusions from the new situation thus created.

The undersigned requests the ambassador to bring the above to the attention of the American Government and avails himself of the opportunity to renew, etc.

VON JAGOW.

Four days later our Government proposed simultaneously to both England and Germany mutual concessions on naval warfare as follows:

You will please deliver to Sir Edward Grey the following identic note, which we are sending England and Germany:

In view of the correspondence which has passed between this Government and Great Britain and Germany, respectively, relative to the declaration of a war zone by the German Admiralty and the use of neutral flags by British merchant vessels, this Government ventures to express the hope that the two belligerent Governments may, through reciprocal concessions, find a basis for agreement which will relieve neutral ships engaged in peaceful commerce from the great dangers which they will incur in the high seas adjacent to the coasts of the belligerents.

The Government of the United States respectfully suggests that an agreement in terms like the following might be entered into. This suggestion is not to be regarded as in any sense a proposal made by this Government, for it, of course, fully recognizes that it is not its privilege to propose terms of agreement between Great Britain and Germany, even though the matter be one in which it and the people of the United States are directly and deeply interested. It is merely venturing to take the liberty which it hopes may be accorded a sincere friend desirous of embarrassing neither nation involved and of serving, if it may, the common interests of humanity. The course outlined is offered in the hope that it may draw forth the views and elicit the suggestions of the British and German Governments on a matter of capital interest to the whole world.

Germany and Great Britain to agree:

1. That neither will sow any floating mines, whether upon the high seas or in territorial waters; that neither will plant on the high seas anchored mines except within cannon range of harbors for defensive purposes only; and that all mines shall bear the stamp of the Government planting them and be so constructed as to become harmless if separated from their moorings.

2. That neither will use submarines to attack merchant vessels of any nationality except to enforce the right of visit and search.

3. That each will require their respective merchant vessels not to use neutral flags for the purpose of disguise or ruse de guerre.

Germany to agree:

That all importations of food or foodstufis from the United States (and from such other neutral countries as may ask it) into Germany shall be consigned to agencies to be designated by the United States Government; that these American agencies shall have entire charge and control, without interference on the part of the German Government, of the receipt and distribution of such importations, and shall distribute them solely to retail dealers bearing licenses from the German Government entitling them to receive and furnish such food and foodstuffs to noncombatants only; that any violation of the terms of the retailers' licenses shall work a forfeiture of their rights to receive such food and foodstuffs for this purpose; and that such food and foodstuffs will not be requisitioned by the German Government for any purpose whatsoever or be diverted to the use of the armed forces of Germany.

Great Britain to agree:

That food and foodstuffs will not be placed upon the absolute contraband list and that shipments of such commodities will not be interfered with or detained by British authorities if consigned to agencies designated by the United States Government in Germany for the receipt and distribution of such cargoes to licensed German retailers for distribution solely to the noncombatant population.

In submitting this proposed basis of agreement this Government does not wish to be understood as admitting or denying any belligerent or neutral right established by the principles of international law, but would consider the agreement, if acceptable to the interested powers, a modus vivendi based upon expediency rather than legal right and as not binding upon the United States either in its present form or in a modified form until accepted by this Government.

BRYAN.

On the 28th of February Germany virtually agreed to make concessions, as follows:

THE MINISTER FOR FOREIGN AFFAIRS TO THE AMERICAN AMBASSADOR.

The undersigned has the honor to inform his excellency, Mr. James W. Gerard, ambassador of the United States of America, in reply to the note of the 22d instant that the Imperial German Government have taken note with great interest of the suggestion of the American Government that certain principles for the conduct of maritime war on the part of Germany and England be agreed upon for the protection of neutral shipping. They see therein new evidence of the friendly feelings of the American Government toward the German Government which are fully reciprocated by Germany.

It is in accordance with Germany's wishes also to have maritime war conducted according to rules which without discriminately restricting one or the other of the belligerent powers in the use of their means of warfare are equally considerate of the interests of neutrals and the dictates of humanity. Consequently it was intimated in the German note of the 16th instant that observation of the declaration of London on the part of Germany's adversaries would create a new situation from which the German Government would gladly draw the proper conclusions.

Proceeding from this view, the German Government have carefully examined the suggestion of the American Government and believe that they can actually see in it a suitable basis for the practical solution of the questions which have arisen.

With regard to the various points of the American note they beg to make the following remarks:

1. With regard to the sowing of mines, the German Government would be willing to agree as suggested not to use floating mines and to have anchored mines constructed as indicated. Moreover, they agree to put the stamp of the Government on all mines to be planted. On the other hand, it does not appear to them to be feasible for the belligerents wholly to forego the use of anchored mines for offensive purposes.

2. The German Government would undertake not to use their submarines to attack mercantile of any flag except when necessary to enforce the right of visit and search. Should the enemy nationality of the vessel or the presence of contraband be ascertained, submarine would proceed in accordance with the general rules of international law.

3. As provided in the American note, this restriction of the use of the submarines is contingent on the fact that enemy mercantile abstain from the use of the neutral flag and other neutral distinctive marks. It would appear to be a matter of course that such mercantile also abstain from arming themselves and from all resistance by force, since such procedure contrary to international law would render impossible any action of the submarines in accordance with international law.

4. The regulation of legitimate importations of food into Germany suggested by the American Government appears to be in general acceptable. Such regulation would, of course, be confined to importations by sea, but that would, on the other hand, include indirect importations by way of neutral ports. The German Government would therefore be willing to make the declarations of the nature provided in the American note so that the use of the imported food and foodstuffs solely by the noncombatant population would be guaranteed. The Imperial Government must, however, in addition (* * *) (apparent omission) having the importation of other raw material used by the economic system of noncombatants including forage permitted. To that end the enemy Governments would have to permit the free entry into Germany of the raw materials mentioned in the free list of the declaration of London, and to treat materials included in the list of conditional contraband according to the same principles as food and foodstuffs.

The German Government ventures to hope that the agreement for which the American Government has paved the way may be reached after due consideration of the remarks made above, and that in this way peaceable neutral shipping and trade will not have to suffer any more than is absolutely necessary from the unavoidable effects of maritime war. These effects could be still further reduced if, as was pointed out in the German note of the 16th instant, some way could be found to exclude the shipping of munitions of war from neutral countries to belligerents on ships of any nationality.

On March 1 England made her statement. It was read by the prime minister to the House of Commons and communicated to the neutral powers:

THE BRITISH AMBASSADOR AT WASHINGTON TO THE SECRETARY OF STATE.

Germany has declared that the English Channel, the north and west coasts of France, and the waters around the British Isles are a war area, and has officially notified that all enemy ships found in that area will be destroyed, and that neutral vessels may be exposed to danger. This is in effect a claim to torpedo at sight, without regard to the safety of the crew or passengers, any merchant vessel under any flag. As it is not in the power of the German Admiralty to maintain any surface craft in these waters, this attack can only be delivered by submarine agency.

The law and custom of nations in regard to attacks on commerce have always presumed that the first duty of the captor of a merchant vessel is to bring it before a prize court, where it may be tried, where the regularity of the capture may be challenged, and where neutrals may recover their cargoes. The sinking of prizes is in itself a questionable act, to be resorted to only in extraordinary circumstances and after provision has been made for the safety of all the crew or passengers, if there are passengers on board. The responsibility for discriminating between neutral and enemy vessels and between neutral and enemy cargo obviously rests with the attacking ship, whose duty it is to verify the status and character of the vessel and cargo and to preserve all papers before sinking or even capturing it. So also is the humane duty of providing for the safety of the crews of merchant vessels, whether neutral or enemy, an obligation upon every belligerent.

It is upon this basis that all previous discussions of the law for regulating warfare at sea have proceeded. A German submarine, however, fulfills none of these obligations; she enjoys no local command of the waters in which she operates; she does not take her captures within the jurisdiction of a prize court; she carries no prize crew which she can put on board a prize; she uses no effective means of discriminating between a neutral and an enemy vessel; she does not receive on board for safety the crew and passengers of the vessel she sinks; her methods of warfare are therefore entirely outside the scope of any of the international instruments regulating operations against commerce in time of war. The German declaration substitutes indiscriminate destruction for regulated capture. Germany is adopting these methods against peaceful traders and noncombatant crews with the avowed object of preventing commodities of all kinds, including food for the civil population, from reaching or leaving the British Isles or northern France.

Her opponents are therefore driven to frame retaliatory measures in order in their turn to prevent commodities of any kind from reaching or leaving Germany. These measures will, however, be enforced by the British and French Governments without risk to neutral ships or to neutral or noncombatant life and in strict observance of the dictates of humanity. The British and French Governments will therefore hold themselves free to detain and take into port ships carrying goods of presumed enemy destination, ownership, or origin. It is not intended to confiscate such vessels or cargoes unless they would otherwise be liable to condemnation. The treatment of vessels and cargoes which have sailed before this date will not be affected.

CECIL SPRING-RICE.

On the 4th of March Congress adopted a resolution safeguarding the neutrality of American waters:

Resolved, etc., That from and after the passage of this resolution, and during the existence of a war to which the United States is not a party and in order to prevent the neutrality of the United States from being violated by the use of its territory, its ports, or its territorial waters, as the base of operations for the armed forces of a belligerent, contrary to the obligations imposed by the law of nations, the treaties to which the United States is a party, or contrary to the statutes of the United States, the President be, and he is hereby, authorized and empowered to direct the collectors of customs under the jurisdiction of the United States to withhold clearance from any vessel of American or foreign registry, or license, which he has reasonable cause to believe to be about to carry fuel, arms, ammunition, men, or supplies to any warship, or tender, or supply ships of a belligerent nation in violation of the obligations of the United States as a neutral nation.

In case any such vessel of American register or license shall depart or attempt to depart from the jurisdiction of the United States, without clearance, for any of the purposes, the owner or master, or person or persons having charge or command of such vessel, shall severally be liable to a fine of not less than $2,000 nor more than $10,000 or to imprisonment not to exceed two years, or both; and in addition such vessels shall be forfeited to the United States.

That the President of the United States be, and he is hereby, authorized and empowered to employ such part of the land or naval forces of the United States as shall be necessary to carry out the purposes of this resolution.

That the provisions of this resolution shall be deemed to extend to all lands and waters, continental or insular, within the jurisdiction of the United States. (The New York Times, Mar. 4, 1915.)

On the next day the American Government inquired how the restraint upon sea-borne commerce with Germany is to be effected:

THE SECRATARY OF STATE TO THE AMERICAN AMBASSADOR AT LONDON.

In regard to the recent communications received from the British and Frencr Governments concerning restraints upon commerce with Germany, please communicate with the British foreign office in the sense following:

The difficulty of determining action upon the British and French declarations of intended retaliation upon commerce with Germany lies in the nature of the proposed measures in their relation to commerce by neutrals.

While it appears that the intention is to interfere with and take into custody all ships, both outgoing and incoming, trading with Germany, which is in effect a blockade of German ports, the rule of blockade, that a ship attempting to enter or leave a German port regardless of the character of its cargo may be condemned, is not asserted.

The language of the declaration is: "The British and French Governments will therefore hold themselves free to detain and take into port ships carrying goods of presumed enemy destination, ownership, or origin. It is not intended to confiscate such vessels or cargoes unless they would otherwise be liable to condemnation."

The first sentence claims a right pertaining only to a state of blockade. The last sentence proposes a treatment of ships and cargoes as if no blockade existed. The two together present a proposed course of action previously unknown to international law.

As a consequence, neutrals have no standard by which to measure their rights or to avoid danger to their ships and cargoes. The paradoxical situation thus created should be changed, and the declaring powers ought to assert whether they rely upon the rules governing a blockade or the rules applicable when no blockade exists.

The declaration presents other perplexities.

The last sentence quoted indicates that the rules of contraband are to be applied to cargoes detained. The rule covering noncontraband articles carried in neutral bottoms is that the cargoes shall be released and the ships allowed to proceed. This rule can not, under the first sentence quoted, be applied as to destination. What, then, is to be done with a cargo of noncontraband goods detained under the declaration? The same question may be asked as to conditional-contraband cargoes.

The foregoing comments apply to cargoes destined for Germany. Cargoes coming out of German ports present another problem under the terms of the declaration. Under the rules governing enemy exports, only goods owned by enemy subjects in enemy bottoms are subject to seizure and condemnation. Yet by the declaration it is purposed to seize and take into port all goods of enemy "ownership and origin." The word "origin" is particularly significant. The origin of goods destined to neutral territory on neutral ships is not and never has been a ground for forfeiture except in case a blockade is declared and maintained. What, then, would the seizure amount to in the present case except to delay the delivery of the goods? The declaration does not indicate what disposition would be made of such cargoes if owned by a neutral or if owned by an enemy subject. Would a different rule be applied, according to ownership? If so, upon what principles of international law would it rest? And upon what rule, if no blockade is declared and maintained, could the cargo of a neutral ship sailing out of a German port be condemned? If it is not condemned, what other legal course is there but to release it?

While this Government is fully alive to the possibility that the methods of modern naval warfare, particularly in the use of the submarine for both defensive and offensive operations, may make the former means of maintaining a blockade a physical impossibility, it feels that it can be urged with great force that there should be also some limit to "the radius of activity," and especially so if this action by the belligerents can be construed to be a blockade. It would certainly create a serious state of affairs if, for example, an American vessel laden with a cargo of German origin should escape the British patrol in European waters only to be held up by a cruiser off New York and taken into Halifax.

Similar cablegram sent to Paris. BRYAN.

On the 13th of March the British Government rejected this Government's proposal for mutual concessions in the following language:

THE SECRETARY OF STATE FOR FOREIGN AFFAIRS TO THE AMERICAN AMBASSADOR.

On the 22d of February last I received a communication from your excellency of the identic note addressed to His Majesty's Government and to Germany respecting an agreement on certain points as to the conduct of the war at sea. The reply of the German Government to this note has been published, and it is not understood from the reply that the German Government are prepared to abandon the practice of sinking British merchant vessels by submarines, and it is evident from their reply that they will not abandon the use of mines for offensive purposes on the high seas as contrasted with the use of mines for defensive purposes only within cannon range of their own harbors, as suggested by the Government of the United States. This being so, it might appear unnecessary for the British Government to make any further reply than to take note of the German answer. We desire, however, to take the opportunity of making a fuller statement of the whole position and of our feeling with regard to it. We recognize with sympathy the desire of the Government of the United States to see the European war conducted in accordance with the previously recognized rules of international law and the dictates of humanity. It is thus that the British forces have conducted the war, and we are not aware that these forces, either naval or military, can have laid to their charge any improper proceedings, either in the conduct of hostilities or in the treatment of prisoners or wounded. On the German side it has been very different.

1. The treatment of civilian inhabitants in Belgium and the north of France has been made public by the Belgian and French Governments and by those who have had experience of it at first hand. Modern history affords no precedent for the sufferings that have been inflicted on the defenseless and noncombatant population in the territory that has been in German military occupation. Even the food of the population was confiscated until in Belgium an international commission, largely influenced by American generosity and conducted under American auspices, came to the relief of the population and secured from the German Government a promise to spare what food was still left in the country, though the Germans still continue to make levies in money upon the defenseless population for the support of the German army.

2. We have from time to time received most terrible accounts of the barbarous treatment to which British officers and soldiers have been exposed after they have been taken prisoner while being conveyed to German prison camps; one or two instances have already been given to the United States Government founded upon authentic and first-hand evidence which is beyond doubt. Some evidence has been received of the hardships to which British prisoners of war are subjected in the prison camps, contrasting, we believe, most unfavorably with the treatment of German prisoners in this country. We have proposed, with the consent of the United States Government, that a commission of United States officers should be permitted in each country to inspect the treatment of prisoners of war. The United States Government have been unable to obtain any reply from the German Government to this proposal, and we remain in continuing anxiety and apprehension as to the treatment of British prisoners of war in Germany.

3. At the very outset of the war a German mine layer was discovered laying a mine field on the high seas. Further mine fields have been laid from time to time without warning, and, so far as we know, are still being laid on the high seas, and many neutral as well as British vessels have been sunk by them.

4. At various times during the war German submarines have stopped and sunk British merchant vessels, thus making the sinking of merchant vessels a general practice, though it was admitted previously, if at all, only as an exception, the general rule to which the British Government have adhered being that merchant vessels, if captured, must be taken before a prize court. In one case already quoted in a note to the United States Government a neutral vessel carrying foodstuffs to an unfortified town in Great Britain has been sunk. Another case is now reported in which a German armed cruiser has sunk an American vessel, the *William P. Frye*, carrying a cargo of wheat from Seattle to Queenstown. In both cases the cargoes were presumably destined for the civil population. Even the cargoes in such circumstances should not have been condemned without the decision of a prize court, much less should the vessels have been sunk. It is to be noted that both these cases occurred before the detention by the British authorities of the *Wilhelmina* and her cargo of foodstuffs which the German Government allege is the justification for their own action. The Germans have announced their intention of sinking British merchant vessels by torpedo without notice and without any provision for the safety of the crew. They have already carried out this intention in the case of neutral as well as of British vessels, and a number of noncombatant and innocent lives on British vessels, unarmed and defenseless, have been destroyed in this way.

5. Unfortified, open, and defenseless towns, such as Scarborough, Yarmouth, and Whitby, have been deliberately and wantonly bombarded by German ships of war, causing in some cases considerable loss of civilian life, including women and children.

6. German aircraft have dropped bombs on the east coast of England where there were no military or strategic points to be attacked. On the other hand, I am aware of but two criticisms that have been made on British action in all these respects: (1) It is said that the British naval authorities also have laid some anchored mines on the high seas. They have done so, but the mines were anchored and so constructed that they would be harmless if they went adrift, and no mines whatever were laid by the British naval authorities till many weeks after the Germans had made a regular practice of laying mines on the high seas. (2) It is said that the British Government have departed from the view of international law which they had previously maintained, that foodstuffs destined for the civil population should never be interfered with, this charge being founded on the submission to a prize court of the cargo of the *Wilhelmina*. The special considerations affecting this cargo have already been presented in a memorandum to the United States Government, and I need not repeat them here. Inasmuch as the stoppage of all foodstuffs is an admitted consequence of blockade, it is obvious that there can be no universal rule based on considerations of morality and humanity which is contrary to this practice. The right to stop foodstuffs destined for the civil population must therefore in any case be admitted if an effective "cordon" controlling intercourse with the enemy is drawn, announced, and maintained. Moreover, independently of rights arising from belligerent action in the nature of blockade, some other nations, differing from the opinion of the Governments of the United States and Great Britain, have held that to stop the food of the civil population is a natural and legitimate method of bringing pressure to bear on an enemy country, as it is upon the defense of a besieged town. It is also upheld on the authority of both Prince Bismarck and Count Caprivi, and therefore presumably is not repugnant to German morality. The following are the quotations from Prince Bismarck and Court Caprivi on this point. Prince Bismarck, in answering, in 1885, an application from the Kiel Chamber of Commerce for a statement of the view of the German Government on the question of the right to declare as contraband foodstuffs that were not intended for military forces, said: "I reply to the chamber of commerce that any disadvantage our commercial and carrying interests may suffer by the treatment of rice as contraband of war does not justify our opposing a measure which it has been thought fit to take in carrying on a foreign war. Every war is a calamity which entails evil consequences, not only on the combatants but also on neutrals. These evils may easily be increased by the interference of a neutral power with the way in which a third carries on the war to the disadvantage of the subjects of the interfering power, and by this means German commerce might be weighted with far heavier losses than a transitory prohibition of the rice trade in Chinese waters. The measure in question has for its object the shortening of the war by increasing the difficulties of the enemy, and is a justifiable step in war if impartially enforced against all neutral ships." Count Caprivi, during a discussion in the German Reichstag on the 4th of March, 1892, on the subject of the importance of international protection for private property at sea, made the following statements: "A country may be dependent for her food or for her raw products upon her trade. In fact, it may be absolutely necessary to destroy the enemy's trade." * * * "The private introduction of provisions into Paris was prohibited during the siege, and in the same way a nation would be justified in preventing the import of food and raw produce." The Government of Great Britain have frankly declared, in concert with the Government of France, their intention to meet the German attempt to stop all supplies of every kind from leaving or entering British or French ports by themselves stopping supplies going to or from Germany by sea. The difference between the two policies is, however, effectively controlling by cruiser "cordon" all passage to and from Germany by sea. The difference between the two policies is, however, that while our object is the same as that of Germany, we propose to attain it without sacrificing neutral ships or noncombatant lives or inflicting upon neutrals the damage that must be entailed when a vessel and its cargo are sunk without notice, examination, or trial. I must emphasize again that this measure is a natural and necessary consequence of the unprecedented methods, repugnant to all law and

morality, which have been described above, which Germany began to adopt at the very outset of the war, and the effects of which have been constantly accumulating. (Dip. Corr., 64–65.)

On the 15th of March Britain replied to the American inquiry as to the sea-borne trade with Germany:

THE SECRETARY OF STATE FOR FOREIGN AFFAIRS TO THE AMERICAN AMBASSADOR.

1. His Majesty's Government have had under careful consideration the inquiries which, under instructions from your Government, your excellency addressed to me on the 8th instant regarding the scope and mode of application of the measures, foreshadowed in the British and French declarations of the 1st of March, for restricting the trade of Germany. Your excellency explained and illustrated by reference to certain contingencies the difficulty of the United States Government in adopting a definite attitude toward these measures by reason of uncertainty regarding their bearing upon the commerce of neutral countries.

2. I can at once assure your excellency that subject to the paramount necessity of restricting German trade His Majesty's Government have made it their first aim to minimize inconvenience to neutral commerce. From the accompanying copy of the order in council, which is to be published to-day, you will observe that a wide discretion is afforded to the prize court in dealing with the trade of neutrals in such manner as may in the circumstances be deemed just and that full provision is made to facilitate claims by persons interested in any goods placed in the custody of the marshal of the prize court under the order. I apprehend that the perplexities to which your excellency refers will for the most part be dissipated by the perusal of this document and that it is only necessary for me to add certain explanatory observations.

3. The effect of the order in council is to confer certain powers upon the executive officers of His Majesty's Government. The extent to which those powers will be actually exercised and the degree of severity with which the measures of blockade authorized will be put into operation are matters which will depend on the administrative orders issued by the Government and the decisions of the authorities specially charged with the duty of dealing with individual ships and cargoes, according to the merits of each case. The United States Government may rest assured that the instructions to be issued by His Majesty's Government to the fleet and to the customs officials and executive committees concerned will impress upon them the duty of acting with the utmost dispatch consistent with the object in view and of showing in every case such consideration for neutrals as may be compatible with that object which is, succinctly stated, to establish a blockade to prevent vessels from carrying goods for or coming from Germany.

4. His Majesty's Government have felt most reluctant at the moment of initiating a policy of blockade to exact from neutral ships all the penalties attaching to a breach of blockade. In their desire to alleviate the burden which the existence of a state of war at sea must inevitably impose on neutral sea-borne commerce, they declare their intention to refrain altogether from the exercise of the right to confiscate ships or cargoes which belligerents have always claimed in respect of breaches of blockade. They restrict their claim to the stopping of cargoes destined for or coming from the enemy's territory.

5. As regards cotton, full particulars of the arrangements contemplated have already been explained. It will be admitted that every possible regard has been had to the legitimate interests of the American cotton trade.

6. Finally, in reply to the penultimate paragraph of your excellency's note, I have the honor to state that it is not intended to interfere with neutral vessels carrying enemy cargo of noncontraband nature outside European waters, including the Mediterranean. (Dip. Corr. 65.)

No. 34. British order in council, March 15, 1915, in restraint of sea-borne commerce with Germany.

Whereas the Germany Government has issued certain orders which, in violation of the usages of war, purport to declare the waters surrounding the United Kingdom a military area, in which all British and allied merchant vessels will be destroyed, irrespective of the safety of the lives of passengers and crew, and in which neutral shipping will be exposed to similar danger in view of the uncertainties of naval warfare; and

Whereas in a memorandum accompanying the said orders neutrals are warned against intrusting crews, passengers, or goods to British or allied ships; and

Whereas such attempts on the part of the enemy give to His Majesty an unquestionable right of retaliation; and

Whereas His Majesty has therefore decided to adopt further measures in order to prevent commodities of any kind from reaching or leaving Germany, though such measures will be enforced without risk to neutral ships or to neutral or noncombatant life and in strict observance of the dictates of humanity; and

Whereas the allies of His Majesty are associated with him in the steps now to be announced for restricting further the commerce of Germany:

His Majesty is therefore pleased, by and with the advice of his privy council, to order and it is hereby ordered as follows:

1. No merchant vessel (sic) which sailed from her port of departure after the 1st March, 1915, shall be allowed to proceed on her voyage to any German port.

Unless the vessel receives a pass enabling her to proceed to some neutral or allied port to be named in the pass, goods on board any such vessel must be discharged in a British port and placed in the custody of the marshal of the prize court. Goods so discharged, not being contraband of war, shall, if not requisitioned for the use of His Majesty, be restored by order of the court, upon such terms as the court may in the circumstances deem to be just, to the person entitled thereto.

2. No merchant vessel which sailed from any German port after the 1st March, 1915, shall be allowed to proceed on her voyage with any goods on board laden at such port.

All goods laden at such port must be discharged in a British or allied port. Goods so discharged in a British port shall be placed in the custody of the marshal of the prize court, and if not requisitioned for the use of His Majesty shall be detained or sold under the direction of the prize court. The proceeds of goods so sold shall be paid into court and dealt with in such manner as the court may in the circumstances deem to be just.

Provided, That no proceeds of the sale of such goods shall be paid out of court until the conclusion of peace, except on the application of the proper officer of the Crown, unless it be shown that the goods had become neutral property before the issue of this order.

Provided also, That nothing herein shall prevent the release of neutral property laden at such enemy port on the application of the proper officer of the Crown.

3. Every merchant vessel which sailed from her port of departure after the 1st of March, 1915, on her way to a port other than a German port, carrying goods with an enemy destination or which are enemy property, may be required to discharge such goods in a British or allied port. Any goods so discharged in a British port shall be placed in the custody of the marshal of the prize court, and, unless they are contraband of war, shall, if not requisitioned for the use of His Majesty, be restored by order of the court upon such terms as the court may in the circumstances deem to be just to the person entitled thereto.

Provided, That this article shall not apply in any case falling within articles 2 or 4 of this order.

4. Every merchant vessel which sailed from a port other than a German port after the 1st of March, 1915, having on board goods which are of enemy origin or are enemy property may be required to discharge such goods in a British or allied port. Goods so discharged in a British port shall be placed in the custody of the marshal of the prize court, and if not requisitioned for the use of His Majesty shall be detained or sold under the direction of the prize court. The proceeds of goods so sold shall be paid into court and dealt with in such manner as the court may in the circumstances deem to be just.

Provided, That no proceeds of sale of such goods shall be paid out of court until the conclusion of peace, except on the application of the proper officer of the Crown, unless it be shown that the goods had become neutral property before the issue of this order.

Provided, also, That nothing herein shall prevent the release of neutral property of enemy origin on the application of the proper officer of the Crown.

5. Any person claiming to be interested in, or to have any claim in respect of, any goods (not being contraband of war) placed in the custody of the marshal of the prize court under this order, or in the proceeds of such goods, may forthwith issue a writ in the prize court against the proper officer of the Crown and apply for an order that the goods should be restored to him, or that their proceeds should be paid to him, or for such other order as the circumstances of the case may require.

The practice and procedure of the prize court shall, so far as applicable, be followed mutatis mutandis in any proceedings consequential upon this order.

6. A merchant vessel which has cleared for a neutral port from a British or allied port, or which has been allowed to pass, having an ostensible destination to a neutral port, and proceeds to an enemy port, shall, if captured on any subsequent voyage, be liable to condemnation.

7. Nothing in this order shall be deemed to affect the liability of any vessel or goods to capture or condemnation independently of this order.

8. Nothing in this order shall prevent the relaxation of the provisions of this order in respect of the merchant vessels of any country which declares that no commerce intended for or originating in Germany or belonging to Germany (sic) subjects shall enjoy the protection of its flag. (Dip. Corr., 66.)

—

No. 35. British order in council, March 23, 1915, authorizing the requisition of neutral ships. (Presented by the solicitor of the Crown in an argument in favor of requisitioning the cargo of foodstuffs on the *Wilhelmina*. See Nos. 20 and 25.)

Whereas by section 3 of the prize courts act, 1894, His Majesty in council is authorized to make rules of court for regulating, subject to the provisions of the naval prize act, 1864, and the said act, the procedure and practice of prize courts within the meaning of the naval prize act, 1864, and the duties and conduct of the officers of the courts and of the practitioners therein, and for regulating the fees to be taken by the officers thereof, and the costs, charges, and expenses to be allowed to the practitioners therein; and

Whereas in pursuance of the prize courts act, 1894, certain rules were made by the order of His Majesty in council, dated the 5th day of August, 1914, and amended by the orders of His Majesty in council of the 30th day of September, 1914, and the 28th day of November, 1914, respectively, which said rules and amended rules were by the said orders in council directed to take effect provisionally in accordance with the provisions of section 2 of the rules publication act, 1893, from the dates of the said orders in council, respectively; and

Whereas the provisions of section 1 of the rules publication act, 1893, were duly complied with in respect of the said rules and amended rules, and the same were finally made by the orders of His Majesty in council, dated, respectively, the 17th day of September, 1914, the 28th day of November, 1914, and the 3d day of February, 1915; and

Whereas it is expedient that the said rules and amended rules should be further amended; and

Whereas on account of urgency this order should come into immediate operation:

Now, therefore, His Majesty, by virtue of the powers in this behalf by the said act or otherwise in him vested, is pleased, by and with the advice of his privy council, to order, and it is hereby ordered, as follows:

1. That in order 9 (discovery, inspection, and admission of documents and facts) of the said rules:

In rule 1, the words "upon filing an affidavit" shall be omitted.

In rule 1, instead of the words "any other party" there shall be substituted the words "any party other than the proper officer of the Crown."

2. That in order 11 (sale, appraisement, safe custody, and inspection of prize) of the said rules, in rule 1, the following words shall be omitted: "On account of the condition of a ship, or on application of a claimant, and on or after condemnation."

3. That in order 15 (evidence and hearing) of the said rules the following rule shall be added:

"21. Notwithstanding anything contained in these rules the proper officer of the Crown may apply to the judge for leave to administer interrogatories for the examination of any person, whether a party to the cause or not."

4. That order 29 (requisition by admiralty) of the said rules, as amended by His Majesty's order in council dated the 28th day of November, 1914, shall be, and the same is hereby, revoked, and in lieu thereof the following order shall have effect:

"ORDER 29.—REQUISITION.

"1. Where it is made to appear to the judge on the application of the proper officer of the Crown that it is desired to requisition on behalf of His Majesty a ship in respect to which no final decree of condemnation has been made, he shall order that the ship shall be appraised, and that upon an undertaking being given in accordance with rule 5 of this order, the ship shall be released and delivered to the Crown.

"2. Where a decree for the detention of a ship has been made in accordance with order 28, the proper officer of the Crown may file a notice (Appendix A, Form No. 55) that the Crown desires to requisition the same, and thereupon a commission (Appendix A, Form No. 56) to the marshal directing him to appraise the ship shall issue. Upon an undertaking being given in accordance with rule 5 of this order the ship shall be released and delivered to the Crown. Service of this notice shall not be required before filing, but copies thereof shall be served upon the parties by the proper officer of the Crown as soon thereafter as possible.

"3. Where in any case of requisition under this order it is made to appear to the judge on behalf of the Crown that the ship is required for the service of His Majesty forthwith, the judge may order the same to be forthwith released and delivered to the Crown without appraisement.

"4. In any case where a ship has been requisitioned under the provisions of this order, and whether or not an appraisement has been made, the court may, on the application of any party, fix the amount to be paid by the Crown in respect of the value of the ship.

"5. In every case of requisition under this order an undertaking in writing shall be filed by the proper officer of the Crown for payment into court on behalf of the Crown of the appraised value of the ship, or of the amount fixed under rule 4 of this order, as the case may be, at such time or times as the court shall declare by order that the same or any part thereof is required for the purpose of payment out of court.

"6. Where in any case of requisition under this order it is made to appear to the judge on behalf of the Crown that the Crown desires to requisition the ship temporarily, the court may, in lieu of an order of release, make an order for the temporary delivery of the ship to the Crown, and subject as aforesaid the provisions of this order shall apply to such a requisition, provided that, in the event of the return of the ship to the custody of the court, the court may make such order as it thinks fit for the release of the undertaking given on behalf of the Crown or the reduction of the amount undertaken to be paid thereby, as the case may be; and provided also, that where the ship so requisitioned is subject to the provisions of order 28, rule 1, relating to detention, the amount for which the Crown shall be considered liable in respect of such requisition shall be the amount of the damage, if any, which the ship has suffered by reason of such temporary delivery as aforesaid.

"7. The proceedings in respect of a ship requisitioned under this order shall continue notwithstanding the requisition.

"8. In any case of requisition of a ship in respect of which no cause has been instituted, any person interested in such ship may, without issuing a writ, provided he does not intend to make a claim for restitution or damages, apply by summons for an order that the amount to be paid in respect of such ship be fixed by the court, and the judge may, on the hearing of such summons, order the ship to be appraised or to be valued, or give such other directions for fixing the amount as he may think fit."

5. That in Form 4 in Appendix A to the said rules there shall be omitted the words "commander of our ship of war" and the words "taken and seized as prize by our said ship of war."

6. This order shall take effect provisionally in accordance with the provisions of section 2 of the rules-publication act, 1893, from the date hereof. (Dip. Corr., 72–73.)

On January 28 the *W. P. Frye* was destroyed by a German auxiliary cruiser. *Prinz Eitel Friedrich*, seeking refuge in Newport News Harbor, brought with her the crew of the *Frye*, a four-masted bark, which had sailed on November 4, 1914, from Seattle with a cargo of wheat consigned to United Kingdom ports.

The *Prinz Eitel* had encountered her on the high seas January 27, 1915, and sunk her, the German captain contending that her cargo was conditional contraband, and that since he had no means of delivering her to a prize court he had the right to sink her, under the provisions of the declaration of London.

The American Government, in April, asked compensation of $228,059 for the destruction of the vessel. The German Government replied on April 8, admitting liability under treaties of commerce between the United States and Prussia. Settlement was left to arbitration, still uninvoked.

The correspondence, which comprises several notes, was printed on January 11, 1916, and is found in the CONGRESSIONAL RECORD, first session of the Sixty-fourth Congress, pages 883 to 913. It is not necessary to reproduce it here.

This dispute does not involve the submarine controversy.

The seizure of the *Wilhelmina*, with a cargo of foodstuffs, was the occasion of several notes on the question of contraband. This correspondence does not involve the submarine controversy, and it is not necessary to insert it here. It will be found in the CONGRESSIONAL RECORD, first session Sixty-fourth Congress, pages 883 to 913.

On April 4 Germany filed a memorandum concerning the British restraint of sea-borne trade with Germany and the American exportation of war material:

THE GERMAN AMBASSADOR TO THE SECRETARY OF STATE.

The various British orders in council have one-sidedly modified the generally recognized principles of international law in a way which arbitrarily stops the commerce of neutral nations with Germany. Even before the last British order in council, the shipment of conditional contraband, especially food supplies, to Germany was practically impossible. Prior to the protest sent by the American to the British Government on December 28 last, such a shipment did not actually take place in a single case. Even after this protest the Imperial Embassy knows of only a single case in which an American shipper has ventured to make such a shipment for the purpose of legitimate sale to Germany. Both ship and cargo were immediately seized by the English and are being held in an English port under the pretext of an order of the German federal council (Bundesrath) regarding the grain trade, although this resolution of the federal council relates exclusively to grain and flour, and not to other foodstuffs, besides making an express exception with respect to imported foodstuffs, and although the German Government gave the American Government an assurance and proposed a special organization whereby the exclusive consumption by the civilian population is absolutely guaranteed.

Under the circumstances, the seizure of the American ship was inadmissible according to recognized principles of international law. Nevertheless the United States Government has not to date secured the release of the ship and cargo, and has not, after a duration of the war of eight months, succeeded in protecting its lawful trade with Germany.

Such a long delay, especially in matters of food supply, is equivalent to an entire denial.

The Imperial Embassy must therefore assume that the United States Government acquiesces in the violations of international law by Great Britain.

Then there is also the attitude of the United States in the question of the exportation of arms. The Imperial Government feels sure that the United States Government will agree that in questions of neutrality it is necessary to take into consideration not only the formal aspect of the case, but also the spirit in which the neutrality is carried out.

The situation in the present war differs from that of any previous war. Therefore any reference to arms furnished by Germany in former wars is not justified, for then it was not a question whether war material should be supplied to the belligerents, but who should supply it in competition with other nations. In the present war all nations having a war-material industry worth mentioning are either involved in the war themselves or are engaged in perfecting their own armaments, and have therefore laid an embargo against the exportation of war material. The United States is, accordingly, the only neutral country in a position to furnish war materials. The conception of neutrality is thereby given a new purport, independently of the formal question of hitherto existing law. In contradiction thereto the United States is building up a powerful arms industry in the broadest sense, the existing plants not only being worked but enlarged by all available means, and new ones built. The international conventions for the protection of the rights of neutral nations doubtless sprang from the necessity of protecting the existing industries of neutral nations as far as possible from injury in their business. But it can in no event be in accordance with the spirit of true neutrality if, under the protection of such international stipulations, an entirely new industry is created in a neutral State, such as is the development of the arms industry in the United States, the business whereof, under the present conditions, can benefit only the belligerent powers.

This industry is actually delivering goods only to the enemies of Germany. The theoretical willingness to supply Germany also, if shipments thither were possible, does not alter the case. If it is the will of the American people that there shall be a true neutrality, the United States will find means of preventing this one-sided supply of arms or at least of utilizing it to protect legitimate trade with Germany, especially that in foodstuffs. This view of neutrality should all the more appeal to the United States Government, because the latter enacted a similar policy toward Mexico. On February 4, 1914, President Wilson, according to a statement of a Representative in Congress in the Committee on Foreign Affairs, of December 30, 1914, upon the lifting of the embargo on arms to Mexico, declared that "we should stand for genuine neutrality, considering the surrounding facts of the case * * *." He then held that "in that case, because Carranza had no ports, while Huerta had them and was able to import these materials, that it was our duty as a nation to treat Carranza and Huerta upon an equality if we wished to observe the true spirit of neutrality, as compared with a mere paper neutrality."

If this view were applied to the present case, it would lead to an embargo on the exportation of arms. (Dip. Corr., 73–74.)

On April 21 our Government replied to Germany's note of the 4th:

THE SECRETARY OF STATE TO THE GERMAN AMBASSADOR.

EXCELLENCY: I have given thoughtful consideration to your excellency's note of the 4th of April, 1915, inclosing a memorandum of the same date, in which your excellency discusses the action of this Government with regard to trade between the United States and Germany and the attitude of this Government with regard to the exportation of arms from the United States to the nations now at war with Germany.

I must admit that I am somewhat at a loss how to interpret your excellency's treatment of these matters. There are many circumstances connected with these important subjects to which I would have expected your excellency to advert, but of which you make no mention, and there are other circumstances to which you do refer which I would have supposed to be hardly appropriate for discussion between the Government of the United States and the Government of Germany.

I shall take the liberty, therefore, of regarding your excellency's references to the course pursued by the Government of the United States with regard to interferences with trade from this country, such as the Government of Great Britain has attempted, as intended merely to illustrate more fully the situation to which you desire to call our attention and not as an invitation to discuss that course. Your excellency's long experience in international affairs will have suggested to you that the relations of the two Governments with one another can not wisely be made a subject of discussion with a third Government, which can not be fully informed as to the facts and which can not be fully cognizant of the reasons for the course pursued. I believe, however, that I am justified in assuming that what you desire to call forth is a frank statement of the position of this Government in regard to its obligations as a neutral power. The general attitude and course of policy of this Government in the maintenance of its neutrality I am particularly anxious that your excellency should see in their true light. I had hoped that this Government's position in these respects had been made abundantly clear, but I am, of course, perfectly willing to state it again. This seems to me the more necessary and desirable because, I regret to say, the language which your excellency employs in your memorandum is susceptible of being construed as impugning the good faith of the United States in the performance of its duties as a neutral. I take it for granted that no such implication was intended, but it is so evident that your excellency is laboring under certain false impressions that I can not be too explicit in setting forth the facts as they are, when fully reviewed and comprehended.

In the first place, this Government has at no time and in no manner yielded any one of its rights as a neutral to any of the present belligerents. It has acknowledged, as a matter of course, the right of visit and search and the right to apply the rules of contraband of war to articles of commerce. It has, indeed, insisted upon the use of

visit and search as an absolutely necessary safeguard against mistaking neutral vessels for vessels owned by an enemy and against mistaking legal cargoes for illegal. It has admitted also the right of blockade if actually exercised and effectively maintained. These are merely the well-known limitations which war places upon neutral commerce on the high seas. But nothing beyond these has it conceded. I call your excellency's attention to this, notwithstanding it is already known to all the world as a consequence of the publication of our correspondence in regard to these matters with several of the belligerent nations, because I can not assume that you have official cognizance of it.

In the second place, this Government attempted to secure from the German and British Governments mutual concessions with regard to the measures those Governments respectively adopted for the interruption of trade on the high seas. This it did, not of right, but merely as exercising the privileges of a sincere friend of both parties and as indicating its impartial good will. The attempt was unsuccessful; but I regret that your excellency did not deem it worthy of mention in modification of the impressions you expressed. We had hoped that this act on our part had shown our spirit in these times of distressing war, as our diplomatic correspondence had shown our steadfast refusal to acknowledge the right of any belligerent to alter the accepted rules of war at sea in so far as they affect the rights and interests of neutrals.

In the third place, I note with sincere regret that, in discussing the sale and exportation of arms by citizens of the United States to the enemies of Germany, your excellency seems to be under the impression that it was within the choice of the Government of the United States, notwithstanding its professed neutrality and its diligent efforts to maintain it in other particulars, to inhibit this trade, and that its failure to do so manifested an unfair attitude toward Germany. This Government holds, as I believe your excellency is aware, and as it is constrained to hold in view of the present indisputable doctrines of accepted international law, that any change in its own laws of neutrality during the progress of a war which would affect unequally the relations of the United States with the nations at war would be an unjustifiable departure from the principle of strict neutrality by which it has consistently sought to direct its actions, and I respectfully submit that none of the circumstances urged in your excellency's memorandum alters the principle involved. The placing of an embargo on the trade in arms at the present time would constitute such a change and be a direct violation of the neutrality of the United States. It will, I feel assured, be clear to your excellency that, holding this view and considering itself in honor bound by it, it is out of the question for this Government to consider such a course.

I hope that your excellency will realize the spirit in which I am drafting this reply. The friendship between the people of the United States and the people of Germany is so warm and of such long standing, the ties which bind them to one another in amity are so many and so strong, that this Government feels under a special compulsion to speak with perfect frankness when any occasion arises which seems likely to create any misunderstanding, however slight or temporary, between those who represent the Governments of the two countries. It will be a matter of gratification to me if I have removed from your excellency's mind any misapprehension you may have been under regarding either the policy or the spirit and purposes of the Government of the United States. Its neutrality is founded upon the firm basis of conscience and good will.

Accept, etc., W. J. BRYAN.

(Dip. Corr. 74–75.)

On April 28 a German aeroplane attacked an American vessel, the *Cushing*, off the Dutch coast. On May 1 another American vessel, the *Gulflight*, was torpedoed off the Scilly Islands, with a loss of two lives. The German Government issued an apology and offered reparation in case the *Cushing* had been attacked by an aeroplane.

On March 28 Leon T. Thrasher, an American citizen, lost his life by the destruction of the English steamship *Falaba* by a German torpedo. This case involved the rights of an American noncombatant on a belligerent unarmed merchantman.

These items do not come under the submarine controversy, but are evidence of the restraints of naval warfare on neutral rights which preceded the submarine activities.

On June 1 the following was sent by Germany:

THE MINISTER FOR FOREIGN AFFAIRS TO THE AMERICAN AMBASSADOR.

Referring to the note of May 28, the undersigned has the honor to inform his excellency the American (*sic*) ambassador of the United States of America, Mr. James W. Gerard, that the examination undertaken on the part of the German Government concerning the American steamers *Gulflight* and *Cushing* has led to the following conclusions:

In regard to the attack on the steamer *Gulflight*, the commander of a German submarine saw on the afternoon of May 1, in the vicinity of the Scilly Islands, a large merchant steamer coming in his direction which was accompanied by two smaller vessels. These latter took such position in relation to the steamer that they formed a regulation safeguard against submarines; moreover, one of them had a wireless apparatus, which is not usual with small vessels. From this it evidently was a case of English convoy vessels. Since such vessels are frequently armed, the submarine could not approach the steamer on the surface of the water without running the danger of destruction. It was, on the other hand, to be assumed that the steamer was of considerable value to the British Government, since it was so guarded. The commander could see no neutral markings on it of any kind—that is, distinctive marks painted on the freeboard recognizable at a distance, such as are now usual on neutral ships in the English zone of naval warfare. In consequence he arrived at the conclusion from all the circumstances that he had to deal with an English steamer, submerged, and attacked.

The torpedo came in the immediate neighborhood of one of the convoy ships, which at once rapidly approached the point of firing; that the submarine was forced to go to a great depth to avoid being rammed. The conclusion of the commander that an English convoy ship was concerned was in this way confirmed. That the attacked steamer carried the American flag was first observed at the moment of firing the shot. The fact that the steamship was pursuing a course which led neither to nor from America was a further reason why it did not occur to the commander of the submarine that he was dealing with an American steamship.

Upon scrutiny of the time and place of the occurrence described, the German Government has become convinced that the attacked steamship was actually the American steamship *Gulflight*. There can be no doubt, according to the attendant circumstances, that the attack is to be attributed to an unfortunate accident, and not to the fault of the commander. The German Government expresses its regrets to the Government of the United States concerning this incident, and declares itself ready to furnish full recompense for the damage thereby sustained by American citizens. It is left to the discretion of the American Government to present a statement of this damage, or, if doubt may arise over individual points, to designate an expert who would have to determine, together with a German expert, the amount of damage.

It has not yet been possible by means of an inquiry to clear up fully the case of the American ship *Cushing*. Official reports available report only one merchant ship attacked by a German flying machine in the vicinity of Nordhind Lightship. The German aviator was forced to consider the vessel as hostile because it carried no flag, and, further, because of no recognizable neutral markings. The attack of four bombs was, of course, not aimed at any American ship.

However, that the ship attacked was the American steamer *Cushing* is possible, considering the time and place of the occurrence. Nevertheless, the German Government accordingly requests of the American Government that it communicate to the German Government the material which was submitted for judgment, in order that, with this as a basis, a further position can be taken in the matter.

The undersigned leaves it to the ambassador to bring the foregoing to the immediate attention of his Government, and takes this opportunity to renew to him the assurance of his most distinguished consideration.

VON JAGOW, *Minister for Foreign Affairs.*

[The New York Times, June 5, 1915.]

On April 22 the Imperial German Embassy published a warning against embarkation on vessels belonging to Great Britain or her allies:

NOTICE.

Travelers intending to embark on the Atlantic voyage are reminded that a state of war exists between Germany and her allies and Great Britain and her allies; that the zone of war includes the waters adjacent the British Isles; that, in accordance with formal notice given by the Imperial German Government, vessels flying the flag of Great Britain, or of any of her allies, are liable to destruction in those waters, and that travelers sailing in the war zone on ships of Great Britain or her allies do so at their own risk.

IMPERIAL GERMAN EMBASSY.

On May 7 the *Lusitania* was struck, with its frightful consequences. Three days later the German note expressing regret for the loss of American lives through the sinking of the *Lusitania:*

THE GERMAN FOREIGN OFFICE TO THE GERMAN EMBASSY AT WASHINGTON.

Please communicate the following to the State Department: The German Government desires to express its deepest sympathy at the loss of lives on board the *Lusitania*. The responsibility rests, however, with the British Government, which, through its plan of starving the civilian population of Germany, has forced Germany to resort to retaliatory measures.

In spite of the German offer to stop the submarine war in case the starvation plan was given up, British merchant vessels are being generally armed with guns and have repeatedly tried to ram submarines, so that a previous search was impossible.

They can not, therefore, be treated as ordinary merchant vessels. A recent declaration made to the British Parliament by the parliamentary secretary in answer to a question by Lord Charles Beresford said that at the present practically all British merchant vessels were armed and provided with hand grenades.

Besides, it has been openly admitted by the English press that the *Lusitania* on previous voyages repeatedly carried large quantities of war material. On the present voyage the *Lusitania* carried 5,400 cases of ammunition, while the rest of her cargo also consisted chiefly of contraband.

If England, after repeated official and unofficial warnings, considered herself able to declare that that boat ran no risk and thus lightheartedly assumed responsibility for the human life on board a steamer which, owing to its armament and cargo, was liable to destruction, the German Government, in spite of its heartfelt sympathy for the loss of American lives, can not but regret that Americans felt more inclined to trust to English promises rather than to pay attention to the warnings from the German side.

FOREIGN OFFICE.

The next day Germany made a statement in regard to the treatment of neutral vessels in the war zone:

THE GERMAN MINISTER FOR FOREIGN AFFAIRS TO THE AMERICAN AMBASSADOR.

First. The Imperial German Government has naturally no intention of causing to be attacked by submarines or aircraft such neutral ships of commerce in the zone of naval warfare, more definitely described in the notice of the German Admiralty staff of February 4 last, as have been guilty of no hostile act. On the contrary, the most definite instructions have repeatedly been issued to German war vessels to avoid attacks on such ships under all circumstances. Even when such ships have contraband of war on board they are dealt with by submarines solely according to the rules of international law applying to prize warfare.

Second. Should a neutral ship nevertheless come to harm through German submarines or aircraft on account of an unfortunate (X) [mistake?] in the above-mentioned zone of naval warfare, the German Government will unreservedly recognize its responsibility therefor. In such a case it will express its regrets and afford damages without first instituting a prize-court action.

Third. It is the custom of the German Government as soon as the sinking of a neutral ship in the above-mentioned zone of naval warfare is ascribed to German war vessels to institute an immediate investigation into the cause. If grounds appear thereby to be given for association of such a hypothesis, the German Navy places itself in communication with the interested neutral Government, so that the latter may also institute an investigation. If the German Government is thereby convinced that the ship has been destroyed by Germany's war vessels,

it will not delay in carrying out the provisions of paragraph 2 above. In case the German Government, contrary to the viewpoint of the neutral Government, is not convinced by the result of the investigation, the German Government has already on several occasions declared itself ready to allow the question to be decided by an international investigation commission, according to chapter 3 of The Hague Convention of October 18, 1907, for the peaceful solution of international disputes. (The New York Times, May 12, 1915.)

Two days later, May 13, our Government sent the first note on the *Lusitania* case. This was the famous "omit no word or act" declaration:

THE SECRETARY OF STATE TO THE AMERICAN AMBASSADOR AT BERLIN.

Please call on the Minister of Foreign Affairs and after reading to him this communication leave with him a copy.

In view of recent acts of the German authorities in violation of American rights on the high seas which culminated in the torpedoing and sinking of the British steamship *Lusitania* on May 7, 1915, by which over 100 American citizens lost their lives, it is clearly wise and desirable that the Government of the United States and the Imperial German Government should come to a clear and full understanding as to the grave situation which has resulted.

The sinking of the British passenger steamer *Falaba* by a German submarine on March 28, through which Leon C. Thrasher, an American citizen, was drowned; the attack on April 28 on the American vessel *Cushing* by a German aeroplane; the torpedoing on May 1 of the American vessel *Gulflight* by a German submarine, as a result of which two or more American citizens met their death; and, finally, the torpedoing and sinking of the steamship *Lusitania*, constitute a series of events which the Government of the United States has observed with growing concern, distress, and amazement.

Recalling the humane and enlightened attitude hitherto assumed by the Imperial German Government in matters of international right, and particularly with regard to the freedom of the seas; having learned to recognize the German views and the German influence in the field of international obligation as always engaged upon the side of justice and humanity; and having understood the instructions of the Imperial German Government to its naval commanders to be upon the same plane of humane action prescribed by the naval codes of other nations, the Government of the United States was loath to believe—it can not now bring itself to believe—that these acts, so absolutely contrary to the rules, the practices, and the spirit of modern warfare, could have the countenance or sanction of that great Government. It feels it to be its duty, therefore, to address the Imperial German Government concerning them with the utmost frankness and in the earnest hope that it is not mistaken in expecting action on the part of the Imperial German Government which will correct the unfortunate impressions which have been created and vindicate once more the position of that Government with regard to the sacred freedom of the seas.

The Government of the United States has been apprised that the Imperial German Government considered themselves to be obliged by the extraordinary circumstances of the present war and the measures adopted by their adversaries in seeking to cut Germany off from all commerce, to adopt methods of retaliation which go much beyond the ordinary methods of warfare at sea, in the proclamation of a war zone from which they have warned neutral ships to keep away. This Government has already taken occasion to inform the Imperial German Government that it can not admit the adoption of such measures or such a warning of danger to operate as in any degree an abbreviation of the rights of American shipmasters or of American citizens bound on lawful errands as passengers on merchant ships of belligerent nationality; and that it must hold the Imperial German Government to a strict accountability for any infringement of those rights, intentional or incidental. It does not understand the Imperial German Government to question those rights. It assumes, on the contrary, that the Imperial Government accept, as of course, the rule that the lives of noncombatants, whether they be of neutral citizenship or citizens of one of the nations at war, can not lawfully or rightfully be put in jeopardy by the capture or destruction of an unarmed merchantman, and recognize also, as all other nations do, the obligation to take the usual precaution of visit and search to ascertain whether a suspected merchantman is in fact of belligerent nationality or is in fact carrying contraband of war under a neutral flag.

The Government of the United States, therefore, desires to call the attention of the Imperial German Government with the utmost earnestness to the fact that the objection to their present method of attack against the trade of their enemies lies in the practical impossibility of employing submarines in the destruction of commerce without disregarding those rules of fairness, reason, justice, and humanity which all modern opinion regards as imperative. It is practically impossible for the officers of a submarine to visit a merchantman at sea and examine her papers and cargo. It is practically impossible for them to make a prize of her; and, if they can not put a prize crew on board of her, they can not sink her without leaving her crew and all on board of her to the mercy of the sea in her small boats. These facts, it is understood, the Imperial German Government frankly admit. We are informed that in the instances of which we have spoken time enough for even that poor measure of safety was not given, and in at least two of the cases cited not so much as a warning was received. Manifestly, submarines can not be used against merchantmen, as the last few weeks have shown, without an inevitable violation of many sacred principles of justice and humanity.

American citizens act within their indisputable rights in taking their ships and in traveling wherever their legitimate business calls them upon the high seas, and exercise those rights in what should be the well-justified confidence that their lives will not be endangered by acts done in clear violation of universally acknowledged international obligations, and certainly in the confidence that their own Government will sustain them in the exercise of their rights.

There was recently published in the newspapers of the United States, I regret to inform the Imperial German Government, a formal warning, purporting to come from the Imperial German Embassy at Washington, addressed to the people of the United States, and stating, in effect, that any citizen of the United States who exercised his right of free travel upon the seas would do so at his peril if his journey should take him within the zone of waters within which the Imperial German Navy was using submarines against the commerce of Great Britain and France, notwithstanding the respectful but very earnest protest of his Government, the Government of the United States. I do not refer to this for the purpose of calling the attention of the Imperial German Government at this time to the surprising irregularity of a communication from the Imperial German Embassy at Washington addressed to the people of the United States through the newspapers, but only for the purpose of pointing out that no warning that an unlawful and inhumane act will be committed can possibly be accepted as an excuse or palliation for that act or as an abatement of the responsibility for its commission.

Long acquaintance as this Government has been with the character of the Imperial German Government and with the high principles of equity by which they have in the past been accentuated and guided, the Government of the United States can not believe that the commanders of the vessels which committed these acts of lawlessness did so except under a misapprehension of the orders issued by the Imperial German naval authorities. It takes it for granted that, at least within the practical possibilities of every such case, the commanders even of submarines were expected to do nothing that would involve the lives of noncombatants or the safety of neutral ships, even at the cost of failing of their object of capture or destruction. It confidently expects, therefore, that the Imperial German Government will disavow the acts of which the Government of the United States complains; that they will make reparation so far as reparation is possible for injuries which are without measure; and that they will take immediate steps to prevent the recurrence of anything so obviously subversive of the principles of warfare for which the Imperial German Government have in the past so wisely and so firmly contended.

The Government and people of the United States look to the Imperial German Government for just, prompt, and enlightened action in this vital matter with the greater confidence because the United States and Germany are bound together not only by special ties of friendship but also by the explicit stipulations of the treaty of 1828 between the United States and the Kingdom of Prussia.

Expressions of regret and offers of reparation in case of the destruction of neutral ships sunk by mistake, while they may satisfy international obligations, if no loss of life results, can not justify or excuse a practice the natural and necessary effect of which is to subject neutral nations and neutral persons to new and immeasurable risks.

The Imperial German Government will not expect the Government of the United States to omit any word or any act necessary to the performance of its sacred duty of maintaining the rights of the United States and its citizens and of safeguarding their free exercise and enjoyment.

BRYAN.

On May 28 the first German note on the *Lusitania* case was transmitted to our Government. This note did not admit the right of Americans on the merchantman and made no offer for reparation:

THE MINISTER FOR FOREIGN AFFAIRS TO THE AMERICAN AMBASSADOR.

The undersigned has the honor to make the following reply to the note of his excellency, Mr. James W. Gerard, ambassador of the United States of America, dated the 15th instant, on the subject of the impairment of many American interests by the German submarine war.

The Imperial Government has subjected the statements of the Government of the United States to a careful examination, and has the lively wish on its part also to contribute in a convincing and friendly manner to clear up any misunderstandings which may have entered into the relations of the two Governments through the events mentioned by the American Government.

With regard firstly to the cases of the American steamers *Cushing* and *Gulflight*, the American Embassy has already been informed that it is far from the German Government to have any intention of ordering attacks by submarines or flyers on neutral vessels in the zone which have not been guilty of any hostile act; on the contrary, the most explicit instructions have been repeatedly given the German armed forces to avoid attacking such vessels. If neutral vessels have come to grief through the German submarine war during the past few months by mistake, it is a question of isolated and exceptional cases, which are traceable to the misuse of flags by the British Government in connection with carelessness or suspicious actions on the part of the captains of the vessels. In all cases where a neutral vessel through no fault of its own has come to grief through the German submarine or flyers according to the facts as ascertained by the German Government, this Government has expressed its regret at the unfortunate occurrence and promised indemnification where the facts justified it. The German Government will treat the cases of the American steamers *Cushing* and *Gulflight* according to the same principles. An investigation of these cases is in progress. Its results will be communicated to the embassy shortly. The investigation might, if thought desirable, be supplemented by an international commission of inquiry, pursuant to title 3 of The Hague convention of October 18, 1907, for the pacific settlement of international disputes.

In the case of the sinking of the English steamer *Falaba*, the commander of the German submarine had the intention of allowing passengers and crew ample opportunity to save themselves.

It was not until the captain disregarded the order to lay to and took to flight, sending up rocket signals for help, that the German commander ordered the crew and passengers, by signals and megaphone, to leave the ship within 10 minutes. As a matter of fact he allowed them 23 minutes and did not fire the torpedo until suspicious steamers were hurrying to the aid of the *Falaba*.

With regard to the loss of life when the British passenger steamer *Lusitania* was sunk, the German Government has already expressed its deep regret to the neutral Governments concerned that nationals of those countries lost their lives on that occasion. The Imperial Government must state for the rest the impression that certain important facts most directly connected with the sinking of the *Lusitania* may have escaped the attention of the Government of the United States. It therefore considers it necessary in the interest of the clear and full understanding aimed at by either Government primarily to convince itself that the reports of the facts which are before the two Governments are complete and in agreement.

The Government of the United States proceeds on the assumption that the *Lusitania* is to be considered as an ordinary unarmed merchant vessel. The Imperial Government begs in this connection to point out that the *Lusitania* was one of the largest and fastest English commerce steamers, constructed with Government funds as auxiliary cruisers, and is expressly included in the navy list published by British Admiralty. It is, moreover, known to the Imperial Government, from reliable information furnished by its officials and neutral passengers, that for some time practically all the more valuable English merchant vessels have been provided with guns, ammunition, and other weapons and reinforced with a crew specially practiced in manning guns. According to reports at hand here, the *Lusitania* when she left New York undoubtedly had guns on board which were mounted under decks and masked.

The Imperial Government furthermore has the honor to direct the particular attention of the American Government to the fact that the British Admiralty, by a secret instruction of February of this year, advised the British merchant marine not only to seek protection behind neutral flags and markings, but even when so disguised to attack German submarines by ramming them. High rewards have been offered by the British Government as a special incentive for the destruction of the submarines by merchant vessels, and such rewards have already been paid out. In view of these facts, which are satisfactorily known to it, the Imperial Government is unable to consider English merchant vessels any longer as "undefended territory" in the zone of maritime war designated by the admiralty staff of the Imperial German Navy. The German commanders are consequently no longer in a position to observe the rules of capture otherwise usual and with which they invariably complied before this. Lastly, the Imperial Government must specially point out that on her last trip the *Lusitania*, as on earlier occasions, had Canadian troops and munitions on board, including no less than 5,400 cases of ammunition destined for the destruction of brave German soldiers who are fulfilling with self-sacrifice and devotion their duty in the service of the Fatherland. The German Government believes that it acts in just self-defense when it seeks to protect the lives of its soldiers by destroying ammunition destined for the enemy with the means of war at its command. The English steamship company must have been aware of the dangers to which passengers on board the *Lusitania* were exposed under the circumstances. In taking them on board in spite of this the company quite deliberately tried to use the lives of American citizens as protection for the ammunition carried and violated the clear provisions of American laws which expressly prohibit and provide punishment for the carrying of passengers on ships which have explosives on board. The company thereby wantonly caused the death of so many passengers. According to the express report of the submarine commander concerned, which is further confirmed by all other reports, there can be no doubt that the rapid sinking of the *Lusitania* was primarily due to the explosion of the cargo of ammunition caused by the torpedo. Otherwise, in all human probability the passengers of the *Lusitania* would have been saved.

The Imperial Government holds the facts recited above to be of sufficient importance to recommend them to a careful examination by the American Government. The Imperial Government begs to reserve a final statement of its position with regard to the demands made in connection with the sinking of the *Lusitania* until a reply is received from the American Government, and believe that it should recall here that it took note with satisfaction of the proposals of good offices submitted by the American Government in Berlin and London with a view to paving the way for a modus vivendi for the conduct of maritime war between Germany and Great Britain. The Imperial Government furnished at that time ample evidence of its good will by its willingness to consider these proposals. The realization of these proposals failed, as is known, on account of their rejection by the Government of Great Britain.

The undersigned requests his excellency, the ambassador, to bring the above to the knowledge of the American Government and avails himself of the opportunity to renew, etc.

VON JAGOW.

On June 9th the American Government sent a second note on the *Lusitania* case. This note was the occasion for the resignation of Mr. Bryan and the promotion of Mr. Lansing:

THE SECRETARY OF STATE AD INTERIM TO THE AMERICAN AMBASSADOR AT BERLIN.

You are instructed to deliver textually the following note to the minister of foreign affairs:

In compliance with your excellency's request I did not fail to transmit to my Government immediately upon their receipt your note of May 28, in reply to my note of May 15, and your supplementary note of June 1, setting forth the conclusions so far as reached by the Imperial German Government, concerning the attacks on the American steamers *Cushing* and *Gulflight*. I am now instructed by my Government to communicate the following in reply:

The Government of the United States notes with gratification the full recognition by the Imperial German Government, in discussing the cases of the *Cushing* and the *Gulflight*, of the principle of the freedom of all parts of the open sea to neutral ships and the frank willingness of the Imperial German Government to acknowledge and meet its liability where the fact of attack upon neutral ships "which have not been guilty of any hostile act" by German aircraft or vessels of war is satisfactorily established; and the Government of the United States will in due course lay before the Imperial German Government, as it requests, full information concerning the attack on the steamer *Cushing*.

With regard to the sinking of the steamer *Falaba*, by which an American citizen lost his life, the Government of the United States is surprised to find the Imperial German Government contending that an effort on the part of the merchantman to escape capture and secure assistance alters the obligation of the officer seeking to make the capture in respect of the safety of the lives of those on board the merchantman, although the vessel had ceased her attempt to escape when torpedoed. These are not new circumstances. They have been in the minds of statesmen and of international jurists throughout the development of naval warfare, and the Government of the United States does not understand that they have ever been held to alter the principles of humanity upon which it has insisted. Nothing but actual forcible resistance or continued efforts to escape by flight when ordered to stop for the purpose of visit on the part of the merchantman has ever been held to forfeit the lives of her passengers or crew. The Government of the United States, however, does not understand that the Imperial German Government is seeking in this case to relieve itself of liability, but only intends to set forth the circumstances which led the commander of the submarine to allow himself to be hurried into the course which he took.

Your excellency's note, in discussing the loss of American lives resulting from the sinking of the steamship *Lusitania*, adverts at some length to certain information which the Imperial German Government has received with regard to the character and outfit of that vessel, and your excellency expresses the fear that this information may not have been brought to the attention of the Government of the United States.

It is stated in the note that the *Lusitania* was undoubtedly equipped with masked guns, supplied with trained gunners and special ammunition, transporting troops from Canada, carrying a cargo not permitted under the laws of the United States to a vessel also carrying passengers, and serving, in virtual effect, as an auxiliary to the naval forces of Great Britain. Fortunately these are matters concerning which the Government of the United States is in a position to give the Imperial German Government official information. Of the facts alleged in your excellency's note, if true, the Government of the United States would have been bound to take official cognizance in performing its recognized duty as a neutral power and in enforcing its national laws. It was its duty to see to it that the *Lusitania* was not armed for offensive action; that she was not serving as a transport; that she did not carry a cargo prohibited by the statutes of the United States; and that if in fact she was a naval vessel of Great Britain she should not receive clearance as a merchantman; and it performed that duty and enforced its statutes with scrupulous vigilance through its regularly constituted officials. It is able, therefore, to assure the Imperial German Government that it has been misinformed. If the Imperial German Government should deem itself to be in possession of convincing evidence that the officials of the Government of the United States did not perform these duties with thoroughness, the Government of the United States sincerely hopes that it will submit that evidence for consideration.

Whatever may be the contentions of the Imperial German Government regarding the carriage of contraband of war on board the *Lusitania* or regarding the explosion of that material by the torpedo, it need only be said that in the view of this Government these contentions are irrelevant to the question of the legality of the methods used by the German naval authorities in sinking the vessel.

But the sinking of passenger ships involves principles of humanity which throw into the background any special circumstances of detail that may be thought to affect the cases, principles which lift it, as the Imperial German Government will no doubt be quick to recognize and acknowledge, out of the class of ordinary subjects of diplomatic discussion or of international controversy. Whatever be the other facts regarding the *Lusitania*, the principal fact is that a great steamer, primarily and chiefly a conveyance for passengers, and carrying more than a thousand souls who had no part or lot in the conduct of the war, was torpedoed and sunk without so much as a challenge or a warning, and that men, women, and children were sent to their death in circumstances unparalleled in modern warfare. The fact that more than 100 American citizens were among those who perished made it the duty of the Government of the United States to speak of these things and once more, with solemn emphasis, to call the attention of the Imperial German Government to the grave responsibility which the Government of the United States conceives that it has incurred in this tragic occurrence, and to the indisputable principle upon which that responsibility rests. The Government of the United States is contending for something much greater than mere rights of property or privileges of commerce. It is contending for nothing less high and sacred than the rights of humanity, which every Government honors itself in respecting and which no Government is justified in resigning on behalf of those under its care and authority. Only her actual resistance to capture or refusal to stop when ordered to do so for the purpose of visit could have afforded the commander of the submarine any justification for so much as putting the lives of those on board the ship in jeopardy. This principle the Government of the United States understands the explicit instructions issued on August 3, 1914, by the Imperial German Admiralty to its commanders at sea to have recognized and embodied, as do the naval codes of all other nations, and upon it every traveler and seamen had a right to depend. It is upon this principle of humanity as well as upon the law founded upon this principle that the United States must stand.

The Government of the United States is happy to observe that your excellency's note closes with the intimation that the Imperial German Government is willing, now as before, to accept the good offices of the United States in an attempt to come to an understanding with the Government of Great Britain by which the character and conditions of the war upon the sea may be changed. The Government of the United States would consider it a privilege thus to serve its friends and the world. It stands ready at any time to convey to either Government any intimation or suggestion the other may be willing to have it convey, and cordially invites the Imperial German Government to make use of its services in this way at its convenience. The whole world is concerned in anything that may bring about even a partial accommodation of interests or in any way mitigate the terrors of the present distressing conflict.

In the meantime, whatever arrangement may happily be made between the parties to the war, and whatever may in the opinion of the Imperial German Government have been the provocation or the circumstantial justification for the past acts of its commanders at sea, the Government of the United States confidently looks to see the justice and humanity of the Government of Germany vindicated in all cases where Americans have been wronged or their rights as neutrals invaded.

The Government of the United States therefore very earnestly and very solemnly renews the representations of its note transmitted to the Imperial German Government on the 15th of May, and relies in these representations upon the principles of humanity, the universally recognized understandings of international law, and the ancient friendship of the German Nation.

The Government of the United States can not admit that the proclamation of a war zone from which neutral ships have been warned to keep away may be made to operate as in any degree an abbreviation of the rights either of American shipmasters or of American citizens bound on lawful errands as passengers on merchant ships of belligerent nationality. It does not understand the Imperial German Government to question those rights. It understands also it to accept as established beyond question the principle that the lives of noncombatants can not lawfully or rightfully be put in jeopardy by the capture or destruction of an unresisting merchantman, and to recognize the obligation to take sufficient precaution to ascertain whether a suspected merchantman is in fact of belligerent nationality or is in fact carrying contraband of war under a neutral flag. The Government of the United States therefore deems it reasonable to expect that the Imperial German Government will adopt the measures necessary to put these principles into practice in respect of the safeguarding of American lives and American ships, and asks for assurances that this will be done.

ROBERT LANSING.

On July 8th the German Government sent a second note on the *Lusitania*, in which she declined to admit responsibility for loss of American lives on the merchantman and suggested "free and safe" passage under certain specified conditions:

THE MINISTER FOR FOREIGN AFFAIRS TO THE AMERICAN AMBASSADOR.

The undersigned has the honor to make the following reply to His Excellency Ambassador Gerard to the note of the 10th ultimo re the impairment of American interests by the German submarine war:

The Imperial Government learned with satisfaction from the note how earnestly the Government of the United States is concerned in seeing the principles of humanity realized in the present war. Also this appeal finds ready echo in Germany, and the Imperial Government is quite willing to permit its statements and decisions in the present case to be governed by the principles of humanity just as it has done always.

The Imperial Government welcomed with gratitude when the American Government, in the note of May 15, itself recalled that Germany had always permitted itself to be governed by the principles of progress and humanity in dealing with the law of maritime war.

Since the time when Frederick the Great negotiated with John Adams, Benjamin Franklin, and Thomas Jefferson the treaty of friendship and commerce of September 9, 1785, between Prussia and the Republic of the West, German and American statesmen have, in fact, always stood together in the struggle for the freedom of the seas and for the protection of peaceable trade.

In the international proceedings which since have been conducted for the regulation of the laws of maritime war, Germany and America have jointly advocated progressive principles, especially the abolishment of the right of capture at sea and the protection of the interests of neutrals.

Even at the beginning of the present war the German Government immediately declared its willingness, in response to proposals of the American Government, to ratify the declaration of London and thereby subject itself in the use of its naval forces to all the restrictions provided therein in favor of neutrals.

Germany likewise has been always tenacious of the principle that war should be conducted against the armed and organized forces of an enemy country, but that the enemy civilian population must be spared as far as possible from the measures of war. The Imperial Government cherishes the definite hope that some way will be found when peace is concluded, or perhaps earlier, to regulate the law of maritime war in a manner guaranteeing the freedom of the seas, and will welcome it with gratitude and satisfaction if it can work hand in hand with the American Government on that occasion.

If in the present war the principles which should be the ideal of the future have been traversed more and more, the longer its duration, the German Government has no guilt therein. It is known to the American Government how Germany's adversaries, by completely paralyzing peaceable traffic between Germany and neutral countries, have aimed from the very beginning and with increasing lack of consideration at the destruction not so much of the armed forces as the life of the German nation, repudiating in doing so all the rules of international law and disregarding all rights of neutrals.

On November 3, 1914, England declared the North Sea a war area, and by planting poorly anchored mines and by the stoppage and capture of vessels, made passage extremely dangerous and difficult for neutral shipping, thereby actually blockading neutral coasts and ports, contrary to all international law. Long before the beginning of submarine war England practically completely intercepted legitimate neutral navigation to Germany also. Thus Germany was driven to a submarine war on trade.

On November 14, 1914, the English premier declared in the House of Commons that it was one of England's principal tasks to prevent food for the German population from reaching Germany via neutral ports. Since March 1 England has been taking from neutral ships without further formality all merchandise proceeding to Germany as well as all merchandise coming from Germany, even when neutral property. Just as it was also with the Boers, the German people is now to be given the choice of perishing from starvation with its women and children or of relinquishing its independence.

While our enemies thus loudly and openly proclaimed war without mercy until our utter destruction, we were conducting a war in self-defense for our national existence and for the sake of peace of an assured permanency. We have been obliged to adopt a submarine warfare to meet the declared intentions of our enemies and the method of warfare adopted by them in contravention of international law.

With all its efforts in principle to protect neutral life and property from damage as much as possible, the German Government recognizes unreservedly in its memorandum of February 4 that the interests of neutrals might suffer from the submarine warfare. However, the American Government will also understand and appreciate that in the fight for existence, which has been forced upon Germany by its adversaries and announced by them, it is the sacred duty of the Imperial Government to do all within its power to protect and save the lives of German subjects. If the Imperial Government were derelict in these its duties, it would be guilty before God and and history of the violation of those principles of highest humanity which are the foundation of every national existence.

The case of the *Lusitania* shows with horrible clearness to what jeopardizing of human lives the manner of conducting war employed by our adversaries leads. In the most direct contradiction of international law all distinctions between merchantmen and war vessels have been obliterated by the order to British merchantmen to arm themselves and to ram submarines, and the promise of rewards therefor, and neutrals who use merchantmen as travelers thereby have been exposed in an increasing degree to all the dangers of war.

If the commander of the German submarine which destroyed the *Lusitania* had caused the crew and passengers to take to the boats before firing a torpedo, this would have meant the sure destruction of his own vessel. After the experiences in sinking much smaller and less seaworthy vessels it was to be expected that a mighty ship like the *Lusitania* would remain above water long enough, even after the torpedoing, to permit passengers to enter the ship's boats. Circumstances of a very peculiar kind, especially the presence on board of large quantities of highly explosive materials, defeated this expectation.

In addition, it may be pointed out that if the *Lusitania* had been spared, thousands of cases of munitions would have been sent to Germany's enemies and thereby thousands of German mothers and children robbed of breadwinners.

In the spirit of friendship wherewith the German nation has been imbued toward the Union (United States) and its inhabitants since the earliest days of its existence the Imperial Government will always be ready to do all it can during the present war also to prevent the jeopardizing of lives of American citizens.

The Imperial Government, therefore, repeats the assurances that American ships will not be hindered in the prosecution of legitimate shipping and the lives of American citizens in neutral vessels shall not be placed in jeopardy.

In order to exclude any unforeseen dangers to American passenger steamers, made possible in view of the conduct of maritime war by Germany's adversaries, German submarines will be instructed to permit the free and safe passage of such passenger steamers when made recognizable by special markings and notified a reasonable time in advance. The Imperial Government, however, confidently hopes that the American Government will assume to guarantee that these vessels have no contraband on board, details of arrangements for the unhampered passage of these vessels to be agreed upon by the naval authorities of both sides.

In order to furnish adequate facilities for travel across the Atlantic for American citizens, the German Government submits for consideration a proposal to increase the number of available steamers by installing in passenger service a reasonable number of neutral steamers under the American flag, the exact number to be agreed upon under the same condition as the above-mentioned American steamers.

The Imperial Government believes it can assume that in this manner adequate facilities for travel across the Atlantic Ocean can be afforded American citizens. There would, therefore, appear to be no compelling necessity for American citizens to travel to Europe in time of war on ships carrying an enemy flag. In particular the Imperial Government is unable to admit that American citizens can protect an enemy ship through the mere fact of their presence on board.

Germany merely followed England's example when she declared part of the high seas an area of war. Consequently, accidents suffered by neutrals on enemy ships in this area of war can not well be judged differently from accidents to which neutrals are at all times exposed at the seat of war on land, when they betake themselves into dangerous localities in spite of previous warnings. If, however, it should not be possible for the American Government to acquire an adequate number of neutral passenger steamers, the Imperial Government is prepared to interpose no objections to the placing under the American flag by the American Government of four enemy passenger steamers for passenger traffic between North America and England. Assurances of "free and safe" passage for American passenger steamers would then extend to apply under the identical preconditions to these formerly hostile passenger steamers.

The President of the United States has declared his readiness, in a way deserving of thanks, to communicate and suggest proposals to the Government of Great Britain with particular reference to the alteration of maritime war. The Imperial Government will always be glad to make use of the good offices of the President, and hopes that his efforts in the present case, as well as in the direction of the lofty ideal of the freedom of the seas, will lead to an understanding.

The undersigned requests the ambassador to bring the above to the knowledge of the American Government, and avails himself of the opportunity to renew to his excellency the assurance of his most distinguished consideration.

VON JAGOW.

The submarine situation was for the moment made more acute by the attack upon the American steamer *Nebraskan* on May 21.

July 15, the German Government submitted the following memorandum:

THE MINISTER FOR FOREIGN AFFAIRS TO THE AMERICAN AMBASSADOR.

The German Government received from newspaper reports the intelligence that the American steamer *Nebraskan* had been damaged by a mine or torpedo on the southwest coast of Ireland. It therefore started a thorough investigation of the case without delay, and from the result of the investigation it has become convinced that the damage to the *Nebraskan* was caused by an attack by a submarine.

On the evening of May 25 last the submarine met a steamer bound westward without a flag and no neutral markings on her freeboard, about 65 nautical miles west of Fastnet Rock. No appliance of any kind for the illumination of the flag or markings was to be seen. In the twilight, which had already set in, the name of the steamer was not visible from the submarine. Since the commander of the submarine was obliged to assume from his wide experience in the area of maritime war that only English steamers, and no neutral steamers, traversed the war area without flag and markings, he attacked the vessel with a torpedo, in the conviction that he had an enemy vessel before him. Some time after the shot the commander saw that the vessel had in the meantime hoisted the American flag. As a consequence he, of course, refrained from any further attack. Since the vessel remained afloat, he had no occasion to concern himself further with the boats which had been launched.

It results from this that, without a doubt, that attack on the steamer *Nebraskan* was not meant for the American flag, nor is it traceable to any fault on the part of the commander of the German submarine, but is to be considered an unfortunate accident. The German Government expresses its regret at the occurrence to the Government of the United States of America and declares its readiness to make compensation for the damage thereby sustained by American citizens. (The New York Times, July 16, 1915.)

The third American note on the *Lusitania* case was sent July 21, in which Germany's proposals of last note were rejected. This is the "deliberately unfriendly" declaration in which the specific language quoted recently by the President occurs:

THE SECRETARY OF STATE TO THE AMERICAN AMBASSADOR AT BERLIN.

You are instructed to deliver textually the following note to the minister for foreign affairs:

The note of the Imperial German Government, dated the 8th of July, 1915, has received the careful consideration of the Government of the United States, and it regrets to be obliged to say that it has found it very unsatisfactory, because it fails to meet the real differences between the two Governments, and indicates no way in which the accepted principles of law and humanity may be applied in the grave matter in controversy, but proposes, on the contrary, arrangements for a partial suspension of those principles which virtually set them aside.

The Government of the United States notes with satisfaction that the Imperial German Government recognizes without reservation the validity of the principles insisted on in the several communications which this Government has addressed to the Imperial German Government with regard to its announcement of a war zone and the use of submarines against merchantmen on the high seas—the principle that the high seas are free; that the character and cargo of a merchantman must first be ascertained before she can lawfully be seized or destroyed; and that the lives of noncombatants may in no case be put in jeopardy unless the vessel resists or seeks to escape after being summoned to submit to examination, for a belligerent act of retaliation is per se an

act beyond the law, and the defense of an act as retaliatory is an admission that it is illegal.

The Government of the United States is, however, keenly disappointed to find that the Imperial German Government regards itself as in large degree exempt from the obligation to observe these principles, even where neutral vessels are concerned, by what it believes the policy and practice of the Government of Great Britain to be in the present war with regard to neutral commerce. The Imperial German Government will readily understand that the Government of the United States can not discuss the policy of the Government of Great Britain with regard to neurtal trade except with that Government itself, and that it must regard the conduct of other belligerent Governments as irrelevant to any discussion with the Imperial German Government of what this Government regards as grave and unjustifiable violations of the rights of American citizens by German naval commanders.

Illegal and inhuman acts, however justifiable they may be thought to be, against an enemy who is believed to have acted in contravention of law and humanity, are manifestly indefensible when they deprive neutrals of their acknowledged rights, particularly when they violate the right to life itself. If a belligerent can not retaliate against an enemy without injuring the lives of neutrals, as well as their property, humanity, as well as justice and a due regard for the dignity of neutral powers, should dictate that the practice be discontinued. If persisted in it would in such circumstances constitute an unpardonable offense against the sovereignty of the neutral nation affected.

The Government of the United States is not unmindful of the extraordinary conditions created by this war or of the radical alterations of circumstance and method of attack produced by the use of instrumentalities of naval warfare which the nations of the world can not have had in view when the existing rules of international law were formulated, and it is ready to make every reasonable allowance for these novel and unexpected aspects of war at sea; but it can not consent to abate any essential or fundamental right of its people because of a mere alteration of circumstances. The rights of neutrals in time of war are based upon principle, not upon expediency, and the principles are immutable. It is the duty and obligation of belligerents to find a way to adapt the new circumstances to them.

The events of the past two months have clearly indicated that it is possible and practicable to conduct such submarine operations as have characterized the activity of the Imperial German Navy within the so-called war zone in substantial accord with the accepted practices of regulated warfare. The whole world has looked with interest and increasing satisfaction at the demonstration of that possibility by German naval commanders. It is manifestly possible, therefore, to lift the whole practice of submarine attack above the criticism which it has aroused and remove the chief causes of offense.

In view of the admission of illegality made by the Imperial Government when it pleaded the right of retaliation in defense of its acts, and in view of the manifest possibility of conforming to the established rules of naval warfare, the Government of the United States can not believe that the Imperial Government will longer refrain from disavowing the wanton act of its naval commander in sinking the *Lusitania* or from offering reparation for the American lives lost, so far as reparation can be made for a needless destruction of human life by an illegal act.

The Government of the United States, while not indifferent to the friendly spirit in which it is made, can not accept the suggestion of the Imperial German Government that certain vessels be designated and agreed upon which shall be free on the seas now illegally proscribed. The very agreement would, by implication, subject other vessels to illegal attack, and would be a curtailment and therefore an abandonment of the principles for which the Government contends, and which in times of calmer counsels every nation would concede as of course.

The Government of the United States and the Imperial German Government are contending for the same great object; have long stood together in urging the very principles upon which the Government of the United States now so solemnly insists. They are both contending for the freedom of the seas. The Government of the United States will continue to contend for that freedom, from whatever quarter violated, without compromise and at any cost. It invites the practical cooperation of the Imperial German Government at this time, when cooperation may accomplish most and this great common object be most strikingly and effectively achieved.

The Imperial German Government expresses the hope that this object may be in some measure accomplished even before the present war ends. It can be. The Government of the United States not only feels obliged to insist upon it, by whomsoever violated or ignored, in the protection of its own citizens, but is also deeply interested in seeing it made practicable between the belligerents themselves, and holds itself ready at any time to act as the common friend who may be privileged to suggest a way.

In the meantime, the very value which this Government sets upon the long and unbroken friendship between the people and Government of the United States and the people and Government of the German Nation impels it to press very solemnly upon the Imperial German Government the necessity for a scrupulous observance of neutral rights in this critical matter. Friendship itself prompts it to say to the Imperial Government that repetition by the commanders of German naval vessels of acts in contravention of those rights must be regarded by the Government of the United States, when they affect American citizens, as deliberately unfriendly.

LANSING.

(The New York Times, July 24, 1915.)

On the 27th day of July the American steamer *Leelanaw* was attacked by a German submarine.

[Telegram.]

AMERICAN CONSULATE,
Dundee, July 28, 1915.

Leelanaw's crew here all safe. Sail Saturday *Saint Paul*. Master under oath stated sighted German submarine July 25, 60 miles northwest Orkneys. Endeavored to escape. Fired on at distance 2 miles, shot falling short; hove to and stopped. Submarine signaled for ship's papers, which were sent. After examining them submarine signaled abandon ship. Ample time given crew to leave ship. Five shots then fired at *Leelanaw* without effect, followed by torpedo. Crew then taken on submarine with lifeboats in tow, after which two more shots were fired, last one setting fire to ship. Submarine headed toward Orkneys. *Leelanaw* was seen to sink 1 hour 20 minutes later. Eight-thirty another steamer being seen approaching, crew ordered to boats, in which they proceeded remainder distance to Kirkwall, arriving 6.30 following morning. *Leelanaw* laden with flax and tow only. Before leaving submarine, master demanded ship's papers. Request refused, his register, customs manifest, and bills of lading being retained. Master has no complaint of treatment on submarine.

DENNISON.

Three months later Germany submitted the following:

AMBASSADOR GERARD TO THE SECRETARY OF STATE.

No. 1672.] AMERICAN EMBASSY,
Berlin, October 19, 1915.

With reference to the department's telegram No. 2022, dated July 31, 1915, 3 p. m., and to my telegram of even date, No. 3023, I have the honor to transmit herewith a translation of a note received to-day from the imperial foreign office, dated October 16, 1915, relating the facts of the sinking of the American steamer *Leelanaw* by a German submarine on July 25, 1915.

I have, etc.,

J. W. GERARD.

[Inclosure—Translation.]

No. IIIa. 17397.
153453. FOREIGN OFFICE,
Berlin, October 16, 1915.

NOTE VERBALE.

The foreign office has the honor to make the following reply to the note verbale of the Embassy of the United States of America, dated August 2, 1915, F. O. No. 4536, relative to the sinking of the American steamer *Leelanaw*.

The steamer mentioned was stopped by a German submarine at 2.10 o'clock on the afternoon of July 25, 1915, in 59° 55′ latitude north and 4° 22′ longitude west. According to the ship's paper she was on a voyage from Archangel to Belfast; the cargo consisted of flax. The commander of the submarine considered the cargo contraband and decided accordingly to sink the vessel and cargo. He saw to it that the crew of the vessel was safely taken ashore and took the ship's papers of the steamer *Leelanaw* on board the submarine.

Under article 21, No. 22 of the German Prize Ordinance, as amended by the ordinance of April 18, 1915 (Reichs-Gesetzblatt, p. 227), flax is to be considered absolute contraband. The ordinance of April 18, 1915, was communicated to the Embassy of the United States of America by note verbale of April 22, 1915 (IIIa. 8434), with the request that the contents be brought to the knowledge of the American Government. It was possible therefore for the shippers and captain of the steamer *Leelanaw* to have knowledge of the German contraband regulations. The goods were destined for an English port; thus the contraband was liable to seizure without further formality (vide art. 30 of the German Prize Ordinance; art. 31 of the Declaration of London). According to value and bulk the contraband formed more than half the whole cargo; consequently the vessel herself was liable to confiscation (vide art. 41, par. 2 of the German Prize Ordinance; art. 40 of the Declaration of London). Since the German commander was unable to take the steamer into a German port without exposing the submarine to danger or impairing the success of the operations in which it was engaged, he was justified in destroying the vessel (art. 113 of the German Prize Ordinance; art. 49 of the Declaration of London). He fulfilled his obligation of placing all persons on board and the ship's papers in safety. (Art. 116 of the German Prize Ordinance; art. 50 of the Declaration of London.)

The commander therefore acted in conformity with the principles of international law. The legality of the measures taken by him is examinable by German prize jurisdiction according to article 1, No. 2, of the German Prize Ordinance; article 51 of the Declaration of London. The ship's papers have already been sent to the prize court at Hamburg. This court will have to decide the questions whether the destruction of the vessel and cargo was legal, whether the property sunk was liable to confiscation, and to whom and in what amount indemnity is to be awarded, provided any claim therefor is before it. It is true that in the present case, as in the case of the *William P. Frye*, the special provisions of article 13 of the Prussian-American treaty of July 11, 1799, are to be considered, pursuant to which property belonging to citizens of the United States of America may only be confiscated when its value is restored.

It appears from information received from the prize court that the American shipping interests have already intrusted a Hamburg attorney with a representation of their rights before the prize court. The foreign office begs to reserve a note concerning the outcome of the proceedings of the court.

On the 19th of August the *Arabic*, of the White Star Line, was torpedoed and sank in 11 minutes. On the same day Count Bernstorff addressed a communication to our Government, in which he said:

In case Americans should actually have lost their lives this would naturally be contrary to the intention of the German Government, who would deeply regret this fact and has instructed me to extend its sincerest sympathy to the Government of the United States.

Later this communication followed:

AMBASSADOR W. H. PAGE TO THE SECRETARY OF STATE.

[Telegram—Paraphrase.]

AMERICAN EMBASSY,
London, August 19, 1915.

Mr. Page informs Mr. Lansing that he has just received word that the steamer *Arabic*, of the White Star Line, was torpedoed at 9 o'clock this morning and sank in 11 minutes. He reports that 15 lifeboats from the vessel are proceeding to Liverpool and that he will send details of the incident as soon as possible.

Although I know that you do not wish to discuss the *Lusitania* question till the *Arabic* incident has been definitely and satisfactorily settled, I desire to inform you of the above, because this policy of my Government was decided on before the *Arabic* incident occurred.

I have no objection to your making any use you may please of the above information

I remain, etc.,

J. BERNSTORFF.

Six days later the following was sent from Ambassador Gerard to the Secretary of State:

AMERICAN EMBASSY,
Berlin, September 7, 1915.

Foreign office sends me the following report of the sinking of the *Arabic*, with the request that it be brought to the knowledge of the American Government:

On the 19th of August a German submarine stopped the English steamer *Dunsley* about 60 nautical miles south of Kinsale and was on

the point of sinking the prize by gun fire after the crew had left the vessel. At this moment the commander saw a large steamer making directly toward him. This steamer, which, as developed later, was identical with the *Arabic*, was recognized as an enemy vessel, as she did not fly any flag and bore no neutral markings. When she approached she altered her original course, but then again pointed directly toward the submarine. From this the commander became convinced that the steamer had the intention of attacking and ramming him. In order to anticipate this attack he gave orders to have the submarine submerge and fired a torpedo at the steamer. After firing he convinced himself that the people on board were being rescued in 15 boats.

According to his instructions the commander was not allowed to attack the *Arabic* without warning and without saving lives unless the ship attempted to escape or offered resistance. He was forced to conclude from the attendant circumstances that the *Arabic* planned a violent attack on the submarine. This conclusion was all the more obvious, as he had been fired upon at a great distance in the Irish Sea on August 14—that is, a few days before—by a large passenger steamer apparently belonging to the British Royal Mail Steam Packet Co., which he had neither attacked or stopped.

The German Government most deeply regrets that lives were lost through the action of the commander. It particularly expresses this regret to the Government of the United States on account of the death of American citizens. The German Government is unable, however, to acknowledge any obligation to grant indemnity in the matter, even if the commander should have been mistaken as to the aggressive intentions of the *Arabic*. If it should prove to be the case that it is impossible for the German and the American Governments to reach a harmonious opinion on this point, the German Government would be prepared to submit the difference of opinion as being a question of international law to The Hague tribunals, pursuant to article 38 of The Hague Convention for the Pacific Settlement of International Disputes. In so doing it assumes that as a matter of course the arbitral decision shall not be admitted to have the importance of a general decision on the permissibility or the converse under international law of German submarine warfare. Berlin, September 7, 1915.

GERARD.

The *Arabic* controversy was continued by the following memorandum:

THE SECRETARY OF STATE TO AMBASSADOR GERARD.

[Telegram.]

DEPARTMENT OF STATE,
Washington, September 1½, 1915.

You are instructed to deliver to the foreign office the following summary of the evidence on file in the department in regard to the sinking of the *Arabic*.

(1) It is generally agreed that the course of the *Arabic* drew her nearer to the *Dunsley* from the time the *Dunsley* and *Arabic* sighted each other until about the time the *Arabic* was torpedoed. (Affidavits of master, first, second, and third officers, mess steward and seamen of *Dunsley;* affidavits of captain and second officer of the *Arabic;* unsworn statements of three American passengers.) The officers of the *Dunsley* agree that the *Arabic* altered her course somewhat toward the *Dunsley*, but that her course was variable or zig-zag. (Affidavits of master, first, second, and third officers and mess steward and one seaman of the *Dunsley;* affidavits of captain and second officer of *Arabic;* affidavit of one American passenger.) The third officer stated that the *Arabic* began the zig-zag course 4 miles away from the *Dunsley*. Though the *Arabic* at times necessarily pointed toward the *Dunsley*, at the time the torpedo struck she was moving away from the *Dunsley*. (Affidavit of captain and second officer of *Arabic*, third officer of *Dunsley*, and one passenger of unknown nationality, and unsworn statement of one American passenger.)

(2) The passengers on the *Arabic* variously estimated that the *Arabic* approached the *Dunsley* to within 1 to 5 miles. (Affidavits of three American passengers; unsworn statements of three American passengers and one passenger of unknown nationality.) While the *Dunsley* was sighted several miles away, the officers of that vessel estimated that the *Arabic* approached to 1½ to 3 miles from the *Dunsley*. (Affidavits of master, first, and second officers.) And one *Dunsley* seaman swore the first distance was only one-half mile. The affidavits of the captain and the second officer of the *Arabic* agree that the *Arabic* did not approach nearer than 2 miles to the *Dunsley*.

(3) It appears that the submarine, after shelling the *Dunsley* and after sighting the *Arabic*, hid behind the *Dunsley* and submerged before the explosion of the torpedo which sank the *Arabic*. (Affidavits of master, first and second officers, mess steward, and one seaman of *Dunsley*.)

(4) Witnesses are in agreement that the submarine was not seen from the *Arabic* (affidavits of the captain and second officer of the *Arabic*, affidavits of three American passengers, and unsworn statement of passenger of unknown nationality), and that the *Arabic* could not have seen the submarine from its position behind the *Dunsley* prior to submerging. (Affidavit of second officer of the *Dunsley*.)

(5) All agree that the *Arabic* received no warning. (Affidavit of six American passengers and two passengers of unknown nationality, and the unsworn statements of four American passengers and two passengers of unknown nationality, and the affidavits of captain and second officer of the *Arabic*.)

(6) The torpedo was first seen by the passengers at an estimated distance of 150 to 300 yards away. (Affidavit of passenger of unknown nationality; unsworn statements of two American passengers, and one passenger of unknown nationality.) The captain of the *Arabic*, however, swears that the air bubbles and the torpedo were only 300 feet away when he saw them. (It appears that Consul Washington at Liverpool, in conversation with Capt. Finch and the second officer of the *Arabic*, learned that they saw bubbles of air at the time they first noticed the torpedo, which were taken to indicate the air escaping at the time the torpedo was expelled from the tube, and that therefore the submarine was supposed to have been only 300 feet from the *Arabic* and about 2 miles from the *Dunsley* when the torpedo was fired. Consul Washington's three telegraphic reports of August 24.)

(7) All agree that the torpedo struck the *Arabic* near the stern on the starboard side. (Affidavit of captain, second officer of *Dunsley*, and two American passengers and a passenger of unknown nationality, and unsworn statement of one American passenger.)

From a diagram made by the second officer of the *Arabic*, who observed the approach of the torpedo from the navigating bridge, the course of the torpedo was almost at right angles to the course of the *Arabic*.

Germany issued the following instructions on October 5, 1915:

THE GERMAN AMBASSADOR TO THE SECRETARY OF STATE.

GERMAN EMBASSY,
Washington, October 5, 1915.

MY DEAR MR. SECRETARY: Prompted by the desire to reach a satisfactory agreement with regard to the *Arabic* incident my Government has given me the following instructions:

The orders issued by His Majesty the Emperor to the commanders of the German submarines—of which I notified you on a previous occasion—have been made so stringent that the recurrence of incidents similar to the *Arabic* case is considered out of the question.

According to the report of Commander Schneider of the submarine that sank the *Arabic*, and his affidavit as well as those of his men, Commander Schneider was convinced that the *Arabic* intended to ram the submarine. On the other hand, the Imperial Government does not doubt the good faith of the affidavits of the British officers of the *Arabic*, according to which the *Arabic* did not intend to ram the submarine. The attack of the submarine, therefore, was undertaken against the instructions issued to the commander. The Imperial Government regrets and disavows this act and has notified Commander Schneider accordingly.

Under these circumstances my Government is prepared to pay an indemnity for the American lives which to its deep regret have been lost on the *Arabic*. I am authorized to negotiate with you about the amount of this indemnity.

I remain, etc.,

J. BERNSTORFF.

Three months later Germany issued further instructions, as follows:

COMMUNICATION FROM GERMAN GOVERNMENT DELIVERED BY GERMAN AMBASSADOR, UNDER INSTRUCTIONS.

GERMAN EMBASSY,
Washington (Received January 7, 1916).

1. German submarines in the Mediterranean had, from the beginning, orders to conduct cruiser warfare against enemy merchant vessels only in accordance with general principles of international law and in particular measures of reprisal, as applied in the war zone around the British Isles, were to be excluded.

2. German submarines are therefore permitted to destroy enemy merchant vessels in the Mediterranean—i. e., passenger as well as freight ships as far as they do not try to escape or offer resistance—only after passengers and crews have been accorded safety.

3. All cases of destruction of enemy merchant ships in the Mediterranean in which German submarines are concerned are made the subject of official investigation and, besides, submitted to regular prize-court proceedings. In so far as American interests are concerned, the German Government will communicate the result to the American Government. Thus also in the *Persia* case if the circumstances should call for it.

4. If commanders of German submarines should not have obeyed the orders given to them, they will be punished; furthermore, the German Government will make reparation for damage caused by death of or injuries to American citizens.

The submarine controversy was expanded by the sinking of the Italian liner *Ancona* November 7, in which nine Americans perished. This incident was intensified by the fact that Dr. Dumba, the Austrian ambassador, had been called home, at the insistence of the United States, on September 27, as the result of the discovery, through the seizure of papers on the person of James F. J. Archibald, an American citizen, of a letter from the ambassador to his home Government suggesting the incitement of strikes in American munition factories. Archibald was arrested by the British authorities when the *Rotterdam*, on which he was traveling to Holland, put into Falmouth.

The following communication from the American Government to the Austrian Government was sent December 6, 1915:

THE SECRETARY OF STATE TO AMBASSADOR PENFIELD.

DEPARTMENT OF STATE,
Washington, December 6, 1915.

Please deliver a note to the minister of foreign affairs, textually as follows:

"Reliable information obtained from American and other survivors who were passengers on the steamship *Ancona* shows that on November 7 a submarine flying the Austro-Hungarian flag fired a solid shot toward the steamship; that thereupon the *Ancona* attempted to escape, but being overhauled by the submarine, she stopped; that after a brief period and before the crew and passengers were all able to take to the boats the submarine fired a number of shells at the vessel and finally torpedoed and sank her while there were yet many persons on board; and that by gunfire and foundering of the vessel a large number of persons lost their lives or were seriously injured, among whom were citizens of the United States.

"The public statement of the Austro-Hungarian Admiralty has been brought to the attention of the Government of the United States and received careful consideration. This statement substantially confirms the principal declaration of the survivors, as it admits that the *Ancona*, after being shelled, was torpedoed and sunk while persons were still on board.

"The Austro-Hungarian Government has been advised, through the correspondence which has passed between the United States and Germany, of the attitude of the Government of the United States as to the use of submarines in attacking vessels of commerce, and the acquiescence of Germany in that attitude, yet with full knowledge on the part of the Austro-Hungarian Government of the views of the Government of the United States as expressed in no uncertain terms to the ally of Austria-Hungary, the commander of the submarine which attacked the *Ancona* failed to put in a place of safety the crew and passengers of the vessel which they purposed to destroy because, it is presumed, of the impossibility of taking it into port as a prize of war.

"The Government of the United States considers that the commander violated the principles of international law and of humanity by shelling and torpedoing the *Ancona* before the persons on board had been put in a place of safety or even given sufficient time to leave the vessel. The conduct of the commander can only be characterized as wanton slaughter of defenseless noncombatants, since at the

time when the vessel was shelled and torpedoed she was not, it appears, resisting or attempting to escape; and no other reason is sufficient to excuse such an attack, not even the possibility of rescue.

"The Government of the United States is forced, therefore, to conclude either that the commander of the submarine acted in violation of his instructions or that the Imperial and Royal Government failed to issue instructions to the commanders of its submarines in accordance with the law of nations and the principles of humanity. The Government of the United States is unwilling to believe the latter alternative and to credit the Austro-Hungarian Government with an intention to permit its submarines to destroy the lives of helpless men, women, and children. It prefers to believe that the commander of the submarine committed this outrage without authority and contrary to the general or special instructions which he had received.

"As the good relations of the two countries must rest upon a common regard for law and humanity, the Government of the United States can not be expected to do otherwise than to demand that the Imperial and Royal Government denounce the sinking of the *Ancona* as an illegal and indefensible act; that the officer who perpetrated the deed be punished; and that reparation by the payment of an indemnity be made for the citizens of the United States who were killed or injured by the attack on the vessel.

"The Government of the United States expects that the Austro-Hungarian Government, appreciating the gravity of the case, will accede to its demand promptly; and it rests this expectation on the belief that the Austro-Hungarian Government will not sanction or defend an act which is condemned by the world as inhumane and barbarous, which is abhorrent to all civilized nations, and which has caused the death of innocent American citizens."

LANSING.

The Austrian reply:

AMBASSADOR PENFIELD TO THE SECRETARY OF STATE.

[Telegram.]

AMERICAN EMBASSY,
Vienna, December 15, 1915.

Department's 1011, December 6, 6 p. m.

Following note received from Minister for Foreign Affairs noon to-day:

"In reply to the much esteemed note, No. 4167, which his excellency, Mr. Frederic Courtland Penfield, ambassador extraordinary and plenipotentiary of the United States of America, directed to him in the name of the American Government under date of the 9th instant in the matter of the sinking of the Italian steamer *Ancona*, the undersigned, preliminary to a thorough, meritorious treatment of the demand, has the honor to observe that the sharpness with which the Government of the United States considers it necessary to blame the commanding officer of the submarine concerned in the affair and the firmness in which the demands addressed to the Imperial and Royal Government appear to be expressed might well have warranted the expectation that the Government of the United States should precisely specify the actual circumstances of the affair upon which it bases its case. As is not difficult to perceive, the presentation of the facts in the case in the aforesaid note leaves room for many doubts; and even if this presentation were correct in all points and the most rigorous legal conception were applied to the judgment of the case, it does not in any way sufficiently warrant attaching blame to the commanding officer of the war vessel or to the Imperial and Royal Government.

"The Government of the United States has also failed to designate the persons upon whose testimony it relies and to whom it apparently believes it may attribute a higher degree of credibility than to the commander of the imperial and royal fleet. The note also fails to give any information whatsoever as to the number, names, and more precise fate of the American citizens who were on board of the said steamer at the critical moment.

"However, in view of the fact that the Washington Cabinet has now made a positive statement to the effect that citizens of the United States of America came to grief in the incident in question, the Imperial and Royal Government is in principle ready to enter into an exchange of views in the affair with the Government of the United States. It must, however, in the first place, raise the question why that Government failed to give juridical reasons for the demands set forth in its note with reference to the special circumstances of the incriminating events upon which it itself lays stress, and why, in lieu thereof, it referred to an exchange of correspondence which it has conducted with another Government in other cases. The Imperial and Royal Government is the less able to follow the Washington Cabinet on this unusual path, since it by no means possesses authentic knowledge of all of the pertinent correspondence of the Government of the United States, nor is it of the opinion that such knowledge might be sufficient for it in the present case, which, in so far as it is informed, is in essential points of another nature than the case or cases to which the Government of the United States seems to allude. The Imperial and Royal Government may therefore leave it to the Washington Cabinet to formulate the particular points of law against which the commanding officer of the submarine is alleged to have offended on the occasion of the sinking of the *Ancona*.

"The Government of the United States has also seen fit to refer to the attitude which the Berlin Cabinet assumed in the above-mentioned correspondence. The Imperial and Royal Government finds in the much esteemed note no indication whatever of the intent with which this reference was made. Should, however, the Government of the United States thereby have intended to express an opinion to the effect that a precedent of whatever nature existed for the Imperial and Royal Government with respect to the juridical consideration of the affair in question this Government must, in order to preclude possible misunderstandings, declare that as a matter of course it reserves to itself full freedom of maintaining its own legal views in the discussion of the case of the *Ancona*.

"In having the honor to have recourse to the kindness of his excellency the ambassador of the United States of America, with the most respectful request to be good enough to communicate the foregoing to the American Government, and on this occasion to state that the Imperial and Royal Government, in no less degree than the American Government and under all circumstances, most sincerely deplores the fate of the innocent victims of the incident in question, the undersigned at the same time avails himself of this opportunity to renew the expression of his most distinguished consideration to his excellency the ambassador.

"(Signed) BURIAN."

PENFIELD.

The American reply:

THE SECRETARY OF STATE TO AMBASSADOR PENFIELD.

[Telegram.]

No. 1039.] DEPARTMENT OF STATE,
Washington, December 19, 1915.

You are instructed to address a note to the Austro-Hungarian minister of foreign affairs, textually as follows:

"The Government of the United States has received the note of your excellency relative to the sinking of the *Ancona*, which was delivered at Vienna on December 15, 1915, and transmitted to Washington, and has given the note immediate and careful consideration.

"On November 15, 1915, Baron Zwiedenek, the chargé d'affaires of the Imperial and Royal Government at Washington, transmitted to the Department of State a report of the Austro-Hungarian Admiralty with regard to the sinking of the steamship *Ancona*, in which it was admitted that the vessel was torpedoed after her engines had been stopped and when passengers were still on board. This admission alone is, in the view of the Government of the United States, sufficient to fix upon the commander of the submarine which fired the torpedo the responsibility for having willfully violated the recognized law of nations and entirely disregarded those humane principles which every belligerent should observe in the conduct of war at sea. In view of these admitted circumstances the Government of the United States feels justified in holding that the details of the sinking of the *Ancona*, the weight and character of the additional testimony corroborating the admiralty's report, and the number of Americans killed or injured are in no way essential matters of discussion. The culpability of the commander is in any case established, and the undisputed fact is that citizens of the United States were killed, injured, or put in jeopardy by his lawless act.

"The rules of international law and the principles of humanity which were thus willfully violated by the commander of the submarine have been so long and so universally recognized and are so manifest from the standpoint of right and justice that the Government of the United States does not feel called upon to debate them and does not understand that the Imperial and Royal Government questions or disputes them.

"The Government of the United States therefore finds no other course open to it but to hold the Imperial and Royal Government responsible for the act of its naval commander and to renew the definite but respectful demands made in its communication of the 6th of December, 1915. It sincerely hopes that the foregoing statement of its position will enable the Imperial and Royal Government to perceive the justice of those demands and to comply with them in the same spirit of frankness and with the same concern for the good relations now existing between the United States and Austria-Hungary which prompted the Government of the United States to make them."

LANSING.

Seeond Austrian reply:

AMBASSADOR PENFIELD TO THE SECRETARY OF STATE.

[Telegram.]

AMERICAN EMBASSY,
Vienna, December 29, 1915.

The following reply to my note of the 21st instant, communicating textually the contents of the department's telegram No. 1039 of December 19, 1 p. m., was received this afternoon:

[Translation.]

"In reply to the very esteemed note No. 4307, of the 21st instant, the undersigned has the honor most respectfully to communicate to his excellency the ambassador of the United States of America, Mr. Frederic Courtland Penfield, the following:

"The Imperial and Royal Government thoroughly agrees with the Washington Cabinet that even in war the sacred demands of humanity must be complied with. Just as it has hitherto never given anyone occasion to doubt its respect for these demands, it has also given numerous proofs of its most humane sentiments, both toward enemies and neutrals, throughout the entire course of this war, which is presenting such convulsive pictures of moral confusion, and it was not its fault that not long ago it did not agree with the Washington Cabinet on a question which it, in unison with the entire public opinion in Austria-Hungary, regarded principally as a question of humanity.

"Also as concerns the principle expressed in the very esteemed note that hostile private ships, in so far as they do not flee or offer resistance, may not be destroyed without the persons on board having been placed in safety, the Imperial and Royal Government is able substantially to assent to this view of the Washington Cabinet.

"The Imperial and Royal Government is very responsive to the assurance that the Government of the United States attaches value to the maintenance of the good relations which happily exist between Austria-Hungary and the United States of America; it reciprocates this assurance most warmly and is now as ever, as far as lies within its power, zealous to render these relations still more cordial.

"Guided by the same spirit of candor as is the American Government, the Imperial and Royal Government, although it does not find in the aforesaid note a reply to all of its justified questions, is ready to communicate to the Government of the United States the result of the investigation which was instituted, in accordance with the existing internal regulations, immediately after the receipt of the naval report on the sinking of the *Ancona* and which has been very recently concluded. The results of this investigation may be summarized as follows:

"On November 7, 1915, at 11.40 a. m., in thick weather, the commander of the submarine saw the outlines of a large Italian steamer suddenly emerge from the fog one point to the starboard at a distance of about 3,000 meters, in latitude 38° 40′ north and longitude 10° 8′ east. He first took it for a transport steamer and put about and then fired a wide warning shot from the after gun; at the same time he displayed the signal 'leave the ship.' The steamer did not stop, but on the contrary turned away and attempted to escape. The commander at first remained stationary several minutes in order to increase the distance, as he feared that the steamer might have a stern gun and use it against the submarine. When the distance had increased to 4,500 meters, he took up the pursuit at full power and fired from the bow gun 16 shells at decreasing range and observed three hits. During the pursuit the steamer steered a zigzag course and did not stop until after the third hit. Thereupon the commander ceased firing. Even during the flight the steamer while at full speed dropped several boats with people, which immediately capsized; after stopping it began to rig out the boats. At a distance of about 2,000 meters the commander saw that six boats were completely filled and rapidly pulled away from the

steamer. Another boat had capsized and was floating keel upward; the people were hanging on to the lines and to the capsized boat. During the further approach of the submarine the commander saw that great panic was prevailing on board and that he was dealing with a passenger steamer, viz, the *Ancona*, of Genoa. He therefore accorded the people on board of the steamer more than the necessary time for leaving the ship in the lifeboats. There were still on board at least 10 lifeboats, which would have more than sufficed for the rescue of the people still on board. One of these boats was completely filled and hung on the half-rigged out boat davits. As no further measures were being taken to rig out the boats, the commander decided, after the lapse of 45 minutes, to torpedo the ship in such a way that it would still remain above water for a considerable length of time, so that, on the one hand, the rigging out of the boats would be accelerated and, on the other hand, sufficient opportunity would remain for rescuing the people still on board.

"Shortly thereafter a steamer was sighted heading for the *Ancona* developing a great amount of smoke and which apparently had been summoned to the *Ancona* by radiotelegraphy. As the commander of the submarine had to count upon an attack from the steamer, which he took to be an enemy cruiser, he submerged after having had a torpedo launched at 12.35 p. m. from a distance of 800 meters at the forehold of the *Ancona*. After that torpedo shot the latter listed about 10° to starboard. At this time an attempt was made to completely lower the half rigged-out lifeboat; it carried away, however, and fell into the water. The boat remained afloat, keel downward, and the people clung to the gunwale. None of the remaining boats were lowered to the water, although people were still seen on board. The steamer gradually righted itself to an even keel and sank so slowly that the commander of the submarine at first doubted whether the steamer would go down; as late as 1.20 it sank, bow first, after slowly submerging parallel to the water line. During this further period of 45 minutes it would have been easily possible to rescue, by means of the available boats, persons still on board. From the circumstances that, contrary to expectations, this did not happen, commander concluded that, contrary to all seamanlike custom, the crew had effected their own rescue in the first boats and left the passengers intrusted to their protection to themselves.

"At the time of the incident the weather was good and the sea was smooth, so that the lifeboats could have reached the nearest coast without danger, as, in fact, lifeboats were damaged only through inexpert lowering, but not after reaching the water. The loss of human lives is in no way to be attributed in the first instance to the sinking of the ship, but—and according to all probability in a much higher degree—to the dropping of the first boats while under way at full speed, as well as to the fact that the crew, thinking only of themselves, did not rescue the passengers of the capsized boats, and also possibly to the projectiles which struck the fleeing ship. But also the death of the persons who went down with the steamer is, above all, to be attributed to the conduct of the crew, which was contrary to the requirements of their duty.

"As is apparent from above-cited facts of the case, the very esteemed note of the 9th instant proceeds in several points from incorrect assumptions. The information reaching the American Government that a solid shot was immediately fired toward the steamer is incorrect. It is incorrect that the submarine overhauled the steamer during the pursuit. It is incorrect that only a brief period was accorded for the disembarkation of the people; to the contrary, an unusually long time was given the *Ancona* for the disembarkation of the passengers. Finally, it is incorrect that a number of shells were still fired at the steamer after it had stopped.

"The facts in the case further permit it to be recognized that the commander of the submarine granted the steamer full 45 minutes; that is more than sufficient time to afford the persons on board opportunity for disembarkation. Then when the people had still not been rescued he effected the torpedoing in such a way that the ship would remain above water as long a time as possible; this with the intention of enabling the disembarkation in the boats still available. As the steamer remained above water 45 minutes more he would, indeed, have accomplished this purpose if the crew had not in violation of their duty left the passengers in the lurch.

"Notwithstanding all appreciation of this procedure of their commander aiming at the rescue of the crew and passengers, the imperial and royal naval authorities came to the conclusion that he had failed to take into sufficient consideration the panic which occurred amongst the passengers rendering the embarkation more difficult, and the spirit of the regulation that imperial and royal naval officers should not refuse help to anyone in distress, not even to the enemy. Hence the officer has been punished in accordance with the rules in force in this matter for exceeding his instructions.

"In this state of affairs the Imperial and Royal Government does not hesitate to draw the appropriate conclusions with reference to the indemnification of the American citizens affected by the sinking of the prize.

"In this respect it must, however, make the following observations: As a matter of course the investigation into the sinking of the *Ancona* could not establish to what degree American citizens are entitled to a claim for indemnity. Even according to the view of the Washington Cabinet, the Imperial and Royal Government can not be held answerable for the injuries which were caused by the undoubtedly justified firing upon the fleeing ship. Just as little might it have to answer for the injuries which occurred before the torpedoing due to the faulty rigging out of the boats or to the capsizing of the boats which had been lowered.

"The Imperial and Royal Government must assume that the Washington Cabinet is able and willing to furnish it with the information which is required in this respect and which is certainly not immaterial. However, should the more precise circumstances under which the American citizens were injured be unknown to the Government of the United States due to a lack of the proper material evidence, the Imperial and Royal Government in consideration of the humanely deeply deplorable incident, and guided by the desire of again manifesting to the Government of the United States its friendly sentiments, would be readily willing to overlook this gap in the evidence and to extend the indemnity also to those injuries the direct cause of which could not be ascertained.

"While the Imperial and Royal Government may well regard the *Ancona* case as cleared up by the foregoing representations, it at the same time reserves to itself for a future time the discussion of the difficult questions of international law in connection with submarine warfare.

"The undersigned has the honor to have recourse to the kindness of his excellency the ambassador of the United States of America with the most respectful request that he be good enough to communicate the foregoing to the Government of the United States, and at the same time avails himself, etc.

"BURIAN."
PENFIELD.

Our relation with Austria was again disturbed by the attack on the steamer *Petrolite*. Our note follows:

THE SECRETARY OF STATE TO AMBASSADOR PENFIELD.

[Telegram.]

DEPARTMENT OF STATE,
Washington, June 21, 1916.

Evidence obtained from the captain and members of crew of the steamer *Petrolite*, and from examination made of the vessel under direction of the Navy Department, convinces this Government that the Austro-Hungarian Government has obtained an incorrect report of the attack on the steamer. With particular reference to the explanation made by the foreign office, the following information, briefly stated, has been obtained from sworn statements of the captain and members of crew:

No shot was fired across the bow of the steamer as a signal to stop. When the first shot was fired the captain was under the impression that an explosion had taken place in the engine room. Not until the second shot was fired did the captain and crew sight the submarine, which was astern of the steamer and therefore they positively assert that neither the first nor the second shot was fired across the bow of the vessel.

The steamer did not swing around in a course directed toward the submarine as alleged in the report obtained by the Austro-Hungarian Government, but the captain at once stopped the engines and swung the vessel broadside to the submarine and at right angles to the course of the vessel, in order to show its neutral markings, which was manifestly the reasonable and proper course to follow, and it ceased to make any headway. On the steamer was painted its name in letters approximately 6 feet long, and the name of the hailing port, and, as has previously been made known to Austro-Hungarian Government, the steamer carried two large flags some distance above the water line which it is positively stated by the officers and crew were flying before the first shot was fired, and were not hoisted after the first shot, as stated by the submarine commander.

The submarine commander admits that the steamer stopped her engines. The captain of the *Petrolite* denies that the vessel was ever headed toward the submarine, and the examination of the steamer made by an American naval constructor corroborates this statement, because, as he states, the shell which took effect on vessel, striking the deck house which surrounds the smokestack, was fired from a point 45° on the starboard bow. This was one of the last shots fired, and indicates that ship was not headed toward the submarine even up to the time when the submarine ceased firing. The captain states that the submarine appeared to be maneuvering so as to direct her shots from ahead of the steamer. The submarine fired approximately 12 shots. The majority of the shots were fired after the ship had stopped and had swung broadside, and while, as even the commander of submarine admits, the steamer was flying the American flag. The captain of the steamer denies that he advised the commander of the submarine that the damage to the steamer was insignificant. He states that he advised him that steamer had been damaged, but that he not then had an opportunity to ascertain the extent of the damage. The seaman who was struck by a fragment of shell sustained severe flesh wounds.

If the ship had intended to ram the submarine, she would not have stopped her engines, and this must have been evident to the submarine commander. Naval authorities here agree that there could have been no danger of the ship ramming the submarine until it was headed straight for the submarine and was under power, and even then the submarine could have so maneuvered as to avoid collision. The *Petrolite* was 2 miles away from the submarine. The engines and funnel of the *Petrolite* were at the stern, and from the general appearance of the ship no experienced naval officer could have believed that it had opportunity or sufficient speed to attack, even if it had been steaming directly toward the submarine. The conduct of the submarine commander showed lack of judgment, self-control, or willful intent amounting to utter disregard of the rights of a neutral.

According to the sworn statements of the captain of steamer and a seaman who accompanied him to the submarine, the commander of the latter stated that he mistook the steamer for a cruiser. This statement is at variance with the statement in the Austro-Hungarian Government's note that the captain of the submarine asserted a false maneuver on the part of the steamer prompted the submarine to continue to fire.

The captain of the steamer swears that he informed the commander of the submarine that he had only sufficient provisions to reach the port of Algiers, and that he would deliver provisions only under compulsion. He states positively in his affidavit and in conversation with officials of the department that he did not give provisions readily nor did he say it was the duty of one seaman to help another, and that he refused payment because he felt that he was being compelled to deliver food in violation of law. The statement of the captain of the *Petrolite* is entirely at variance with the report of the submarine commander. The correctness of the captain's opinion that the wounded seaman was held as a hostage to guarantee the delivery of food seems clear. Obviously the commander of the submarine had no right to order the seaman to remain on board. The fact that this order was given showed that the commander insisted that food was to be delivered to him, otherwise the seaman would naturally have accompanied the captain back to his vessel. The outrageous conduct of the submarine commander and all the circumstances of the attack on the *Petrolite* warranted the captain in regarding himself as being compelled in order to avoid further violence to deliver food to the commander of the submarine.

In the absence of other and more satisfactory explanation of the attack on the steamer than that contained in the note addressed to you by the foreign office, the Government of the United States is compelled to regard the conduct of the commander of the submarine in attacking the *Petrolite* and in coercing the captain as a deliberate insult to the flag of the United States and an invasion of the rights of American citizens for which this Government requests that an apology be made; that the commander of the submarine be punished; and that reparation be made for the injuries sustained by the payment of a suitable indemnity.

Please communicate with foreign office in sense of foregoing.

You may add that this Government believes that the Austro-Hungarian Government will promptly comply with these requests, in view

of their manifest justness and the high sense of honor of that Government which would not, it is believed, permit an indignity to be offered to the flag of a friendly power or wrongs to its nationals by an Austro-Hungarian naval officer without making immediate and ample amends.

LANSING.

About this time the question of the armed merchantmen came up. The custom of permitting merchant vessels to arm for defense was contested by Germany. This matter had received careful and detailed attention soon after the war began, as shown by the following diplomatic correspondence with both England and Germany:

DEFENSIVE ARMAMENT AND THE RIGHT OF DEPARTURE FROM NEUTRAL PORTS OF BELLIGERENT MERCHANT SHIPS TO ARM AT SEA.

File No. 763.72111/85.

THE BRITISH CHARGÉ TO THE SECRETARY OF STATE.

No. 252.] BRITISH EMBASSY,
Washington, August 4, 1914.

SIR: In view of the state of war now existing between Great Britain and Germany, I have the honor, under instructions from His Majesty's principal secretary of state for foreign affairs, to make the following communication to you in respect to the arming of any merchant vessels in neutral waters.

As you are aware it is recognized that a neutral Government is bound to use due diligence to prohibit its subjects or citizens from the building and fitting out to order of belligerent vessels intended for warlike purposes and also to prevent the departure of any such vessel from its jurisdiction. The starting point for the universal recognition of this principle was the three rules formulated in article 6 of the treaty between Great Britain and the United States of America for the amicable settlement of all causes of differences between the two countries, signed at Washington on May 8, 1871. These rules, which His Majesty's Government and the United States Government agreed to observe as between themselves in future, are as follows:

"A neutral Government is bound—

"First. To use due diligence to prevent the fitting out, arming, or equipping, within its jurisdiction, of any vessel which it has reasonable ground to believe is intended to cruise or to carry on war against a power with which it is at peace; and also to use like diligence to prevent the departure from its jurisdiction of any vessel intended to cruise or carry on war as above, such vessel having been specially adapted, in whole or in part, within such jurisdiction to warlike use.

"Secondly. Not to permit or suffer either belligerent to make use of its ports or waters as the base of naval operations against the other, or for the purpose of the renewal or augmentation of military supplies or arms, or the recruitment of men.

"Thirdly. To exercise due diligence in its own ports and waters, and, as to all persons within its jurisdiction, to prevent any violation of the foregoing obligations and duties."

The above rules may be said to have acquired the force of generally recognized rules of international law, and the first of them is reproduced almost textually in Article VIII of The Hague convention No. 13 of 1907 concerning the rights and duties of neutral powers in case of maritime warfare, the principles of which have been agreed to by practically every maritime State.

It is known, however, that Germany, with whom Great Britain is at war, favors the policy of converting her merchant vessels into armed ships on the high seas, and it is probable, therefore, that attempts will be made to equip and dispatch merchantmen for such conversion from the ports of the United States.

It is probable that, even if the final completion of the measures to fit out merchantmen to act as cruisers may have to be effected on the high seas, most of the preliminary arrangements will have been made before the vessels leave port, so that the warlike purpose to which they are to be put after leaving neutral waters must be more or less manifest before their departure.

In calling your attention to the above-mentioned "Rules of the treaty of Washington" and The Hague convention, I have the honor to state that His Majesty's Government will accordingly hold the United States Government responsible for any damages to British trade or shipping, or injury to British interests generally, which may be caused by such vessels having been equipped at, or departing from, United States ports.

I have, etc.,

COLVILLE BARCLAY.

File No. 763.72111/87.

THE BRITISH CHARGÉ D'AFFAIRES TO THE SECRETARY OF STATE.

No. 259.] BRITISH EMBASSY,
Washington, August 9, 1914.

SIR: With reference to my note No. 252 of the 4th instant, I have the honor to inform you that I have now received instructions from Sir Edward Grey to make a further communication to you in explanation of the position taken by His Majesty's Government in regard to the question of armed merchantment.

As you are no doubt aware, a certain number of British merchant vessels are armed, but this is a precautionary measure adopted solely for the purpose of defense, which, under existing rules of international law, is the right of all merchant vessels when attacked.

According to the British rule, British merchant vessels can not be converted into men-of-war in any foreign port, for the reason that Great Britain does not admit the right of any power to do this on the high seas. The duty of a neutral to intern or order the immediate departure of belligerent vessels is limited to actual and potential men-of-war, and, in the opinion of His Majesty's Government, there can therefore be no right on the part of neutral Governments to intern British armed merchant vessels, which can not be converted into men-of-war on the high seas, nor to require them to land their guns before proceeding to sea.

On the other hand, the German Government have consistently claimed the right of conversion on the high seas, and His Majesty's Government therefore maintain their claim that vessels which are adapted for conversion and under German rules may be converted into men-of-war on the high seas should be interned in the absence of binding assurances, the responsibility for which must be assumed by the neutral Government concerned, that they shall not be so converted.

I have, etc.,

COLVILLE BARCLAY.

File No 763.72111/543.

THE BRITISH CHARGÉ TO THE SECRETARY OF STATE.

No. 264.] BRITISH EMBASSY,
Washington, August 12, 1914.

SIR: With reference to my notes Nos. 252 and 259 of August 4 and August 9, respectively, stating and explaining the position taken up by His Majesty's Government in regard to the question of armed merchantmen, I have the honor to state that I have now been informed by Sir Edward Grey that exactly similar instructions were at the same time issued by him to His Majesty's representatives in practically all neutral countries to address the same communications to the respective Governments to which they were accredited.

I have, etc.,

COLVILLE BARCLAY.

—

File No. 763.72111/85.

THE SECRETARY OF STATE TO THE BRITISH CHARGÉ D'AFFAIRES.

DEPARTMENT OF STATE,
Washington, August 19, 1914.

SIR: I have the honor to acknowledge the receipt of your communication No. 252 of the 4th inst., which was made to this Government in pursuance of instructions from His Majesty's principal secretary of state for foreign affairs, with respect to the arming of merchant vessels in neutral waters.

The communication states the principles of neutrality, as contained in the treaty signed at Washington on May 8, 1871, by representatives of the United States and Great Britain, and reproduced, as you say, almost textually in Article VIII of The Hague convention, signed October 18, 1907, concerning the rights and duties of neutral powers in case of maritime warfare, the principles of which have been, as you state, agreed to by practically every maritime power.

The communication next considers the question of conversion of enemy merchantmen on the high seas, a policy which your Government opposes. It is then stated that Germany favors the policy of conversion; that it will probably attempt to use the ports of the United States to equip and dispatch merchantmen for conversion from such ports; and that most of the preliminary arrangements leading to conversion will have to be made within neutral ports before the vessels proceed to the high seas to complete their transformation into vessels of war.

The purpose of the communication is apparently to lay down the principles of law which your Government believe should be applied by the United States in fulfilling its neutral obligations, especially in the matter of conversion of merchant vessels into war vessels, and, assuming these principles to be correct, to tax this Government with damages to British trade or shipping, or injury to British interests generally, if these principles, the correctness of which you assume, are not applied to German merchant vessels "equipped at, or departing from, United States ports."

In acknowledging this communication, it does not seem appropriate to enter into any discussion as to what may or what may not be the policy of Germany in the matter of converting its merchant ships, which may be within the jurisdiction of the United States, into ships of war after they have left American ports and have reached the high seas. The assertion of the right so to convert merchant ships upon the high seas, made by Germany at the second Hague conference and maintained at the London naval conference, does not of itself indicate an intention on the part of the German Government to exercise this right, and this department does not feel justified in its correspondence with foreign Governments to assume, in the absence of specific information, an intention on the part of Germany so to do. The department will, however, carefully examine the facts and circumstances of any particular case when it is called to its attention.

The question of the place where the belligerent right of conversion may be exercised, difficult in itself, is complicated by the fact that there has been a difference of opinion among the maritime states parties to the present war, and that at the conferences, to which reference has been made, the British delegation stated that there was no rule of international law on the question. Germany and Austria-Hungary insisted at the conferences upon the right to convert merchant vessels upon the high seas. France and Russia, allies of Great Britain in the present war, likewise insisted upon the right so to convert. Great Britain and Belgium intimately associated with France and Russia in the prosecution of hostilities against Germany and Austria-Hungary, opposed the right of conversion on the high seas at the Second Hague Conference, where both these nations were represented; and at the London Naval Conference, to which Belgium was not invited and in which it did not participate, Great Britain maintained its previous attitude. It is thus seen that the right to convert merchant vessels upon the high seas was asserted in international conferences by four of the maritime countries now at war and that two of the maritime nations now at war opposed this contention. It is further seen that the maritime nations at war with Germany and Austria-Hungary are evenly divided on this question.

At the Second Hague Conference, the British delegation, opposing conversion on the high seas, stated that there was no rule of international law on the question; that in its carefully prepared memorandum presented to the powers invited to the London Naval Conference, the British Government held that "no general practice of nations has prevailed in the past on this point from which any principles can be deduced and formulated as the established rules of international law. So far as can be ascertained there are no precedents on the subject."

In the official report of the conference, drafted by Mr. Renault, it is stated that agreement on conversion upon the high seas was impossible; and, in the report of the British delegates to their Government, it is said:

"We were met with a refusal to make any concessions or to abate one jot from the claim to the absolutely unfettered exercise of the right, which its advocates vindicate as a rule forming part of the existing law of nations. In these circumstances we felt that we had no option but to decline to admit the right, and the result is that the question remains an open one."

It is obvious that the subject of conversion must be carefully examined and considered, and in view of these circumstances it is deemed by the Department of State inexpedient to declare a policy as to what measures it will take in a contingency which has not yet arisen, and that it may well content itself, in so far as this matter is concerned, with an acknowledgment of your note.

In the course of your communication it is stated as recognized "that a neutral Government is bound to use due diligence to prohibit its sub-

jects or citizens from the building or fitting out to the order of belligerents vessels intended for warlike purposes, and also to prevent the departure of such vessels from its jurisdiction." It is asserted in this connection that "the starting point for the universal recognition of this principle was the three rules formulated in Article VI of the treaty between Great Britain and the United States of America for the amicable settlement of all causes of difference between the two countries, signed at Washington on May 8, 1871." After quoting the three rules of Washington the note thus continues:

"The above rules may be said to have acquired the force of generally recognized rules of international law, and the first of them is reproduced almost textually in Article VIII of The Hague Convention No. 13 of 1907 concerning the rights and duties of neutral powers in case of maritime warfare, the principles of which have been agreed to by practically every maritime State."

As the communication apparently lays great stress on the expression "due diligence," contained in the treaty of Washington, it is believed material to the present occasion to quote the following definition of it contained in the Geneva award of 1872:

"The 'due diligence' referred to in the first and third of the said rules ought to be exercised by neutral Governments in exact proportion to the risks to which either of the belligerents may be exposed from a failure to fulfill the obligations of neutrality on their part."

The expression "due diligence" was contained in the draft submitted by the British delegation to the Second Hague Conference, upon which Article VIII was based. Article VIII as finally adopted is as follows:

"ARTICLE VIII.

"A neutral Government is bound to employ the means at its disposal to prevent the fitting out or arming of any vessel within its jurisdiction which it has reason to believe is intended to cruise, or engage in hostile operations against a power with which that Government is at peace. It is also bound to display the same vigilance to prevent the departure from its jurisdiction of any vessel intended to cruise or engage in hostile operations, which had been adapted entirely or partly within the said jurisdiction for use in war."

As the expression "due diligence" was considered obscure, it was rejected, as the learned reporter of the convention, Mr. Louis Renault, says in the elaborate report which accompanies the convention, and which is, in accordance with the practice of international conferences, to be considered as the official and authoritative interpretation of the convention which it explains, justifies, and interprets. "The expression of due diligence," he says, "which has become celebrated by its obscurity since its solemn interpretation, was rejected. The convention merely requires in the first instance (On se contente de dire d'abord) that the neutral is bound to employ the means at its disposal * * * then, to display the same vigilance."

It is to be presumed that Article VIII which "reproduced almost textually" the first rule of the Treaty of Washington, is to be interpreted in the sense in which Mr. Renault's report shows it to have been adopted, especially as Great Britain and the United States have ratified the convention without any objection or reservation as to Article VIII thereof.

It seems obvious therefore that by neither the terms nor the interpretation of the provisions of the treaties on this point is the United States bound to assume the attitude of an insurer. Consequently the United States disclaims as a correct statement of its responsibility the assertion in your note that "His Majesty's Government will accordingly hold the United States Government responsible for any damages to British trade or shipping, or injury to British interests generally, which may be caused by such vessels having been equipped at, or departing from, United States ports."

The United States has always looked upon the three rules of Washington as declaratory of international law, and as the necessary and natural consequences of the doctrine of neutrality, proclaimed and enforced by the United States since the wars of the French Revolution, to which Great Britain was a party. The three rules can, in the opinion of this Government, only be considered as the starting point of the doctrine of that degree of diligence which a neutral should observe in the sense that its recognition by Great Britain in an important international controversy called marked attention to an existing doctrine, and furnished an incentive to its incorporation and definition in The Hague Convention concerning the rights and duties of neutral powers in case of maritime warfare.

The United States, since the earliest days of its existence, has been as solicitous of its neutral duties as of its neutral rights, and without further consideration of your communication at this time I request you to state to your Government that there is no reason to anticipate that the United States will be less mindful of its duties or of its rights as a neutral in the present case than it has been in the past.

I have, etc.,

W. J. BRYAN.

—

File No. 763.72111/87.

THE SECRETARY OF STATE TO THE BRITISH CHARGÉ.

DEPARTMENT OF STATE,
Washington, August 20, 1914.

SIR: I have the honor to acknowledge the receipt of your communication No. 259 of the 9th instant, made to the Department of State under instructions from Sir Edward Grey, in regard to the question of armed merchantmen, informing this Government that a certain number of the British merchant vessels are armed as a precautionary measure for the purpose of defense, and maintaining that such merchant vessels can not be considered as vessels of war or subjected to the treatment properly accorded to vessels of the latter category in neutral ports.

In the last paragraph of this communication you call attention to the right claimed by the German Government, in accordance with its rules, to convert its merchant vessels upon the high seas into vessels of war, and the communication states the contention of the British Government that the neutral Government concerned is taxed with responsibility if it does not intern such vessels, in the absence of binding assurances that they will not be converted into men of war on the high seas.

The Department of State acknowledges without comment the statement of British policy in such matters and also the British understanding of Germany's intentions and policy, but as to the responsibility of the United States in the premises, you are referred to department's note of the 19th instant replying to your note No. 252 of the 4th instant.

I have, etc.

For the Secretary of State:

ROBERT LANSING.

File No. 763.72111/88.

THE BRITISH AMBASSADOR TO THE SECRETARY OF STATE.

No. 289.]

BRITISH EMBASSY,
Washington, August 25, 1914.

SIR: With reference to Mr. Barclay's notes Nos. 252 and 259 of the 4th and 9th of August, respectively, fully explaining the position taken up by His Majesty's Government in regard to the question of armed merchantmen, I have the honor, in view of the fact that a number of British armed merchantmen will now be visiting United States ports, to reiterate that the arming of British merchantmen is solely a precautionary measure adopted for the purpose of defense against attack from hostile craft.

I have at the same time been instructed by His Majesty's principal secretary of state for foreign affairs to give the United States Government the fullest assurances that British merchant vessels will never be used for purposes of attack, that they are merely peaceful traders armed only for defense, that they will never fire unless first fired upon, and that they will never under any circumstances attack any vessel.

I have, etc.

CECIL SPRING-RICE.

THE SECRETARY OF STATE TO THE BRITISH AMBASSADOR.

DEPARTMENT OF STATE,
Washington, August 29, 1914.

EXCELLENCY: I have the honor to acknowledge the receipt of your note of the 25th instant in which, referring to previous correspondence, you state that, in view of the fact that a number of British armed merchantmen will now be visiting United States ports, you desire to reiterate that the arming of British merchantmen is solely a precautionary measure adopted for the purpose of defense against attack from hostile craft. You add that you have been instructed by His Majesty's principal secretary of state for foreign affairs to give the Government of the United States the fullest assurances that British merchant vessels will never be used for purposes of attack; that they are merely peaceful traders armed only for defense; that they will never fire unless first fired upon, and that they will never under any circumstances attack any vessel.

I have, etc.,

W. J. BRYAN.

File No. 763.72111/144.

THE BRITISH AMBASSADOR TO THE SECRETARY OF STATE.

No. 302.]

BRITISH EMBASSY,
Washington, September 4, 1914.

SIR: I have the honor to inform you that at the request of your department I drew the attention of my Government to the fact that two British merchant vessels—the *Adriatic* and the *Merrion*—were at present in United States ports, and that they were carrying guns—the former four and the latter six. I added that the fact of these vessels carrying guns was likely to lead to the raising of difficult questions as to the enforcement by the United States Government of the neutrality of American ports, although an assurance had been given that these guns would only be used for defensive purposes and in case the merchant vessels in question were attacked by an enemy ship when on a commercial voyage.

I have now received a reply from Sir Edward Grey, in which he informs me that His Majesty's Government hold the view that it is not in accordance with neutrality and international law to detain in neutral ports merchant vessels armed with purely defensive armaments. But in view of the fact that the United States Government is detaining armed merchant vessels prepared for offensive warfare, and in order to avoid the difficult questions of the character and degree of armament which would justify detention, His Majesty's Government have made arrangements for landing the guns of the *Merrion*, the *Adriatic* having already sailed before the orders reached her. In the case of the latter ship, the passenger list and cargo had proved that she was proceeding to sea on ordinary commercial business. These and other papers relative to the case will be duly communicated to your department.

This action has been taken without prejudice to the general principle which His Majesty's Government have enunciated and to which they adhere.

It is presumed that no objection will be raised by your Government to the guns being shipped subsequently to England as cargo in some vessel without mountings or ammunition.

I have, etc.,

CECIL SPRING-RICE.

MEMORANDUM FROM THE BRITISH EMBASSY.

BRITISH EMBASSY,
Washington, September 7, 1914.

The British ambassador presents his compliments to the Secretary of State of the United States and, with reference to his note No. 302 of September 4, has the honor to state that he is informed by the British consul general that the steamship *Adriatic*, which sailed from New York on September 3 with four guns mounted and 200 rounds of ammunition, took 28 first-class passengers, 43 second, and 89 third. She also took 637 bags of mail and a general cargo of provisions and manufactured goods. She had no war material on board and no army reservists.

These data bear out the assurances that the *Adriatic* is bound on a peaceful commercial voyage and that her armament is destined solely for defensive purposes.

File No. 763.72111/410.

MEMORANDUM FROM THE BRITISH EMBASSY.

BRITISH EMBASSY,
Washington, September 9, 1914.

The German Government have openly entered upon the policy of arming merchant ships as commerce destroyers and even claim the right to carry out the process of arming and equipping such merchant ships in neutral harbors or on the high seas. It is in consequence of this that the British Admiralty have been compelled, in accordance with

the practice followed in the great wars of history, to arm a certain number of British merchant ships for self-defense only.

The practice of arming ships in self-defense is very old and has been ordered by Royal proclamation in England from early in the seventeenth century. During the Napoleonic wars the right to arm in self-defense was recognized by British and United States prize courts in the cases of the *Catherine Elizabeth* (British) and the *Nereide* (United States). The right of a merchant ship of a belligerent to carry arms and resist capture is clearly and definitely laid down in modern times. The right of resistance of merchant vessels is recognized by the United States Naval War Code, by the Italian Code for Mercantile Marine, and by the Russian Prize Regulations. Writers of authority in many European countries also recognize the right. To mention a German authority, it may be stated that the late Dr. Perels, at one time legal adviser to the German Admiralty, quotes with approval article 10 of the United States Naval War Code, which states "the prisoners of merchant vessels of an enemy who in self-defense and in protection of the vessel placed in their charge resist an attack, are entitled to the status of prisoners of war." The Institute of International Law at its meeting in 1913 prepared and adopted a manual of the laws of naval warfare, article 10 of which expressly declared that private ships are allowed to employ force to defend themselves against the attack of an enemy ship.

A merchant vessel armed purely for self-defense is therefore entitled under international law to enjoy the status of a peaceful trading ship in neutral ports and His Majesty's Government do not ask for better treatment for British merchant ships in this respect than might be accorded to those of other powers. They consider that only those merchant ships which are intended for use as cruisers should be treated as ships of war and that the question whether a particular ship carrying an armament is intended for offensive or defensive action must be decided by the simple criterion whether she is engaged in ordinary commerce and embarking cargo and passengers in the ordinary way. If so, there is no rule in international law that would justify such vessel even if armed being treated otherwise than as a peaceful trader.

—

File No. 763.72111/411.

MEMORANDUM FROM THE BRITISH EMBASSY.

BRITISH EMBASSY,
Washington, September 9, 1914.

In a memorandum of to-day's date the British ambassador has set forth the grounds upon which His Majesty's Government hold that British merchant vessels which are armed for defensive purposes only are entitled to be treated as peaceful trading vessels.

In urging this view upon the consideration of the United States Government the British ambassador is instructed to state that it is believed that German merchant vessels with offensive armament have escaped from American ports, especially ports in South America, to prey upon British commerce in spite of all the precautions taken. German cruisers in the Atlantic continue, by one means or another, to obtain ample supplies of coal shipped to them from neutral ports, and if the United States Government take the view that British merchant vessels which are bona fide engaged in commerce and carry guns at the stern only are not permitted purely defensive armament, unavoidable injury may ensue to British interests and indirectly also to United States trade which will be deplorable.

THE ACTING SECRETARY OF STATE TO THE GERMAN AMBASSADOR.

(Same to the British, French, and Japanese ambassadors in Washington, and the Belgian minister.)

DEPARTMENT OF STATE,
Washington, September 19, 1914.

DEAR MR. AMBASSADOR: I am inclosing for your information two memoranda which the department has issued to-day and which define the general rules which this Government will follow in dealing with cases involving the status of armed merchant vessels visiting American ports, and with cases of merchant vessels suspected of carrying supplies to belligerent warships from American ports.

I am, etc.,

ROBERT LANSING.

[Inclosure 1.]

THE STATUS OF ARMED MERCHANT VESSELS.

A. A merchant vessel of belligerent nationality may carry an armament and ammunition for the sole purpose of defense without acquiring the character of a ship of war.

B. The presence of an armament and ammunition on board a merchant vessel creates a presumption that the armament is for offensive purposes, but the owners or agents may overcome this presumption by evidence showing that the vessel carries armament solely for defense.

C. Evidence necessary to establish the fact that the armament is solely for defense and will not be used offensively, whether the armament be mounted or stowed below, must be presented in each case independently at an official investigation. The result of the investigation must show conclusively that the armament is not intended for, and will not be used in, offensive operations.

Indications that the armament will not be used offensively are:

1. That the caliber of the guns carried does not exceed 6 inches.
2. That the guns and small arms carried are few in number.
3. That no guns are mounted on the forward part of the vessel.
4. That the quantity of ammunition carried is small.
5. That the vessel is manned by its usual crew, and the officers are the same as those on board before war was declared.
6. That the vessel intends to and actually does clear for a port lying in its usual trade route, or a port indicating its purpose to continue in the same trade in which it was engaged before war was declared.
7. That the vessel takes on board fuel and supplies sufficient only to carry it to its port of destination, or the same quantity substantially which it has been accustomed to take for a voyage before war was declared.
8. That the cargo of the vessel consists of articles of commerce unsuited for the use of a ship of war in operations against an enemy.
9. That the vessel carries passengers who are as a whole unfitted to enter the military or naval service of the belligerent whose flag the vessel flies, or of any of its allies, and particularly if the passenger list includes women and children.
10. That the speed of the ship is slow.

D. Port authorities, on the arrival in a port of the United States of an armed vessel of belligerent nationality, claiming to be a merchant vessel, should immediately investigate and report to Washington on the foregoing indications as to the intended use of the armament, in order that it may be determined whether the evidence is sufficient to remove the presumption that the vessel is, and should be treated as, a ship of war. Clearance will not be granted until authorized from Washington, and the master will be so informed upon arrival.

E. The conversion of a merchant vessel into a ship of war is a question of fact which is to be established by direct or circumstantial evidence of intention to use the vessel as a ship of war.

DEPARTMENT OF STATE,
September 19, 1914.

[Inclosure 2.]

MERCHANT VESSELS SUSPECTED OF CARRYING SUPPLIES TO BELLIGERENT VESSELS.

1. A base of operations for belligerent warships is presumed when fuel or other supplies are furnished at an American port to such warships more than once within three months since the war began, or during the period of the war, either directly or by means of naval tenders of the belligerent or by means of merchant vessels of belligerent or neutral nationality acting as tenders.

2. A common rumor or suspicion that a merchant vessel laden with fuel or other naval supplies intends to deliver its cargo to a belligerent warship on the high seas, when unsupported by direct or circumstantial evidence, imposes no duty on a neutral government to detain such merchant vessel even for the purpose of investigating the rumor or suspicion, unless it is known that the vessel has been previously engaged in furnishing supplies to a belligerent warship.

3. Circumstantial evidence supporting a rumor or suspicion that a merchant vessel intends to furnish a belligerent warship with fuel or other supplies on the high seas is sufficient to warrant detention of the vessel until its intention can be investigated in the following cases:

(a) When a belligerent warship is known to be off the port at which the merchant vessel is taking on cargo suited for naval supplies, or when there is a strong presumption that the warship is off the port.

(b) When the merchant vessel is of the nationality of the belligerent whose warship is known to be off the coast.

(c) When a merchant vessel which has on a previous voyage between ports of the United States and ports of other neutral States failed to have on board at the port of arrival a cargo consisting of naval supplies shipped at the port of departure seeks to take on board a similar cargo.

(d) When coal or other supplies are purchased by an agent of a belligerent Government and shipped on board a merchant vessel which does not clear for a port of the belligerent but for a neighboring neutral port.

(e) When an agent of a belligerent is taken on board a merchant vessel having a cargo of fuel or other supplies and clearing for a neighboring neutral port.

4. The fact that a merchant vessel, which is laden with fuel or other naval supplies, seeks clearance under strong suspicion that it is the intention to furnish such fuel or supplies to a belligerent warship is not sufficient ground to warrant its detention, if the case is isolated and neither the vessel nor the warship for which the supplies are presumably intended has previously taken on board similar supplies since the war began or within three months during the period of the war.

5. The essential idea of neutral territory becoming the base for naval operations by a belligerent is repeated, departure from such territory by a naval tender of the belligerent or by a merchant vessel in belligerent service which is laden with fuel or other naval supplies.

6. A merchant vessel, laden with naval supplies, clearing from a port of the United States for the port of another neutral nation, which arrives at its destination and there discharges its cargo should not be detained if, on a second voyage, it takes on board another cargo of similar nature.

In such a case the port of the other neutral nation may be a base for the naval operations of a belligerent. If so, and even if the fact is notorious, this Government is under no obligation to prevent the shipment of naval supplies to that port. Commerce in munitions of war between neutral nations can not, as a rule, be a basis for a claim of unneutral conduct, even though there is a strong presumption or actual knowledge that the neutral State in whose port the supplies are discharged is permitting its territory to be used as a base of supply for belligerent warships. The duty of preventing an unneutral act rests entirely upon the neutral State whose territory is being used as such a base.

In fact this principle goes further in that, if the supplies were shipped directly to an established naval base in the territory or under the control of a belligerent, this Government would not be obligated by its neutral duty to limit such shipments or detain or otherwise interfere with the merchant vessels engaged in that trade. A neutral can only be charged with unneutral conduct when the supplies furnished to a belligerent warship or furnished directly to it in a port of the neutral or through naval tenders or merchant vessels acting as tenders departing from such port.

7. The foregoing propositions do not apply to furnishing munitions of war included in absolute contraband, since in no event can a belligerent warship take on board such munitions in neutral waters, nor should it be permitted to do so indirectly by means of naval tenders or merchant vessels acting as such tenders.

DEPARTMENT OF STATE,
September 19, 1914.

File No. 763.72111/156.

THE ACTING SECRETARY OF STATE TO THE BRITISH AMBASSADOR.

No. 590.] DEPARTMENT OF STATE,
Washington, September 26, 1914.

EXCELLENCY: I have the honor to acknowledge the receipt of your note of the 4th instant, in which, with reference to the presence in American ports of the British armed merchant vessels *Adriatic* and *Merion*, you advise the department of the receipt of a dispatch from Sir Edward Grey in which he states that His Majesty's Government holds the view that it is not in accordance with neutrality and international law to detain in neutral ports merchant vessels armed with purely defensive armaments.

In reply I have the honor to state that this Government has had the matter of the status of armed merchant vessels under consideration, and that it has already made a public announcement thereon.

In this relation I have also the honor to acknowledge the receipt of your embassy's memorandum of the 7th instant, announcing the departure of the *Adriatic* from New York, and pointing out that, as she had no war material on board and carried no army reservists, these data bear out the assurances that the *Adriatic* was bound on a peaceful commercial voyage and that her armament was destined solely for defensive purposes.

I have, etc.,

ROBERT LANSING.

File No. 763.72111/227.

THE SECRETARY OF STATE TO AMBASSADOR GERARD.

No. 143.] DEPARTMENT OF STATE,
Washington, September 29, 1914.

SIR: I transmit herewith, for the information of the German Government, copies of two memoranda issued by this department which define the general rules which the Government of the United States will follow in dealing with cases involving the status of armed merchant vessels visiting American ports, and with cases of merchant vessels suspected of carrying supplies to belligerent warships from American ports.

Copies of these memoranda were also sent to the German ambassador here, and it is at his request that the copies herewith are sent for communication to his Government.

I am, etc.,

For the Secretary of State:

ROBERT LANSING.

—

File No. 763.72111/473.

AMBASSADOR GERARD TO THE SECRETARY OF STATE.

[Telegram—Paraphrase.]

AMERICAN EMBASSY.
Berlin, October 15, 1914—7 p. m.

Mr. Gerard transmits the following memorandum, which he says he has received from the German foreign office:

"An official notice appearing in the Westminster Gazette of September 21, 1914, states that the Department of State at Washington has ruled that ships of belligerent nations when equipped with ammunition and armament shall be treated, nevertheless, while in American ports, as merchant ships, provided the armament serves for defensive purposes only. This ruling wholly fails to comply with the principles of neutrality. The equipment of British merchant vessels with artillery is for the purpose of making armed resistance against German cruisers. Resistance of this sort is contrary to international law, because in a military sense a merchant vessel is not permitted to defend itself against a war vessel, an act of resistance giving the warship * * * [omission] with crew and passengers. It is a question whether or not ships thus armed should be admitted into ports of a neutral country at all. Such ships, in any event, should not receive any better treatment in neutral ports than a regular warship, and should be subject at least to the rules issued by neutral nations restricting the stay of a warship. If the Government of the United States considers that it fulfills its duty as a neutral nation by confining the admission of armed merchant ships to such ships as are equipped for defensive purposes only, it is pointed out that so far as determining the warlike character of a ship is concerned, the distinction between the defensive and offensive is irrelevant. The destination of a ship for use of any kind in war is conclusive, and restrictions as to the extent of armament affords no guaranty that ships armed for defensive purposes only will not be used for offensive purposes under certain circumstances."

—

File No. 763.72111/473.

THE ACTING SECRETARY OF STATE TO AMBASSADOR GERARD.

[Telegram.]

DEPARTMENT OF STATE,
Washington, November 7, 1914.

Your 515, October 15. The Government of the United States is obliged to dissent from the views of the German Government as expressed in your telegram in regard to the treatment to be accorded armed merchant vessels of belligerent nationality in neutral ports. The practice of a majority of nations and the concensus of opinion by the leading authorities on international law, including many German writers, support the proposition that merchant vessels may arm for defense without losing their private character and that they may employ such armament against hostile attack without contravening the principles of international law.

The purpose of an armament on a merchant vessel is to be determined by various circumstances, among which are the number and position of the guns on the vessel, the quantity of ammunition and fuel, the number and sex of the passengers, the nature of the cargo, etc. Tested by evidence of this character the question as to whether an armament on a merchant vessel is intended solely for defensive purposes may be readily answered and the neutral government should regulate its treatment of the vessel in accordance with the intended use of the armament.

This Government considers that in permitting a private vessel having a general cargo, a customary amount of fuel, an average crew, and passengers of both sexes on board, and carrying a small armament and a small amount of ammunition, to enjoy the hospitality of an American port as a merchant vessel, it is in no way violating its duty as a neutral. Nevertheless it is not unmindful of the fact that the circumstances of a particular case may be such as to cause embarrassment and possible controversy as to the character of an armed private vessel visiting its ports. Recognizing, therefore, the desirability of avoiding a ground of complaint this Government, as soon as a case arose, while frankly admitting the right of a merchant vessel to carry a defensive armament, expressed its disapprobation of a practice which compelled it to pass upon a vessel's intended use, which opinion if proven subsequently to be erroneous might constitute a ground for a charge of unneutral conduct.

As a result of these representations no merchant vessels with armaments have visited the ports of the United States since the 10th of September. In fact, from the beginning of the European war but two armed private vessels have entered or cleared from ports of this country, and as to these vessels their character as merchant vessels was conclusively established.

Please bring the foregoing to the attention of the German Government, and in doing so express the hope that they will also prevent their merchant vessels from entering the ports of the United States carrying armaments even for defensive purposes though they may possess the right to do so by the rules of international law.

LANSING.

In August of last year, 1916, the status of belligerent submarines in American waters was announced.

File No. 763.72111/3958.

MEMORANDUM FROM THE FRENCH EMBASSY.

(Identic memoranda were received from the embassies of Great Britain, Russia, and Japan, and on Sept. 2, 1916, from the Italian Embassy, and on Sept. 11, 1916, from the Portuguese Legation.)

[Translation.]

FRENCH EMBASSY,
Washington, August 21, 1916.

MEMORANDUM.

In the presence of the development of submarine navigation, under existing circumstances and by reason of what may unfortunately be expected from enemy submarines, the allied Governments deem it necessary, in order to protect their belligerent rights and the freedom of commercial navigation, as well as to remove chances of conflict, to exhort the neutral Governments, if they have not already done so, to take efficacious measures tending to prevent belligerent submarines, regardless of their use, to avail themselves of neutral waters, roadsteads, and harbors.

In the case of submarines the application of the principles of international law offers features that are as peculiar as they are novel, by reason, on the one hand, of the facility possessed by such craft to navigate and sojourn in the seas while submerged and thus escape any supervision or surveillance, and, on the other hand, of the impossibility to identify them and determine their national character, whether neutral or belligerent, combatant or innocent, and to put out of consideration the power to do injury that is inherent in their very nature.

It may be said, lastly, that any submarine war vessel far away from its base, having at its disposal a place where it can rest and replenish its supplies, is afforded, by mere rest obtained, so many additional facilities that the advantages it derives therefrom turn that place into a veritable basis of naval operations.

In view of the present condition of things the allied Governments hold that—

Submarine vessels must be excluded from the benefit of the rules heretofore accepted in international law regarding the admission and sojourn of war and merchant vessels in the neutral waters, roadsteads, and harbors; any submarine of the belligerents that once enters a neutral harbor must be held there.

The allied Governments take this opportunity to warn the neutral powers of the great danger to neutral submarines attending the navigation of waters visited by the submarines of belligerents.

—

File No. 763.72111/3958.

MEMORANDUM TO THE FRENCH EMBASSY.

(Same to the embassies of Great Britain, Russia, and Japan, and, mutatis mutandis, to the Italian Embassy, Sept. 8, 1916, and to the Portuguese Legation, Sept. 13, 1916.)

DEPARTMENT OF STATE,
Washington, August 31, 1916.

MEMORANDUM.

The Government of the United States has received the identic memoranda of the Governments of France, Great Britain, Russia, and Japan in which neutral Governments are exhorted "to take efficacious measures tending to prevent belligerent submarines, regardless of their use, to avail themselves of neutral waters, roadsteads, and harbors." These Governments point out the facility possessed by such craft to avoid supervision or surveillance or determination of their national character and their power "to do injury that is inherent in their very nature," as well as the "additional facilities" afforded by having at their disposal places where they can rest and replenish their supplies. Apparently on these grounds the allied Governments hold that "submarine vessels must be excluded from the benefit of the rules heretofore accepted under international law regarding the admission and sojourn of war and merchant vessels in neutral waters, roadsteads, or harbors; any submarine of a belligerent that once enters a neutral harbor must be held there," and therefore the allied Governments "warn neutral powers of the great danger to neutral submarines attending the navigation of waters visited by the submarines of belligerents."

In reply the Government of the United States must express its surprise that there appears to be an endeavor of the allied powers to determine the rule of action governing what they regard as a "novel situation" in respect to the use of submarines in time of war and to enforce acceptance of that rule, at least in part, by warning neutral powers of the great danger to their submarines in waters that may be visited by belligerent submarines. In the opinion of the Government of the United States the allied powers have not set forth any circumstances, nor is the Government of the United States at present aware of any circumstances, concerning the use of war or merchant submarines which would render the existing rules of international law inapplicable to them. In view of this fact and of the notice and warning of the allied powers announced in their memoranda under acknowledgment it is incumbent upon the Government of the United States to notify the Governments of France, Great Britain, Russia, and Japan that, so far as the treatment of either war or merchant submarines in American waters is concerned, the Government of the United States reserves its liberty of action in all respects and will treat such vessels as, in its opinion, becomes the action of a power which may be said to have taken the first steps toward establishing the principles of neutrality and which for over a century has maintained those principles in the traditional spirit and with the high sense of impartiality in which they were conceived.

In order, however, that there should be no misunderstanding as to the attitude of the United States, the Government of the United States announces to the allied powers that it holds it to be the duty of belligerent powers to distinguish between submarines of neutral and belligerent nationality, and that responsibility for any conflict that may arise between belligerent warships and neutral submarines on account of the neglect of a belligerent to so distinguish between these classes of submarines must rest entirely upon the negligent power.

On January 18, 1916, our Government addressed its famous note to all belligerents on the issue of defensively armed merchant vessels. It is as follows:

It is a matter of deepest interest to my Government to bring to an end, if possible, the dangers of life which attend the use of submarines

as at present employed in destroying enemy commerce on the high seas, since on any merchant vessel of belligerent nationality there may be citizens of the United States who have taken passage or members of the crew in the exercise of their recognized rights as neutrals. I assume your Government is equally solicitous to protect their nationals from the exceptional hazards which are presented by their passage on merchant vessels through these portions of the high seas in which undersea craft of the enemy are operating.

While I am fully alive to the appalling loss of life among noncombatants, regardless of their sex, which has resulted from the present method of destroying merchant vessels without removing the persons on board to places of safety, and while I view that practice as contrary to those humane principles which should control belligerents in the conduct of their naval operations, I do not feel that a belligerent should be deprived of the proper use of submarines in the invasion of commerce, since those instruments of war have proved their effectiveness in this practical branch of warfare on the high seas.

In order to bring submarine warfare within the general rules of international law and the principles of humanity without destroying their efficiency in the destruction of commerce, I believe that a formula may be found which, though it may require slight modification of the precedent generally followed by nations prior to the employment of the submarine, will appeal to the sense of justice and fairness of all the belligerents in the present war.

Your Government will understand that in seeking the formula or rule of this nature I approach it of necessity from the point of view of a neutral, but I believe that it will be equally efficacious in preserving the lives of noncombatants on merchant vessels of belligerent nationalities.

My comments on this subject are predicated on the following propositions:

First. A noncombatant has a right to traverse the high seas in a merchant vessel entitled to fly a belligerent flag, to rely upon the observance of the rules of international law and principles of humanity, and if the vessel is approached by the naval vessel of another belligerent the merchant vessel of enemy nationality should not be attacked without being ordered to stop.

Second. An enemy merchant vessel, when ordered to do so by a belligerent submarine, should immediately stop.

Third. Such vessel should not be attacked after being ordered to stop unless it attempts to flee or to resist. In case it ceases to flee or to resist the attack should be discontinued.

Fourth. In the event that it is impossible to place a prize crew on board of an enemy merchant vessel or to convoy her into port the vessel may be sunk, provided the crew and passengers have been removed to a place of safety.

In complying with the foregoing principles, which, in my opinion, embody the principal rule, the strict observance of which will insure the life of a noncombatant on a merchant vessel which is intercepted by a submarine, I am not unmindful of the obstacles which would be met by undersea craft as commerce destroyers.

Prior to the year 1915 belligerent operations against enemy commerce on the high seas had been conducted with cruisers carrying heavy armaments. In these conditions international law appeared to permit a merchant vessel to carry armament for defensive purposes without lessening its character as a private merchant vessel. This right seems to have been predicated on the superior defensive strength of ships of war, and the limitation of armament to have been dependent on the fact that it could not be used effectively in offensive against enemy naval vessels, while it could defend the merchantmen against the generally inferior armament of piratical ships and privateers.

The use of the submarine, however, has changed these relations. Comparison of the defensive strength of a cruiser and a submarine shows that the latter, relying for protection on its power to submerge, is almost defenseless in point of construction. Even a merchant ship carrying a small-caliber gun would be able to use it effectively against the submarine.

Moreover, pirates and sea rovers have been swept from the main trade channels of the sea and privateering has been abolished. Consequently the placing of guns on merchantmen at the present date of submarine warfare can be explained only on the ground of a purpose to render merchantmen superior in force to submarines and to prevent warning and visit and search by them. Any armament, therefore, on a merchant vessel would seem to have the character of an offensive armament.

If a submarine is required to stop and search a merchant vessel on the high seas, and in case it is found that she is of an enemy character and that conditions necessitate her destruction and the removal to a place of safety of persons on board, it would not seem just nor reasonable that the submarine should be compelled, while complying with these requirements, to expose itself to almost certain destruction by the guns on board the merchant vessel.

It would therefore appear to be a reasonable and reciprocally just arrangement if it could be agreed by the opposing belligerents that submarines should be caused to adhere strictly to the rules of international law in the matter of stopping and searching merchant vessels, determining their belligerent nationality, and removing the crews and passengers to places of safety before sinking the vessels as prizes of war, and that merchant vessels of belligerent nationality should be prohibited from carrying any armament whatsoever.

In proposing this formula as a basis of conditional declarations by the belligerent Government, I do so in the full conviction that each Government will consider primarily the humane purposes of saving the lives of innocent people rather than the insistence upon doubtful legal rights which may be denied on account of new conditions.

I would be pleased to be informed whether your Government would be willing to make such a declaration conditioned upon your enemies making a similar declaration.

I should say that my Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of the submarine warfare and the defensive weakness of undersea craft, should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent Government, and is seriously considering instructing its officials accordingly.

The contents of this note was made public on the 18th of February, 1916. Ten days before this note was made public, and just one year from the day of our "strict accountability" note, Germany announced her intention to attack armed merchantmen without warning:

BERLIN ATTITUDE TO U-BOAT WAR—TEXT OF GERMAN WARNING TO NEUTRALS AND EVIDENCE BACKING IT IS GIVEN OUT—ATTACKS ON SUBMARINES—GERMAN DETAILS OF CLASHES WITH ARMED MERCHANT SHIPS OF ALLIES—INSTRUCTIONS THEY FOUND—DOCUMENTS TAKEN FROM THE ADMIRALTY TRANSPORT "WOODFIELD" MADE PUBLIC IN WASHINGTON.

WASHINGTON, *March 17.*

Frank L. Polk, Acting Secretary of State, to-day made public the official text of the memorandum issued by the German Government on February 10, which announced to the neutral powers the purpose of Germany to treat all armed enemy merchantmen as belligerents liable to attack without warning after February 29.

At the same time the State Department made public for the first time the official copies of all the so-called "appendices" to the memorandum in the form of a dozen exhibits, embracing what are declared by the German Government to be secret instructions issued by the British Admiralty to British merchant ships armed for defense, advising them to use their guns against enemy submarines pursuing or approaching them. One appendix is a recital of instances in which merchant ships are alleged to have fired on German and Austrian submarines.

The alleged secret instructions covered by these exhibits are declared to have been found on the British steamer *Woodfield*, which was sunk by a submarine in the western Mediterranean on November 3 last and on the British steamer *Linkmoor*. These instructions differ materially from the British version of the admiralty orders to armed merchantmen, the full text of which was made public by the British Admiralty

At the outbreak of the war the German Government, acting upon the suggestion of the United States, immediately expressed its readiness to ratify the declaration of London. At that time a German prize code had already been issued, which was entirely—and without modification—based upon rules of the declaration of London. Germany thereby proved her willingness to recognize full and existing rules of international law, which insure the freedom of the sea for the legitimate trade of neutral nations not only among themselves but also with belligerent countries.

GERMANY UTILIZES NEW WEAPON.

Great Britain, on the other hand, declined to ratify the declaration of London, and after the outbreak of the war began to restrict the legitimate trade of the neutrals in order to hit Germany. The contraband provisions were systematically extended on August 5 and 20, September 21, and October 29, 1914. On November 3, 1914, the order of the British Admiralty followed, declaring the whole North Sea a war zone, in which commercial shipping would be exposed to most serious danger from mines and men-of-war. Protests from neutrals were of no avail and from that time on the freedom of neutral commerce with Germany was practically destroyed.

Under these circumstances Germany was compelled to resort, in February, 1915, to reprisals in order to fight her opponent's measures, which were absolutely contrary to international law. She chose for this purpose a new weapon, the use of which had not yet been regulated by international law, and in doing so could and did not violate any existing rules, but only took into account the peculiarity of this new weapon—the submarine boat.

NEW DANGER TO NEUTRALS.

The use of the submarine naturally necessitated a restriction of the free movement of neutrals and constituted a danger for them, which Germany intended to ward off by a special warning analogous to the warning England had given regarding the North Sea.

As both belligerents—Germany in her note of February 17 and Great Britain in those of February 18 and 20, 1915—claimed that their proceeding was only enacted in retaliation for the violation of international law by their opponents, the American Government approached both parties for the purpose of trying to reestablish international law as it had been in force before the war. Germany was asked to adapt the use of her new weapon to the rules which had been existing for the former naval weapons, and England not to interfere with the food supplies intended for the noncombatant German population, and to admit their distribution under American supervision.

GERMANY OFFERS TO COMPLY.

Germany, on March 1, 1915, declared her willingness to comply with the proposal of the American Government, while England, on the other hand, declined to do so. By the order in council of March 11, 1915, Great Britain abolished even what had remained of the freedom of neutral trade with Germany and her neutral neighbors. England's object was to starve Germany into submission by these illegal means.

Germany, after neutral citizens had lost their lives against the wish and intention, nevertheless, in the further course of the war, complied with the wishes of the American Government regarding the use of her submarines. The rights of neutrals regarding legal trading were, in fact, nowhere limited by Germany.

Then England made it impossible for submarines to conform with the old rules of international law by arming nearly all merchantmen and by ordering the use of guns on merchant vessels for attack. Photographic reproduction of those instructions have been transmitted to neutral Governments with the memorandum of the German Government of February 8, 1916. These orders are obviously in contradiction with the note delivered by the British ambassador in Washington to the American Government on August 25, 1914.

On account of the proposals made by the United States on January 23, 1916, regarding disarmament, the Imperial Government hoped that these facts would enable the neutral Governments to obtain the disarmament of the merchant ships of her opponents. The latter, however, continued with great energy to arm their merchantmen with guns.

SHIELDED BY AMERICANS.

The principle of the United States Government not to keep their citizens off belligerent merchant ships has been used by Great Britain and her allies to arm merchant ships for offensive purposes. Under these circumstances merchantmen can easily destroy submarines, and if their attack fails still consider themselves in safety by the presence of American citizens aboard.

The order to use arms on British merchantmen was supplemented by instructions to the masters of such ships to hoist false flags and to ram U boats. Reports on payments of premiums and bestowals of decorations to successful masters of merchantmen show the effects of these orders. England's allies have adopted this position.

SITUATION CONFRONTING GERMANY.

Now Germany is facing the following facts:

(a) A blockade contrary to international law (compare American note to England of Nov. 5, 1915) has for one year been keeping neutral trade from German ports and is making German exports impossible.

(b) For 18 months, through the extending of contraband provisions in violation of international law (compare American note to England of Nov. 5, 1915) the over-seas trade of neighboring neutral countries, so far as Germany is concerned, has been hampered.

(c) The interception of mails in violation of international law (compare American memorandum to England of Jan. 10, 1916) is meant to stop any intercourse of Germany with foreign countries.

ATTEMPT TO STARVE NATION.

(d) England, by systematically and increasingly oppressing neutral countries, following the principle of "might before right," has prevented neutral trade on land with Germany so as to complete the blockade of the central powers, intended to starve their civil population.

(e) Germans met by our enemies on the high seas are deprived of their liberty, no matter whether they are combatants or noncombatants.

(f) Our enemies have armed their merchant vessels for offensive purposes, theoretically making it impossible to use our U-boats according to the principles set forth in the London declaration (compare American memorandum of Feb. 8, 1916).

TRADE CUT OFF BY BRITAIN.

The English White Book of January 5, 1916, on the restriction of German trade, boasts that by British measures Germany's export trade has been stopped almost entirely, whilst her imports are subject to England's will.

The Imperial Government feels confident that the people of the United States, remembering the friendly relations that for the last hundred years have existed between the two nations, will, in spite of the difficulties put into the way by our enemies, appreciate the German viewpoint as laid down above.

The German text of instructions to her submarine captains, issued February 10, was as follows:

FOREIGN OFFICE,
Berlin, February 10, 1916.

NOTE VERBALE.

The foreign office has the honor to transmit herewith to the embassy of the United States of America three copies of a memorandum of the Imperial German Government on the treatment of armed merchantmen, with inclosures, and to request that the embassy be good enough to bring the essential contents of the memorandum to the members of its Government by telegraph, stating at the time that the order to the German naval forces mentioned in Section IV, No. 1, of the memorandum will not be carried into effect until the 29th instant, in the interest of neutrals already on board armed merchant vessels.

Memorandum of the Imperial German Government upon the treatment of armed merchantmen:

I. Even before the outbreak of the present war the British Government had given English shipping companies the opportunity to arm their merchant vessels with guns. On March 26, 1913, Winston Churchill, then first lord of the Admiralty, made the declaration in the British Parliament (Exhibit 1) that the Admiralty had called upon the shipowners to arm a number of first-class liners for protection against danger menaced in certain cases by fast auxiliary cruisers of other powers; the liners, were not, however, to assume the character of auxiliary cruisers themselves. The Government desired to place at the disposal of the shipowners the necessary guns, sufficient ammunition, and suitable personnel for the training of the gun crews.

II. The English shipowners have readily responded to the call of the Admiralty. Thus Sir Owen Phillipps, president of the Royal Mail Steam Packet Co., was able to inform the stockholders of his company in May, 1913, that the larger steamers of the company were equipped with guns; furthermore, the British Admiralty published in January, 1914, a list, according to which 29 steamers of various English lines carried guns aft. For example, the crew are not to wear uniforms in neutral ports and thus plainly belong to the British Navy. Above all, it is shown by the instructions that these armed vessels are not to await any action of maritime war on the part of the German submarines, but are to attack them forthwith. In this respect the following regulations are particularly instructive:

(a) The instructions for guidance in the use, care, and maintenance of armament in defensively armed merchant ships, Exhibits 5 and 6, provide in the section headed "Action," in paragraph 4: "It is not advisable to open fire at a range greater than 800 yards unless the enemy has already opened fire." From this it is the duty of the merchantman in principle to open fire without regard to the attitude of the submarine.

(b) The instructions regarding submarines applicable to vessels carrying a defensive armament, Exhibits 9 and 10, prescribed under No. 8: "If a submarine is obviously pursuing a ship by day and it is evident to the master that she has hostile intentions, the ship pursued should open fire in self-defense, notwithstanding the submarine may not have committed a definite hostile act, such as firing a gun or torpedo." From this also the mere appearance of a submarine in the wake of a merchantman affords sufficient occasion for an armed attack.

In all these orders, which do not apply merely to the zone of maritime war around England, but are unrestricted as regards their validity, see Exhibit 12 for the Mediterranean, the greatest emphasis is laid on secrecy, plainly in order that the action of merchantmen, in absolute contradiction of international law and the British assurances, Exhibit 2, might remain concealed from the enemy as well as the neutrals.

III. It is thus made plain that the armed English merchantmen have official instructions to attack the German submarines treacherously wherever they come near them; that is to say, orders to conduct relentless warfare against them. Since England's rules of maritime war are adopted by her allies without question, the proof must be taken as demonstrated in request of the armed merchantmen of the other enemy countries also.

IV. In the circumstance set forth above enemy merchantmen armed with guns no longer have any right to be considered as peaceable vessels of commerce. Therefore the German naval forces will receive orders within a short period, paying consideration to the interests of the neutrals, to treat such vessels as belligerents.

The German Government brings this status of affairs to the knowledge of the neutral powers in order that they may warn their nationals against continuing to intrust their persons or property to armed merchantmen of the powers at war with the German Empire.

APPENDICES TO THE NOTE.

The so-called appendices to the note verbale, above quoted, embrace 12 exhibits, the most interesting of which are what purport to be the secret and confidential orders issued by the British Admiralty to British merchantmen. Germany's note points out that on March 26, 1913, Winston Churchill, then first lord of the British Admiralty, called on British shipowners to arm a number of first-class liners for defense. Churchill's statement is the first exhibit submitted by the German Government, as follows:

EXHIBIT 1.

Declaration of the first lord of the admiralty, Winston Churchill, at the session of the British lower house of March 26, 1913. Parliamentary debates, official report, third session of the Thirtieth Parliament, House of Commons, 1913 (Bd., 1 S., 1775 Bis., 1776):

"I turn to one aspect of trade protection which requires special reference. It was made clear at the Second Hague Conference and the London conference that certain of the great powers have reserved to themselves the right to convert merchant steamers into cruisers, not merely in national harbors but, if necessary, on the high seas. There is now good reason to believe that a considerable number of foreign merchant steamers may be rapidly converted into armed ships by the mounting of guns. The sea-borne trade of the world follows well-marked routes, upon nearly all of which the tonnage of the British mercantile marine largely predominates. Our food-carrying liners and vessels carrying raw material, following these trade routes, would, in certain contingencies, meet foreign vessels armed and equipped in the manner desirable. If the British ships had no armament, they would be at the mercy of any foreign liner carrying one effective gun and a few rounds of ammunition. It would be obviously absurd to meet the contingency of considerable numbers of foreign armed merchant cruisers on the high seas by building an equal number of cruisers. That would expose this country to an expenditure of money to meet a particular danger altogether disproportionate to the expense caused to any foreign power in creating that danger. Hostile cruisers, wherever they are found, will be covered and met by British ships of war, but the proper reply to an armed merchantman is another merchantman armed in her own defense.

"This is the position to which the admiralty have felt it necessary to draw the attention of leading shipowners. We have felt justified in pointing out to them the danger to life and property which would be incurred if their vessels were totally incapable of offering any defense to an attack. The shipowners have responded to the admiralty invention with cordiality, and substantial progress has been made in the direction of meeting it by preparing a defensive measure to equip a number of first-class British liners to repel the attack of armed foreign merchant cruisers.

"Although these vessels have, of course, a wholly different status from that of the regularly commissioned merchant cruisers, such as those we obtain under the Cunard agreement, the admiralty have felt that the greater part of the cost of necessary equipment should not fall upon the owners, and we have decided, therefore, to lend the necessary guns, to supply ammunition, and to provide for the training of members of the ship's company to form the gun crews. The owners on their part are paying the cost of the necessary structural conversion, which is not great. The British mercantile marine will, of course, have the protection of the Royal Navy under all possible circumstances, but it is obviously impossible to guarantee individual vessels from attack when they are scattered on their voyages all over the world. No one can pretend to view these measures without regret or without hoping that the period of retrogression all over the world, which has rendered them necessary, may be succeeded by days of broader international confidence and agreement than those through which we are now passing."

Exhibit No. 2 is the text of the note delivered August 25, 1914, by Sir Cecil Spring-Rice, British ambassador at Washington, to the State Department, in which he gave fullest assurances that British merchant vessels "will never be used for purposes of attack; that they are merely peaceful traders armed only for defense; that they will never fire unless first fired upon; and that they will never under any circumstances attack any vessel."

Exhibit No. 3 is the text of a memorandum delivered by the German Government to Ambassador Gerard on October 15, 1914, concerning the treatment of armed merchant vessels in neutral ports.

SHIPS ATTACKED.

Exhibit No. 4 of the German appendices is a list of cases in which armed enemy merchant ships are alleged to have fired on German or Austrian submarines. It follows:

"Digest of cases in which enemy merchant ships have fired on German or Austro-Hungarian submarines.

"April 11, 1915: Unknown steamer, south North Sea, near the Nordhinder Lightship; steamer without a flag. Steamer saw periscope, opened gunfire at about 3,000 meters and turned on *U* (boat). Report of shells could be heard near the boat—about 15 or 20 shots.

"April 28, 1915: Unknown steamer of medium size, North Sea, about 60 nautical miles northeast of the mouth of the Tyne. Steamer was sighted running onward; suddenly opened fire at about 3,000 meters without hoisting flag. On account of her head-on position it could not be seen whether she bore neutral marks. From the impact of the shots the guns were from 5 to 7 centimeters. *U* escaped the well-directed fire by speedily submerging.

"May 29, 1915: English steamer *Demerara*, west entrance to the English Channel, near Ouessant (Ushant Island). *U* chased the steamer and tried when 4,500 meters off to bring her to a halt by firing warning guns. Steamer turned off and returned the fire.

"June 3, 1915: Unknown steamer, west entrance to the English Channel, 50 nautical miles south of the Scilly Isles. *U* tried to bring the steamer to a halt by firing warning shots with her artillery. The steamer returned the fire with a poop gun.

"June 14, 1915: Two unknown steamers, west of the Hebrides (about 30 nautical miles off Lewis). The two steamers were running close together, at about 4,000 meters; both opened fire on *U* with small-caliber poop guns. Shots hit sideways very bad. Speedy submerging, running deep; so submarine attack hopeless.

"August 14, 1915: Large English steamer of the Royal Mail Line, Irish Sea. *U* was fired on suddenly by the steamer without provocation, from a distance of 8,000 meters. Shots fell short. No attack was attempted on the steamer.

"August 18, 1915: Unknown steamer, Bristol Channel. Tried to bring steamer to halt by gunfire, after warning. When steamer saw that U boat was waiting she suddenly opened fire with a gun from the promenade deck.

"September 10, 1915: Unknown steamer, western Mediterranean. Steamer was challenged to show her flag. She turned away without hoisting the flag and opened fire with a 10-centimeter poop gun on the U boat, which escaped the firing by speedily submerging.

"October 7, 1915: French steamship *Amiral Hametin*, middle Mediterranean. U signaled the steamer to stop. She turned away and ran on a zigzag course. The U boat tried to bring the steamer to a halt by artillery fire. When about 3,000 meters distant she returned the fire. It was some time before the steamer stopped. She was sunk later.

"November 3: English transport steamer *Woodfield*, western Mediterranean. The steamer did not stop at the warning gun. At a distance of 6,000 meters she returned the fire with a small gun. She was forced to stop by artillery fire, and her crew list showed that the steamer carried gunners and enlisted men of the navy as members of her crew.

"November 5: Unknown steamer, western Mediterranean. A large steamer was chased by U boat after being challenged in vain. The steamer returned the fire with a large gun. The chase had to be given up.

"November 6: Eastern Mediterranean, English tank steamer *Lumina*. The steamer was challenged to stop by a warning gun. She turned about, ran away, and returned the fire with a poop gun. She was compelled to stop by artillery fire and later was sunk.

"November 11: English steamship *City of Marseilles*, western Mediterranean. U boat after warning tried to stop a large freight steamer by artillery fire. The steamer turned away and returned the fire with two guns of about 10 centimeters. The U boat had to give up the chase: the steamer got away. A press telegram of January 1, 1916, from Bombay told the incident in detail. The steamer claimed she had sunk the U boat.

"November 30: Unknown steamer, middle Mediterranean. U boat after a warning gun tried to stop a large steamer by artillery fire. The steamer turned away and returned the fire with a small gun.

"December 8: Unknown steamer, eastern Mediterranean. The steamer was approached under water. She fired with a poop gun on the periscope as soon as it emerged.

"December 13: Unknown English steamer, middle Mediterranean. U boat tried to stop by artillery fire a large steamer, with poop guns, that showed no flag. The steamer hoisted the English flag and returned the fire with two guns.

"December 14: Unknown steamer, middle Mediterranean. U boat approached the steamer, which stopped at sight of the boat, and ordered her to show her flag. The steamer speeded away, keeping up a brisk fire from a poop gun.

"January 17, 1916: Unknown steamer, middle Mediterranean. U boat ordered steamer, apparently in ballast, that was sighted on a westerly course, to stop. The steamer turned about, ran away, and fired with a poop gun.

"January 17: English steamer *Melanic*, middle Mediterranean. U boat signaled a flush-decked freight steamer, with raised forecastle and cabin, of about 3,000 tons, sailing under the Dutch flag, to send a boat and have the ship's papers examined. This was done after a while. As U boat, which for safety's sake had gone under, came to the surface about 1,000 meters away from the steamer, near the ship's boat, the steamer opened fire with two guns of medium caliber and machine guns so briskly that the U boat barely saved herself by speedily submerging. Throughout the action the steamer displayed the Dutch flag. She bore the name of *Melanic*, which is found not in the Dutch by the English marine list."

BRITISH ORDERS TO MERCHANTMEN.

Exhibit No. 5 is what purports to be the text of confidential instructions to British defensively armed merchantmen regarding the use of their armament. These instructions are declared to have been found on the British steamer *Woodfield* and are given as follows:

"CONFIDENTIAL.

"Instructions for guidance in the use, care, and maintenance of armament in defensively armed merchant ships.

"GENERAL.

"1. Ratings embarked as gun's crew will sign the ship's articles at the rate of pay communicated.

"2. They are to obey the orders of the master and officers of the ship. If they think it necessary to make a complaint against any order, they are to obey the order and make their complaint in writing, asking that it may be forwarded to the proper authorities.

"3. The ratings are not required for duties unconnected with the armament, except in case of emergency, but they are to assist at all times in the welfare of the ship and look after the cleanliness of their berths.

"4. They are to keep watch and watch at sea and also when the ship is anchored in any place liable to attack by submarines.

"5. They will receive their pay through the master of the ship. They will not mess with the crew, but in one of the officers' messes, as the master may decide.

"6. Uniform is not to be worn in neutral ports.

"7. A brief report is to be rendered by the senior rating on the first of each month, countersigned by the master, and sent to the Director of Trade Division, Admiralty, Whitehall, S. W.

"DRILL AND MAINTENANCE OF GUN.

"8. The ratings embarked are entirely responsible for the efficiency in all respects of the gun and ammunition, which should be ready day and night.

"9. The senior rating is to arrange with the master to detail the necessary additional men to complete the gun's crew up to the numbers required by the drill book.

"10. One of the ratings is to act as gun layer and the other as breech worker. The remaining numbers should be told off to act as sight setter, projectile loader, and cartridge loader, etc.

"11. Arrangements are to be made with the master to detail a sufficient number of hands, over and above the gun's crew, to supply ammunition to the gun on going into action.

"12. A ready supply of 10 complete rounds, with percussion tubes in the cartridges, is to be kept at the gun day and night. Care should be taken that a supply of one percussion tube to each cartridge is kept aside for action, and this supply of tubes is never to be encroached on for practice firing.

"13. The senior rating should arrange with the master for the instruction of the ratings told off as gun's crew and ammunition supply party.

"14. A drill book is supplied for information, but it is not necessary that the gun's crew should be burdened with details, provided that they understand what is required when the gun is to be fought.

"15. Percussion firing should always be used, as it is the most certain means of discharging the gun; and, therefore—

"(a) Cartridges in ready supply only should be kept ready tubed with percussion tubes. Tubes not required for ready supply of cartridges should be retained in their sealed boxes to preserve them from damp.

"(b) Aiming practice with a percussion lanyard should be carried out daily. It is not necessary to fire a tube in this practice, but the breech worker should be exercised at the same time in cocking the striker while the breech is open and in hooking on the firing lanyard and passing it to the gun layer.

"NOTE.

"The present allowance of percussion tubes is one per cartridge. Electric firing mechanism and batteries are therefore to be kept efficient in every respect, in case the supply of percussion tubes becomes insufficient from damp or other causes.

"16. Great attention is to be paid to the ready supply of ammunition, to keep it clean and dry. If tubes and cartridges are not kept dry there is considerable danger of hanging fire. The projectiles are to be lightly oiled. In case the cartridges are suspected to have become wet, they should be laid aside until return to harbor.

"17. For the maintenance of the gun and mounting, it is to be borne in mind that 'lubrication is the secret of efficiency in gun machinery.' All oil channels should be seen clear of vaseline and filled with oil. It is to be remembered that vaseline is a preservative only; oil is a lubricant.

"Each morning and evening the bore is to be seen clear, recoil cylinders filled, striker protrusion gauged, and the gun trained and elevated to both extremes.

"The gun is to be cleaned twice a day, gear being supplied by the master.

"Brick dust is not to be used on machined surfaces.

"ACTION.

"The master is responsible for handling the ship and for opening and ceasing fire. He has been furnished with instructions which will enable him to do this to the best advantage. The duty of the gun's crew is to fire the gun under the general direction of the master, who will communicate to them so much of the instructions as he may consider necessary to enable them to fire the gun to the best advantage.

"In action the following instructions should be carried out:

"1. When in submarine waters everything should be in a state of readiness, but the gun should not be kept actually loaded.

"2. When the enemy is engaged:

"(a) The point of aim should be the center of the water line.

"(b) It is to be remembered that 'over' shots are useless. A short shot by causing a splash confuses the enemy. It may ricochet into the enemy. If the shell bursts on striking the water—as it usually does—some fragments are likely to hit the enemy. To get the best results at least half of the shots fired should fall short.

"3. The master will probably keep the submarine astern, so that little deflection will be necessary.

"4. It is not advisable to open fire at a range greater than 800 yards, unless the enemy has already opened fire, for the following reasons:

"(a) The ammunition supply is limited.

"(b) Accurate shooting under probable existing conditions can not be expected at greater range.

"5. When in action and a misfire occurs with a percussion tube the following procedure is to be adopted:

"(a) The B. M. lever is to be tapped to insure it is closed.

"(b) The striker is to be recocked.

"If the gun does not then fire the striker is to be taken out to insure that the point is not broken. If unbroken, the breech is to be opened and the cartridge is to be thrown overboard, it having been ascertained that the percussion tube has been inserted.

"The gun is then to be reloaded.

"INSTRUCTIONS FOR CARRYING OUT FIRING PRACTICE.

"1. In order to insure that the gun is maintained in an efficient condition one round is to be fired every two months.

"2. In order to prevent false alarms it is essential that the firing referred to in paragraph 1 shall take place in clear weather and out of sight of land and of other ships.

"3. If convenient, a cask or other suitable object should be dropped as a target, and the gun should be fired when the range is about 600 yards.

"4. The gun's crew and ammunition-supply party should be exercised on the day previous to the practice, and also immediately before firing.

"5. Before practice firing the following procedure is to be carried out:

"(a) Recoil cylinders and tanks are to be seen filled.

"(b) Bore is to be seen clear.

"(c) Movable objects in the way of blast from the gun are to be removed.

"(d) The striker is to be reexamined to see (1) that sheet net is screwed up and keep pin in place and intact; (2) that needle set and check nuts are screwed up; (3) that striker does not protrude with B. M. lever in open position; (4) that striker does not move forward till marks on breechblock and gun are in line; (5) that safety stop is correct and keep screw is in place.

"ADMIRALTY.

"MAY 7, 1915."

—

INSTRUCTIONS TO SHIP MASTERS.

Exhibit No. 6 gives the text of a separate set of confidential British instructions for guidance in the use of armament on defensively armed merchantmen, said to have been found on the steamer *Woodfield*, and is similar to the secret instructions given in Exhibit No. 5, except that the instructions described as Exhibit No. 6 appears to be a reprint of the instructions described as Exhibit No. 5, with several slight technical rules concerning the guns.

Exhibit No. 7 embraces brief supplementary instructions of a confidential nature, also said to have been found on the steamer *Woodfield*, as follows:

"Confidential addenda to instructions for guidance in the use, care, and maintenance of armament in defensively armed merchant ships:

"1. The master should arrange, wherever possible, that the space in the immediate vicinity of the gun is railed off, and passengers and other unauthorized persons should not be allowed near the gun.

"2. A notice to this effect should be posted up near the gun.

"3. When the ship is in harbor one of the two ratings is always to be on board to keep guard on the gun and ammunition, and the master is to use his discretion as to keeping both ratings on board, should he consider such a course to be desirable.

"4. The gun is to be kept covered at all times when not in use.

"5. Whenever the ships anchor in the vicinity of a man-of-war a request should be made to the commanding officer of the man-of-war for an armorer to inspect the gun and mounting.

"ADMIRALTY.

"MAY 27, 1915."

LEAF FROM DRILL BOOK.

Exhibit No. 8 is a facsimile of the title-page of the "Drill book for 12-pounder quick-fire guns, issued to defensively armed merchant ships, issued by the gunnery branch of the British Admiralty in May, 1915." This book is alleged to have been found on the steamer *Woodfield*.

Exhibit No. 9 is a copy of secret instructions No. 45 regarding submarines, applicable to vessels carrying a defensive armament, issued by the British Admiralty on February 25, 1915, and also found on the steamer *Woodfield*. It follows:

"CONFIDENTIAL—NO. 45.

"In no circumstances is this paper to be allowed to fall into the hands of the enemy.

"This paper is for the master's personal information. It is not to be copied, and when not actually in use is to be kept in safety in a place where it can be destroyed at a moment's notice.

"Such portions as call for immediate action may be communicated verbally to the officers concerned.

"FEBRUARY 25, 1915.

"Instructions regarding submarines applicable to vessels carrying a defensive armament:

"1. Defensively armed vessels should follow generally the instructions for ordinary merchant ships.

"2. In submarine waters guns should be kept in instant readiness.

"3. If a submarine is obviously pursuing a ship by day and it is evident to the master that she has hostile intentions, the ship pursued should open fire in self-defense, notwithstanding the submarine may not have committed a definite hostile act, such as firing a gun or torpedo.

"4. In view of the great difficulty in distinguishing a friend from an enemy at night, fire should not be opened after dark unless it is absolutely certain that the vessel fired at is hostile.

"5. Before opening fire the British colors should be hoisted.

"It is essential that fire should not be opened under neutral colors."

FURTHER RULES FOR ATTACKS.

Exhibit 10 is a copy of British secret instructions No. 291 and is similar to and repeats instructions No. 45, printed above, with the addition of the following instructions:

"CONFIDENTIAL—NO. 291.

"In no circumstances is this paper to be allowed to fall into the hands of the enemy.

"This paper is for the master's personal information. It is not to be copied, and when not actually in use is to be kept in safety in a place where it can be destroyed at a moment's notice. Such portions as call for immediate action may be communicated verbally to the officers concerned.

"APRIL, 1915.

"Instructions regarding submarines applicable to vessels carrying a defensive armament.

"6. If a defensively armed vessel is pursued by a submarine, the master has two alternatives:

"a. To open fire at long range immediately it is certain that the submarine is really in pursuit.

"b. To retain fire until the submarine has closed to a range, say 800 yards, at which fire is likely to be effective.

"In view of the very great difficulty of distinguishing between friendly and hostile submarines at long range (one British submarine has already been fired at by a merchant vessel which erroneously supposed herself to be pursued by the submarine) it is strongly recommended that course be should be adopted by all defensively armed ships.

"7. A submarine's flag is no guide to her nationality, as German submarines frequently fly British colors.

"8. Vessels carrying a defensive armament and proceeding to neutral ports must not be painted in neutral colors or wear a neutral flag.

"9. It is recommended that in neutral ports, particularly those of Spain, the armament should be concealed as far as possible. A canvas cover is recommended for this purpose."

ORDERS TO TROOP TRANSPORTS.

Exhibit No. 11 purports to be the text of secret instructions to masters of transports carrying troops, issued by the British Admiralty, May 31, 1915, and found on the steamer *Woodfield*. The document follows:

"SECRET.

"Memorandum for issue to masters of transports carrying troops.

"Use of rifle and machine-gun fire by troops on board transports against enemy submarines or torpedo crafts.

"1. In daylight a submarine will probably attack while submerged, with only her periscope showing.

"At night, in moonlight, a submarine may attack while on the surface, or with only her conning tower above water, owing to the difficulty of seeing through the periscope at night.

"2. In either case heavy rifle or machine-gun fire will make it more difficult for a submarine to make a successful shot with a torpedo. If submerged, no injury will be done to her, but a good volume of fire falling just short of the periscope will make splashes which will render it difficult for the observer to see clearly through the periscope.

"3. When a destroyer escort is accompanying a transport troops should not open fire on a submarine, as it may prevent a destroyer from ramming her, nor should their weapons be loaded, in order to avoid the possibility of an escorting vessel being fired on by mistake, especially at night.

"4. When no escort is provided machine guns should be in readiness to open fire, and a strong party of riflemen should also be on duty.

"5. Military officers should be in command both of the machine guns and riflemen to control the fire.

"6. A military officer of the watch should be in command of the troops on deck. He should not order fire to be opened on a hostile submarine or torpedo vessel without the previous assent of the master or his representative—the ship's officer of the watch.

"7. The object of those controlling the fire should be to keep the center of the pattern just short of the hostile vessel.

"8. Machine-gun tripods can be lashed to the rails or other deck fittings. If there is motion on the ship and machine guns are fitted with elevating or training gear, it is advisable to disconnect it and point the gun by hand.

"9. Field guns with recoil mountings might possibly be secured on deck in such a manner as to permit of their being fired, but their arc of training would be very restricted, and it is unlikely that gun layers, without previous training afloat, could make satisfactory practice from a ship with motion on. Their use is not, therefore, recommended.

"10. In men-of-war it has been the practice for many years to station sentries with ball cartridge on deck opposite the boats in the event of collision or other serious emergency likely to the boats being required. Their duties are to prevent anyone getting into the boats or attempting to lower the boats without orders from the captain or his representatives. This practice should be followed in transports.

"ADMIRALTY.

"31st MAY, 1915."

The last of the appendices, Exhibit No. 12, purports to be instructions to British merchant vessels in the Mediterranean, alleged to have been found on the English steamer *Linkmoor*. It follows:

"ADMIRALTY SUPERINTENDENT'S OFFICE,
"*Malta, June, 1915.*

"Instructions to British merchant vessels passing through the Mediterranean Sea.

"It is now certain that there are enemies' submarines at sea in the Mediterranean.

"In order to avoid attack you are to keep out of the track of shipping.

"You are to darken ship at night and are not to show navigation lights except at discretion to avoid collision, and all lights are to be extinguished when necessity is passed.

"You are to carry out the procedure recommended by the Admiralty in their printed instructions if a hostile submarine is sighted."

The armed merchantmen an issue in Congress:

THE LETTER FROM SENATOR STONE TO WHICH THE PRESIDENT'S IS A REPLY.

UNITED STATES SENATE,
Washington, February 24.

DEAR MR. PRESIDENT: Since Senator KERN, Mr. FLOOD, and I talked with you on Monday evening I am more troubled than I have been for many a day. I have not felt authorized to repeat our conversation, but I have attempted, in response to numerous inquiries from my colleagues, to state to them, within the confidence that they should observe, my general understanding of your attitude. I have stated my understanding of your attitude to be substantially as follows:

That while you would deeply regret the rejection by Great Britain of Mr. Lansing's proposal for the disarmament of merchant vessels of the allies, with the understanding that Germany and her allies would not fire upon a merchant ship if she hauled to when summoned, not attempting to escape, and that the German warships would only exercise the admitted right of visitation and capture, and would not destroy the captured ship except in circumstances that reasonably assured the safety of passengers and crew, you were of the opinion that if Great Britain and her allies rejected the proposal and insisted upon arming her merchant ships she would be within her right under international law.

Also that you would feel disposed to allow armed vessels to be cleared from our ports. Also that you are not favorably disposed to the idea of this Government taking any definite steps toward preventing American citizens from embarking upon armed merchant vessels. Furthermore, that you would consider it your duty if a German warship should fire upon an armed merchant vessel of the enemy upon which American citizens were passengers to hold Germany to strict account.

Numerous Members of the Senate and the House have called to discuss this subject with me. I have felt that the Members of the two Houses who are to deal with this grave question were entitled to know the situation we are confronting as I understand it to be.

I think I should say to you that the Members of both Houses feel deeply concerned and disturbed by what they read and hear. I have heard of some talk to the effect that some are saying that after all it may be possible that the program of preparedness, so called, has some relation to just such a situation as we are called upon to meet.

I have counseled all who have talked with me to keep cool; that this whole business is still the subject of diplomacy, and that you are striving to the utmost to bring about some peaceable adjustment, and that in the meantime Congress should be careful not to "ball up" a diplomatic situation by any kind of hasty and ill-considered action. However, the situation in Congress is such as to excite a sense of deep concern in the minds of careful and thoughtful men.

I have felt that it is due to you to say this much. I think you understand my personal attitude with respect to this subject. As much and deeply as I would hate to radically disagree with you, I find it difficult from my sense of duty and responsibility to consent to plunge this Nation into the vortex of this world war because of the unreasonable obstinacy of any of the powers upon the one hand, or, on the other hand, of foolhardiness, amounting to a sort of moral treason against the Republic, of our people recklessly risking their lives on armed belligerent ships. I can not escape the conviction that such would be so monstrous as to be indefensible.

I want to be with you and to stand by you, and I mean to do so up to the last limit; and I want to talk with you and Secretary Lansing with the utmost frankness—to confer with you and to have your judgment and counsel—and I want to be kept advised as to the course of events, as it seems to me I am entitled to be.

In the meantime I am striving to prevent anything being done by any Senator or Member calculated to embarrass your diplomatic negotiations. Up to the last you should be left free to act diplomatically as you think for the best to settle the questions involved. I need hardly say that my wish is to help, not to hinder, you.

With the highest regard and most sympathetic consideration, I have the honor, Mr. President, to be,

W. J. STONE.

On the same day the President addressed the Senator as follows:

THE PRESIDENT'S LETTER TO SENATOR STONE MADE PUBLIC FEBRUARY 24.

THE WHITE HOUSE,
Washington, February 24, 1916.

MY DEAR SENATOR: I very warmly appreciate your kind and frank letter of to-day and feel that it calls for an equally frank reply.

You are right in assuming that I shall do everything in my power to keep the United States out of war. I think the country will feel no uneasiness about my course in that respect. Through many anxious months I have striven for that object, amidst difficulties more manifold than can have been apparent upon the surface, and so far I have succeeded. I do not doubt that I shall continue to succeed. The course which the central European powers have announced their intention of following in the future with regard to undersea warfare seems for the moment to threaten insuperable obstacles, but its apparent meaning is so manifestly inconsistent with explicit assurances recently given us by those powers with regard to their treatment of merchant vessels on the high seas that I must believe that explanations will presently ensue which will put a different aspect upon it. We have had no reason to question their good faith or their fidelity to their promises in the past, and I, for one, feel confident that we shall have none in the future.

But in any event our duty is clear. No nation, no group of nations, has the right while war is in progress to alter or disregard the principles which all nations have agreed upon in mitigation of the horrors and sufferings of war; and if the clear rights of American citizens should ever unhappily be abridged or denied by any such action we should, it seems to me, have in honor no choice as to what our own course should be.

For my own part I can not consent to any abridgment of the rights of American citizens in any respect. The honor and self-respect of the Nation are involved. We covet peace, and shall preserve it at any cost but the loss of honor. To forbid our people to exercise their rights for fear we might be called upon to vindicate them would be a deep humiliation indeed. It would be an implicit, all but an explicit, acquiescence in the violation of the rights of mankind everywhere and of whatever nation or allegience. It would be a deliberate abdication of our hitherto proud position as spokesmen, even amidst the turmoil of war, for the law and the right. It would make everything this Government has attempted and everything that it has achieved during this terrible struggle of nations meaningless and futile.

It is important to reflect that if in this instance we allowed expediency to take the place of principle the door would inevitably be opened to still further concessions. Once accept a single abatement of right, and many other humiliations would certainly follow, and the whole fine fabric of international law might crumble under our hands, piece by piece. What we are contending for in this matter is of the very essence of the things that have made America a sovereign Nation. She can not yield them without conceding her own impotency as a Nation and making virtual surrender of her independent position among the nations of the world.

I am speaking, my dear Senator, in deep solemnity, without heat, with a clear consciousness of the high responsibilities of my office and as your sincere and devoted friend. If we should unhappily differ, we shall differ as friends; but where issues so momentous as these are involved we must, just because we are friends, speak our minds without reservation.

Faithfully, yours,

WOODROW WILSON.

On the 29th the President wrote Acting Chairman POU, of the Rules Committee:

THE WHITE HOUSE,
Washington, February 29, 1916.

MY DEAR MR. POU: Inasmuch as I learn that Mr. HENRY, the chairman of the Committee on Rules, is absent in Texas, I take the liberty of calling your attention, as ranking member of the committee, to a matter of grave concern to the country which can, I believe, be handled, under the rules of the House, only by that committee.

The report that there are divided counsels in Congress in regard to the foreign policy of the Government is being made industrious use of in foreign capitals. I believe that report to be false, but so long as it is anywhere credited it can not fail to do the greatest harm and expose the country to the most serious risks. I therefore feel justified in asking that your committee will permit me to urge an early vote upon the resolutions with regard to travel on armed merchantmen, which have recently been so much talked about, in order that there may be afforded an immediate opportunity for full public discussion and action upon them and that all doubts and conjectures may be swept away and our foreign relations once more cleared of damaging misunderstandings.

The matter is of so grave importance and lies so clearly within the field of Executive initiative that I venture to hope that your committee will not think that I am taking unwarranted liberty in making this suggestion as to the business of the House, and I very earnestly commend it to their immediate attention.

Cordially and sincerely, yours,

WOODROW WILSON.

The McLemore warning resolution was tabled, which was equivalent in parliamentary effect to a refusal to warn American citizens from defensively armed belligerent vessels.

The British Admiralty issued the following instructions to her merchantmen:

FULL TEXT OF BRITISH INSTRUCTIONS TO ARMED LINERS—APPROACH OF SUBMARINE TO BE DEEMED HOSTILE ACT.

LONDON, *March 2.*

The British Admiralty to-night officially made public the admiralty orders to armed merchantmen given October 2, 1915.

The orders say that the armament of such vessels must be used solely for resisting an attack by an armed vessel and for no other purpose. As British submarines and aircraft are ordered not to approach merchantmen, the orders say the approach to a British merchantman of a submarine is to be regarded as done with a hostile intention.

The official statement reads as follows:

"In view of the recent issue by the German Government of a memorandum on the treatment of armed merchant ships, the admiralty has decided to make public the instructions actually governing the actions of British merchant vessels armed for self-defense:

"Instruction, dated 20th of October, 1915, in re the status of armed merchant ships:

"(1) The right of the crew of a merchant vessel to forcibly resist visit and search and fight in self-defense is well recognized in international law and expressly admitted by the German prize regulations in an addendum issued June, 1914, at a time when it was known that numerous merchant vessels were being armed for self-defense.

"(2) Armament is supplied solely for the purpose of resisting attack by an armed enemy vessel and must not be used for any other purpose whatsoever.

"(3) An armed merchant vessel, therefore, must not in any circumstances interfere with or obstruct the free passage of other merchant vessels or fishing craft, whether these are friendly, neutral, or hostile.

"(4) The status of a British armed merchant vessel can not be changed upon the high seas.

"Rules to be observed in the exercise of the right of self-defense:

"(1) The master or officer in command is responsible for opening and ceasing fire.

"(2) Participation in armed resistance must be confined to persons acting under the orders of the master or the officer in command.

"(3) Before opening fire the British colors must be hoisted.

"(4) Fire must not be opened or continued from a vessel which has stopped, hauled down her flag, or otherwise indicated her intention to surrender.

"(5) The expression 'armament' includes not only cannon but also rifles and machine guns in cases, where these have been supplied.

"(6) The ammunition used in rifles and machine guns must conform to article 23, Hague Convention, 1907; that is, bullets must be cased in nickel or other hard substance and must not be split or cut in such a way as to cause them to expand or set up on striking a man. The use of explosive bullets is forbidden.

"Circumstances under which armament should be employed:

"(1) The armament is supplied for the purpose of defense only. The object of the master should be to avoid action whenever possible.

"(2) Experience has shown that hostile submarines and aircraft have frequently attacked merchant vessels without warning. It is important, therefore, that craft of this description should not be allowed to approach to short range, at which a torpedo or bomb launched without notice would almost certainly be effective. British and allied submarines and aircraft have orders not to approach merchant vessels; consequently it may be presumed that any submarine or aircraft which deliberately approaches or pursues a merchant vessel does so with hostile intention. In such cases fire may be opened in self-defense in order to prevent the hostile craft from closing to a range at which resistance to a sudden attack with bomb or torpedo would be impossible.

"(3) An armed merchant vessel proceeding to render assistance to the crew of a vessel in distress must not seek action with any hostile craft, though if she herself is attacked while doing so fire may be opened in self-defense.

"(4) It should be remembered that the flag is no guide to nationality. German submarines and armed merchant vessels have frequently employed the British, allied, or neutral colors to approach undetected. Though, however, the use of disguise and false colors to escape capture is a legitimate ruse de guerre, its adoption by defensively armed merchant ships may easily lead to misconception. Such vessels, therefore, are forbidden to adopt any form of disguise which might cause them to be mistaken for neutral ships."

Admiralty comment:

"These instructions, which are those at present in force, are the latest issued. Successive issues have been made, not by reason of a change in policy—the policy throughout has remained unaltered—but by improvement in wording and greater clearness of expression, to emphasize the purely defensive character of the armament of merchant vessels.

"It is because of the distorted interpretation given these instructions as a whole and the very forced character of the interpretation given by the German Government to portions which they quote from an earlier issue of the instructions that the admiralty felt it desirable, with a view to allaying neutral anxiety, to publish these in extenso.

On the 24th of March the steamer *Sussex* was attacked without warning. On the following day our Government sent a note to Germany, which was not made public until the 27th of April. The note defines armed-liner law:

NOTIFIES BELLIGERENTS THAT UNITED STATES RECOGNIZES RIGHT OF DEFENSE BY MERCHANTMEN—LIMITS ACTS OF WAR CRAFT—MUST NOT ATTACK WITHOUT WARNING UNTIL STATUS OF VESSEL IS FULLY DETERMINED—AND MUST DISPLAY COLORS—MERCHANTMEN WITH MANDATORY ORDERS TO ATTACK WAR CRAFT NOT IMMUNE THEMSELVES.

TEXT OF THE MEMORANDUM.

The memorandum, which sets forth the attitude of the administration in clear detail, follows:

MEMORANDUM ON ARMED MERCHANT VESSELS.

By direction of the President a memorandum was prepared during March, 1916, in regard to the status of armed merchant vessels in neutral ports and on the high seas. This memorandum is now made public as a statement of this Government's attitude on that subject:

DEPARTMENT OF STATE,
Washington, March 25, 1916.

I.

The status of an armed merchant vessel of a belligerent is to be considered from two points of view: First, from that of a neutral when the vessel enters its ports; and, second, from that of an enemy when the vessel is on the high seas.

First. An armed merchant vessel in neutral ports.

(1) It is necessary for a neutral Government to determine the status of an armed merchant vessel of belligerent nationality which enters its jurisdiction, in order that the Government may protect itself from responsibility for the destruction of life and property by permitting its ports to be used as bases of hostile operations by belligerent warships.

(2) If the vessel carries a commission or orders issued by a belligerent Government and directing it under penalty to conduct aggressive operations, or if it is conclusively shown to have conducted such operations, it should be regarded and treated as a warship.

(3) If sufficient evidence is wanting a neutral Government in order to safeguard itself from liability for failure to preserve its neutrality may reasonably presume from these facts the status of an armed merchant vessel which frequents its waters. There is no settled rule

of international law as to the sufficiency of evidence to establish such a presumption. As a result a neutral Government must decide for itself the sufficiency of the evidence which it requires to determine the character of the vessel. For the guidance of its port officers and other officials a neutral Government may therefore declare a standard of evidence, but such standard may be changed on account of the general conditions of naval warfare or modified on account of the circumstances of a particular case. These changes and modifications may be made at any time during the progress of the war, since the determination of the status of an armed merchant vessel in neutral waters may affect the liability of a neutral Government.

Second. An armed merchant vessel on the high seas.

(1) It is necessary for a belligerent warship to determine the status of an armed merchant vessel of an enemy encountered on the high seas, since the rights of life and property of belligerents and neutrals on board the vessel may be impaired if its status is that of an enemy warship.

(2) The determination of warlike character must rest in no case upon presumption but upon conclusive evidence, because the responsibility for the destruction of life and property depends on the actual facts of the case and can not be avoided or lessened by a standard of evidence which a belligerent may announce as creating a presumption of hostile character. On the other hand, to safeguard himself from possible liability for unwarranted destruction of life and property the belligerent should, in the absence of conclusive evidence, act on the presumption that an armed merchantman is of peaceful character.

(3) A presumption based solely on the presence of an armament on a merchant vessel of an enemy is not a sufficient reason for a belligerent to declare it to be a warship and proceed to attack it without regard to the rights of the persons on board. Conclusive evidence of a purpose to use the armament for aggression is essential. Consequently an armament which a neutral Government, seeking to perform its neutral duties, may presume to be intended for aggression might in fact on the high seas be used solely for protection. A neutral Government has no opportunity to determine the purpose of an armament on a merchant vessel unless there is evidence in the ship's papers or other proof as to its previous use, so that the Government is justified in substituting an arbitrary rule of presumption in arriving at the status of the merchant vessel. On the other hand, a belligerent warship can on the high seas test by actual experience the purpose of an armament on an enemy merchant vessel and so determine by direct evidence the status of the vessel.

SUMMARY.

The status of an armed merchant vessel as a warship in neutral waters may be determined, in the absence of documentary proof or conclusive evidence of previous aggressive conduct, by presumption derived from all the circumstances of the case.

The status of such vessel as a warship on the high seas must be determined only upon conclusive evidence of aggressive purpose, in the absence of which it is to be presumed that the vessel has a private and peaceable character, and it should be so treated by an enemy warship.

In brief, a neutral Government may proceed upon the presumption that an armed merchant vessel of belligerent nationality is armed for aggression, while a belligerent should proceed on the presumption that the vessel is armed for protection. Both of these presumptions may be overcome by evidence—the first by secondary or collateral evidence, since the fact to be established is negative in character; the second by primary and direct evidence, since the fact to be established is positive in character.

II.

The character of the evidence upon which the status of an armed merchant vessel of belligerent nationality is to be determined when visiting neutral waters and when traversing the high seas having been stated, it is important to consider the rights and duties of neutrals and belligerents as affected by the status of armed merchant vessels in neutral ports and on the high seas.

First. The relations of belligerents and neutrals as affected by the status of armed merchant vessels in neutral ports.

(1) It appears to be the established rule of international law that warships of a belligerent may enter neutral ports and accept limited hospitality there upon condition that they leave, as a rule, within 24 hours after their arrival.

(2) Belligerent warships are also entitled to take on fuel once in three months in ports of a neutral country.

(3) As a mode of enforcing these rules, a neutral has the right to cause belligerent warships failing to comply with them, together with their officers and crews, to be interned during the remainder of the war.

(4) Merchantmen of belligerent nationality, armed only for purposes of protection against the enemy, are entitled to enter and leave neutral ports without hindrance in the course of legitimate trade.

(5) Armed merchantmen of belligerent nationality under a commission or orders of their Government to use, under penalty, their armament for aggressive purposes, or merchantmen which, without such commission or orders, have used their armaments for aggressive purposes, are not entitled to the same hospitality in neutral ports as peaceable armed merchantmen.

Second. The relations of belligerents and neutrals as affected by the status of armed merchant vessels on the high seas.

(1) Innocent neutral property on the high seas can not legally be confiscated, but is subject to inspection by a belligerent. Resistance to inspection removes this immunity and subjects the property to condemnation by a prize court, which is charged with the preservation of the legal rights of the owners of neutral property.

(2) Neutral property engaged in contraband trade, breach of blockade, or unneutral service obtains the character of enemy property and is subject to seizure by a belligerent and condemnation by a prize court.

(3) When hostile and innocent property is mixed, as in the case of a neutral ship carrying a cargo which is entirely or partially contraband, this fact can only be determined by inspection. Such innocent property may be of uncertain character, as it has been frequently held that it is more or less contaminated by association with hostile property. For example, under the declaration of London—which, so far as the provisions covering this subject are concerned, has been adopted by all the belligerents—the presence of a cargo which in bulk or value consists of 50 per cent contraband articles impresses the ship with enemy character and subjects it to seizure and condemnation by a prize court.

(4) Enemy property, including ships and cargoes, is always subject to seizure and condemnation. Any enemy property taken by a belligerent on the high seas is a total loss to the owners. There is no redress in a prize court. The only means of avoiding loss is by flight or successful resistance. Enemy merchant ships have therefore the right to arm for the purpose of self-protection.

(5) A belligerent warship is any vessel which, under commission or orders of its Government imposing penalties entitling it to prize money, is armed for the purpose of seeking and capturing or destroying enemy property or hostile neutral property on the seas. The size of the vessel, strength of armament, and its defensive or offensive force are immaterial.

(6) A belligerent warship has, incidental to the right of seizure, the right to visit and search all vessels on the high seas for the purpose of determining the hostile or innocent character of the vessels and their cargoes. If the hostile character of the property is known, however, the belligerent warship may seize the property without exercising the right of visit and search, which is solely for the purpose of obtaining knowledge as to the character of the property. The attacking vessel must display its colors before exercising belligerent rights.

(7) When a belligerent warship meets a merchantman on the high seas, which is known to be enemy owned, and attempts to capture the vessel, the latter may exercise its right of self-protection either by flight or by resistance. The right to capture and the right to prevent capture are recognized as equally justifiable.

(8) The exercise of the right of capture is limited, nevertheless, by certain accepted rules of conduct based on the principles of humanity and regard for innocent property, even if there is definite knowledge that some of the property, cargo, as well as the vessel, is of enemy character. As a character of these limitations, it has become the established practice for warships to give merchant vessels an opportunity to surrender or submit to visit and search before attempting to seize them by force. The observance of this rule of naval warfare tends to prevent the loss of life of noncombatants and the destruction of innocent neutral property, which would result from sudden attack.

(9) If, however, before a summons to surrender is given a merchantman of belligerent nationality, aware of the approach of an enemy warship, uses its armament to keep the enemy at a distance, or after it has been summoned to surrender it resists or flees, the warship may properly exercise force to compel surrender.

(10) If the merchantman finally surrenders, the belligerent warship may release it or take it into custody. In the case of an enemy merchantman it may be sunk, but only if it is impossible to take it into port, and provided always that the persons on board are put in a place of safety. In the case of neutral merchantman, the right to sink it in any circumstance is doubtful.

(11) A merchantman entitled to exercise the right of self-protection may do so when certain of attack by an enemy warship, otherwise the exercise of the right would be so restricted as to render it ineffectual. There is a distinct difference, however, between the exercise of the right of self-protection and the act of cruising the seas in an armed vessel for the purpose of attacking enemy naval vessels.

(12) In the event that merchant ships of belligerent nationality are armed and under commission or orders to attack in all circumstances certain classes of enemy naval vessels for the purpose of destroying them, and are entitled to receive prize money for such service from their Government, or are liable to a penalty for failure to obey the orders given, such merchant ships lose their status as peaceable merchant ships and are to a limited extent incorporated in the naval forces of their Government, even though it is not their sole occupation to conduct hostile operations.

(13) A vessel engaged intermittently in commerce and under a commission or orders of its Government imposing a penalty, in pursuing and attacking enemy naval craft, possesses a status tainted with a hostile purpose which it can not throw aside or assume at will. It should, therefore, be considered as an armed public vessel and receive the treatment of a warship by an enemy and by neutrals. Any person taking passage on such a vessel can not expect immunity other than that accorded persons who are on board a warship. A private vessel, engaged in seeking enemy naval craft, without such a commission or orders from its Government, stands in a relation to the enemy similar to that of a civilian who fires upon the organized military forces of a belligerent, and is entitled to no more considerate treatment.

On the 10th of April Germany made reply to our memorandum of the 25th of March, in which responsibility for the destruction of the *Sussex* was not admitted:

BERLIN, *April 12, 1916.*

The following is the text of the German note on the *Sussex*, dated April 10:

"The undersigned has the honor to inform your excellency, Ambassador Gerard, in response to communications of the 29th and 30th ultimo and the 3d instant regarding the steamers *Sussex*, *Manchester Engineer*, *Englishman*, *Berwindvale*, and *Eagle Point* that the mentioned cases, in accordance with our notes of the 30th and 31st ultimo and the 4th and 5th instant, have been subjected to careful investigation by the admiral staff of the navy, which has led to the following results:

"First. The English steamer *Berwindvale:* A steamer, which was possibly the *Berwindvale*, was encountered on the evening of March 16 in sight of Bull Rock Light, on the Irish coast, by a German submarine. The steamer, as soon as she noticed the submarine, which was running unsubmerged, turned and steamed away. She was ordered to halt by a warning shot. She paid no attention, however, to this warning, but extinguished all lights and attempted to escape. The vessel was then fired upon until halted, and without further orders lowered several boats. After the crew entered the boats and received enough time to row away the ship was sunk.

"The name of this steamer was not established; it can not be stated with assurance, even with the help of the details which were furnished by the American Embassy, that the above-described incident concerns the steamer *Berwindvale*. Since, however, the steamer sunk was a tank steamer like the *Berwindvale*, the identity of the ship may be assumed. In this case, however, the statement made that the *Berwindvale* was torpedoed without warning would conflict with the fact.

"Second. The British steamer *Englishman:* This steamer on March 24 was called upon to halt by a German submarine, through two warning shots, about 20 sea miles west of Islay (Hebrides). The vessel proceeded, however, without heeding the warning, and was therefore forced by the submarine by artillery fire to halt after an extended chase, whereupon she lowered boats without further orders.

"After the German commandant had convinced himself that the crew had taken to the boats and rowed from the ship, he sank the steamer.

"Third. The British steamer *Manchester Engineer:* It is impossible to establish through the investigation up to the present whether the attack on this steamer, which, according to the given description, occurred on March 27 in the latitude of Waterford, is attributable to a German submarine. The statement regarding the time and place of the incident gives no sufficient basis for investigation. It would therefore be desirable to have more exact statements of the place, time, and attendant circumstances of the attack reported by the American Government, in order that the investigation might thereupon be brought to a conclusion.

"Fourth. The British steamer *Eagle Point:* This steamer in the forenoon of March 28 was called upon to halt by a German submarine through signal and shot about 100—not 130—sea miles from the southwest coast of Ireland, but proceeded. She was thereupon fired upon until halted, and without further orders lowered two boats, in which the crew took their places. After the commandant convinced himself that the boats, which had hoisted sails, had gotten clear of the steamer, he sank the steamer.

"At the time of the sinking a north-northwest wind of the strength of two, not 'a storm wind,' and a light swell, not 'a heavy sea,' as stated in the given description, prevailed. The boats therefore had every prospect of being picked up very quickly, because the place of the sinking lay on a much-used steamer path.

"If the crew of the steamer used only two small boats for saving themselves the responsibility falls upon themselves, since there were still upon the steamer, as the submarine could establish, at least four big collapsible boats.

"Fifth. The French steamer *Sussex:* Ascertainment of the fact whether the Channel steamer *Sussex* was damaged by a German submarine was rendered extremely difficult, because no exact details of time, place, and attendant circumstances of the sinking were known, and also because it was impossible to obtain a picture of the ship before April 6. Consequently the investigation had to be extended to all actions undertaken on the day in question—March 24—in the Channel in the general region between Folkstone and Dieppe."

In that region, on March 24, a long, black craft without a flag, having a gray funnel, small gray forward works and two high masts, was encountered about the middle of the English Channel by a German submarine. The German commander reached the definite conclusion that it was a war vessel, and, indeed, a mine layer of the recently built English *Arabic* class. He was led to the conviction by the following facts: First, by the plain, unbroken deck of the ship; second, the form of the stern, sloping downward and backward like a war vessel; third, she was painted like a war vessel; fourth, the high speed developed, about 18 knots; fifth, the circumstance that the vessel did not keep a course northward of the light buoys between Dungeness and Beachy Head, which, according to the frequent and unvarying observations of German submarines, is about the course of commercial vessels, but kept in the middle of the channel, on a course about in the direction of Le Havre.

Consequently he attacked the vessel at 3.55 in the afternoon, middle European time, 1½ sea miles southeast of Bull Rock (Bullock?) Bank, the submarine being submerged. The torpedo struck and caused such a violent explosion in the forward part of the ship that the entire forward part was torn away to the bridge.

The particularly violent explosion warrants the certain conclusion that great amounts of munitions were aboard.

The German commander made a sketch of the vessel attacked by him, two drawings of which are inclosed. The picture of the steamer *Sussex*, two copies of which are also inclosed, is reproduced photographically from the English paper, the Daily Graphic of the 27th ultimo.

A comparison of the sketch and the picture shows that the craft attacked is not identical with the *Sussex*. The difference in the position of the stack and shape of the stern is particularly striking.

No other attack whatever by German submarines at the time in question for the *Sussex* upon the route between Folkstone and Dieppe occurred. The German Government must therefore assume that the injury to the *Sussex* is attributable to another cause than an attack by a German submarine.

For an explanation of the case the fact may perhaps be serviceable that no less than 26 English mines were exploded by shots by German naval forces in the channel on the 1st and 2d of April alone. The entire sea in that vicinity is, in fact, endangered by floating mines and by torpedoes that have not sunk. Off the English coast it is further endangered in an increasing degree through German mines which have been laid against enemy naval forces.

Should the American Government have at its disposal further material for a conclusion upon the case of the *Sussex*, the German Government would ask that it be communicated, in order to subject this material also to an investigation.

In the event that differences of opinion should develop hereby between the two Governments, the German Government now declares itself ready to have the facts of the case established through mixed commissions of investigation, in accordance with the third title of The Hague agreement, for the peaceful settlement of international conflicts, November 18, 1907.

The undersigned, while requesting that you communicate the above to the Government of the United States, takes occasion to renew to the ambassador the assurance of his distinguished esteem.

JAGOW.

On the 18th day of April our Government addressed Germany the now famous note, considered by many as an ultimatum:

TEXT OF THE AMERICAN NOTE TO GERMANY.

DEPARTMENT OF STATE,
Washington, April 18, 1916.

The SECRETARY OF STATE TO AMBASSADOR GERARD:

You are instructed to deliver to the secretary of foreign affairs a communication reading as follows:

"I did not fail to transmit immediately, by telegraph, to my Government your excellency's note of the 10th instant in regard to certain attacks by German submarines, and particularly in regard to the disastrous explosion which, on March 24 last, wrecked the French steamship *Sussex* in the English Channel. I have now the honor to deliver, under instructions from my Government, the following reply to your excellency:

"Information now in the possession of the Government of the United States fully establishes the facts in the case of the *Sussex*, and the inferences which my Government has drawn from that information it regards as confirmed by the circumstances set forth in your excellency's note of the 10th instant. On the 24th of March, 1916, at about 2.50 o'clock in the afternoon, the unarmed steamer *Sussex*, with 325 or more passengers on board, among whom were a number of American citizens, was torpedoed while crossing from Folkestone to Dieppe. The *Sussex* had never been armed, was a vessel known to be habitually used for the conveyance of passengers across the English Channel, and was not following the route taken by troopships or supply ships. About 80 of her passengers, noncombatants of all ages and sexes, including citizens of the United States, were killed or injured.

"A careful, detailed, and scrupulously impartial investigation by naval and military officers of the United States has conclusively established the fact that the *Sussex* was torpedoed without warning or summons to surrender, and that the torpedo by which she was struck was of German manufacture. In the view of the Government of the United States these facts from the first made the conclusion that the torpedo was fired by a German submarine unavoidable. It now considers that conclusion substantiated by the statements of your excellency's note. A full statement of the facts upon which the Government of the United States has based its conclusion is inclosed.

"The Government of the United States, after having given careful consideration to the note of the Imperial Government of the 10th of April, regrets to state that the impression made upon it by the statements and proposals contained in that note is that the Imperial Government has failed to appreciate the gravity of the situation, which has resulted not alone from the attack on the *Sussex* but from the whole method and character of submarine warfare as disclosed by the unrestrained practice of the commanders of German undersea craft during the past 12 months and more in the indiscriminate destruction of merchant vessels of all sorts, nationalities, and destinations. If the sinking of the *Sussex* had been an isolated case, the Government of the United States might find it possible to hope that the officer who was responsible for that act had willfully violated his orders or had been criminally negligent in taking none of the precautions they prescribed, and that the ends of justice might be satisfied by imposing upon him an adequate punishment, coupled with a formal disavowal of the act and payment of a suitable indemnity by the Imperial Government. But though the attack upon the *Sussex* was manifestly indefensible and caused a loss of life so tragical as to make it stand forth as one of the most terrible examples of the inhumanity of submarine warfare as the commanders of German vessels are conducting it, it unhappily does not stand alone.

"On the contrary, the Government of the United States is forced by recent events to conclude that it is only one instance, even though one of the most extreme and most distressing instances, of the deliberate method and spirit of indiscriminate destruction of merchant vessels of all sorts, nationalities, and destinations which have become more and more unmistakable as the activity of German undersea vessels of war has in recent months been quickened and extended.

"The Imperial Government will recall that when, in February, 1915, it announced its intention of treating the waters surrounding Great Britain and Ireland as embraced within the seat of war and of destroying all merchant ships owned by its enemies that might be found within that zone of danger, and warned all vessels, neutrals as well as belligerent, to keep out of the waters thus proscribed or to enter them at their peril, the Government of the United States earnestly protested. It took the position that such a policy could not be pursued without constant gross and palpable violations of the accepted law of nations, particularly if submarine craft were to be employed as its instruments, inasmuch as the rules prescribed by that law, rules founded on the principles of humanity and established for the protection of the lives of noncombatants at sea, could not in the nature of the case be observed by such vessels. It based its protest on the ground that persons of neutral nationality and vessels of neutral ownership would be exposed to extreme and intolerable risks, and that no right to close any part of the high seas could lawfully be asserted by the Imperial Government in the circumstances then existing. The law of nations in these matters, upon which the Government of the United States based that protest, is not of recent origin or founded upon merely arbitrary principles set up by convention. It is based, on the contrary, upon manifest principles of humanity and has long been established with the approval and by the express assent of all civilized nations.

"The Imperial Government, notwithstanding, persisted in carrying out the policy announced, expressing the hope that the dangers involved, at any rate to neutral vessels, would be reduced to a minimum by the instructions which it had issued to the commanders of its submarines, and assuring the Government of the United States that it would take every possible precaution both to respect the rights of neutrals and to safeguard the lives of noncombatants.

"In pursuance of this policy of submarine warfare against the commerce of its adversaries, thus announced and thus entered upon in despite of the solemn protest of the Government of the United States, the commanders of the Imperial Government's undersea vessels have carried on practices of such ruthless destruction which have made it more and more evident as the months have gone by that the Imperial Government has found it impracticable to put any such restraints upon them as it had hoped and promised to put. Again and again the Imperial Government has given its solemn assurances to the Government of the United States that at least passenger ships would not be thus dealt with, and yet it has repeatedly permitted its undersea commanders to disregard those assurances with entire impunity. As recently as February last it gave notice that it would regard all armed merchantmen owned by its enemies as part of the armed naval forces of its adversaries and deal with them as with men-of-war, thus, at least by implication, pledging itself to give warning to vessels which were not armed and to accord security of life to their passengers and crews; but even this limitation their submarine commanders have recklessly ignored.

"Vessels of neutral ownership, even vessels of neutral ownership bound from neutral port to neutral port, have been destroyed, along with vessels of belligerent ownership, in constantly increasing numbers. Sometimes the merchantmen attacked have been warned and summoned to surrender before being fired on or torpedoed; sometimes their passengers and crews have been vouchsafed the poor security of being allowed to take to the ship's boats before the ship was sent to the bottom. But again and again no warning has been given, no escape even to the ship's boats allowed to those on board. Great liners like the *Lusitania* and *Arabic* and mere passenger boats like the *Sussex* have been attacked without a moment's warning, often before they have even become aware that they were in the presence of an armed ship of the enemy, and the lives of noncombatants, passengers and crew, have been destroyed wholesale and in a manner which the Government of the United States can not but regard as wanton and without the slightest color of justification. No limit of any kind has, in fact, been set to their indiscriminate pursuit and destruction of merchantmen of all

kinds and nationalities within the waters which the Imperial Government has chosen to designate as lying within the seat of war. The roll of Americans who have lost their lives upon ships thus attacked and destroyed has grown month by month until the ominous toll has mounted into the hundreds.

"The Government of the United States has been very patient. At every stage of this distressing experience of tragedy after tragedy it has sought to be governed by the most thoughtful consideration of the extraordinary circumstances of an unprecedented war and to be guided by sentiments of very genuine friendship for the people and Government of Germany. It has accepted the successive explanations and assurances of the Imperial Government as, of course, given in entire sincerity and good faith, and has hoped, even against hope, that it would prove to be possible for the Imperial Government so to order and control the acts of its naval commanders as to square its policy with the recognized principles of humanity as embodied in the law of nations. It has made every allowance for unprecedented conditions and has been willing to wait until the facts became unmistakable and were suspectible of only one interpretation.

"It now owes it to a just regard for its own rights to say to the Imperial Government that that time has come. It has become painfully evident to it that the position which it took at the very outset is inevitable, namely, the use of submarines for the destruction of an enemy's commerce, is, of necessity, because of the very character of the vessels employed and the very methods of attack which their employment of course involves, utterly incompatible with the principles of humanity, the long-established and incontrovertible rights of neutrals, and the sacred immunities of noncombatants.

"If it is still the purpose of the Imperial Government to prosecute relentless and indiscriminate warfare against vessels of commerce by the use of submarines, without regard to what the Government of the United States must consider the sacred and indisputable rules of international law and the universally recognized dictates of humanity, the Government of the United States is at last forced to the conclusion that there is but one course it can pursue: Unless the Imperial Government should now immediately declare and effect an abandonment of its present methods of submarine warfare against passenger and freight-carrying vessels, the Government of the United States can have no choice but to sever diplomatic relations with the German Empire altogether. This action the Government of the United States contemplates with the greatest reluctance, but feels constrained to take in behalf of humanity and the rights of neutral nations.

"LANSING."

On the day after sending the note to Germany, the President addressed the Congress on the issue, as follows:

Gentlemen of the Congress, a situation has arisen in the foreign relations of the country of which it is my plain duty to inform you very frankly.

It will be recalled that in February, 1915, the Imperial German Government announced its intention to treat the waters surrounding Great Britain and Ireland as embraced within the seat of war, and to destroy all merchant ships owned by its enemies that might be found within any part of that portion of the high seas, and that it warned all vessels, of neutral as well as belligerent ownership, to keep out of the waters it had thus proscribed, or else enter them at their peril. The Government of the United States earnestly protested. It took the position that such a policy could not be pursued without the practical certainty of gross and palpable violations of the law of nations, particularly if submarine craft were to be employed as its instruments, inasmuch as the rules prescribed by that law, rules founded upon principles of humanity and established for the protection of the lives of noncombatants at sea, could not in the nature of the case be observed by such vessels. It based its protest on the ground that persons of neutral nationality and vessels of neutral ownership would be exposed to extreme and intolerable risks, and that no right to close any part of the high seas against their use or to expose them to such risks could lawfully be asserted by any belligerent Government. The law of nations in these matters, upon which the Government of the United States based its protest, is not of recent origin or founded upon merely arbitrary principles set up by convention. It is based, on the contrary, upon manifest and imperative principles of humanity, and has long been established with the approval and by the express assent of all civilized nations.

Notwithstanding the earnest protest of our Government, the Imperial German Government at once proceeded to carry out the policy it had announced. It expressed the hope that the dangers involved, at any rate the dangers to neutral vessels, would be reduced to a minimum by the instructions which it had issued to its submarine commanders, and assured the Government of the United States that it would take every possible precaution both to respect the rights of neutrals and to safeguard the lives of noncombatants.

What has actually happened in the year which has since elapsed has shown that those hopes were not justified, those assurance insusceptible of being fulfilled. In pursuance of the policy of submarine warfare against the commerce of its adversaries thus announced and entered upon by the Imperial German Government despite the solemn protest of this Government, the commanders of German undersea vessels have attacked merchant ships with greater and greater activity, not only upon the high seas surrounding Great Britain and Ireland but wherever they could encounter them, in a way that has grown more and more ruthless, more and more indiscriminate as the months have gone by, less and less observant of restraints of any kind, and have delivered their attacks without compunction against vessels of every nationality and bound upon every sort of errand. Vessels of neutral ownership, even vessels of neutral ownership bound from neutral port to neutral port, have been destroyed along with vessels of belligerent ownership in constantly increasing numbers. Sometimes the merchantman attacked has been warned and summoned to surrender before being fired on or torpedoed; sometimes passengers or crews have been vouchsafed the poor security of being allowed to take to the ship's boats before she was sent to the bottom. But again and again no warning has been given, no escape even to the ship's boats allowed to those on board. What this Government foresaw must happen has happened. Tragedy has followed tragedy on the seas in such fashion, with such attendant circumstances as to make it grossly evident that warfare of such a sort, if warfare it be, can not be carried on without the most palpable violation of the dictates alike of right and of humanity. Whatever the disposition and intention of the Imperial German Government, it has manifestly proved impossible for it to keep such methods of attack upon the commerce of its enemies within the bounds set by either the reason or the heart of mankind.

In February of the present year the Imperial German Government informed this Government and the other neutral Governments of the world that it had reason to believe that the Government of Great Britain had armed all merchant vessels of British ownership and had given them secret orders to attack any submarine of the enemy they might encounter upon the seas, and that the Imperial German Government felt justified in the circumstances in treating all armed merchantmen of belligerent ownership as auxiliary vessels of war, which it would have the right to destroy without warning. The law of nations has long recognized the right of merchantmen to carry arms for protection and to use them to repel attack, though to use them in such circumstances at their own risks; but the Imperial German Government claimed the right to set these understandings aside in circumstances which it deemed extraordinary. Even the terms in which it announced its purpose thus still further to relax the restraints it had previously professed its willingness and desire to put upon the operations of its submarines carried the plain implication that at least vessels which were not armed would still be exempt from destruction without warning, and that personal safety would be accorded their passengers and crews; but even that limitation, if it was ever practicable to observe it, has in fact constituted no check at all upon the destruction of ships of every sort.

Again and again the Imperial German Government has given this Government its solemn assurances that at least passenger ships would not be thus dealt with, and yet it has again and again permitted its undersea commanders to disregard those assurances with entire immunity. Great liners like the *Lusitania* and the *Arabic* and mere ferryboats like the *Sussex* have been attacked without a moment's warning, sometimes before they had even become aware that they were in the presence of an armed vessel of the enemy, and the lives of noncombatants, passengers, and crew have been sacrificed wholesale in a manner which the Government of the United States can not but regard as wanton and without the slightest color of justification. No limit of any kind has, in fact, been set to the indiscriminate pursuit and destruction of merchantmen of all kinds and nationalities within the waters, constantly extending in area, where these operations have been carried on, and the roll of Americans who have lost their lives on ships thus attacked and destroyed has grown month by month until the ominous toll has mounted into the hundreds.

One of the latest and most shocking instances of this method of warfare was that of the destruction of the French cross-channel steamer *Sussex*. It must stand forth, as the sinking of the steamer *Lusitania* did, as so singularly tragical and unjustifiable as to constitute a truly terrible example of the inhumanity of submarine warfare as the commanders of German vessels have for the past 12 months been conducting it. If this instance stood alone, some explanation, some disavowal by the German Government, some evidence of criminal mistake or willful disobedience on the part of the commander of the vessel that fired the torpedo might be sought or entertained, but unhappily it does not stand alone. Recent events make the conclusion inevitable that it is only one instance, even though it be one of the most extreme and distressing instances, of the spirit and method of warfare which the Imperial German Government has mistakenly adopted and which from the first exposed that Government to the reproach of thrusting all neutral rights aside in pursuit of its immediate objects.

The Government of the United States has been very patient. At every stage of this distressing experience of tragedy after tragedy in which its own citizens were involved it has sought to be restrained from any extreme course of action or of protest by a thoughtful consideration of the extraordinary circumstances of this unprecedented war; and actuated in all that it said or did by the sentiments of genuine friendship which the people of the United States have always entertained and continue to entertain toward the German nation. It has of course accepted the successive explanations and assurances of the Imperial German Government as given in entire sincerity and good faith and has hoped, even against hope, that it would prove to be possible for the German Government so to order and control the acts of its naval commanders as to square its policy with the principles of humanity as embodied in the law of the nations. It has been willing to wait until the significance of the facts became absolutely unmistakable and susceptible of but one interpretation.

That point has now unhappily been reached. The facts are susceptible of but one interpretation. The Imperial German Government has been unable to put any limits or restraints upon its warfare against either freight or passenger ships. It has therefore become painfully evident that the position which this Government took at the very outset is inevitable, namely, that the use of submarines for the destruction of an enemy's commerce is of necessity, because of the very character of the vessels employed and the very methods of attack which their employment, of course, involves, incompatible with the principles of humanity, the long-established and incontrovertible rights of neutrals, and the sacred immunities of noncombatants.

I have deemed it my duty, therefore, to say to the Imperial German Government that if it is still its purpose to prosecute relentless and indiscriminate warfare against vessels of commerce by the use of submarines, notwithstanding the now demonstrated impossibility of conducting that warfare in accordance with what the Government of the United States must consider the sacred and indisputable rules of international law and the universally recognized dictates of humanity, the Government of the United States is at last forced to the conclusion that there is but one course it can pursue, and that unless the Imperial German Government should now immediately declare and effect an abandonment of its present methods of warfare against passenger and freight carrying vessels this Government can have no choice but to sever diplomatic relations with the Government of the German Empire altogether.

This decision I have arrived at with the keenest regret; the possibility of the action contemplated I am sure all thoughtful Americans will look forward to with unaffected reluctance. But we can not forget that we are in some sort and by the force of circumstances the responsible spokesmen of the rights of humanity, and that we can not remain silent while those rights seem in process of being swept utterly away in the maelstrom of this terrible war. We owe it to a due regard for our own rights as a Nation, to our sense of duty as a representative of the rights of neutrals the world over, and to a just conception of the rights of mankind to take this stand now with the utmost solemnity and firmness.

I have taken it, and taken it in the confidence that it will meet with your approval and support. All sober-minded men must unite in hoping that the Imperial German Government, which has in other circumstances stood as the champion of all that we are now contending for in the interest of humanity, may recognize the justice of our demands and meet them in the spirit in which they are made.

On the 5th of this month Germany made reply to our note, which in the main seems to meet our demand. The significant statement is in the following words:

In accordance with the general principles of visit and search and the destruction of merchant vessels recognized by international law, such vessels, both within and without the area declared a naval war zone, shall not be sunk without warning and without saving human lives, unless the ship attempt to escape or offer resistance.

TEXT OF GERMANY'S REPLY TO OUR NOTE.

BERLIN, *May 5, 1916.*
(By wireless to Sayville.)

Following is the text of the note of the German Government in reply to the American note respecting submarine warfare, delivered yesterday by Gottlieb von Jagow, the foreign secretary, to Ambassador Gerard:

The undersigned, on behalf of the Imperial German Government, has the honor to present to his excellency the ambassador of the United States, Mr. James W. Gerard, the following reply to the note of April 20 regarding the conduct of German submarine warfare:

"The German Government handed over to the proper naval authorities for early investigation the evidence concerning the *Sussex*, as communicated by the Government of the United States. Judging by the results that the investigation has hitherto yielded, the German Government is alive to the possibility that the ship mentioned in the note of April 10 as having been torpedoed by a German submarine is actually identical with the *Sussex*.

"The German Government begs to reserve further communication on the matter until certain points are ascertained, which are of decisive importance for establishing the facts of the case. Should it turn out that the commander was wrong in assuming the vessel to be a man-of-war, the German Government will not fail to draw the consequence resulting therefrom.

"In connection with the case of the *Sussex* the Government of the United States made a series of statements, the gist of which is the assertion that the incident is to be considered but one instance of a deliberate method of indiscriminate destruction of vessels of all sorts, nationalities, and destinations by German submarine commanders.

"The German Government must emphatically repudiate the assertion. The German Government, however, thinks it of little avail to enter into details in the present stage of affairs, more particularly as the Government of the United States omitted to substantiate the assertion by reference to concrete facts.

"The German Government will only state that it has imposed far-reaching restraints upon the use of the submarine weapon, solely in consideration of neutrals' interests, in spite of the fact that these restrictions are necessarily of advantage to Germany's enemies. No such consideration has ever been shown neutrals by Great Britain and her allies.

"The German submarine forces have had, in fact, orders to conduct the submarine warfare in accordance with the general principles of visit and search and the destruction of merchant vessels recognized by international law, the sole exception being the conduct of warfare against enemy trade carried on enemy freight ships encountered in the war zone surrounding Great Britain. With regard to these, no assurances have ever been given to the Government of the United States. No such assurances are contained in the declaration of February 8, 1916.

"The German Government can not admit any doubt that these orders were given or are executed in good faith. Errors actually occurred. They can in no kind of warfare be avoided altogether. Allowances must be made in the conduct of naval warfare against an enemy resorting to all kinds of ruses, whether permissible or illicit.

"But apart from the possibility of errors, naval warfare, just like warfare on land, implies unavoidable dangers for neutral persons and goods entering the fighting zone. Even in cases where the naval action is confined to ordinary forms of cruiser warfare, neutral persons and goods repeatedly come to grief.

"The German Government has repeatedly and explicitly pointed out the dangers from mines that have led to the loss of numerous ships.

"The German Government has made several proposals to the Government of the United States in order to reduce to a minimum for American travelers and goods the inherent dangers of naval warfare. Unfortunately the Government of the United States decided not to accept the proposals. Had it accepted, the Government of the United States would have been instrumental in preventing the greater part of the accidents that American citizens have met with in the meantime.

"The German Government still stands by its offer to come to an agreement along these lines.

"As the German Government repeatedly declared, it can not dispense with the use of the submarine weapon in the conduct of warfare against enemy trade. The German Government, however, has now decided to make a further concession, adapting methods of submarine war to the interests of neutrals. In reaching its decision the German Government is actuated by considerations which are above the level of the disputed question.

"The German Government attaches no less importance to the sacred principles of humanity than the Government of the United States. It again fully takes into account that both Governments for many years cooperated in developing international law in conformity with these principles, the ultimate object of which has always been to confine warfare on sea and land to armed forces of belligerents and safeguard as far as possible noncombatants against the horrors of war.

"But although these considerations are of great weight, they alone would not, under present circumstances, have determined the attitude of the German Government. For in answer to the appeal by the Government of the United States on behalf of the sacred principles of humanity and international law, the German Government must repeat once more, with all emphasis, that it was not the German, but the British, Government which ignored all accepted rules of international law and extended this terrible war to the lives and property of noncombatants, having no regard whatever for the interests and rights of neutrals and noncombatants that through this method of warfare have been severely injured.

"In self-defense against the illegal conduct of British warfare, while fighting a bitter struggle for national existence, Germany had to resort to the hard but effective weapon of submarine warfare.

"As matters stand, the German Government can not but reiterate regret that the sentiments of humanity, which the Government of the United States extends with such fervor to the unhappy victims of submarine warfare, are not extended with the same warmth of feeling to many millions of women and children who, according to the avowed intention of the British Government, shall be starved, and who by sufferings shall force the victorious armies of the central powers into ignominious capitulation.

"The German Government, in agreement with the German people, fails to understand this discrimination, all the more as it has repeatedly and explicitly declared itself ready to use the submarine weapon in strict conformity with the rules of international law as recognized before the outbreak of the war, if Great Britain likewise was ready to adapt the conduct of warfare to these rules.

"Several attempts made by the Government of the United States to prevail upon the British Government to act accordingly failed because of flat refusal on the part of the British Government. Moreover, Great Britain again and again has violated international law, surpassing all bounds in outraging neutral rights. The latest measure adopted by Great Britain, declaring German bunker coal contraband and establishing conditions under which English bunker coal alone is supplied to neutrals, is nothing but an unheard-of attempt by way of exaction to force neutral tonnage into the service of British trade war.

"The German people knows that the Government of the United States has the power to confine the war to armed forces of the belligerent countries, in the interest of humanity and maintenance of international law. The Government of the United States would have been certain of attaining this end had it been determined to insist, against Great Britain, on the incontrovertible rights to freedom of the seas. But as matters stand the German people is under the impression that the Government of the United States, while demanding that Germany, struggling for existence, shall restrain the use of an effective weapon, and while making compliance with these demands a condition for maintenance of relations with Germany, confines itself to protests against illegal methods adopted by Germany's enemies. Moreover, the German people knows to what considerable extent its enemies are supplied with all kinds of war material from the United States.

"It will, therefore, be understood that the appeal made by the Government of the United States to sentiments of humanity and principles of international law can not, under the circumstances, meet the same hearty response from the German people which such an appeal otherwise always is certain to find here. If the German Government, nevertheless, is resolved to go to the utmost limit of concessions, it has been guided not alone by the friendship connecting the two great nations for over 100 years, but also by the thought of the great doom which threatens the entire civilized world should the cruel and sanguinary war be extended and prolonged.

"The German Government, conscious of Germany's strength, twice within the last few months announced before the world its readiness to make peace on a basis safeguarding Germany's vital interests, thus indicating that it is not Germany's fault if peace is still withheld from the nations of Europe. The German Government feels all the more justified in declaring that responsibility could not be borne before the forum of mankind and in history if after 21 months of the war's duration the submarine question, under discussion between the German Government and the Government of the United States, were to take a turn seriously threatening maintenance of peace between the two nations.

"As far as lies with the German Government, it wishes to prevent things from taking such a course. The German Government, moreover, is prepared to do its utmost to confine operations of the war for the rest of its duration to the fighting forces of the belligerents, thereby also insuring the freedom of the seas, a principle upon which the German Government believes, now as before, that it is in agreement with the Government of the United States.

"The German Government, guided by this idea, notifies the Government of the United States that German naval forces have received the following order:

"'In accordance with the general principles of visit and search and the destruction of merchant vessels, recognized by international law, such vessels, both within and without the area declared a naval war zone, shall not be sunk without warning and without saving human lives unless the ship attempt to escape or offer resistance.'

"But neutrals can not expect that Germany, forced to fight for existence, shall, for the sake of neutral interests, restrict the use of an effective weapon, if the enemy is permitted to continue to apply at will methods of warfare violating rules of international law. Such a demand would be incompatible with the character of neutrality, and the German Government is convinced that the Government of the United States does not think of making such a demand, knowing that the Government of the United States repeatedly declares that it is determined to restore the principle of freedom of the seas, from whatever quarter it has been violated.

"Accordingly, the German Government is confident that in consequence of the new orders issued to the naval forces the Government of the United States will also now consider all impediments removed which may have been in the way of a mutual cooperation toward restoration of the freedom of the seas during the war, as suggested in the note of July 23, 1915, and it does not doubt that the Government of the United States will now demand and insist that the British Government shall forthwith observe the rules of international law universally recognized before the war, as are laid down in the notes presented by the Government of the United States to the British Government December 28, 1914, and November 5, 1915.

"Should steps taken by the Government of the United States not attain the object it desires, to have the laws of humanity followed by all belligerent nations, the German Government would then be facing a new situation in which it must reserve to itself complete liberty of decision.

"The undersigned avails himself of this opportunity to renew to the American ambassador assurances of highest consideration.

"VON JAGOW."

This position on the sensitive submarine issue indicated clearly Germany's desire to avoid the steps which might lead to severing diplomatic relations. It was partially anticipated in the address of the chancellor, Von Hollweg, in the Reichstag on the 5th of April, about 10 days after our note on the *Sussex*, out of which the latest controversy arose. The address in part, as given out from Berlin, is as follows:

BERLIN, *April 5, 1916.*
(By wireless to Sayville.)

In the Reichstag to-day Chancellor Bethmann Hollweg, in the most comprehensive speech he has delivered since the war began, derided the reports—calumniously circulated by the allies, he said—that Germany contemplated an attack upon the United States after the European war was ended, and had designs upon the territory of South American States.

The chancellor, whose address was delivered to a crowded house, also spoke of the questions presented in relation to the principle of nationality, considering the Polish, Lithuanian, Livonian, Belgian, and Flemish problems. He insisted upon the necessity of guaranteeing the peace of Europe after the war, and also of securing this result by giving to these races opportunity of free evolution along the lines of their natural individualities and mother tongues.

"TOWARD A FUTURE OF LIBERTY."

At the conclusion of his address the chancellor elicited great applause by saying:

"The spirit of union shall lead us, as it shall lead our children and grandchildren, through the struggles of their fathers, toward a future of strength and liberty."

The chancellor began his address with a review of the military situation. He said that since his last speech in the Reichstag the Dardanelles enterprise had ended as a failure; that the Serbian campaign, with the assistance of Austria-Hungary and Bulgaria, had been brought to a victorious conclusion, and that Montenegro and Albania likewise were now in the hands of Germany's allies; that the British attempt to relieve Kut-el-Amara, in Mesopotamia, had been vain; that the Russians, although they had succeeded in occupying Erzerum with superior numbers, had found their advance checked by strong Turkish forces; that Russian attacks against the front in East Galicia and Italian attacks against the Isonzo positions had been beaten back. Moreover, he said, the Russians had driven columns against the German lines, but their assaults had broken down before Field Marshal von Hindenburg and his "heroes."

The chancellor declared that the reports of the enemies of this nation that the German military force had been expended were erroneous, as the Verdun battle had proved that where operations were prepared with great foresight and where the bravery of German troops was called into play one advantage after another had been obtained. He then expressed the nation's thanks to the soldiers and their leaders.

Discussing attempts which he said were being made to starve Germany, Dr. von Bethmann Hollweg continued:

"I understood that in 1915 our enemies would not give up this hope, but I do not understand how cool heads, after the experience of 1915, can cling to it. Our enemies forget that, thanks to the organizing powers of the whole nation, Germany is equal to the task of distribution of food supplies.

"MORAL RESERVES" AGAINST STARVATION.

"Our enemies forget that in cases in which there is a real shortage the German Nation is able to make use of moral reserves which enable us to lower our standard of life, which has risen remarkably during the last decades. What would it mean, for instance, if the consumption of meat should temporarily be lowered to the level of the seventies? I should think our adversaries would remember how strong was the German race of those days."

Conditions of life in Germany were not easy, the chancellor continued, but the difficulties were being met in admirable fashion by the entire nation, especially the poorer classes. The crop reports indicated, he said, that all the winter crops were good; in fact, the reports had not been so favorable for many years previously. The harvest of 1915 was the worst of decades; nevertheless, the stocks of grain for bread-making not only would be sufficient, but provided for a considerable reserve with which to begin the new year.

"We shall not run short of anything in the future, as we have not done in the past," he said.

The chancellor asserted that it was the intention of Germany's enemies to extend the war to the women and children of the nation by starving them, and that for this purpose Great Britain and her allies had interfered with the trade of neutrals.

"The American note of November 5, 1915, gave an exact description of British violations of the nations' laws," he continued, "but as far as I know it has not been answered up to this day.

"No fair-minded neutral, no matter whether he favors us or not, can doubt our right to defend ourselves against this war of starvation, which is contrary to international law. No one can ask us to permit our arms of defense to be wrested from our hands. We use them, and must use them. We respect legitimate rights of neutral trade and commerce, but we have a right to expect that this will be appreciated, and that our right and our duty be recognized—to use all means against this policy of starvation, which is a jeering insult not only to all laws of nations but also to the plainest duties of humanity."

"THERE MUST BE A NEW BELGIUM."

Amid profound silence and the deep attention of the whole house the chancellor turned to the Polish problem and to that of nationalities in general, saying:

"Neither Germany nor Austria-Hungary intended to touch the Polish question, but the fate of battles brought them in contact with it. Now this problem stands before the world and needs to be solved. Germany and Austria-Hungary must and will solve it. History will not admit that after such earthquakes things will ever become what they were before.

"After the war there must be a new Belgium.

"Formely Poland was left in the hands of the tchinovnik [Russian police agent]. Even members of the Russian Duma have frankly admitted that he ought not to return to the place where Germans, Austrians, and Poles have honestly labored in the interests of this unfortunate land.

"Mr. Asquith also mentions the principle of nationality. If he puts himself in the position of this unconquered and unconquerable adversary, can he really suppose that Germany will ever of her own free will deliver into the hands of reactionary Russia the nations between the Baltic and the Volhynian swamps who have been freed by her and by her allies—no matter whether they are Poles or Lithuanians or Livonians of the Baltic?"

DENIES HOPE OF AMERICAN CONQUESTS.

Dr. von Bethmann Hollweg protested vigorously against the report that Germany now or in the future contemplated aggression against the United States.

"The latest offspring of the calumniating campaign directed against us," he said, "is a report that after the end of this war we shall rush against the American Continent, and that we shall attempt to conquer Canada.

"This is the silliest of all the imputations invented against us. Equally silly are the reports that we contemplate the acquisition of any territory on American soil, as in Brazil, or in any American country whatsoever.

"We fight for our existence and for our future. For Germany and not for space in a foreign country are Germany's sons bleeding and dying on the battle field. Every one among us knows this, and it makes our hearts and nerves so strong. This moral force strengthens our will in order not only to weather the storm but also to achieve final victory."

The chancellor intimated that any suggestions of peace on the basis of the destruction of Prussian military power would make possible only one answer—the German sword.

Dr. von Bethmann Hollweg turned to the subject of eventual conditions of peace after a brief reference to the entrance of Portugal into the war. He pointed out that in his speech of September 9 he had declared readiness to enter into discussion of peace, but that then, as now, Germany's enemies declined his offer.

"Let us suppose I suggest to Mr. Asquith to sit down with me at a table and examine the possibilities of peace," he continued, "and Mr. Asquith begins with a claim of definitive and complete destruction of Prussia's military power. The conversation would be ended before it began. To these peace conditions only one answer would be left, and this answer our sword must give.

FUTURE SLAUGHTER BLAMED ON ALLIES.

"If our adversaries want to continue the slaughter of human beings and the devastation of Europe theirs will be the guilt, and we shall have to stand it as men."

The chancellor introduced a personal touch in the following passage:

"When I was last at headquarters I stood with the Emperor at a place to which I had accompanied him one year previously. The Emperor remembered this and, deeply moved, pointed out the enormous changes that had taken place since that time. Then the Russians were on the ridge of the Carpathians. At Corlice we had just begun to break through the enemy's lines, and Hindenburg's powerful offensive had just been started. Now we are deep in Russia.

"The British and French at that time had attacked Gallipoli, and were hoping to arouse the Balkans against us. Now the Bulgarians stand firmly on our side. Then we were engaged in the defensive Champagne battle, and now, at the Emperor's word, the cannon resound in the Verdun battle. Deep gratitude to God, to the army, and to the nation filled the Emperor's heart.

AIMS TO RESCUE EUROPE FROM CHAOS.

"Our enemies wish to destroy united, free Germany," the chancellor went on. "They desire that Germany shall be again as weak as during past centuries, a prey of all lusts of domination of her neighbors, and the scapegoat of Europe, beaten back forever in the dominion of economic evolution, even after the war. That is what our enemies mean when they speak of definitive destruction of Prussia's military power.

"And what is our intention? The sense and aim of this war is for us the creation of a Germany so firmly united, so strongly protected, that no one ever will feel the temptation to annihilate us; that every one in the world will concede to us the right of free exercise of our peaceful endeavors. This Germany, and not the destruction of other races, is what we wish. Our aim is the lasting rescue of the European Continent, which is now shaken to its very foundation."

SAYS PEACE MUST BE LASTING.

Referring to the conditions which he wished to see prevail at the end of the war, the chancellor said:

"This new Europe in many respects can not resemble the past. The blood which has been shed will never be repaid and the wealth which has been destroyed can only slowly be replaced. But whatever else this Europe may be it must be for the nations that inhabit it a land of peaceful labor. The peace which shall end this war shall be a lasting peace. It must not bear the germ of new wars, but must provide for a peaceful arrangement of European questions."

The chancellor declared that England wished to see military operations ended, but hoped then to continue the commercial war with redoubled violence, adding:

"First the British endeavor to destroy our military and then our economic policy. Everywhere there is brutal lust of destruction and of annihilation and domination to cripple a nation of 70,000,000 people."

As to colonial questions, he quoted Bismarck to the effect that the fate of colonies was decided on the Continent. He asserted that Germany's enemies were now actively engaged in inventing new formulas in order to maintain the spell of illusion, hatred, and deception which bound them.

ALLIES' "LUST OF REVENGE."

"Of all the nations in the war," he continued, "only Germany has been threatened by her enemies and by their responsible spokesmen with annihilation, with partition of her realm, with destruction of her essential political and economic forces, no matter whether they called them Prussianism or militarism or barbarism. The forces which before the war bound together the anti-German coalition were lust of conquest, lust of revenge, and jealousy against German competition in the world's markets. During the war they have remained powerful with the Governments of our enemies in spite of all defeats.

"This is still the object and aim of the war alike in St. Petersburg (Petrograd), Paris, and London.

"To this we oppose that Germany in this war had only one aim, namely, to defend herself, to maintain her existence, to hold her enemies back from the German frontiers, and whenever their lust of destruction had shown itself to drive them back as quickly as possible.

"We did not want this war. We felt no desire to change our frontiers when the war began against our will. We threatened no nation with annihilation of her existence or with destruction of her national life."

"LOVED PEACE MORE THAN ALL OTHERS."

The chancellor pointed out the roots of Germany's present strength, saying:

"And what gives us this force to conquer and overcome the difficulties caused by the interruption of our over-seas trade and, on the front, numerically superior enemies? Who can readily believe that greed of land inspires our columns at Verdun and makes them accomplish every day new deeds of heroism, or shall a nation which gave to the world so many valued intellectual and useful gifts, which during 44 years loved peace more than all the others—shall this nation overnight be transformed into barbarians and Huns?

"No, gentlemen; these are the inventions of the evil conscience of those who are guilty of the war and are now fearing for their power an influence in their own countries."

With respect to the intentions of Germany in the case of Belgium, the speaker said:

"We must create real guaranties that Belgium never shall be a Franco-British vassal; never shall be used as a military or economic fortification against Germany. Also in this respect things can not be

what they were before. Also here Germany can not sacrifice the oppressed Flemish race, but must assure them sound evolution which corresponds to their rich natural gifts, which is based on their mother tongue and follows their national character.

"We want neighbors that do not form coalitions against us, but with whom we collaborate and who collaborate with us to our mutual advantage. Remembrance of the war will still echo in the sadly tried Belgian country, but we shall never allow that this will be a new source of wars—shall not allow it in our mutual interests."

On the 8th the President sent his answer to the German Government, which is an acceptance of the German position, so long as the instructions to the submarine commanders as outlined above are respected:

PRESIDENT WILSON'S ANSWER TO GERMANY.

WASHINGTON, *May 8, 1916.*

The American ambassador in Berlin was instructed to-day by cable to deliver the following note to the German minister of foreign affairs:

"The note of the Imperial German Government under date of May 4, 1916, has received careful consideration by the Government of the United States. It is especially noted, as indicating the purpose of the Imperial Government as to the future, that it 'is prepared to do its utmost to confine the operations of the war for the rest of its duration to the fighting forces of the belligerents' and that it is determined to impose upon all its commanders at sea the limitations of the recognized rules of international law upon which the Government of the United States has insisted.

"Throughout the months which have elapsed since the Imperial Government announced, on February 4, 1915, its submarine policy, now happily abandoned, the Government of the United States has been constantly guided and restrained by motives of friendship in its patient efforts to bring to an amicable settlement the critical questions arising from that policy. Accepting the Imperial Government's declaration of its abandonment of the policy which has so seriously menaced the good relations between the two countries, the Government of the United States will rely upon a scrupulous execution henceforth of the now altered policy of the Imperial Government, such as will remove the principal danger to an interruption of the good relations existing between the United States and Germany.

"The Government of the United States feels it necessary to state that it takes it for granted that the Imperial German Government does not intend to imply that the maintenance of its newly announced policy is in any way contingent upon the course or result of diplomatic negotiations between the Government of the United States and any other belligerent Government, notwithstanding the fact that certain passages in the Imperial Government's note of the 4th instant might appear to be susceptible of that construction. In order, however, to avoid any possible misunderstanding, the Government of the United States notifies the Imperial Government that it can not for a moment entertain, much less discuss, a suggestion that respect by German naval authorities for the rights of citizens of the United States upon the high seas should in any way or in the slightest degree be made contingent upon the conduct of any other Government affecting the rights of neutrals and noncombatants. Responsibility in such matters is single, not joint; absolute, not relative.

"LANSING."

The State Department made the following statement for the public after the note was sent to Berlin:

STATEMENT BY MR. LANSING.

The greater part of the German answer is devoted to matters which this Government can not discuss with the German Government. The only questions of right which can be discussed with that Government are those arising out of its action or out of our own, and in no event those questions which are the subject of diplomatic exchanges between the United States and any other country.

The essence of the answer is that Germany yields to our representations with regard to the rights of merchant ships and noncombatants on the high seas and engages to observe the recognized rules of international law governing naval warfare in using her submarines against merchant ships. So long as she lives up to this altered policy we can have no reason to quarrel with her on that score, though the losses resulting from the violation of American rights by German submarine commanders operating under the former policy will have to be settled.

While our differences with Great Britain can not form a subject of discussion with Germany, it should be stated that in our dealings with the British Government we are acting as we are unquestionably bound to act, in view of the explicit treaty engagements with that Government. We have treaty obligations as to the manner in which matters in dispute between the two Governments are to be handled. We offered to assume mutually similar obligations with Germany, but the offer was declined. When, however, the subject in dispute is a continuing menace to American lives it is doubtful whether such obligations apply unless the menace is removed during the pendency of the proceedings.

The treaty with the British Government referred to is the convention negotiated by ex-Secretary Bryan under which the two nations agree that any dispute arising shall be submitted to an investigating commission for one year before entering into hostilities. An offer to enter into such a treaty with Germany brought a request for information, but formal negotiations never were instituted.

In May Germany announces her submarine captains must abide by international law:

THE GERMAN AMBASSADOR TO THE SECRETARY OF STATE.

GERMAN EMBASSY,
Washington, May 12, 1916.

MR. SECRETARY OF STATE: A German submarine in January last signaled with flags from a distance the Dutch steamer *Bandoeng* to stop. Instead of immediately complying with that summons, permissible under international law, the Dutch steamer turned at high speed on the submarine, whose commander, on the assumption warranted by the circumstances that he had to do with an English ship in disguise bent on attacking him, then opened fire on her. The steamer *Bandoeng* then stopped and sent over a boat for the examination of the ship's papers. On being asked about his captain's proceeding the Dutch officer in command of the boat explained that he wanted to come nearer the submarine so as to shorten the visitation formalities.

The Imperial Government finds in the incident occasion to suggest to the neutral Governments that the masters of their merchant ships be given to understand that in the event of thus being stopped by German public vessels the provisions of international law must be observed to the letter, and that their special attention be called to the danger incurred by turning their ships on a submarine. Thus alone can incidents of the foregoing description be avoided, the responsibility for which would exclusively lie upon the neutral shipmaster.

Accept, etc.,

BERNSTORFF.

Notwithstanding this feeling of assurance that Germany had acceded to our rights in the defensive-armed merchantmen issue, as well as the submarine contention, the following paragraph was not reassuring:

Accordingly, the German Government is confident that, in consequence of the new orders issed to its naval forces, the Government of the United States will now also consider all impediments removed which may have been in the way of a mutual cooperation toward the restoration of the freedom of the seas during the war, as suggested in the note of July 23, 1915, and it does not doubt that the Government of the United States will now demand and insist that the British Government shall forthwith observe the rules of international law universally recognized before the war as they are laid down in the notes presented by the Government of the United States to the British Government on December 28, 1914, and November 5, 1915. Should the steps taken by the Government of the United States not attain the object it desires to have the laws of humanity followed by all belligerent nations, the German Government would then be facing a new situation, in which it must reserve itself complete liberty of decision.

It will be noted that Germany has never disavowed the *Lusitania* sinking.

The American Government's note of April 18, 1916, was looked upon as a final statement, and it was thought to be so regarded by Germany. The possibility of the great neutral power being drawn into the vortex was thought to be negligible.

The world's interests were centered at Berlin when on the 12th of December the famous peace conference was proposed by the Kaiser.

BERLIN, *December 12.*

Following is the text of the note addressed by Germany and her allies to the neutral powers for transmission to the entente allies:

"The most terrific war experienced in history has been raging for the last two years and a half over a large part of the world—a catastrophe which thousands of years of common civilization was unable to prevent and which injures the most precious achievements of humanity.

"Our aims are not to shatter nor annihilate our adversaries. In spite of our consciousness of our military and economic strength and our readiness to continue the war (which has been forced upon us) to the bitter end, if necessary, at the same time, prompted by the desire to avoid further bloodshed and to make an end to the atrocities of war, the four allied powers propose to enter forthwith into peace negotiations.

"The propositions which they bring forward for such negotiations, and which have for their object a guarantee of the existence of the honor and liberty of evolution for their nations, are, according to their firm belief, an appropriate basis for the establishment of a lasting peace.

"The four allied powers have been obliged to take up arms to defend justice and the liberty of national evolution. The glorious deeds of our armies have in no way altered their purpose. We always maintained the firm belief that our own rights and justified claims in no way control the rights of these nations.

"The spiritual and material progress which were the pride of Europe at the beginning of the twentieth century are threatened with ruin. Germany and her allies, Austria-Hungary, Bulgaria, and Turkey, gave proof of their unconquerable strength in this struggle. They gained gigantic advantages over adversaries superior in number and war material. Our lines stand unshaken against ever-repeated attempts made by armies.

"The last attack in the Balkans has been rapidly and victoriously overcome. The most recent events have demonstrated that further continuance of the war will not result in breaking the resistance of our forces, and the whole situation with regard to our troops justifies our expectation of further successes.

"If, in spite of this offer of peace and reconciliation, the struggle should go on, the four allied powers are resolved to continue to a victorious end, but they disclaim responsibility for this before humanity and history. The Imperial Government, through the good offices of your excellency, asks the Government of [here is inserted the name of the neutral power addressed in each instance] to bring this communication to the knowledge of the Government of [here are inserted the names of the belligerents]."

—

TO THE VATICAN.

BERLIN, *December 12.*

The note of the German Government, as presented by Dr. von Muhlberg, German minister to the Vatican, to Cardinal Gasparri, papal secretary of state, reads as follows:

"According to instructions received, I have the honor to send to your eminence a copy of the declaration of the Imperial Government to-day, which by the good offices of the powers intrusted with the protection of German interests in the countries with which the German Empire is in a state of war, transmits to these States, and in which the Imperial Government declares itself ready to enter into peace negotiations. The Austro-Hungarian, Turkish, and Bulgarian Governments also have sent similar notes.

"The reasons which prompted Germany and her allies to take this step are manifest. For two years and a half a terrible war has been devastating the European Continent. Unlimited treasures of civilization have been destroyed. Extensive areas have been soaked with blood. Millions of brave soldiers have fallen in battle and millions have returned home as invalids. Grief and sorrow fill almost every house.

"Not only upon the belligerent nations, but also upon neutrals, the destructive consequences of the gigantic struggle weigh heavily. Trade and commerce, carefully built up in years of peace, have been depressed. The best forces of the nation have been withdrawn from the production of useful objects. Europe, which formerly was devoted to the propagation of religion and civilization, which was trying to find solutions for social problems, and was the home of science and art and all peaceful

labor, now resembles an immense war camp in which the achievements and works of many decades are doomed to annihilation.

"Germany is carrying on a war of defense against her enemies, which aim at her destruction. She fights to assure the integrity of her frontiers and the liberty of the German nation, for the right which she claims to develop freely her intellectual and economic energies in peaceful competition and on an equal footing with other nations. All the efforts of their enemies are unable to shatter the heroic armies of the (Teutonic) allies which protect the frontiers of their countries, strengthened by the certainty that the enemy shall never pierce the iron wall.

"Those fighting on the front know that they are supported by the whole nation, which is inspired by love for its country and is ready for the greatest sacrifices and determined to defend to the last extremity the inherited treasures of intellectual and economic work and the social organization and sacred soil of the country.

"Certain of our own strength, but realizing Europe's sad future if the war continues; seized with pity in the face of the unspeakable misery of humanity, the German Empire, in accord with her allies, solemnly repeats what the chancellor already has declared a year ago, that Germany is ready to give peace to the world by setting before the whole world the question whether or not it is possible to find a basis for an understanding.

"Since the first day of the pontifical reign his holiness the Pope has unswervingly demonstrated in the most generous fashion his solicitude for the innumerable victims of this war. He has alleviated the sufferings and ameliorated the fate of thousands of men injured by this catastrophe. Inspired by the exalted ideas of his ministry, his holiness has seized every opportunity in the interests of humanity to end so sanguinary a war.

"The Imperial Government is firmly confident that the intiative of the four powers will find friendly welcome on the part of his holiness, and that the work of peace can count upon the precious support of the Holy See."

On the 18th of December the President addressed his own famous and much-discussed peace note to the belligerents, and which was made public on the 20th:

PRESIDENT WILSON'S NOTE TO THE BELLIGERENT NATIONS.

THE SECRETARY OF STATE TO THE AMERICAN AMBASSADORS OF THE CAPITALS OF THE BELLIGERENT POWERS.

DEPARTMENT OF STATE,
Washington, D. C., December 18, 1916.

The President directs me to send you the following communication to be presented immediately to the minister of foreign affairs of the Government to which you are accredited:

The President of the United States has instructed me to suggest to the [here is inserted a designation of the Government addressed] a course of action with regard to the present war, which he hopes that the Government will take under consideration as suggested in the most friendly spirit, and as coming not only from a friend but also as coming from the representative of a neutral nation whose interests have been most seriously affected by the war and whose concern for its early conclusion arises out of a manifest necessity to determine how best to safeguard those interests if the war is to continue.

[The third paragraph of the note as sent to the four central powers—Germany, Austria-Hungary, Turkey, and Bulgaria—is as follows:]

The suggestion which I am instructed to make the President has long had it in mind to offer. He is somewhat embarrassed to offer it at this particular time, because it may now seem to have been prompted by a desire to play a part in connection with the recent overtures of the central powers. It has, in fact, been in no way suggested by them in its origin, and the President would have delayed offering it until those overtures had been independently answered but for the fact that it also concerns the question of peace and may best be considered in connection with other proposals which have the same end in view. The President can only beg that his suggestion be considered entirely on its own merits and as if it had been made in other circumstances.

[The third paragraph of the note as sent to the 10 entente allies—Great Britain, France, Italy, Japan, Russia, Belgium, Montenegro, Portugal, Roumania, and Serbia—is as follows:]

The suggestion which I am instructed to make the President has long had it in mind to offer. He is somewhat embarrassed to offer it at this particular time, because it may now seem to have been prompted by the recent overtures of the central powers. It is, in fact, in no way associated with them in its origin, and the President would have delayed offering it until those overtures had been answered but for the fact that it also concerns the question of peace and may best be considered in connection with other proposals which have the same end in view. The President can only beg that his suggestion be considered entirely on its own merits and as if it had been made in other circumstances.

[Thenceforward the note proceeds identically to all the powers, as follows:]

The President suggests that an early occasion be sought to call out from all the nations now at war such an avowal of their respective views as to the terms upon which the war might be concluded and the arrangements which would be deemed satisfactory as a guaranty against its renewal or the kindling of any similar conflict in the future as would make it possible frankly to compare them. He is indifferent as to the means taken to accomplish this. He would be happy himself to serve, or even to take the initiative in its accomplishment, in any way that might prove acceptable, but he has no desire to determine the method or the instrumentality. One way will be as acceptable to him as another, if only the great object he has in mind be attained.

He takes the liberty of calling attention to the fact that the objects which the statesmen of the belligerents on both sides have in mind in this war are virtually the same, as stated in general terms to their own people and to the world. Each side desires to make the rights and privileges of weak peoples and small States as secure against aggression or denial in the future as the rights and privileges of the great and powerful States now at war. Each wishes itself to be made secure in the future, along with all other nations and peoples, against the recurrence of wars like this and against aggression or selfish interference of any kind. Each would be jealous of the formation of any more rival leagues to preserve an uncertain balance of power amid multiplying suspicions; but each is ready to consider the formation of a league of nations to insure peace and justice throughout the world. Before that final step can be taken, however, each deems it necessary first to settle the issues of the present war upon terms which will certainly safeguard the independence, the territorial integrity, and the political and commercial freedom of the nations involved.

"In the measures to be taken to secure the future peace of the world the people and Government of the United States are as vitally and as directly interested as the Governments now at war. Their interest, moreover, in the means to be adopted to relieve the smaller and weaker peoples of the world of the peril of wrong and violence is as quick and ardent as that of any other people or Government. They stand ready, and even eager, to cooperate in the accomplishment of these ends, when the war is over, with every influence and resource at their command. But the war must first be concluded. The terms upon which it is to be concluded they are not at liberty to suggest; but the President does feel that it is his right and his duty to point out their intimate interest in its conclusion, lest it should presently be too late to accomplish the greater things which lie beyond its conclusion, lest the situation of neutral nations, now exceedingly hard to endure, be rendered altogether intolerable, and lest, more than all, an injury be done civilization itself which can never be atoned for or repaired.

"The President therefore feels altogether justified in suggesting an immediate opportunity for a comparison of views as to the terms which must precede those ultimate arrangements for the peace of the world, which all desire and in which the neutral nations as well as those at war are ready to play their full responsible part.

"If the contest must continue to proceed toward undefined ends by slow attrition until the one group of belligerents or the other is exhausted; if million after million of human lives must continue to be offered up until on the one side or the other there are no more to offer; if resentments must be kindled that can never cool and despairs engendered from which there can be no recovery, hopes of peace and of the willing concert of free peoples will be rendered vain and idle.

"The life of the entire world has been profoundly affected. Every part of the great family of mankind has felt the burden and terror of this unprecedented contest of arms. No nation in the civilized world can be said in truth to stand outside its influence or to be safe against its disturbing effects. And yet the concrete objects for which it is being waged have never been definitely stated.

"The leaders of the several belligerents have, as has been said, stated those objects in general terms. But, stated in general terms, they seem the same on both sides. Never yet have the authoritative spokesmen of either side avowed the precise objects which would, if attained, satisfy them and their people that the war had been fought out. The world has been left to conjecture what definitive results, what actual exchange of guaranties, what political or territorial changes or readjustments, what stage of military success, even, would bring the war to an end.

"It may be that peace is nearer than we know; that the terms which the belligerents on the one side and on the other would deem it necessary to insist upon are not so irreconcilable as some have feared; that an interchange of views would clear the way at least for conference and make the permanent concord of the nations a hope of the immediate future, a concert of nations immediately practicable.

"The President is not proposing peace; he is not even offering mediation. He is merely proposing that soundings be taken in order that we may learn, the neutral nations with the belligerent, how near the haven of peace may be for which all mankind longs with an intense and increasing longing. He believes that the spirit in which he speaks and the objects which he seeks will be understood by all concerned, and he confidently hopes for a response which will bring a new light into the affairs of the world.

"LANSING.

The President transmitted the German note of December 12 to the entente powers December 19.

The entente powers replied December 30:

REPLY OF THE ENTENTE ALLIES TO THE CENTRAL POWERS.

PARIS, *December 30.*

The text of the entente reply to the Teuton peace proposal is as follows:

"The allied Governments of Belgium, France, Great Britain, Italy, Japan, Montenegro, Portugal, Roumania, Russia, and Serbia, united for the defense of the liberty of their peoples and faithful to engagements taken not to lay down their arms separately, have resolved to reply collectively to the pretended propositions of peace which were addressed to them on behalf of the enemy Governments through the intermediary of the United States, Spain, Switzerland, and Holland.

"Before making any reply the allied powers desire particularly to protest against the two essential assertions of the notes of the enemy powers that pretend to throw upon the allies responsibility for the war and proclaim the victory of the central powers. The allied Governments can not admit an affirmation doubly inexact and which suffices to render sterile all tentative negotiations. The allied nations have sustained for 30 months a war they did everything to avoid. They have shown by their acts their attachment to peace. That attachment is as strong to-day as it was in 1914. But it is not upon the word of Germany, after the violation of its engagements, that the peace broken by her may be based.

"A mere suggestion, without a statement of terms, that negotiations should be opened is not an offer of peace. The putting forward by the Imperial Government of a sham proposal lacking all substance and precision would appear to be less an offer of peace than a war maneuver. It is founded on calculated misinterpretation of the character of the struggle in the past, the present, and the future.

"As for the past, the German note takes no account of the facts, dates, and figures, which establish that the war was desired, provoked, and declared by Germany and Austria-Hungary.

"At The Hague conference it was a German delegate who refused all proposals for disarmament. In July, 1914, it was Austria-Hungary who, after having addressed to Serbia an unprecedented ultimatum, declared war upon her in spite of the satisfaction which had at once been accorded.

"The central empires then rejected all attempts made by the entente to bring about a pacific solution of a purely local conflict. Great Britain suggested a conference; France proposed an international commission; the Emperor of Russia asked the German Emperor to go to arbitration, and Russia and Austria-Hungary came to an understanding on the eve of the conflict. But to all these efforts Germany gave neither answer nor effect.

"Belgium was invaded by an empire which had guaranteed her neutrality and which had the assurance to proclaim that treaties were 'scraps of paper' and that 'necessity knows no law.'

"At the present moment these sham offers on the part of Germany rest on the war map of Europe alone, which represents nothing more than a superficial and passing phase of the situation and not the real strength of the belligerents. A peace concluded upon these terms would be only to the advantage of the aggressors who, after imagining that they would reach their goal in two months, discovered after two years that they could never attain it.

"As for the future the disasters caused by the German declaration of war and the innumerable outrages committed by Germany and her allies against both belligerents and neutrals demand penalties, reparation, and guaranties. Germany avoids mention of any of these.

"In reality these overtures made by the central powers are nothing more than a calculated attempt to influence the future course of war and to end it by imposing a German peace. The object of these overtures is to create dissention in public opinion in the allied countries. But that public opinion has, in spite of all the sacrifices endured by the allies, already given its answer with admirable firmness and has denounced the empty pretense of the declaration of the enemy powers.

"They (the peace overtures) have the further object of stiffening public opinion in Germany and in the countries allied to her—one and all severely tried by their losses, worn out by economic pressure, and crushed by the supreme effort which has been imposed upon their inhabitants.

"They endeavor to deceive and intimidate public opinion in neutral countries, whose inhabitants have long since made up their minds where the initial responsibilities lie and are far too enlightened to favor the designs of Germany by abandoning the defense of human freedom.

"Finally, these overtures attempt to justify in advance in the eyes of the world a new series of crimes—submarine warfare, deportations, forced labor, and forced enlistment of the inhabitants against their own countries, and violations of neutrality.

"Fully conscious of the gravity of this moment, but equally conscious of its requirements, the allied Governments, closely united to one another and in perfect sympathy with their peoples, refuse to consider a proposal which is empty and insincere.

"Once again the allies declare that no peace is possible so long as they have not secured reparation for violated rights and liberties, the recognition of the principle of nationality, and of the free existence of small States, so long as they have not brought about a settlement calculated to end once and for all forces which have constituted a perpetual menace to the nations, and to afford the only effective guaranty for the future security of the world.

"In conclusion, the allied powers think it necessary to put forward the following considerations, which show the special situation of Belgium after two and a half years of war. In virtue of the international treaties signed by five great European powers, of which Germany was one, Belgium enjoyed before the war a special status, rendering her territory inviolable and placing her, under the guaranty of the powers, outside all European conflicts. She was, however, in spite of these treaties, the first to suffer the aggression of Germany. For this reason the Belgian Government think it necessary to define the aims which Belgium has never ceased to pursue while fighting side by side with the entente powers for right and justice.

"Belgium has always scrupulously fulfilled the duties which her neutrality imposed upon her. She has taken up arms to defend her independence and her neutrality violated by Germany and to show that she remains faithful to her international obligations.

"On the 4th of August, 1914, in the Reichstag, the German chancellor admitted that this aggression constituted an injustice contrary to the laws of nations, and pledged himself in the name of Germany to repair it. During two and a half years this injustice has been cruelly aggravated by the proceedings of the occupying forces, which have exhausted the resources of the country, ruined its industries, devastated its towns and villages, and have been responsible for innumerable massacres, executions, and imprisonments.

"At this very moment, while Germany is proclaiming peace and humanity to the world, she is deporting Belgian citizens by thousands and reducing them to slavery.

"Belgium before the war asked for nothing but to live in harmony with her neighbors. Her King and her Government have but one aim—the reestablishment of peace and justice. But they only desire peace which would assure to their country legitimate reparation, guaranties, and safeguards for the future."

On the 22d of January the President addressed the Senate as follows:

TEXT OF PRESIDENT WILSON'S ADDRESS BEFORE THE SENATE GIVING HIS IDEAS OF STEPS NECESSARY FOR WORLD PEACE.

GENTLEMEN OF THE SENATE: On the 18th of December last I addressed an identic note to the Governments of the nations now at war requesting them to state more definitely than there had yet been stated by either group of belligerents the terms upon which they would deem it possible to make peace. I spoke on behalf of humanity and of the rights of all neutral nations like our own, many of whose most vital interests the war puts in constant jeopardy. The central powers united in a reply which stated merely that they were ready to meet their antagonists in conference to discuss terms of peace.

The entente powers have replied much more definitely and have stated, in general terms, indeed, but with sufficient definiteness to imply details, the arrangements, guaranties, and acts of reparation which they deem to be the indispensable conditions of a satisfactory settlement.

We are that much nearer a definite discussion of the peace which shall end the present war. We are that much nearer the discussion of the international concert which must thereafter hold the world at peace.

In every discussion of the peace that must end this war it is taken for granted that that peace must be followed by some definite concert of power which will make it virtually impossible that any such catastrophe should ever overwhelm us again. Every lover of mankind, every sane and thoughtful man, must take that for granted.

I have sought this opportunity to address you because I thought that I owed it to you, as the council associated with me in the final determination of our international obligations, to disclose to you without reserve the thought and purpose that have been taking form in my mind in regard to the duty of our Government in these days to come, when it will be necessary to lay afresh and upon a new plan the foundations of peace among nations.

It is inconceivable that the people of the United States should play no part in that great enterprise. To take part in such a service will be the opportunity for which they have sought to prepare themselves by the very principles and purposes of their policy and the approved practices of their Government ever since the days when they set up a new Nation in the high and honorable hope that it might, in all that it was and did, show mankind the way to liberty. They can not in honor withhold the service to which they are now about to be challenged. They do not wish to withhold it. But they owe it to themselves and to the other nations of the world to state the conditions under which they will feel free to render it.

That service is nothing less than this: To add their authority and their power to the authority and force of other nations to guarantee peace and justice throughout the world. Such a settlement can not now be long postponed. It is right that before it comes this Government should frankly formulate the conditions upon which it would feel justified in asking our people to approve its formal and solemn adherence to a league for peace. I am here to attempt to state those conditions.

The present war must first be ended; but we owe it to candor and to a joint regard for the opinion of mankind to say that so far as our participation in guarantee of future peace is concerned it makes a great deal of difference in what way and upon what terms it is ended. The treaties and agreements which bring it to an end must embody terms which will create a peace that is worth guaranteeing and preserving; a peace that will win the approval of mankind, not merely a peace that will serve the several interests and immediate aims of the nations engaged. We shall have no voice in determining what those terms shall be, but we shall, I feel sure, have a voice in determining whether they shall be made lasting or not by the guarantees of a universal covenant; and our judgment upon what is fundamental and essential as a condition precedent to permanency should be spoken now, not afterwards, when it may be too late.

No covenant of cooperative peace that does not include the peoples of the New World can suffice to keep the future safe against war; and yet there is only one sort of peace that the peoples of America could join in guaranteeing.

The elements of that peace must be elements that engage the confidence and satisfy the principles of the American Governments, elements consistent with their political faith and the practical convictions which the peoples of America have once for all embraced and undertaken to defend.

I do not mean to say that any American government would throw any obstacle in the way of any terms of peace the Governments now at war might agree upon, or seek to upset them when made, whatever they might be.

I only take it for granted that mere terms of peace between the belligerents will not be satisfactory even to the belligerents themselves. Mere agreements may not make peace secure. It will be absolutely necessary that a force be created as a guarantor of the permanency of the settlement so much greater than the force of any nation now engaged or any alliance hitherto formed or projected that no nation, no probable combination of nations, could face or withstand it. If the peace presently to be made is to endure, it must be a peace made secure by the organized major force of mankind.

The terms of the immediate peace agreed upon will determine whether it is a peace for which such a guaranty can be secured. The question upon which the whole future peace and policy of the world depends is this:

And the paths of the sea must, alike in law and in fact, be free. The freedom of the seas is the sine qua non of peace, equality, and cooperation. No doubt a somewhat radical reconsideration of many of the rules of international practice hitherto sought to be established may be necessary in order to make the seas indeed free and common in practically all circumstances for the use of mankind, but the motive for such changes is convincing and compelling. There can be no trust or intimacy between the peoples of the world without them. The free, constant, unthreatened intercourse of nations is an essential part of the process of peace and of development.

It need not be difficult to define or to secure the freedom of the seas if the Governments of the world sincerely desire to come to an agreement concerning it.

It is a problem closely connected with the limitation of naval armament and the cooperation of the navies of the world in keeping the seas at once free and safe. And the question of limiting naval armaments opens the wider and perhaps more difficult question of the limitation of armies and of all programs of military preparation.

Difficult and delicate as these questions are, they must be faced with the utmost candor and decided in a spirit of real accommodation if peace is to come with healing in its wings, and come to stay. Peace can not be had without concession and sacrifice. There can be no sense of safety and equality among the nations if great preponderating armaments are henceforth to continue here and there to be built up and maintained.

The statesmen of the world must plan for peace, and nations must adjust and accommodate their policy to it as they have planned for war and made ready for pitiless contest and rivalry.

The question of armaments, whether on land or sea, is the most immediately and intensely practical question connected with the future fortunes of nations and of mankind.

I have spoken upon these great matters without reserve and with the utmost explicitness because it has seemed to me to be necessary if the world's yearning desire for peace was anywhere to find free voice and utterance. Perhaps I am the only person in high authority amongst all the peoples of the world who is at liberty to speak and hold nothing back. I am speaking as an individual, and yet I am speaking also, of course, as the responsible head of a great Government, and I feel confident that I have said what the people of the United States would wish me to say.

May I not add that I hope and believe that I am in effect speaking for liberals and friends of humanity in every nation and of every program of liberty? I would fain believe that I am speaking for the silent mass of mankind everywhere who have as yet had no place or opportunity to speak their real hearts out concerning the death and ruin they see to have come already upon the persons and the homes they hold most dear.

And in holding out the expectation that the people and Government of the United States will join the other civilized nations of the world in guaranteeing the permanence of peace upon such terms as I have named I speak with the greater boldness and confidence, because it is clear to every man who can think that there is in this promise no breach in either our traditions or our policy as a nation, but a fulfillment rather of all that we have professed or striven for.

I am proposing, as it were, that the nations should with one accord adopt the doctrine of President Monroe as the doctrine of the world; that no nation should seek to extend its policy over any other nation or people, but that every people should be left free to determine its

own polity, its own way of development, unhindered, unthreatened, unafraid, the little along with the great and powerful.

I am proposing that all nations henceforth avoid entangling alliances which would draw them into competitions of power, catch them in a net of intrigue and selfish rivalry, and disturb their own affairs with influences intruded from without. There is no entangling alliance in a concert of power. When all unite to act in the same sense and with the same purpose all act in the common interest and are free to live their own lives under a common protection.

I am proposing government by the consent of the governed; that freedom of the seas which in international conference after conference representatives of the United States have urged with the eloquence of those who are the convinced disciples of liberty; and that moderation of armaments which makes of armies and navies a power for order merely, not an instrument of aggression or of selfish violence.

These are American principles, American policies. We can stand for no others. And they are also the principles and policies of forward-looking men and women everywhere, of every modern nation, of every enlightened community. They are the principles of mankind and must prevail.

Is the present war a struggle for a just and secure peace or only for a new balance of power? If it be only a struggle for a new balance of power, who will guarantee, who can guarantee, the stable equilibrium of the new arrangement? Only a tranquil Europe can be a stable Europe. There must be not a balance of power but a community of power, not organized rivalries but an organized common peace.

Fortunately, we have received very explicit assurances on this point. The statesmen of both of the groups of nations now arrayed against one another have said in terms that could not be misinterpreted that it was no part of the purpose they had in mind to crush their antagonists. But the implications of these assurances may not be equally clear to all—may not be the same on both sides of the water. I think it will be serviceable if I attempt to set forth what we understand them to be.

They imply, first of all, that it must be a peace without victory. It is not pleasant to say this. I beg that I may be permitted to put my own interpretation upon it and that it may be understood that no other interpretation was in my thought. I am seeking only to face realities and to face them without soft concealments. Victory would mean peace forced upon the loser—a victor's terms imposed upon the vanquished.

It would be accepted in humiliation, under duress, at an intolerable sacrifice, and would leave a sting, a resentment, a bitter memory upon which terms of peace would rest not permanently but only as upon quicksand. Only a peace between equals can last. Only a peace the very principle of which is equality and a common participation in a common benefit. The right state of mind, the right feeling between nations, is as necessary for a lasting peace as is the just settlement of vexed questions of territory or of racial and national allegiance.

The equality of nations upon which peace must be founded if it is to last must be an equality of rights; the guaranties exchanged must neither recognize nor imply a difference between big nations and small, between those that are powerful and those that are weak. Right must be based upon the common strength, not upon the individual strength, of the nations upon whose concert peace will depend.

Equality of territory or of resources there, of course, can not be; nor any other sort of equality not gained in the ordinary peaceful and legitimate development of the peoples themselves. But no one asks or expects anything more than an equality of rights. Mankind is looking now for freedom of life, not for equipoises of power.

And there is a deeper thing involved than even equality of right among organized nations. No peace can last, or ought to last, which does not recognize and accept the principle that governments derive all their just powers from the consent of the governed, and that no right anywhere exists to hand people about from sovereignty to sovereignty as if they were property.

I take it for granted, for instance, if I may venture upon a single example, that statesmen everywhere are agreed that there should be a united, independent, and autonomous Poland, and that henceforth inviolable security of life, of worship, and of industrial and social development should be guaranteed to all peoples who have lived hitherto under the power of governments devoted to a faith and purpose hostile to their own.

I speak of this not because of any desire to exalt an abstract political principle, which has always been held very dear by those who have sought to build up liberty in America, but for the same reason that I have spoken of the other conditions of peace which seem to me clearly indispensable, because I wish frankly to uncover realities. Any peace which does not recognize and accept this principle will inevitably be upset.

It will not rest upon the affections or the convictions of mankind. The ferment of spirit of whole populations will fight subtly and constanly against it and all the world will sympathize. The world can be at peace only if its life is stable, and there can be no stability where the will is in rebellion, where there is not tranquillity of spirit and a sense of justice, of freedom, and of right.

So far as practicable, moreover, every great people now struggling toward a full development of its resources and of its powers should be assured a direct outlet to the great highways of the sea. Where this can not be done by the cession of territory, it can, no doubt, be done by the neutralization of direct rights of way under the general guarantee which will assure the peace itself. With a right comity of arrangement no nation need be shut away from free access to the open paths of the world's commerce.

In order to make this record fairly complete I here insert the President's address on the peace question here in the Capital on the evening of the 27th of last May at the Peace Conference banquet:

When the invitation to be here to-night came to me I was glad to accept it—not because it offered me an opportunity to discuss the program of the league—that you will, I am sure, not expect of me—but because the desire of the whole world now turns eagerly, more and more eagerly, toward the hope of peace, and there is just reason why we should take our part in counsel upon this great theme. It is right that I, as spokesman of our Government, should attempt to give expression to what I believe to be the thought and purpose of the people of the United States in this vital matter.

This great war that broke so suddenly upon the world two years ago, and which has swept within its flame so great a part of the civilized world, has affected us very profoundly, and we are not only at liberty, it is perhaps our duty, to speak very frankly of it and of the great interests of civilization which it affects.

RIGHTS OF NATION AFFECTED.

With its causes and its objects we are not concerned. The obscure fountains from which its stupendous flood has burst forth we are not interested to search for or explore. But so great a flood, spread far and wide to every quarter of the globe, has of necessity engulfed many a fair province of right that lies very near to us.

Our own rights as a Nation, the liberties, the privileges, and the property of our people have been profoundly affected. We are not mere disinterested lookers-on.

The longer the war lasts the more deeply do we become concerned that it should be brought to an end and the world be permitted to resume its normal life and course again. And when it does come to an end we shall be as much concerned as the nations at war to see peace assume an aspect of permanence, give promise of days from which the anxiety of uncertainty shall be lifted, bring some assurance that peace and war shall always hereafter be reckoned part of the common interest of mankind.

ARE PARTNERS WITH THE REST.

We are participants, whether we would or not, in the life of the world. The interests of all nations are our own also. We are partners with the rest. What affects mankind is inevitably our affair as well as the affair of the nations of Europe and of Asia.

One observation on the causes of the present war we are at liberty to make, and to make it may throw some light forward upon the future as well as backward upon the past. It is plain that this war could have come only as it did, suddenly and out of secret counsels, without warning to the world, without discussion, without any of the deliberate movements of counsel with which it would seem natural to approach so stupendous a contest.

It is probable that if it had been foreseen just what would happen, just what alliances would be formed, just what forces arrayed against one another, those who brought the great contest on would have been glad to substitute conference for force.

MIGHT HAVE AVERTED WAR.

If we ourselves had been afforded some opportunity to apprise the belligerents of the attitude which it would be our duty to take, of the policies and practices against which we would feel bound to use all our moral and economic strength, and in certain circumstances even our physical strength also, our own contribution to the counsel which might have averted the struggle would have been considered worth weighing and regarding.

And the lesson which the shock of being taken by surprise in a matter so deeply vital to all the nations of the world has made poignantly clear is, that the peace of the world must henceforth depend upon a new and more wholesome diplomacy.

Only when the great nations of the world have reached some sort of agreement as to what they hold to be fundamental to their common interest, and as to some feasible method of acting in concert when any nation or group of nations seeks to disturb those fundamental things, can we feel that civilization is at last in a way of justifying its existence and claiming to be finally established.

MUST BE GOVERNED BY HONOR.

It is clear that nations must in the future be governed by the same high code of honor that we demand of individuals.

We must, indeed, in the very same breath with which we avow this conviction admit that we have ourselves upon occasion in the past been offenders against the law of diplomacy which we thus forecast; but our conviction is not the less clear, but rather the more clear on that account.

If this war has accomplished nothing else for the benefit of the world, it has at least disclosed a great moral necessity and set forward the thinking of the statesmen of the world by a whole age.

Repeated utterances of the leading statesmen of most of the great nations now engaged in war have made it plain that their thought has come to this: That the principle of public right must henceforth take precedence over the individual interests of particular nations, and that the nations of the world must in some way band themselves together to see that that right prevails as against any sort of selfish aggression; that henceforth alliance must not be set up against alliance, understanding against understanding, but that there must be a common agreement for a common object, and that at the heart of that common object must lie the inviolable rights of peoples and of mankind.

NATIONS ARE NOW NEIGHBORS.

The nations of the world have become each other's neighbors. It is to their interest that they should understand each other. In order that they may understand each other it is imperative that they should agree to cooperate in a common cause, and that they should so act that the guiding principle of that common cause shall be even-handed and impartial justice.

This is undoubtedly the thought of America. This is what we ourselves will say when there comes proper occasion to say it. In the dealings of nations with one another arbitrary force must be rejected, and we must move forward to the thought of the modern world, the thought of which peace is the very atmosphere. That thought constitutes a chief part of the passionate conviction of America.

RIGHTS OF THE LITTLE NATIONS.

We believe these fundamental things: First, that every people has a right to choose the sovereignty under which they shall live. Like other nations, we have ourselves no doubt once and again offended against that principle when for a little while controlled by selfish passion, as our franker historians have been honorable enough to admit; but it has become more and more our rule of life and action. Second, that the small States of the world have a right to enjoy the same respect for their sovereignty and for their territorial integrity that great and powerful nations expect and insist upon. And, third, that the world has a right to be free from every disturbance of its peace that has its origin in aggression and disregard of the rights of peoples and nations.

So sincerely do we believe in these things that I am sure that I speak the mind and wish of the people of America when I say that the United States is willing to become a partner in any feasible association of nations formed in order to realize these objects and make them secure against violation.

READY TO CHECK AGGRESSION.

There is nothing that the United States wants for itself that any other nation has. We are willing, on the contrary, to limit ourselves along with them to a prescribed course of duty and respect for the

rights of others which will check any selfish passion of our own, as it will check any aggressive impulse of theirs.

If it should ever be our privilege to suggest or initiate a movement for peace among the nations now at war, I am sure that the people of the United States would wish their Government to move along these lines:

First, such a settlement with regard to their own immediate interests as the belligerents may agree upon. We have nothing material of any kind to ask for ourselves, and are quite aware that we are in no sense or degree parties to the present quarrel. Our interest is only in peace and its future guaranties.

Second, an universal association of the nations to maintain the inviolate security of the highway of the seas for the common and unhindered use of all the nations of the world, and to prevent any war begun either contrary to treaty covenants or without warning and full submission of the causes to the opinion of the world—a virtual guaranty of territorial integrity and political independence.

ONLY AVOWS A CREED.

But I did not come here, let me repeat, to discuss a program. I came only to avow a creed and give expression to the confidence I feel that the world is even now upon the eve of a great consummation, when some common force will be brought into existence which shall safeguard right as the first and most fundamental interest of all peoples and all governments, when coercion shall be summoned not to the service of political ambition or selfish hostility but to the service of a common order, a common justice, and a common peace.

God grant that the dawn of that day of frank dealing and of settled peace, concord, and cooperation may be near at hand.

On January 31 Germany sent a note to the United States, as follows:

TEXT OF GERMANY'S NOTE TO THE UNITED STATES.

WASHINGTON, D. C., *January 31, 1917.*

Mr. SECRETARY OF STATE:

Your excellency was good enough to transmit to the Imperial Government a copy of the message which the President of the United States of America addressed to the Senate on the 22d instant. The Imperial Government has given it the earnest consideration which the President's statements deserve, inspired, as they are, by a deep sentiment of responsibility.

It is highly gratifying to the Imperial Government to ascertain that the main tendencies of this important statement correspond largely to the desires and principles professed by Germany. These principles especially include self-government and equality of rights for all nations. Germany would be sincerely glad if, in recognition of this principle, countries like Ireland and India, which do not enjoy the benefits of political independence, should now obtain their freedom.

The German people also repudiate all alliances which serve to force the countries into a competition for might and to involve them in a net *of selfish intrigues.* On the other hand, Germany will gladly cooperate in all efforts to prevent future wars.

The freedom of the seas, being a preliminary condition of the free existence of nations and the peaceful intercourse between them, as well as the open door for the commerce of all nations, has always formed part of the leading principles of Germany's political program. All the more the Imperial Government regrets that the attitude of her enemies, who are so entirely opposed to peace, makes it impossible for the world at present to bring about the realization of these lofty ideals.

Germany and her allies were ready to enter now into a discussion of peace, and had set down as basis the guarantee of existence, honor, and free development of their peoples. Their aims, as has been expressly stated in the note of December 12, 1916, were not directed toward the destruction or annihilation of their enemies and were, according to their conviction, perfectly compatible with the rights of the other nations. As to Belgium, for which such warm and cordial sympathy is felt in the United States, the chancellor had declared only a few weeks previously that its annexation had never formed part of Germany's intentions. The peace to be signed with Belgium was to provide for such conditions in that country, with which Germany desires to maintain friendly, neighborly relations, that Belgium should not be used again by Germany's enemies for the purpose of instigating continuous hostile intrigues. Such precautionary measures are all the more necessary, as Germany's enemies have repeatedly stated, not only in speeches delivered by their leading men, but also in the statutes of the economical conference in Paris, that it is their intention not to treat Germany as an equal, even after peace has been restored, but to continue their hostile attitude, and especially to wage a systematical economic war against her.

The attempt of the four allied powers to bring about peace has failed, owing to the lust of conquest of their enemies, who desired to dictate the conditions of peace. Under the pretense of following the principle of nationality, our enemies have disclosed their real aims in this way, viz: To dismember and dishonor Germany, Austria-Hungary, Turkey, and Bulgaria. To the wish of reconciliation they oppose the will of destruction. They desire a fight to the bitter end.

A new situation has thus been created which forces Germany to new decisions. Since two years and a half England is using her naval power for a criminal attempt to force Germany into submission by starvation. In brutal contempt of international law, the group of powers led by England does not only curtail the legitimate trade of their opponents but they also, by ruthless pressure, compel neutral countries either to altogether forego every trade not agreeable to the entente powers or to limit it according to their arbitrary decrees.

The American Government knows the steps which have been taken to cause England and her allies to return to the rules of international law and to respect the freedom of the seas. The English Government, however, insists upon continuing its war of starvation, which does not at all affect the military power of its opponents, but compels women and children, the sick and the aged, to suffer for their country pains and privations which endanger the vitality of the nation. Thus British tyranny mercilessly increases the sufferings of the world, indifferent to the laws of humanity, indifferent to the protests of the neutrals whom they severely harm, indifferent even to the silent longing for peace among England's own allies. Each day of the terrible struggle causes new destruction, new sufferings. Each day shortening the war will, on both sides, preserve the lives of thousands of brave soldiers and be a benefit to mankind.

The Imperial Government could not justify before its own conscience, before the German people, and before history the neglect of any means destined to bring about the end of the war. Like the President of the United States, the Imperial Government had hoped to reach this goal by negotiations. After the attempts to come to an understanding with the entente powers have been answered by the latter with the announcement of an intensified continuation of the war, the Imperial Government—in order to serve the welfare of mankind in a higher sense and not to wrong its own people—is now compelled to continue the fight for existence, again forced upon it, with the full employment of all the weapons which are at its disposal.

Sincerely trusting that the people and the Government of the United States will understand the motives for this decision and its necessity, the Imperial Government hopes that the United States may view the new situation from the lofty heights of impartiality and assist on their part to prevent further misery and unavoidable sacrifice of human life.

Inclosing two memoranda regarding the details of the contemplated military measures at sea, I remain, etc.

J. BERNSTORFF.

TEXT OF THE ANNEX TO GERMAN NOTE, OUTLINING BARRED ZONES AND PRESCRIBING CONDITIONS FOR AMERICAN VESSELS.

[By wireless to Sayville.]

BERLIN, *January 31.*

Following is the annex referred to in the German note:

"From February 1, 1917, within barred zones around Great Britain, France, Italy, and in the eastern Mediterranean, as outlined in the following, all sea traffic forthwith will be opposed. Such barred zones are:

"In the North Sea, the district around England and France, which is limited by a line 20 nautical miles; the district along the Dutch coast as far as the Terschelling Lightship, the degree of longitude of the Terschelling Lightship to Udsir; a line from there across the point 62° north latitude, 5° longitude, westward along 62° to a point 3 nautical miles south of the south point of Farove: (Faroe Island?), from there across the point 62° north, —° west, to 61° north, 15° west; then 57° north, 20° west, to 47° north, 20° west; further, to 43° north, 15° west; then on degree latitude 43° north to the point 20 nautical miles from Cape Finisterre and 20 nautical miles distant along the Spanish north coast as far as the French frontier.

"Concerning the south, in the Mediterranean: For neutral shipping there remains open the sea district of a line from Point de les Paquett to 38° 20′ north and 6° east, as well as north and west of a zone 60 sea miles broad along the north African coast, beginning on (?) degrees west longitude.

"In order to connect this sea district with Greece, the zone leads 20 sea miles in width north or east, following this line: Thirty-eight degrees north and 6° east, 38° north, and 11° 30′ east, to 34° north and 11° 30′ east to 34° north and 22° 30′ east. From there it leads to a zone 20 sea miles broad west of 22° 30′ east longitude into Greek territorial waters.

"Neutral ships plying within the barred zones do so at their own risk. Although precautions are being taken to spare neutral ships which on February 1 are on the way to ports in the barred zone, during an appropriate delay, yet it is urgently to be advised that they should be warned and directed to other routes by all means available.

"Neutral ships lying in ports of the barred zones can with the same safety abandon the barred zones if they sail before February 5 and take the shortest route into the open district.

"Traffic of regular American passenger steamers can go on unmolested if—

"(a) Falmouth is taken as the port of destination; and if

"(b) On the going and return journey the Scilly Islands, as well as the point 50° north, 20° west, be steered on. Along this route no German mines will be laid.

"(c) If steamers on this journey bear the following special signals, which only they will be permitted to display in American ports: A coating of paint on the ship's hull and the superstructure in vertical stripes three meters broad, alternating white and red; on every mast a large flag of checkered white and red, on the stern the American national flag; during darkness the national flag and the coat of paint to be as easily recognizable as possible from a distance; and the ships must be completely and brightly illuminated.

"(d) If only one steamer runs each week in each direction, arriving at Falmouth on Sundays, leaving Falmouth on Wednesdays.

"(e) If guaranties and assurances are given by the American Government that these steamers carry no contraband (according to the German list of contraband).

"Two copies of maps on which the barred zones are outlined are added."

The meaning of the new order as interpreted by the chancellor in his address to the Reichstag:

The chancellor opened the sitting with a speech of which the keynote words were:

"We have been challenged to fight to the end. We accept the challenge; we stake everything; and we shall be victorious."

He indicated that Germany was ready to accept the consequences of unrestricted U-boat warfare which had been decided upon. He wound up by saying:

"As regards all that human strength can do to enforce success for the fatherland, be assured, gentlemen, that nothing has been neglected. Everything in this respect will be done."

At the outset of his address the chancellor explained why in March and May, 1916, he opposed unrestricted submarine war, and why again in September, "according to the unanimous judgment of the political and military authorities, the question was not thought ripe for decision." On this matter he said:

"By the development of the situation the decision concerning submarine warfare has been forced into the last acute stage. The question of U-boat war, as members of the Reichstag will remember, has occupied us three times in this committee, namely, in March, May, and September of last year. On each occasion in an exhaustive statement I expounded the points for and against in this question. I emphasized on each occasion that I was speaking pro tempore, and not as a supporter in principle or opponent in principle of the unrestricted employment of U boats, but in consideration of the military, political, and economic situation as a whole.

"I have always proceeded from the standpoint of whether U-boat war would bring us nearer victorious peace or not. Every means, I said in March, that was calculated to shorten the war constitute the most humane policy to follow. When the most ruthless methods are considered best calculated to lead us to victory, and swift victory, I said, then they must be employed.

MUST STRIKE NOW.

"This moment has now arrived," he continued. "Last autumn the time was not yet ripe, but to-day the moment has come when, with the greatest prospect of success, we can undertake the enterprise. We must, therefore, not wait any longer.

"Where has there been any change in the situation?" the chancellor asked. "In the first place, the most important fact of all is that the number of our submarines has been very considerably increased as compared with last spring, and thereby a firm basis for success has been established.

"The second codecisive reason is the bad cereal harvest of the world This fact already confronts England, France, and Italy with serious difficulties, which by means of unrestricted U-boat war will be brought to a point of unbearableness.

"The coal question, too, is a vital question in war. Already it is critical in Italy and France, as you know. Our submarines will make it still more critical.

"To this must be added, especially as regards England, the supply of ore for the production of munitions, in the widest sense, and of timber for coal mines. The enemy's difficulties are rendered still more acute by the increasing lack of enemy cargo space. In this respect time and U-boat and cruiser warfare have prepared the ground for the decisive blow.

"The entente suffers owing to lack of cargo space. The lack makes itself felt in Italy and France, no less than in England. If we may now venture to estimate the positive advantages of unrestricted U-boat war at a very much higher value than last spring, the dangers which arise for us from U-boat war have correspondingly decreased since that time.

READY TO ACCEPT ALL CONSEQUENCES.

The chancellor discussed in detail the political situation, and then referred to military affairs as follows:

"A few days ago Field Marshal von Hindenburg described the situation to me thus: Our front stands firm on all sides. We have everywhere the requisite reserves. The spirit of our troops is good, and confident. The military situation as a whole permits us to accept all the consequences which unrestricted U-boat war may bring, and as this U-boat war is the means of injuring our enemies the most greviously, it must be begun.

"The Admiralty Staff and the high seas fleet entertain the firm conviction (a conviction which has practical support in the experience gained in U-boat cruiser warfare) that Great Britain will be brought to peace by arms. Our allies agree with our views. Austria-Hungary adheres to our procedure also in practice. Just as we lay a blockaded area around Great Britain and the west coast of France, in which we will try to prevent all shipping traffic to the enemy countries, Austria-Hungary declares a blockaded area around Italy.

"To all neutral countries a free path for mutual intercourse is left outside the blockaded area. To America we offer, as we did in 1915, safe passenger traffic under definite conditions, even with Great Britain."

The chancellor here read the note to the United States and said that corresponding notes had been sent to the other neutral States. He concluded as follows:

"No one among us will close his eyes to the seriousness of the step we are taking. That our existence is at stake everyone has known since August 4, 1914, and this has been brutally emphasized by the rejection of our peace offer. When, in 1914, we had to seize and have recourse to the sword against Russia's general mobilization, we did so with the deepest sense of responsibility toward our people and conscious of resolute strength, which says: 'We must and, therefore, we can.' Endless streams of blood have since been shed, but they have not washed away the 'must' and the 'can.'

"BEST AND SHARPEST WEAPON."

"In now deciding to employ our best and sharpest weapon, we are guided solely by sober consideration of all the circumstances that come into the question and by the firm determination to help our people out of the distress and disgrace which our enemies contemplate for them.

"Success lies in a higher hand, but as regards all that human strength can do to enforce success for the fatherland, be assured, gentlemen, that nothing has been neglected. Everything in this respect will be done."

The chancellor was followed by the secretary of state for the admiralty, who spoke of the situation from the technical military and naval viewpoint. Detailed statistical data in regard to the economic position of the world was supplied by the secretary of the interior, and the foreign secretary, Herr Zimmermann, replied to several special questions.

After the ministers had spoken the committee went into secret session at which speeches were made by representatives of the Centrist, National Liberal, and Progressive Parties.

On the 1st of February the following memorandum was given out:

MEMORANDUM DRAWN BY BERNSTORFF DELIVERED WITH NOTE; IT SAYS ALL SHIPS WITHIN BARRED ZONES "WILL BE SUNK."

WASHINGTON, *February 1.*

A second memorandum, delivered yesterday with the German note, and made public late to-day by the State Department, differs in some respects from the substance of the note itself. The understanding is that it was prepared at the German Embassy on instructions from Berlin prior to President Wilson's peace address to the Senate, and withheld then on account of the address. When Count von Bernstorff received the note and memorandum yesterday from Berlin he decided to deliver with them the original document prepared by him. The memorandum reads:

"After bluntly refusing Germany's peace offer the entente powers stated in their note addressed to the American Government that they are determined to continue the war in order to deprive Germany of German Provinces in the west and east, to destroy Austria-Hungary, and to annihilate Turkey. In waging war with such aims the entente allies are violating all rules of international law, as they prevent the legitimate trade of neutrals with the central powers and of the neutrals among themselves. Germany has so far not made unrestricted use of the weapon which she possesses in her submarines. Since the entente powers, however, have made it impossible to come to an understanding based upon equality of rights of all nations, as proposed by the central powers, and have instead declared only such a peace to be possible which shall be dictated by the entente allies, and shall result in the destruction and the humiliation of the central powers, Germany is unable further to forego the full use of her submarines.

"The Imperial Government therefore does not doubt that the Government of the United States will understand the situation thus forced upon Germany by the entente allies' brutal methods of war and by their determination to destroy the central powers, and that the Government of the United States will further realize that the now openly disclosed intention of the entente allies gives back to Germany the freedom of action which she reserved in her note addressed to the Government of the United States on May 4, 1916.

"Under these circumstances Germany will meet the illegal measures of her enemies by forcibly preventing after February 1, 1917, in a zone around Great Britain, France, Italy, and in the eastern Mediterranean all navigation, that of neutrals included, from and to England and from and to France, etc. All ships met within that zone will be sunk.

"The Imperial Government is confident that this measure will result in a speedy termination of the war and in the restoration of peace, which the Government of the United States has so much at heart. Like the Government of the United States, Germany and her allies had hoped to reach this goal by negotiations. Now that the war, through the fault of Germany's enemies, has to be continued, the Imperial Government feels sure that the Government of the United States will understand the necessity of adopting such measures as are destined to bring about a speedy end of the horrible and useless bloodshed. The Imperial Government hopes all the more for such an understanding of her position, as the neutrals have under the pressure of the entente powers suffered great losses, being forced by them either to give up their entire trade or to limit it according to conditions arbitrarily determined by Germany's enemies in violation of international law."

Two days after the publication of the German submarine order the President addressed Congress as follows:

TEXT OF PRESIDENT WILSON'S ADDRESS.

WASHINGTON, *February 3.*

The President's address to the joint session of Congress to-day was as follows:

"GENTLEMEN OF THE CONGRESS: The Imperial German Government on the 31st day of January announced to this Government and to the Governments of the other neutral nations that on and after the 1st day of February, the present month, it would adopt a policy with regard to the use of submarines against all shipping seeking to pass through certain designated areas of the high seas, to which it is clearly my duty to call your attention.

"Let me remind the Congress that on the 18th of April last, in view of the sinking on the 24th of March of the cross-channel steamship *Sussex* by a German submarine, without summons or warning, and the consequent loss of the lives of several citizens of the United States who were passengers aboard her, this Government addressed a note to the Imperial German Government, in which it made the following declaration:

"'If it is still the purpose of the Imperial German Government to prosecute relentless and indiscriminate warfare against vessels of commerce by the use of submarines, without regard to what the Government of the United States must consider the sacred and indisputable rules of international law and the universally recognized dictates of humanity, the Government of the United States is at last forced to the conclusion that there is but one course it can pursue. Unless the Imperial Government should now immediately declare and effect an abandonment of its present methods of submarine warfare against passenger and freight carrying vessels, the Government of the United States can have no choice but to sever diplomatic relations with the German Empire altogether.'

"In reply to this declaration the Imperial German Government gave this Government the following assurance:

"'The German Government is prepared to do its utmost to confine the operations of war for the rest of its duration to the fighting forces of the belligerents, thereby also insuring the freedom of the seas, a principle upon which the German Government believes now, as before, to be in agreement with the Government of the United States.

"'The German Government, guided by this idea, notifies the Government of the United States that the German naval forces have received the following orders: "In accordance with the general principles of visit and search and destruction of merchant vessels recognized by international law, such vessels, both within and without the area declared a naval war zone, shall not be sunk without warning and without saving human lives, unless these ships attempt to escape or offer resistance."

"'But [it added] neutrals can not expect that Germany, forced to fight for her existence, shall, for the sake of neutral interest, restrict the use of an effective weapon if her enemy is permitted to continue to apply at will methods of warfare violating the rules of international law. Such a demand would be incompatible with the character of neutrality, and the German Government is convinced that the Government of the United States does not think of making such a demand, knowing that the Government of the United States has repeatedly declared that it is determined to restore the principle of the freedom of the seas from whatever quarter it has been violated.'

"To this the Government of the United States replied on the 8th of May, accepting, of course, the assurance given, but adding:

"'The Government of the United States feels it necessary to state that it takes it for granted that the Imperial German Government does not intend to imply that the maintenance of its newly announced policy is in any way contingent upon the course or result of diplomatic negotiations between the Government of the United States and any other belligerent Government, notwithstanding the fact that certain passages in the Imperial Government's note of the 4th instant might appear to be susceptible of that construction. In order, however, to avoid any misunderstanding the Government of the United States notifies the Imperial Government that it can not for a moment entertain, much less discuss, a suggestion that respect by German naval authorities for the rights of citizens of the United States upon the high seas should in any way or in the slightest degree be made contingent upon the conduct of any other Government, affecting the rights of neutrals and noncombatants. Responsibility in such matters is single, not joint; absolute, not relative.'

"To this note of the 8th of May the Imperial German Government made no reply.

"On the 31st of January, the Wednesday of the present week, the German Ambassador handed to the Secretary of State, along with a formal note, a memorandum which contained the following statement:

"'The Imperial Government, therefore, does not doubt that the Government of the United States will understand the situation thus forced upon Germany by the entente allies' brutal methods of war and by their determination to destroy the central powers, and that the Government of the United States will further realize that the now openly disclosed intention of the entente allies gives back to Germany the freedom of action which she reserved in her note addressed to the Government of the United States on May 4, 1916.

"'Under these circumstances Germany will meet the illegal measures of her enemies by forcibly preventing after February 1, 1917, in a zone around Great Britain, France, Italy, and in the Eastern Mediterranean, all navigation, that of neutrals included, from and to England and from and to France, etc. All ships met within the zone will be sunk.'

"I think that you will agree with me that in view of this declaration, which suddenly and without prior intimation of any kind deliberately withdraws the solemn assurance given in the Imperial Government's note of the 4th of May, 1916, this Government has no alternative consistent with the dignity and honor of the United States but to take the course which, in its note of the 18th of April, 1916, it announced that it would take in the event that the German Government did not declare and effect an abandonment of the methods of submarine warefare which it was then employing and to which it now purposes again to resort.

"I have therefore directed the Secretary of State to announce to his excellency the German ambassador that all diplomatic relations between the United States and the German Empire are severed and that the American ambassador at Berlin will immediately be withdrawn, and, in accordance with this decision, to hand to his excellency his passports.

"Notwithstanding this unexpected action of the German Government, this sudden and deplorable renunciation of its assurances given this Government at one of the most critical moments of tension in the relations of the two Governments, I refuse to believe that it is the intention of the German authorities to do in fact what they have warned us they will feel at liberty to do. I can not bring myself to believe that they will indeed pay no regard to the ancient friendship between their people and our own or to the solemn obligations which have been exchanged between them, and destroy American ships and take the lives of American citizens in the willful prosecution of the ruthless naval program they have announced their intention to adopt. Only actual overt acts on their part can make me believe it even now.

"If this inveterate confidence on my part in the sobriety and prudent foresight of their purpose should unhappily prove unfounded; if American ships and American lives should in fact be sacrificed by their naval commanders in heedless contravention of the just and reasonable understandings of international law and the obvious dictates of humanity, I shall take the liberty of coming again before the Congress to ask that authority be given me to use any means that may be necessary for the protection of our seamen and our people in the prosecution of their peaceful and legitimate errands on the high seas. I can do nothing less. I take it for granted that all neutral Governments will take the same course.

"We do not desire any hostile conflict with the Imperial German Government. We are the sincere friends of the German people and earnestly desire to remain at peace with the Government which speaks for them. We shall not believe that they are hostile to us unless and until we are obliged to believe it, and we purpose nothing more than the reasonable defense of the undoubted rights of our people. We wish to serve no selfish ends. We seek merely to stand true alike in thought and in action to the immemorial principles of our people, which I have sought to express in my address to the Senate only two weeks ago—seek merely to vindicate our right to liberty and justice and an unmolested life. These are the bases of peace, not war. God grant that we may not be challenged to defend them by acts of willful injustice on the part of the Government of Germany."

The dismissal of the German ambassador was couched in the following note:

THE SECRETARY OF STATE TO THE GERMAN AMBASSADOR.

DEPARTMENT OF STATE, *February 3, 1917.*

EXCELLENCY: In acknowledging the note, with accompanying memoranda, which you delivered into my hands on the afternoon of January 31, and which announced the purpose of your Government as to the future conduct of submarine warfare I would direct your attention to the following statements appearing in the correspondence which has passed between the Government of the United States and the Imperial German Government in regard to submarine warfare.

Then follow the quotations used by the President in addressing Congress, including the citations from the memorandum accompanying the German note of January 31, giving notice of unrestricted naval warfare.

In view of this declaration, concludes the State Department note, which withdraws suddenly and without prior intimation the solemn assurance given in the Imperial Government's note of May 4, 1916, this Government has no alternative consistent with the dignity and honor of the United States but to take the course which it explicitly announced in its note of April 18, 1916, it would take in the event that the Imperial Government did not declare and effect an abandonment of the methods of submarine warfare then employed, and to which the Imperial Government now purpose again to resort.

The President has therefore directed me to announce to your excellency that all diplomatic relations between the United States and the German Empire are severed, and that the American ambassador at Berlin will be immediately withdrawn, and in accordance with such announcement to deliver to your excellency your passports.

I have the honor to be your excellency's obedient servant,

ROBERT LANSING.

Neutral countries were sounded by the President:

PRESIDENT, NOTIFYING NEUTRALS OF THE BREAK, HOPES THEY "CAN FIND IT POSSIBLE TO TAKE SIMILAR ACTION."

WASHINGTON, *February 4.*

The State Department has sent to American diplomatic representatives in neutral countries the following instructions to announce the break with Germany and suggest that they take similar action:

"You will immediately notify the Government to which you are accredited that the United States, because of the German Government's recent announcement of its intention to renew unrestricted submarine warfare, has no choice but to follow the course laid down in its note of April 18, 1916 (the *Sussex* note).

"It has, therefore, recalled the American ambassador to Berlin and has delivered passports to the German ambassador to the United States.

"Say also that the President is reluctant to believe Germany actually will carry out her threat against neutral commerce, but if it be done the President will ask Congress to authorize use of the national power to protect American citizens engaged in their peaceful and lawful errands on the seas.

"The course taken is, in the President's view, entirely in conformity with the principles he enunciated in his address to the Senate January 12 (the address proposing a world league for peace).

"He believes it will make for the peace of the world if other neutral powers can find it possible to take similar action.

"Report fully and immediately on the reception of this announcement and upon the suggestion as to similar action."

German official attitude toward American reception of her new submarine policy:

ZIMMERMANN HOPES WILSON WILL PREVENT CONFLICT.

BERLIN, *February 6.*

Foreign Secretary Zimmermann gave the following interview to the Overseas News Agency:

"We regret this measure taken by President Wilson all the more since, against all traditions and all international law, we are cut off from all direct communication and regular intercourse with the trans-Atlantic world. We also remember that American diplomats during the last months and years of the war have cared for German interests, by proxy, in several hostile countries with efficiency and great success.

"The text of the President's message, in the absence of other official documents, has therefore been examined most minutely. Having no real reason for hostility to the United States, remembering the traditional friendship which has existed between the countries practically from the first days of the United States, we naturally appreciate the words of a rather nonhostile character, which, among others of a different character, are found in that message, as transmitted by Reuters.

"In them President Wilson gives assurances that he wishes no 'hostile conflict' with Germany, and I can add that we appreciate this and other paragraphs in the message, joining in this respect with President Wilson's note.

"While we think to a certain extent that we can see by what reasons the United States Government was prompted to its present attitude, on the other hand, we expect that President Wilson to the same extent may recognize the reason which prompted us to take our decision."

Dr. Karl Helfferich, vice chancellor and minister of the interior, gave the following interview to-day to a Norwegian correspondent:

"We consider submarine warfare to be an effective means of shortening the war and breaking once for all British tyranny on the seas. It is true that neutrals will have to suffer in some respects, but do they not suffer already? You can be sure that the difficulties caused to your country by our submarine war will be little compared with those caused by Great Britain.

"Ask your countrymen by what brutal methods Great Britain coerces Norwegian shipowners to carry contraband, and how with all means she strangles the Norwegian fishing industry, as well as paralyzes Norwegian industry by holding back coal.

"We shall do everything to diminish these difficulties. We know that the coal question is most important for you. Notwithstanding the difficulties from which we now suffer in regard to transportation, we shall help you as we can.

"As to the submarine war, there is no way back for us. We shall go on in the way which we have chosen to the end, and we are convinced that later neutrals will be thankful to us."

On the 6th of February the following provision was submitted to the House:

EMERGENCY LEGISLATION.

(a) Definition: The word "person" as used in paragraphs (b), (c), (d), (e), (f) next hereafter shall include any individual, trustee, firm, association, company, or corporation. The word "ship" shall include any boat, vessel, and submarine, and any form of aircraft and the parts thereof. The words "war material" shall include arms, armament, ammunition, stores, supplies, and equipment for ships and aeroplanes, and everything required for or in connection with the production thereof. The word "factory" shall include any factory, workshop, engine works, building used for manufacture, assembling, construction, or for any process, and any shipyard or dockyard. The words "United States" shall include the Canal Zone and all territory and waters, continental and insular, subject to the jurisdiction of the United States.

(b) In time of war or of national emergency, to be determined by the President by proclamation or Executive order, the President is hereby authorized and empowered, through the Secretary of the Navy, in addition to all other existing provisions of law and within the limit of amounts appropriated therefor—

(1) To place an order with any person for such ships or war material as he may require and which are of the nature and kind usually produced or capable of being produced by such person. Compliance with all such orders shall be obligatory on any person to whom such order is given, and such order shall take precedence over all other orders and contracts theretofore placed with such person, except orders and contracts of or for the United States. If any person owning, leasing, or operating any factory equipped for the building or production of ships or war material for the Navy shall refuse or fail to give to the United States such preference in the execution of such an order, or shall refuse to build, supply, furnish, or manufacture the kind, quantity, or quality of ships or war material so ordered at such reasonable price as shall be determined by the Secretary of the Navy, the President may take immediate possession of any factory of such person, or of any part thereof without taking possession of the factory itself, and may use the same at such times and in such manner as he may consider necessary or expedient, and the occupier and every officer and servant of the occupier of the factory, or part thereof, shall obey his directions.

(2) To modify or cancel any existing contract for the building, production, or purchase of ships or war material; and if any contractor shall refuse or fail to comply with the contract as so modified the President may take immediate possession of any factory of such contractor, or any part thereof without taking possession of the factory itself, and may use the same at such times and in such manner as he may consider necessary or expedient, and the occupier and every officer and servant of the occupier of such factory, or part thereof, shall obey his directions.

(3) To require the owner or occupier of any factory in which ships or war material are built or produced to place at the disposal of the United States the whole or any part of the output of such factory, and to deliver such output or parts thereof in such quantities and at such times as may be specified in the order, at such reasonable price as shall be determined by the Secretary of the Navy.

(4) To requisition and take over for use or operation by the Government the factory, or any part thereof without taking possession of

the factory itself, whether the United States has or has not any contract or agreement with the owner or occupier of such factory.

(5) To waive all provisions of law restricting the hours of labor of persons in the employ of the United States and of persons in the employ of contractors therewith when employed on work in connection with such ships or war material, and to waive all other restrictions and limitations affecting the labor of such persons, with a view to increase output or prevent delay.

(c) No person shall, directly or indirectly, induce any person employed in any factory and engaged on work for the United States to leave his employment or to cease such work.

(d) In time of actual war the President is hereby authorized and empowered, through the Secretary of the Navy, to draft into the naval service of the United States and to place under naval control any or all of the officers, agents, or employees of any factory equipped for the building or production of ships or war material for the Navy, and said officers, agents, and employees shall be thenceforth considered as members of the Naval Establishment of the United States, subject to all the conditions and restrictions imposed by the articles for the government of the Navy. The draft of the officers, agents, and employees of said factories shall be accomplished upon proclamation by the President requiring all such officers, agents, and employees of any factory therein named to submit themselves to draft and directing such officer or officers of the Naval Establishment as he may select for the purpose to prepare either by designation or by lot, as may be most expedient, a roster or rosters of the individual officers, agents, and employees so to be drafted. Upon the making of such roster or rosters notice shall be given to each person so enrolled of the place where and the time when he shall appear and enter upon his service; and any persons who shall in any manner willfully evade or resist such notice or shall fail to present himself for duty at the time and place named therein or within such time thereafter as may be necessary to accomplish his journey to the place appointed by the most expeditious route, shall be punished as hereinafter provided. And any officers, agents, or employees of such factory who may be drafted into the Naval Establishment of the United States hereunder shall during their service for the United States in the manufacture or production of ships or war materials receive for their services so rendered such compensation as they were theretofore accustomed to receive for similar services.

(e) Any person who violates or fails to comply with any provision of paragraphs (b), (c), (d), or any order given, direction, regulation, or restriction made or imposed thereunder, shall be subject to a fine of not more than $10,000 or to imprisonment for not more than two years, or both.

(f) Whenever the United States shall cancel or modify any contract, make use of, assume, occupy, requisition, or take over any factory or part thereof, or any ships or war material, in accordance with the provisions of the foregoing paragraphs (b), (c), (d), it shall make just compensation therefor, and in default of agreement upon the damages, compensation, price, or rental due by reason of any action hereunder, the person to whom the same is due shall be entitled to sue the United States to recover his fair and reasonable damages, in the manner provided for by section 24, paragraph 20, and section 145 of the Judicial Code.

Submarine activity since February 1, as reported for the five days February 1 to 6:

45 VESSELS, WITH A TOTAL TONNAGE OF 86,304, HAVE BEEN DESTROYED IN WAR ZONE SINCE FEBRUARY 1.

A compilation of results of the German submarine campaign since February 1, the day the new blockade order went into effect, follows:

Reported sunk.	Tonnage.
Port Adelaide, British	8,181
Bravalla, Swedish	1,553
Belford, British	1,955
Warley Pickering, British	4,196
Floridian, British	4,777
Wartenfels, British	4,511
Cerea, Russian	3,512
Palmleaf, British	3,206
Cliftonian, British	4,303
Thor II, Norwegian	2,144
Tamara, Norwegian	453
Rizel, Norwegian	1,771
Wasdall, Norwegian	1,856
Songdal, Norwegian	2,089
Total tonnage	44,427

Previously reported sunk.	Tonnage.
Eavestone, British	1,850
Isle of Arran, British	1,918
Hurstwood, British	1,918
Lars Kruse, Danish	1,460
Garnet Hill, Russian	2,272
Housatonic, American	2,022
Butron, Spanish	2,434
Elekon, Greek (tonnage as estimated)	1,500
Helicot, Greek (tonnage as estimated	1,500

Ymer, Norwegian	1,123
Two trawlers, British (tonnage as estimated)	1,000
Three smacks, British	150
Total tonnage previously	41,877
Grand total since February 1	86,304

Action of the Senate February 7, indorsing the President's position in breaking off diplomatic relations:

ACTION IS APPROVED.

By a vote of 78 to 5 the Senate late yesterday afternoon recorded its emphatic approval of the President's severance of diplomatic relations with Germany. This action came after six hours of debate. A number of Senators expressed the view that the resolution was unnecessary, but declared they would vote for it so there might be no suspicion in Europe that the Senate and the American people were not solidly behind the President.

TEXT OF RESOLUTION.

The text of the resolution follows:

"Whereas the President has, for the reasons stated in his address delivered to the Congress in joint session on February 3, 1917, severed diplomatic relations with the Imperial German Government by the recall of the American ambassador at Berlin and by handing his passports to the German ambassador at Washington; and

"Whereas, notwithstanding this severance of diplomatic intercourse, the President has expressed his desire to avoid conflict with the Imperial German Government; and

"Whereas the President declared in this said address that if in his judgment an occasion should arise for further action in the premises on the part of the Government of the United States he would submit the matter to the Congress and ask the authority of Congress to use such measures as he might deem necessary for protection of American seamen and people in the prosecution of their peaceful and legitimate errands on the high seas: Therefore be it

"*Resolved*, That the Senate approves the action taken by the President as set forth in his address delivered before the joint session of Congress, as stated above.

Neutrals decline to follow the American Government. Diplomats and press of small countries point to peril for them. They still fear the power of Germany. Dutch comment that the United States is far from war, with ample food and war material:

LONDON, *February 6.*

The attitude of European neutrals in regard to the American suggestion that they break off diplomatic relations with Germany is being awaited with keen interest, but a canvass of the diplomatic representatives of these nations showed there was a general disposition to take time for consideration of the suggestion. Notwithstanding reports that Spain has taken action, the Spanish ambassador, Señor Merry del Val, who is being kept advised by his Government, had not received word up to noon to-day of any measures taken by his Government. The view prevailed in Spanish quarters that several days would be taken up with consideration of the various questions involved.

There are some indications already that Spain does not contemplate a rupture. They include the taking up of part of the Belgian relief work which the American rupture with Germany is deranging.

At the Swiss Legation it was said that although a preliminary note, in the nature of an inquiry, has been sent to Washington, it was not Switzerland's final reply. It has not been expected by entente diplomats that Switzerland would take action which might involve her in the war, inasmuch as her frontiers would be exposed on three sides. From a military standpoint such action by Switzerland, it is pointed out, would not be wholly advantageous for the entente, and particularly for France, as it probably would mean that Germany would menace the unfortified French frontier adjoining Switzerland.

At the Scandinavian legations the general view, in the absence of definite advices, was that the exposed Baltic frontages of these countries made their situation much more dangerous than that of America, which would tend to restrain them from any decisive action.

As a result of this attitude on the part of the various European neutrals, the best-informed entente diplomats are inclined to believe that the American move will not be followed by these nations, although it is expected to exert strong moral influence on them.

—

HOLLAND TO TAKE TIME TO CONSIDER SITUATION—NO REASON AT THIS MOMENT FOR SPECIAL ANXIETY, THE PREMIER TELLS PARLIAMENT.

THE HAGUE, *February 6.*

Premier Cort van der Linden made the following statement in the Second Chamber of the Dutch Parliament to-day:

"Serious events occupy the Government's attention. At the present moment it is impossible to give information regarding them, but the Government will not neglect to give the chamber information so soon as expedient. There is no reason at this moment for special anxiety."

—

[Special cable to the New York Times—Dispatch to the London Times.]

AMSTERDAM, *February 6.*

Unquestionably President Wilson's words echo from the hearts of the freedom-loving Dutch, but it must not be forgotten that their position is one of extreme difficulty. Exposed as they are on the eastern frontier to an invasion from German troops and menaced with a complete stoppage of supplies by German submarines, they not unnaturally hesitate to take any steps calculated to expedite their annihilation at German hands.

President Wilson's words respecting the course other neutrals are likely to follow is widely reproduced here, where sympathy is entertained for the attitude adopted by the United States, though the difference in circumstances of that country and Holland are pointed out generally in the press of various shades of opinion from the Socialist Volk to the Catholic Tyd.

The Handelsblad intimates that the Dutch Government's previous record does not encourage the supposition that it will proceed to extreme lengths in the event of complications arising from the sinking of Dutch vessels. America is not exposed to the perils of immediate invasion by an enemy who has proved himself absolutely devoid of the bowels of mercy, but Holland, which has already suffered much, is prepared to suffer a great deal more rather than incur the fate of Louvain, Dinant, and Liege. She does not want to give the Kaiser the chance to proclaim to the world, "My heart bleeds for the poor Dutch."

PRESIDENT WILSON CRITICIZED.

[Special cable to the New York Times.]

THE HAGUE, *February 6.*

Commenting on the breaking off of diplomatic relations between the United States and Germany, the Nieuwe Rotterdamsche Courant says:

"We are somewhat surprised that President Wilson allows himself to meddle in the affairs of other neutral states in suggesting that they follow America's example. There is every possibility that our Government, which has to meet the exigencies of our country, sees things in a different light than the American Government does.

"America is a country well provided with iron, steel, grain, fats, and other food products. America does not border on belligerent countries. On the contrary, she is separated by a wide ocean, almost unattainable by the Central Powers. In American ports are countless German vessels, among them the largest and most magnificent of the German merchant fleet. All these, in the eventuality of war, could fall booty to America. Whereas America is self-supplying, Holland must rely on overseas and imports from Germany.

"But our over-seas imports have been reduced to a minimum by the allies' policy. Germany delivers practically nothing. We have been prevented from laying in supplies for a rainy day. There is a scarcity of coal, grain, most food products, and fats. We have not enough iron and steel, and we are neighbors of Germany. President Wilson can well set an example without risking much. These are only a few points of the difference by which it can be seen that our international position is quite other than that of America.

"Our Government has not been sitting still during the last week, but has been in touch with other neutrals whose position is more similar to ours than is America's. Mr. Wilson's step has certainly awakened much feeling here. There are many who greet it as the dawning of a new day."

The Nieuwe Courant says:

"The neutrals have been robbed of their natural leader in peace action. The small nations of Europe that have kept out of the world-wide madness have been thrown on their own resources. Both for the future and present the position of the neutrals has grown decidedly worse.

"We need have no illusions about criticizing the 'seizure' of German ships in American ports. Confiscating vessels must be regarded as an action of war. Therefore we can not believe in this interpretation. It is perhaps only with the possibility of war in sight that special precautionary measures are taken. That the ships are still in German possession can not be doubted.

"The President does not intend to let American citizens be dictated to as to which ships to travel on, nor American ships as to which route they may follow. Mr. Wilson demands the right for them to travel peacefully on the free seas, and demands an acknowledgment of this right from Germany. American correspondents retain the right to remain in Germany, according to the Prussian-American treaty of 1798."

The Nieuwes Van Den Dag says:

"In any case the fact remains that if America goes to war the magnificent ships which are the pride of Germany's merchant fleet are lost for Germany. They would surely be most welcome as an increase to the entente's merchant fleet, and Germany would then be able to torpedo her own fine ships."

—

HOLLAND STOPS TRAFFIC WITH ENGLAND.

LONDON, *February 6.*

The port authorities of Holland have been notified, according to a Reuter dispatch from The Hague, that, until further notice, Dutch steamers will not be allowed to proceed to England.

The Nieuwe Rotterdamsche Courant says that several shipowners have received the following telegram from The Hague: "The naval staff announces that the German Admiralty has informed them that Dutch ships, which had already left North America on February 1 for English ports will be allowed to pass thereto, but can not leave those ports without risk." The Courant adds that as the telegram was not clear some of the shipowners have gone to The Hague to seek an explanation.

The Dutch Legation in Paris issued the following public notice to-day:

"All Dutch subjects having military obligations to fulfill, whether in the militia reserve or territorials, must present themselves without delay to the Dutch consulate."

—

FEAR WILSON'S PEACE VIEWS—SOME RUSSIANS THINK HIS INFLUENCE IN NEGOTIATIONS WILL NOT BE WELCOME.

[Special cable to the New York Times.]

PETROGRAD, *February 6.*

[Dispatch to the London Daily Chronicle.]

Russian opinion was very agreeably surprised by the rupture between America and Germany. The general impression is one of unqualified pleasure and all speculations as to the possible consequences of the German submarine campaign are completely obscured by the moral effect of Wilson's act.

Numbers of statesmen, including the minister for foreign affairs, M. Pokrovsky, M. Sazonoff, and Count Kokovtsoff, have expressed their views on the probable results of American intervention. For the most part they confine themselves to an estimate of the measures by which America could actively help the allies in the event of a declaration of war. Pokrovsky declines to forecast the future and dwells on the moral effect of the rupture of diplomatic relations. I am bound to add, however, that in some quarters a certain anxiety is expressed lest America's participation in the peace negotiations should have the effect of rather tying the hands of the entente powers in the matter of the reconstruction of Europe. This attitude must be regarded as the result of the impression left on many minds by Wilson's peace notes.

Among the comments the most interesting are those which attempt to give a national estimate of Germany's desperate action. Deputy Rodicheff, for instance, considers that the German declaration of merciless submarine warfare was either a gesture of insanity or was an intentional provocation of America in the hope of a speedy conclusion of peace. The Novoe Vremya develops this view more fully. The German Government, it assumes, was driven to despair, but for dynastic reasons dared not give up the struggle and accept the allies' terms. Its declaration of merciless submarining, the paper says, was directly calculated to provoke action on the part of America, so that with the whole world made hostile it could turn to its people and demonstrate the physical and moral impossibility of continuing the war.

TO INSURE FOREIGN SHIPS—SWEDEN ADOPTING MEASURES TO ENCOURAGE IMPORTS.

STOCKHOLM, *February 6.*

The first step for the encouragement of imports has been taken by the Riksdag by the adoption of a bill materially extending the powers of the State Insurance Commission. This commission was empowered, under the law of July, 1915, to insure Swedish vessels only for an amount not exceeding 80 per cent of their value, and in no case exceeding 2,000,000 crowns for steamers and 200,000 crowns for sailing vessels, at a premium rate not exceeding 7 per cent.

The new measure permits the insurance of foreign vessels as well as Swedish, and the commission may insure for the full value of the vessel and cargo. No maximum is set. The new law removes the limitation on the premium rate and authorizes the commission also to issue accident policies for masters and seamen.

The shipping companies are still waiting to see what the next few days will bring forth.

The railway authorities have decided to withdraw, beginning February 10, passenger trains having runs aggregating 13,000 kilometers daily.

—

ATHENS GREATLY EXCITED—SOME PAPERS SEE IN OUR MOVE CUTTING OFF OF THEIR FOOD SUPPLIES.

[Special cable to the New York Times.]

ATHENS, *Monday, February 5.*

[Dispatch to the London Daily Chronicle.]

The rupture of diplomatic relations between the United States and Germany, reported here at a late hour last night from a German source, created great excitement. All papers comment on the situation at length this morning; the opinions vary a good deal. Embros thinks the rupture would not affect the provisioning of Greece, as the danger for Greek vessels would be the same after such an event as they are now. The Nea Himera, on the other hand, believes the consequences for Greece will be very disagreeable, as the food supplies for the country come mainly from the United States, and, in addition, all emigration will cease.

The Greek press has been placing great faith in Wilson's ability to bring about peace, and all newspapers point out with regret that his efforts have come to an end with the breaking of diplomatic relations. Chronos, a military organ, argues that the rupture will increase the prestige of the central empires, because they stand forth as a terrible and invincible colossus, standing up against their adversaries, greatly superior in force. On this point Embros says the entry of the United States into the war will be of great moral value to the entente, and that it is not impossible that other neutral states, especially Spain, will follow the example.

—

ROME LOOKS TO NEUTRALS—HOPES OTHERS WILL FOLLOW THE EXAMPLE OF THE UNITED STATES.

[Special cable to the New York Times.]

ROME, *February 6.*

Many citizens of neutral countries living here, especially Spaniards, Swiss, and South Americans, strongly sympathize with President Wilson's attitude and are using all their influence to induce their respective countries to follow the American lead, which is expected to make a league of neutral states master of the situation.

The Tribuna says: "The present moment furnishes an excellent chance for the neutrals to use their influence not to enlarge the conflict but to bring to reason the German Kaiser and his generals and statesmen."

—

ROME, *February 5 (via Paris, delayed).*

All the newspapers comment extensively on the German-American crisis and express the hope that neutrals without exception will associate themselves with the United States. The attitude of America has influenced subscriptions to the fourth war loan, which opened to-day, it being felt that intervention of the United States would hasten the conclusion of the war.

Ambassador Page has received many letters from soldiers at the front, some of them written in English by Italians who formerly lived in America, expressing approval of the attitude of Washington.

—

BARS SHIPS FROM SPAIN—BUT GERMANY WILL ALLOW THOSE ON WAY TO ENGLAND TO REACH THERE.

LONDON, *February 6.*

Reuter's Madrid correspondent cables that the note of the Spanish Government to the central powers will be delivered to-day and published in Madrid to-morrow.

The Correspondencia de Espana announces that Germany has consented to allow Spanish fruit ships now on their way to England with safe conducts to reach their destinations, but can not allow them to return to Spain.

The minister of marine has instructed the authorities at all ports to allow no ship to clear unless provided with proper appliances for saving life in the event the vessel is sunk.

The cruiser *Catalonia* is guarding the entrance to Las Palmas Bay to prevent the German and Austrian ships moored there from leaving. No vessel is allowed to enter or leave port between sunset and sunrise.

—

DENMARK TO SAY NO—WILL TELL PRESIDENT POSITION OF AMERICA IS DIFFERENT, IT IS SAID.

[Special cable to the New York Times.]

COPENHAGEN, *February 6.*

According to an authentic report, the Danish Government's reply to President Wilson's note will say that there is so great a difference between the position of the United States and that of Denmark that no comparison is possible, and that the three Scandinavian Governments are consulting together in Stockholm on the basis of international law about their attitude to the new German blockade.

—

SWISS ANSWER NEGATIVE—COUNCIL'S REPLY TO PRESIDENT WILSON WIRED TO WASHINGTON.

LONDON, *February 6.*

Switzerland, says a Berne dispatch given out by the Wireless Press to-day, has sent a negative reply to President Wilson's invitation to follow the lead of the United States in breaking off diplomatic relations with Germany.

GENEVA, *February 6.*

President Wilson's special note to the Swiss Government inviting it to join the United States in action regarding Germany was discussed at length at an extraordinary meeting of the federal council. The text of the Swiss reply has been telegraphed to Washington and will be published here as soon as received by President Wilson. The Swiss Telegraphic Agency says that the report that Switzerland will take charge of German and Austrian interests in the United States is premature, although the federal council will probably accept the task.

Commenting on President Wilson's communication to Switzerland, the Journal de Genève says:

"Switzerland is bound by engagements differing from those of America, whose neutrality does not depend upon formal treaties. In these circumstances it can not be admitted that Switzerland can follow President Wilson and, without solidarity with other neutrals and without direct provocation, break either her relations with Germany or engagements entered into by Switzerland during the war, or abandon the multiple international interests which represent at present the clearly expressed will of the Swiss people.

"That, however, is not a reason to prevent Switzerland from protesting strongly to Berlin and Vienna against measures which threaten neutral commerce, and there is no doubt that the federal council will make its voice heard."

The Neue Zuricher Zeitung says that President Wilson's action was the only solution to the situation caused by the German note. It remarks that the fact that execution would follow the German threat within a few hours left the United States no time to protest. The Zeitung regards the situation as most serious and looks for a declaration from President Wilson announcing reprisals that he will resort to in the event of Germany putting her threats into execution.

Votes in Some of the Woman-Suffrage States.

EXTENSION OF REMARKS
OF
HON. HENRY I. EMERSON,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 10, 1917.

Mr. EMERSON. Mr. Speaker, I desire to give some facts and figures in votes for some of the woman-suffrage States of the Union.

In analyzing the election returns, it is found that women voters responded loyally to the appeal not to give support to Mr. Wilson because of his opposition to national woman suffrage. In Illinois, the only State where the vote of women is counted separately, over 70,000 more women voted against Mr. Wilson than for him. Mr. Wilson received 58,578 less women's votes than did Mr. Hughes. The combined Socialist and Prohibition vote cast by women in Chicago and Cook County alone was 10,783, making the total woman's vote against Mr. Wilson throughout the State well over 70,000.

Illinois was conceded to the Democrats some weeks before the election by Republicans and Democrats both. Both parties agreed that the large woman's vote of that State would go to President Wilson because of his peace record. Months of work by the Woman's Party told, however, and on election day the expected landslide to Wilson did not take place, because of the counter appeal the Woman's Party had spread over the State that "Wilson kept us out of suffrage."

In none of the other suffrage States can the woman's vote be separated from that of the men. In Nevada, however, such a close parallel exists between the 1914 and 1916 elections that results there are almost equally conclusive. The successful Democratic candidate for the United States Senate received in 1914 in Nevada about 8,000 votes. In 1916 about 12,000 new women voters voted for the first time, but the successful Democratic candidate for United States Senate in 1916, with the men's vote having meanwhile increased and the party alignment far more favorable to the Democrats than in 1914, received only 12,700 votes, showing that women voted against Senator PITTMAN at least 3 to 1. Without doubt Nevada women voted against Mr. Wilson in nearly the same proportions, according to the election returns.

While 10 of the suffrage States went for Wilson, they did not do so, as has been claimed, by the woman's vote. It must be remembered that rock-ribbed Republican New Hampshire, where men only vote, and Ohio went Democratic. Mr. Wilson received in the suffrage States almost the solid labor vote, the Progressive and the farmers' vote. The popular majority which Mr. Wilson received in the 12 suffrage States amounted to only 27,000 in round numbers out of a popular vote, according to the latest returns, of more than 5,350,000 in the same States. Moreover, in each of these States the men outnumbered the women; in some by more than 2 to 1. In these States the landslide of the Progressive, the labor, and the farmer's vote to Wilson was sufficient to give most of these States to him by narrow margins, despite the fact that hosts of women who would normally have supported him refused to do so because of his suffrage record. In a very close election Oregon and Illinois with 34 electoral votes were carried against President Wilson in spite of the Wilson landslide, undoubtedly in great part by means of the woman's vote.

The High Cost of Living.

EXTENSION OF REMARKS
OF
HON. THOMAS D. SCHALL,
OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 10, 1917.

Mr. SCHALL. Mr. Speaker, as the brilliant English writer, H. G. Wells, opines, things keep on keeping on. Even in our memories, the old familiar order of things has passed away. Minneapolis celebrated its fiftieth birthday last month. It is a big city, a beauty spot. It has lost its provincial ways. But it is not so long ago that herd boys were convoying their several herds through its streets to pasturage, and brought the milk to our doors in its coverless tin pail. Now, the one-cow milkman, the small dairy, has been eaten up by the big competitors, two or three companies, who control the price of milk.

The countrywoman does not ride in with her eggs and butter on top of the load any more, when her man comes to town. The creameries handle her cream and the big produce companies sweep up her eggs.

The little gristmills, that once clacked briskly all through the country, are silent, idle, and dilapidated. The small tobacco shop, fuel company, bakery even, are yielding before the advance of the big fellows. The day of the small enterprise has almost passed away. All of which has its advantages, but all of which tends to center price control outside of the hands of the people.

The cost of living began to increase some 10 or 15 years ago. At that time a 5-cent soup bone was a meal. Now there is no such thing. Cautiously, stealthily, one article after another began to add a cent or two on the pound, the box, or the gallon. The purchasing power of our dollar began to dwindle. The steady procession changed to a run, a gallop, a mad rush. Now it is a giddy scramble to see which can rise to the most outrageous height.

The subject served to spice up a new set of jokes, but it has long ceased to be a joke to the poor man on a small salary, the widow with a little fixed income from a few bonds or invested money. The newspaper man in the small town, the retail grocer, the butcher, the baker, and the dressmaker feel the tug of diminished profits first. They are the buffers to receive the angry protests of outraged consumers. Obliged to raise profits or go out of business, they are the ultimate and obvious price raisers, who get the heavy end of the blame and the abuse that belong to quite another division of this orgy of price raising.

There has not been a regular rise in the level of prices. The rise in pay lags behind the rise in prices. The cost of commodities has gone up quickly, of wages slowly. The rise in prices hits all classes, while the rise in wages hits only a few. This great current of wealth is sweeping into the coffers of a few. So strikes and demand for higher wages add to the vicious circle.

The following table from Bradstreet's gives the increase in prices for the last four years:

	1912	1916
Flour, per barrel	$4.65	$8.40
Beans, per 100 pounds	4.95	9.45
Potatoes, per 180 pounds	1.50	2.75
Sugar, per pound	.049	.08
Lard, per pound	.10	.15

Further comparisons are made in Current Opinion, October, 1916:

Bread that was 5 cents, is 10 cents.
Sugar was 22 pounds for a dollar, now 12 pounds for $1.
Steak was 18 cents, now 32 cents.
Veal was 15 cents, now 25 cents.
Butter was 20 cents. now 40 cents.
Eggs now 45 cents.

Clothes, shoes, wool, cotton, and silk have advanced from 20 to 40 per cent. Lumber that was $15 to $25 a thousand is now

selling at from $28 to $60 a thousand. Wood that was $4 a cord is now $10. Flour that was $5 a barrel three years ago is $10.50 a barrel now. Sugar was 6 cents a pound post hominum memoriam; it is 8¾ cents a pound now. The price of sandwiches and pie and beans in restaurants has joined the aeroplaning crew. Catsup and bread and butter are charged for extra.

Many and various are the causes adduced for the present abnormal level of prices. One factor that is always present is the undeniable upward trend of prices. High prices were an alarming fact long before the war. A mass of serious literature considering the subject was in print by 1911. People tend to live better, to require pure food, demand quicker service. Women want their goods, even down to a spool of thread, or three different purchases in a day, delivered instanter. The item of delivery, with its special messengers, automobile service, numerous trips, and reduplication adds greatly to the cost of modern living. Better conditions for workers in the way of hours, window lighting, and sanitation of buildings all cost money and tend to elevate prices.

But this alone would not cause prices to attain the present level.

The war has interposed itself as a grim, gigantic factor, disturbing the whole normal world to its very foundation, and affecting supply and demand in countless conceivable and inconceivable ways. The diversion of an army of men from production to destruction, the migration of nations to the front, the slaughter of millions, the absolute waste of money going up in powder and shot, are all factors that bear directly on the labor end of the problem. Immigration has dropped off. They tell us that labor is scarce, therefore high. All this apart from the demand for our exports from abroad. What goes over the sea can not be used here. The vast quantities of foodstuffs shipped to Europe have reduced the supply in this country. The first nine months of 1914 exports of breadstuffs amounted to $172,000,000; in 1916, $337,000,000.

Three hundred million bushels of potatoes have been exported this year.

Producing energy, both here and in Europe, is diverted to one special line, namely, munitions and kindred war needs. Aside from legitimate and natural rise of prices due to the war there has been an attendant sympathetic increase. The war is made an excuse of where real reason or necessity for boosting prices is absent.

A partial factor is found in the crop shortage of last season. The long, cold, rainy spring, the excessive dry hot spell, then the heavy rainfall just at the time to develop rusts and smuts; last, a frost so early as to prevent corn and fruit from ripening, all combined to produce not only a shortage of crops but also an inferior crop.

This condition, combined with the deluge of gold flowing into this country from Europe, worked to make high prices higher. For where gold is plentiful and crops are scanty the tendency will be to boost the value of the scarce commodity.

Another factor contributing to present high prices is the beef shortage. Individual producers of beef have been frozen out by the high-handed methods of the packing houses. Cash price and newspaper price vary so dishearteningly that it does not pay to raise beef. The stock raiser gets around 4 cents a pound for his beef; the consumer pays 20 to 30 cents. As the grazing land became less in extent a custom sprang up of driving young herds of beef cattle across from Mexico in the spring and selling them in the fall. But the war in Mexico has put an end to the cattle business. It will take 10 years after the war ceases before Mexico can be counted as a source for young beef. A still further element in the beef situation is the enormous loss of live stock through drought in summer and storms in winter. Only the Government can afford to forefend against conditions of such magnitude. Here, as Kipling says, is another story we have not time to dwell on.

Loss of live stock through frequent plagues and diseases might be overcome by the adoption of such a system of veterinary service as they have in Europe. To be sure, one of the principal aims of the Department of Agriculture has been to increase the production of meat. Their endeavors have been along the line of prevention of disease and of improving the breed. Sheep scabies, cattle scabies, cattle tick, hog cholera, are all coming under control, due to the efforts of this department.

Cattle raising in every part of the United States received a setback when in the quarantine in Chicago for hoof-and-mouth disease thousands of blooded animals, the best of the flock, were shot. These animals came, on invitation, to the cattle show from uninfected localities. But no step has ever been taken to recompense their owners.

A factor which has contributed heavily to the present crisis is lack of transportation facilities and exorbitant and prohibitive transportation costs. All over the West fruit was allowed to rot because it cost more to box and ship than to let it lie. There was more profit in cider at 30 cents a gallon than in apples at $3 a barrel when cost of handling and freight to the East had to be deducted. So that is why the city man pays $6 a barrel for apples if he is rich or reckless enough to buy that quantity. The railroads are ready with a plan of increasing demurrage and per diem charge in order to relieve car shortage. And they are about to raise the cry, according to the Railway Review, that the car shortage is due to old-style equipment, is too slow; therefore they need more money for new engines.

I must pay my respects to those Members from corn States who see in this exigency a necessity for pressing their bill to legalize putting impurities into flour. They affirm that a cheaper bread will result. A cheaper quality does not guarantee a lower price. Along with Congressman GEORGE R. SMITH and ex-Gov. John Lind I voiced my opposition against this measure before the committee last year. I said then and I say now this mixed product will not furnish a cheaper food. As well put oleomargarine on the market for butter because it is cheaper.

Blame for present conditions does not lie with the farmer. He gets 2 and 3 cents a quart for milk he sends to town, while the city man pays 9 to 15 cents for a pale imitation of a quart of it. The farmer is glad to get 85 cents a bushel for potatoes at the same time that the city man is paying $2. The farmer's profits are very little in advance of what they were two years ago, because labor, fertilizer, and machinery have risen so prodigiously. If the farmer got half the price the city man pays for his food, he could afford to pay high wages to his hired man. The farmer has to take the lean years, the mortgage years, without help and without grumbling. That is why he protests against an embargo as falling heaviest on him. He says there is no necessity of declaring a further embargo than the railroads have already declared.

Most comprehensive and far-reaching suggestions are embodied in the report of the New Zealand Commission, which are in outline as follows:

Municipalization of markets.
Encouragement of small holdings of land.
Abolition of duty on foodstuffs.
Vocational education.
Improvement of Government statistics.
Supply of money outstripping trade.

The creation of State market departments are being urged in many cities.

A report sent out from New York says:

A central market was advocated here by John J. Dillon, commissioner of the State department of foods and markets, who declared that such a market so situated that steamships might unload directly under its roof, while railroads might be connected with it through spurs, would do more to reduce the present soaring prices than any other expedient. By eliminating the excessive cost of rehandling food prevailing prices for food would be reduced.

The market and credit conference at Chicago on December 9 sent to Congress the following resolutions:

We urge upon Congress municipal abattoirs and cooperatively owned packing plants. We recommend that the market service of the office of markets be extended to include all farm products. We believe that the office of markets should require all handlers of farm products to report prices, receipts, and supplies on hand.

We recommend that the Agricultural Department extend its work of establishing market grades to cover all farm products and that in each of the principal markets official inspectors enforce the use of official grades. We recommend that the States promote organization among farmers.

All suggestions of relief bear upon the one great problem of marketing, of distribution. When the parcel post was first talked of, its advocates hoped that it would speedily become a channel of distribution. I am heartily in favor of enlarging and improving the parcel post, and so voted last year when the Madden amendment was up for consideration. No man can foresee the future benefits and possibilities of the parcel post to farmers. But the vista should not be in any way restricted.

Germany has solved the food problem. Her rural-credit system gave cheap money and fertilizer to the farmer long before the war was under way. Food is just as important as bullets, and Germany owes her ability to hold out as much to her economic forethought as to her military preparedness. England would be in a precarious condition were it not for her command of the seas. In this last deadly grapple her very life depends upon her maintaining this command. The biggest lesson of preparedness to us should be to learn to be sufficient unto ourselves, to feed ourselves, to furnish all our needs, to be self-supporting, in America for the American. We must evolve an adequate national food policy. Embargoes, investigations, indictments, and boycotts are only temporary. They do not go to the root of the matter. We want a cure, not a palliative; something which will delve deep below the surface, organize our whole system, and render food strikes forever unnecessary.

But all causes put forth only skirt the one big cause of high prices. There is a gradually tightening ring about the throat of our cities. Its clutch is spreading to every village, every farming community. No branch of the necessities of life, from food to fuel and clothing, is free from its effects. It is the great big menace of the present, a new octopus, a Frankenstein, the product of the times, a monster that its maker can no longer control. That is the universal Food Trust, which manipulates markets, holds food in cold storage for a rise in price. The agents of this Food Trust were sent all over the United States to buy up pumpkins, potatoes, cucumbers, apples, and other fruits and vegetables for cash, and then allowed them to rot unpicked in order to cause a shortage and increased prices. The cost of living is higher here than it is in the belligerent countries. Eggs are being shipped from England to sell in the Chicago market, with millions of dozens of eggs in cold storage there.

At Peoria, Ill., 28 carloads of potatoes were dumped into the river. In Minnesota when a coal famine occurred in the little towns, due to lack of freight cars, the railroads averred, there were any number of cars loaded with coal on the sidetracks. With my guide, I walked along and counted on the Northern Pacific tracks 32 cars loaded with coal and marked "hold." This was the situation: The dealers had made contracts for delivery when the price was under what it later developed to be. Consequently they were unwilling to make deliveries under the contracts when they could force a sale under the advance price. In the Minneapolis Tribune of November 22 the following appeared:

B. L. Brundage, a farmer of Gary, Ind., sold his pumpkin crop for cash. When the crop ripened he tried to find the buyer and learned that the name and address given were fictitious. A combination to raise the price of beans exists. Large quantities of canned and bulk beans are being held in Norfolk, Va., and Saginaw, Mich., which has increased the price of beans 60 per cent in the last six months.

The greed, the selfishness, the cruelty, that would encourage such waste is unthinkable. High prices have reached a point almost beyond the endurance of the American people. They have affected seriously the welfare of workers everywhere. Proper and sufficient food is the most vital necessity of our people. It is one of the ironies of the situation that the poor are urged to eat less in order to reduce the cost of living, and sprightly diet squads experiment to see if it really is necessary to spend more than 25 cents per day for food. The fact is the poor have retrenched, willy-nilly, and the result is an ever-increasing wave of pellagra and kindred diseases, directly traceable to insufficient and improper food.

Is there no way to get together, put our backs against the avalanche of descending dollar values? What is to become of our middle class, our laboring class, if this level of prices continues? The strife that has slumbered for so long between class and mass must with this new fuel burst forth into fresh strikes, riots, and revolution. Already we hear sharp evidence of discontent. Each day we read of new labor demands, refusals by capital, and resulting strikes. The air is full of speculation, disquiet, and doubt. We live in troublous times; a time of wealth and squalid poverty, extravagance and misery, ostentation and wretchedness, dishonesty and trickery.

If a monopoly has control of our food supply, what course have we but to pay the price they demand? If a time comes when personal gain is too exacting, when the burden is past all bearing, private enterprise can not complain if the Government step in. Greed that can not curb itself, history has ever shown, will inevitably suffer a curb.

Armor-Plate Plant at Knoxville, Tenn.

EXTENSION OF REMARKS

OF

HON. RICHARD W. AUSTIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

February 12, 1917.

Mr. AUSTIN. Mr. Speaker, now that we are considering the naval appropriation bill, it will not be out of order to call attention to the proposed construction of the armor-plate plant authorized by Congress during the last session. The board appointed by the Secretary of the Navy, headed by Admiral Fletcher, will at an early date personally visit and examine the sites or locations suggested, with a view of making a recommendation to the Secretary of the Navy, who is clothed with power to make the final decision. I believe a full, thorough, and impartial investigation, which we are to have, will result in the selection of Knoxville, Tenn., pronounced by President Lincoln, whose anniversary birthday is being observed throughout the United States to-day, as—

the most central or converging point in the more defensible mountain districts where the seven States of North Carolina, South Carolina, Virginia, Georgia, Kentucky, Tennessee, and West Virginia come together.

The statement by the War College Division of the General Staff, made September 11, 1915, emphasizes the importance of the location of supply depots, arsenals, munition plants, and so forth, west of the Appalachian Mountains, which brings Knoxville within its recommendation as to location.

In conclusion, I wish to call attention to the impartial and disinterested opinion of the Detroit Free Press, in its issue of May 29, 1916, which makes Knoxville the ideal place for the armor-plate plant:

For the benefit of the impartial citizen, interested in securing the best place, here are the several points:

HAS NATURAL DEFENSES.

Knoxville lies in the center of a valley 60 to 80 miles wide and 250 miles long.

The outer rim of this valley in all directions is protected with rugged mountains, the highest lying between Knoxville and the seacoast. The approach from Knoxville to these mountains is comparatively gradual, but on the coastal side it is abrupt and furnishes a defense against attack from the outside.

RAW MATERIALS.

Raw materials are there in abundant quantities, such as aluminum, coal, copper, cotton, iron, limestone, manganese, zinc, etc., used in the making of arms and munitions.

The city is close to the great hydroelectric plant which it is proposed the Government shall erect to extract nitrate from the air.

Furthermore, in the manufacture of explosives several chemicals that are largely used are obtained as by-products from coal and copper. Sulphuric acid is being extensively produced in the district, and the undeveloped water power of the territory is enormous.

In addition to all this, Knoxville is the exact center of the territory of the eastern United States—the territory to which munitions will have to be shipped in time of war.

Niagara Power Bill.

EXTENSION OF REMARKS

OF

HON. BERTRAND H. SNELL,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 13, 1917.

Mr. SNELL. Mr. Speaker, the present bill under discussion, in my judgment, is one of the most important measures that have been before us during the present session of Congress, and is worthy of the most careful and considerate attention from each Member of this House. I know of no public question in which the people of the whole country are more earnestly and actively interested than the further development of the undeveloped water powers of this country. We have been told on the floor of this House a great many times of their enormous value, and while I agree as to their potential value, I still maintain that they are not of one dollar actual value as long as they run idle to the sea. And I am one of those men who believe that the people of the present generation should have the opportunity to take advantage of the enormous natural resources with which we have been so abundantly provided. I also well know that it is impossible to do this until there has been some positive progressive legislation along this line.

I want to state in the beginning that I am not in favor of any legislation that gives away any of the people's rights, neither am I in favor of any law which ignores the State of New York or confiscates the rights of the riparian owners along any navigable stream in any State in this Union.

I shall not try to discuss this bill from a legal standpoint, but from the practical common-sense, business standpoint of any man who might be interested in developing power.

WHAT DOES THE GOVERNMENT OWN?

The first question I would want to know if I were interested in the development of any one of these powers is, What does the Federal Government own and what does it propose to sell or lease? If the Federal Government owns the power or all the water, does it own the bed of the stream? If it owns the bed of the stream, does it own the shore to low or high water marks? If it owns it to high-water mark, does it own 1 inch or 10 feet along the shore; and if it does, where do the State and the riparian owner come in? These are practical questions, and questions that must be decided before any man or set of men will develop your powers. That is the reason I asked the

gentleman from Indiana if there was anything in this bill or in existing law that definitely defines what are State rights, what are the Federal rights, what are the rights of the riparian owners. The gentleman replied:

I will state to the gentleman that the position of the committee is that when the Federal authority takes jurisdiction of a water power or of a navigable river that authority supersedes the rights of all riparian owners and whatever rights the State has. That is, the Federal Government will not divide its jurisdiction in a question of this kind with a State.

Still, this same committee, whose chairman made this reply, said in its majority report:

In the opinion of the committee the provisions of the accompanying bill do no violence to any interest, and fully conserve, promote, and protect the rights of the United States, the State of New York, the companies operating at the Falls.

Now, I do not think there is a member of this committee or a man on the floor of this House but who believes that the State of New York and the riparian owners have some rights here, and if they do, no matter how small, I maintain that any legislation that is fair to all parties and of any lasting or permanent benefit to the people of this country must first be based on a proper defining of the rights of the Federal Government, State, and riparian owner.

In considering an important public question like the future development of water power I do not believe it should be considered from the extreme viewpoint of the Socialist or municipal ownership advocate any more than it should be from the sole viewpoint of the individual or corporation desiring to get possession of all the power in the country, but, on the other hand, it should be considered in a sane and sensible manner. Place all the facts of both sides fairly before the House. Do not try to distort them to create a wrong impression, but tell the whole story just as it is and then let the Members of the House make their own decision. Desiring to do this, and for no other reason, I have decided to call your attention to certain statements made when this bill was being discussed by the gentleman from Alabama and the gentleman from Wisconsin in regard to the generation and distribution of electricity in the State of New York and other countries, that in my judgment are neither germane to the proposition, entirely misleading, not founded on actual conditions as they exist, and in many cases show a lamentable lack of real knowledge or comprehension of the subject under discussion.

The gentleman from Alabama, in his impassioned tirade against this bill, says, "It is full of faults." "You can drive a four-horse team through it in a dozen places." If I am not mistaken, you can drive at least a pony cart through his speech in more than one place. He says, "The voice of the inarticulate mass of the people of western New York has come to me to plead against this." I would like to ask this gentleman from Alabama when he became so interested in the people of New York State? Did he show any interest in the people of New York when he voted for the nitrate plant, armor-plate plant, good-roads bill, and several other bills, and then voted for the revenue bill that is intended to make New York State stand practically one-half of it all? Why does he care so much more about what the people of New York pay for their electricity than he does the people of his own district? Why is he spending so much time looking up the prices the people of Buffalo pay for electricity when he does not know the price the people of his own home city pay for similar service. In the city of Buffalo, where he says the people are so shockingly abused, they pay (according to his statement in the RECORD, p. 1916) from $22 to $100 per horsepower. In his own home city of Birmingham, Ala., from power developed on Coosa River the people are paying from $48.75 per horsepower minimum to $487.50 per horsepower maximum. This information was received by wire to-day from a responsible officer in that city. Now, in my judgment, it would be a good idea for the gentleman from Alabama to give some attention to the downtrodden, suffering people in his own district and not shed any more crocodile tears over the people of New York State.

Now, Mr. Speaker, I desire to call your attention to further statements of the gentleman from Alabama, that are not only inconsistent with each other, but can not be confirmed by the actual facts as shown by the reports of the Hydroelectric Commission of Canada for the year 1915, the last one published, and the report of the Public Service Commission of New York for 1914, the last one available. On page 1916 of the RECORD he states as follows:

Over on the American side, at Buffalo, one-fourth of the distance from the point of generation that Toronto is, they are charging $20 to $200 per horsepower, and the basis is 8 cents a kilowatt hour. It is a sliding scale that goes down to about 4 cents. The price on the American side is more than double what is being charged in Canada. And this does not apply to the city of Toronto alone.

This statement not only contradicts itself but shows that the gentleman does not know the subject he is talking about. He states they charge as high as $200 per horsepower; basis, 8 cents per kilowatt hour. Any man who knows electricity and horsepower knows that 8 cents per kilowatt hour is a great deal more than $200 per horsepower. He says they charge as low as 4 cents per kilowatt hour, which is a great deal more than $20 per horsepower, which the gentleman says is the low price. In next column, same speech, he says, "Lowest price per horsepower, Buffalo, is $22 and highest $100." In same column he says, "I have been able to learn of no American consumer who gets power for less than $16 per horsepower." Right in next column, in his exuberance, he says, "Their American competitors are fleecing the people to the extent of a minimum price of $20 a horsepower, right in Niagara, delivered at the company's bus bar." Or, in plain English, he contradicts himself four times in the first five minutes.

Now, let us look for a minute at his statement that they are charging more than double in Buffalo than they are in Toronto. These cities are practically the same size, and in comparing the actual statistics for consumption of electricity of one year, I find as follows: Toronto used 18,843,055 kilowatt hours of electricity at a cost of $623,714, or at an average price of 3.31 cents per kilowatt hour. Buffalo used 39,421,480 kilowatt hours at a cost of $1,489,789, or an average cost of 3.78 cents per kilowatt hour, or at an average cost of 10 per cent more than Toronto, while the distributing company in Buffalo pays a franchise tax, corporation income tax, and a local city and State tax, and the municipal plant of Toronto does not pay one dollar of any name or nature, and it has had some assistance from direct taxation on the people. Therefore, in my judgment, if you added to their present price the additional taxes an American company has to pay, with a proper depreciation and sinking-fund charge, to the Toronto municipal plant the people of Buffalo, on the average price of all power used in that city, are not paying a single fraction more than the people of Toronto.

For further information of the committee, I beg to submit the following table showing the average price paid per kilowatt hour in the seven largest places in Ontario supplied by the hydroelectric commission during the year 1915, and seven cities in New York State during the year 1914 (last statistics available), and all supplied by privately owned public utility companies that pay franchise tax, corporation income tax, and local city and State tax as against the tax-exempt municipal-owned plants in Canada:

	Cents.
Toronto, year 1915, average price per kilowatt hour	3.31
Ottawa, year 1915, average price per kilowatt hour	3.4
Hamilton, year 1915, average price per kilowatt hour	2.9
London, year 1915, average price per kilowatt hour	2.9
Brantwood, year 1915, average price per kilowatt hour	3.65
Berlin, year 1915, average price per kilowatt hour	3.34
Stratford, year 1915, average price per kilowatt hour	4.21
STATE OF NEW YORK.	
Niagara Falls, year 1914, average price per kilowatt hour	1.7
Buffalo, year 1914, average price per kilowatt hour	3.78
Geneseo Light & Power Co., year 1914, average price per kilowatt hour (distributes in several small towns)	1.74
Rochester, year 1914, average price per kilowatt hour	2.14
Syracuse, year 1914, average price per kilowatt hour	3.53
Utica, year 1914, average price per kilowatt hour	2.72
Schenectady, year 1914, average price per kilowatt hour	3.45

The city of Prescott, Canada (which is just across the St. Lawrence River from Ogdensburg in my own district), is furnished current from the Hydroelectric Commission of Canada and paid an average price of 5.4 cents per kilowatt hour, while the city of Ogdensburg, supplied with current from a privately owned company, paid only 3.66 cents per kilowatt hour.

As I said before, these are the actual figures taken from Hydroelectric Commission of Canada's report for 1915 and public service commission's report, State of New York, for 1914, and I leave it to the judgment of the Members of this House whether the statements made by the gentleman from Alabama were true or not when he said that the people of Canada were getting electric current at one-third to one-half the price of the people in New York State.

When the gentleman from Alabama was making his impassioned appeal for the people of New York State, I asked him this question: "Can the gentleman tell how much any of these Canadian cities have lost in distributing this power?" Mr. HUDDLESTON, "They have lost nothing." The detailed report of the 99 municipalities doing business in Canada in 1915 (last published report) shows that 12 municipalities did business at a loss, without making one dollar charge for depreciation or a dollar taxes. It shows, further, that 25 others, or 37 in all out of 99, did not charge one dollar to depreciation account in the year 1915. This committee's report goes on further to state

that they never charge anything to depreciation account during first year's operation. I also find that the Hydroelectric Commission of Canada, exclusive of the municipal plants, has an investment in transmission lines, transformers, meters, etc., of $12,600,000. It has been in operation eight years, has never paid one dollar in any kind of taxes, and only claims to have on hand $634,561 that is applicable for sinking fund, depreciation, and reserve. This amount is only 5 per cent, or just about the amount that should be charged to depreciation each year in such a hazardous business and a business whose plant is subject to such destructive elements as the distribution of electricity.

Later in the same day the gentleman from Wisconsin [Mr. COOPER] tried to answer my question to the gentleman from Alabama [Mr. HUDDLESTON]. He said:

Here is a correct statement of the facts taken from the report dated October 31, 1915, of the Canadian Commission. The municipalities own their own distributing systems and sell the power to consumers substantially at cost.

That was no answer to my question. That was simply what the committee said in its report when it was complimenting itself, and the distinguished gentleman would have soon discovered his error if he had taken time to study the itemized reports published in the same book he was quoting from. He goes on further to compare rates, and says:

The average cost for all Ontario was 3.9 cents for domestic and 3.1 cents for commercial current. In this country for the electric power generated at the same cataract the people pay 8, 9, 10, or 12 cents.

This statement is not only absolutely unfair, but it creates a false impression, for the gentleman compares the average price paid by all kinds of consumers for both manufacturing and lighting in Canada with the highest price paid by the individual consumer in an extreme case for lighting, and I can not find a place where anyone pays as high a price as he quotes for lighting.

This same gentleman from Wisconsin said in his discussion of the Falls development:

At this point let me direct attention to important testimony, still unprinted, which was taken day before yesterday before the Committee on Foreign Affairs. Secretary of War Baker said:

"Gen. Black has handed me some figures showing that 20,000 cubic feet per second used below the Falls would develop 600,000 horsepower, while the same diversion of water as now used develops 250,000 horsepower, showing that the gain from using the same water below instead of above would be about 75 per cent, or 150 per cent."

This statement in itself, or in any explanation he made of it, meant absolutely nothing to the Members of this House, and I do not believe that it meant anything to the gentleman himself or to the Secretary of War when he made it to the committee. Then the gentleman goes on to read a lengthy report of a hydroelectric company in Switzerland, which also meant nothing to the Members of this House as far as this discussion is concerned, for no one knew anything about the kind or quality of service the company was giving or the conditions under which it was being operated, the last part of which statement, referring to prices, I will quote:

Prices for a 500-volt current for industrial purposes are quoted per kilowatt hour as follows: For the first 10,000 kilowatt hours, $0.0214; 10,001 to 20,000 kilowatt hours, $0.019; 20,001 to 30,000 kilowatt hours, $0.0166; 30,001 to 50,000 kilowatt hours, $0.0142; 50,001 to 80,000 kilowatt hours, $0.0119; 80,001 to 120,000 kilowatt hours, $0.0107; 120,001 to 150,000 kilowatt hours, $0.0099; 150,001 and more kilowatt hours, $0.0095.

This is a statement of rates for industrial purposes, which to me means manufacturing.

Now, once more, if the gentleman had given careful consideration to this subject and had translated these prices per kilowatt hours to prices for horsepower per year—what he was talking about earlier in his remarks, when he was lamenting over the charges at Buffalo and said:

For the power at Niagara the lowest rate in Buffalo is $22 per horsepower, from which the price ranges as high as $100 per horsepower. The lowest price paid there that anyone could find—and I take this from my colleague, Mr. HUDDLESTON, who told me that it was the result of his inquiry—the lowest price charged there to an American consumer was $16 per horsepower—

He would have discovered that the prices quoted by him for industrial purposes, in this model municipal Swiss plant, ranged from $61.75 per horsepower to $139.10, or an average of nearly twice as much as is being paid, according to his own statement, by his much-abused people of Buffalo.

Mr. Speaker, I have gone into this extensive detail of figures for two reasons: First, to show the glaring discrepancies of the figures quoted by the gentleman from Alabama and the gentleman from Wisconsin, and the false conclusions that they tried to draw from the same; second, to show that it is absolutely foolish to try to make comparisons between public-utility companies by simply comparing rates and paying no attention whatever to the kind or quality of service and the conditions under which the individual companies work and are controlled. In not a single instance during the discussion of this bill have the gentlemen from Alabama and Wisconsin considered anything but the rate, and have given no consideration at all to the really important questions that determine the ultimate price of electric current, namely:

How far has the current been transmitted?

How many times transformed?

How distributed and delivered; whether in small quantities to the individual consumer, involving large losses in the transforming and distribution, large proportionate investment and operating expenses; or whether it is delivered in large blocks of high-voltage power to some near-by place at practically no loss or expense?

The gentleman from Alabama all through his speech tries to create the impression that he is the direct representative of the small user, the small manufacturer; as he says, the common people. He does not care about the large fellow, for he can take care of himself. Now, certainly there is not any electric current distributed to this class of people anywhere in the State of New York that does not come under the public-service commission, and the commission is always open to receive complaints from any justified person and never fails to give such complaints careful consideration.

For the purpose of determining the conditions as they exist in regard to power and rates in the Niagara district, I have examined the public service commission's reports and hearings quite extensively. I find about 95 per cent of all power generated there is used for manufacturing and about 5 per cent for lighting. Also that the commission has never received a complaint from the purchasers of power for manufacturing, and it is a matter of common knowledge that purchasers are very anxious for the power at present prices. As regards the power or current used in Buffalo, there was an investigation made by the public service commission about four years ago and rates reduced to the present level, which the commission characterizes as follows:

These rates were so adjusted as to allow, in addition to operating expenses, only a fair return upon the actual physical property devoted to the purpose of distributing electricity.

And I submit this testimony of the Public Service Commission of New York as to the present rates in the city of Buffalo to refute the charge made by the gentleman from Alabama that these people are being "robbed" and "skinned alive."

The Cline bill is far from satisfactory to me, but perhaps it is a step in the right direction and will lead toward more definite and progressive legislation along this line.

I believe the rights of the Federal Government stop with navigation and national defense, and that their authority ceases with proper legislation along this line. If anyone has a right to charge for use of water it is New York State, and I believe that the State of New York has a perfect right to make any contract she desires with the riparian owners for the use of water in navigable streams in her own State.

Now, just a word about the Hydroelectric Commission of Canada and I am through. This commission and its work have been discussed a great deal in my State, and there is, of course, an honest difference of opinion, not only among competent engineers but also among the people buying electricity. However, I think it is the opinion of the majority of the best engineers that the hydroelectric commission has not as yet proved a great success nor is yet on a sound financial basis. In my own judgment, while it may appear that they are temporarily getting electricity in Canada at a cheaper rate through the hydroelectric commission and municipal ownership than their American neighbors, when they make due allowances for replacements and depreciation, the rapid obsolescence of all electrical equipment, the loss of taxes, and the other aid given the commission and municipalities by the Provincial Government without charge, the credit will be on the side of the New York State town that purchases its electric current from a privately owned and operated utility company under the jurisdiction of a watchful public service commission.

Furthermore, until the Federal Government shows more efficiency than at present in managing its ordinary governmental activities I am absolutely opposed to a general plunge into Government ownership. The Federal Government has all it can attend to managing its naval and military affairs, public buildings, river and harbor improvements, foreign affairs, and a thousand other things connected with a big country like ours that it can not delegate to anyone else without encroaching upon the work and domain of the private individual. And if the time ever does come when the people of the United States desire to try Government ownership I am sure they will not begin by entering upon a business that involves as many complex, difficult, and technical problems as the generation, transmission, and distribution of electricity.

Legislature of West Virginia Indorses the President's Action in Severing Diplomatic Relations With Germany.

EXTENSION OF REMARKS

OF

HON. M. M. NEELY,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 10, 1917.

Mr. NEELY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a short resolution adopted by the House of Delegates of West Virginia indorsing the course of this Government in severing diplomatic relations with the Imperial Government of Germany.

The resolution is as follows:

House joint resolution No. 13, indorsing the course of the President of the United States in severing diplomatic relations with the Imperial German Government.

Be it resolved by the House of Delegates of West Virginia (the Senate concurring therein):

First. That we, the Legislature of West Virginia, deeply deploring the international crisis that has called it forth, hereby express our hearty approval of the course pursued by President Wilson and the Department of State at Washington, in severing diplomatic relations with the Imperial German Government, following its note of January 31, repudiating the pledges heretofore given to respect the lives and property of American citizens, and to insure the freedom of the seas. Believing that to submit to a violation of the fundamental rights involved would bring lasting humiliation and a loss of self-respect, we indorse the clear and patriotic declaration by the President of a fixed purpose to invoke the power of the Nation to maintain our honor and independence as a sovereign people. In an hour like the present our usual personal and party differences are leveled before an exalted patriotism; and to maintain its rights and sacred honor among the nations of the earth, we pledge to our Government the united support of the people of West Virginia.

Second. That a copy of this resolution, duly authenticated, be sent to the President of the United States, and a copy to each of our representatives in the Congress of the United States, with the request that they communicate the same to their respective Houses.

Adopted by the house of delegates, February 5, 1917.

ROBERT L. HAMILTON,
Clerk of the House.

Adopted by the Senate, February 5, 1917.

JOHN T. HARRIS,
Clerk of the Senate.

River and Harbor Appropriation Bill.

SPEECH

OF

HON. WILLIAM J. SEARS,

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 23, 1917.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 20079) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. SEARS. Mr. Chairman, I arise to oppose the motion made by the gentleman from Wisconsin [Mr. FREAR]. I dislike to take up the time of the committee in speaking against his motion, because I am satisfied his argument will not have much weight. I reach this conclusion because the laborious minority report is only signed by the distinguished gentleman himself. My sole purpose in rising is to correct some of the misstatements he has made. Last year in my speech before this House, in which they kindly gave me 15 minutes to explain the Kissimmee River project, I undertook to explain to the gentleman from Wisconsin what the Kissimmee River was, what it meant to that section of the country, and at that time I said I believed the gentleman was misinformed. This year, however, the gentleman from Wisconsin has again made the same unfair attack on the Kissimmee River project, and I have no comment to make except as follows: After serving two years on the Rivers and Harbors Committee, claiming as he does that he has worked laboriously, I find in a speech delivered on the public-buildings bill the gentleman does not even know where the Kissimmee River is located, for he states that Kissimmee, a little village of two thousand one hundred and some-odd souls, is on a river dry eight months out of the year, when, as a matter of fact, Kissimmee is 85 miles or more from the Kissimmee River. About 2,124 souls is as near the truth as he gets in any statement he makes regarding the Kissimmee River, for I have a telegram from one of our State officers giving the census of Kissimmee, for 1915, which was taken under a State law providing for same, in which he states that the census of Kissimmee for that year was 4,221. The gentleman from Wisconsin only missed it a little over 2,000.

Mr. FREAR. Will the gentleman yield?

Mr. SEARS. Certainly.

Mr. FREAR. I gave the report in 1910 in all those cases. That is what I stated.

Mr. SEARS. When you gave it you got it from the census of 1910?

Mr. FREAR. That is what I stated in that speech in several places.

Mr. SEARS. Oh, by implication, at least, the gentleman conveyed the impression he was speaking of the present. Of course, I realize the other gentlemen of the House understood that Kissimmee was not such a small place, because it was not possible for anyone in the United States, except possibly the gentleman from Wisconsin, who does not know that Florida is growing more rapidly than any other section of the country, and unless the gentleman wakes up, my friends, "old Rip Van Winkle" may well be on his guard or he will be a back number in comparison with the gentleman from Wisconsin.

The people of this country need these water improvements, and they are going to have them regardless of the newspaper articles condemning these propositions.

This river is about 125 miles long, and the Government has spent on it $35,000. Taking as true, which it is not, the statement of the gentleman that the river is dry eight months out of the year, I submit it to my colleague if a river that has navigation only four months out of a year and still has a commerce of 73,565 tons, with a valuation of over $1,000,000, with only $35,000 spent in improving it, is it not entitled to have the small sum of $47,000 appropriated and thereby make navigation possible throughout the entire year?

The statement that only two steamboats ply this river is not correct. There are four steamers on the river at this time. The gentleman's statement was true some years ago. There are also many launches engaged in the fishing business and numerous boats hauling freight back and forth. As I said in my speech last year, and I do not desire to repeat it and thereby unnecessarily take up your time, I will at this time only say when my colleagues realize that from Kissimmee by boat you can go to Tampa, Pensacola, or Mobile, and that by boat you can go to Miami and Jacksonville, and, if the boat could draw a sufficient depth, to New York, you can realize the importance of this appropriation. I also desire to call your attention to the fact that there is no railroad at present paralleling this river.

Mr. SWITZER. Mr. Chairman——

The CHAIRMAN. Will the gentleman yield?

Mr. SEARS. I will.

Mr. SWITZER. Is it not a fact that on many of the northern rivers and the Great Lakes navigation, on account of ice in the winter season, is interfered with two or three or four months? Navigation on some of these streams and on the Great Lakes closes for that length of time.

Mr. SEARS. That is true, I presume.

Mr. SWITZER. I presume that possibly for three or four months, on account of the dry season in the South, there may be no navigation. Is there any particular difference, so far as navigation being closed, on a northern stream than on one in Florida?

Mr. SEARS. The gentleman is absolutely correct, and there is no difference, and should not be any. But I would remind my friend that this river, as stated before, has no railroad paralleling it. There is no railroad within 15 or 20 miles of this river, and, in fact, there is a 15 to 20 mile haul when the river is not navigable; it is never dry; and the only way citizens residing there have to secure their supplies, their groceries, and other freight one or two months instead of eight months out of the year is to haul them with teams. Whether that should be the case or not I will leave it to the fairness of my colleagues to decide. It is your constituents who are moving into this section of the country and buying lands and improving them. It is for them I speak as well as for my own constituents, who have lived there for years. I know this is a worthy project, and I trust the motion of the gentleman from Wisconsin to strike out same will not prevail. I do not care, Mr. Chairman, to now take up more of the time of the House on the appropriation for the Kissimmee River, because I believe the committee will pass it, as it is one of the most worthy projects in this bill. But the New York Sun recently published an editorial in which they start out with "Nothing too trifling for pork chasers. Logging streams and partly dry streams in bill. Representative SPARKMAN asks," and so forth.

They then go on and refer to "creeks sometimes dry," referring to the Kissimmee River. Then they say "Agitation may prevent steal." Then they refer to more little steals, and, in line with the distinguished gentleman from Wisconsin, they under-

take to jump on the South and southern projects and make the statement that this is a sectional bill. The gentleman from Wisconsin denies this, but in his speech on the public-buildings bill he specifically states that the bill was full of sectionalism.

Mr. FREAR. That is a different bill than this one.

Mr. SEARS. It does not matter. It is along the same line. Last year in his discussion on the river and harbor bill the gentleman referred to the fact that southern men were in the saddle, and the New York Sun, taking up that line of argument, tries to get this House to cut out small appropriations throughout the South in order that their large appropriations may be placed in.

The CHAIRMAN. The time of the gentleman from Florida has expired.

Mr. SEARS. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. SEARS. It may, Mr. Chairman, be of interest to the Members of this House and the country to know just what the facts are. Since we have had river and harbor appropriations, for the 11 Southern States there has been appropriated $128,138,008.14; for 11 Northern States during that same time there has been appropriated $231,460,079.97, or $103,322,071.83 more for 11 of the Northern States than for the 11 Southern States. During that time there has been appropriated for Massachusetts, Michigan, and New York, $137,951,139.61 for rivers and harbors, or approximately $9,000,000 more for those three States than all of the Southern States. I give you the States as follows:

Eleven Southern States.	
Alabama	$9,115,230.60
Arkansas	1,871,501.05
Florida	17,536,579.88
Georgia	15,388,219.57
Louisiana	5,296,829.57
Mississippi	5,848,490.95
North Carolina	11,190,257.92
South Carolina	10,600,636.64
Tennessee	356,853.00
Texas	40,135,890.38
Virginia	10,797,518.58
Total	128,138,008.14
Eleven Northern States.	
Connecticut	$6,799,123.81
Illinois	19,874,736.72
Maine	7,399,565.99
Massachusetts	21,410,898.91
Michigan	59,378,884.50
New Jersey	7,311,272.71
New York	57,161,356.20
Ohio	22,423,769.53
Pennsylvania	5,082,468.73
Rhode Island	8,134,002.82
Wisconsin	16,484,000.05
Total	231,460,079.97
Northern States	231,460,079.97
Southern States	128,138,008.14
Difference	103,322,071.83

Mr. HULBERT. Will the gentleman yield?

Mr. SEARS. I have not much time.

Mr. HULBERT. I wanted to ask the gentleman a brief question, whether he has made any comparison between the numerical representation of the 11 States of the South and the 11 States of the North, and the commercial statistics of the States of the North and the States of the South?

Mr. SEARS. I will get to that in a moment. For New York there has been appropriated for rivers and harbors $57,161,356.20, and in this bill there are appropriations amounting to $2,299,000 for New York City alone. For public buildings for 4 Northern States—Massachusetts, New York, Ohio, and Pennsylvania—$102,421,481.79 has been appropriated; for 4 Southern States—Arkansas, Florida, North Carolina, and South Carolina—$14,977,033.94, or a difference in favor of the 4 Northern States of $87,444,447.85. Showing, Mr. Chairman, that we of the South have not been trying to get all of the "pork."

Mr. HULBERT. Mr. Chairman, will the gentleman yield there?

The CHAIRMAN. Does the gentleman from Florida yield to the gentleman from New York?

Mr. SEARS. I regret I can not yield. I want to say right here, and I think this will answer the question that the gentleman from New York would ask, I trust I shall never become so narrow that I will vote against any bill because the appropriation does not affect my district, or solely because it only affects some other Member's district. I trust that I shall not become so narrow that I will vote against any bill because the appropriation goes to the North and does not come to the South. My vision has always been too broad for that, and I will not now become so small that I would fight an appropriation on those grounds. If it was not for the business that we give to the great city of New York—and as a southern man, coming from the extreme South, the land of flowers, I want to say that I am as proud of New York City as the gentleman, Mr. HULBERT, my able colleague, is himself—perhaps New York would not be the great city it is. If these appropriations had not been made in the past, New York could not have handled the business and would not be the city it is to-day. It is such appropriations as contained in this bill that have made large cities possible, and this should teach us, my colleagues, that we should go on with this great work and, by so doing, make other great cities possible.

I want to say that I do not believe the citizens of New York indorse any such editorial as the one I have called your attention to. On the contrary, I believe they rather condemn such editorials. I do not believe the citizens of New York would like to array against them the good merchants of the South, who now go there annually and spend their money for merchandise, and by doing so cause them to spend it somewhere else. Let us all be broad minded. I trust that some day the scales will fall from the eyes of the gentleman from Wisconsin [Mr. FREAR], and instead of being a pessimist of the deepest type he will wake up to optimism and assist us in making this great country of ours even greater. I would rather be an optimist, my friends, and make lemonade out of the lemons in the shape of the misstatements that are persistently spoken by the gentleman from Wisconsin than to be a pessimist trying to find something that would raise a foul stench and vex mankind. I would rather chase the rainbow than watch the snake as he makes his crooked trail through the slush, and filth, and mud. I would rather believe all men are honest until their dishonor is proven than to believe all men are dishonest until their honor has been proven. I would rather believe that my colleagues are not guilty of theft, are not guilty of stealing, are not pork-barrel chasers, simply because they endeavor to get an appropriation for their districts, than to make a charge that this is only a big grab for money and made for the purpose of getting votes and deceiving the people back home. I would rather ask that my colleagues try to make this great country a greater country if possible than to try to drag into disrepute my fellow Members who have simply endeavored to secure for their districts meritorious appropriations. I would not array one section of the country against another for selfish gain, and I fear, though I trust I am mistaken, this must be the sole reason which actuates the gentleman from Wisconsin. I would rather unite my country as one great brotherhood, under one flag, under one Government, under one Nation we all love. [Applause.]

Mr. FREAR. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Florida yield to the gentleman from Wisconsin?

Mr. SEARS. Yes.

Mr. FREAR. The gentleman has referred to me many times, and put many words in my mouth that I did not use.

Mr. SEARS. I have not put any words in the gentleman's mouth. He never lacks for words.

Mr. FREAR. I have told the gentleman that I struck out these items in the North just the same as in the South, and yet if it helps him or helps his constituents I am willing that he should say such things. But, of course, if it helps him I have no objection. He speaks of my standing here in this way. I do, and I get abuse from a lot of people. I am simply doing what I believe to be a public duty. I present from the official reports the conditions that exist, and base my argument entirely on these reports.

Mr. SEARS. Mr. Chairman, the gentleman from Wisconsin still insists upon making misstatements. If he can point to one single item that he has stricken out in either of the bills since I have been in Congress, I would like to have him do so.

Mr. FREAR. I have not claimed that.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SEARS. Under leave granted me to extend my remarks, as an appendix, solely that the Members may know of some of the criticisms that have been made, I call their attention to an editorial which appeared in the Chattanooga Times, dated Sunday, January 16, 1916:

[From the Chattanooga Times, Sunday, Jan. 16, 1916.]

A Washington dispatch in Saturday's Times gave an instance fairly illuminating what is meant by the "pork barrel" in congressional legislation. The Times says: "Congressman SEARS to-day introduced a bill appropriating $50,000 for a post office at West Palm Beach, Fla." It need hardly be said that Congressman SEARS is from Florida and that West Palm Beach is in his district. We are told that West Palm Beach is somewhat larger than Wauhatchie, but not quite as large as Sherman Heights, and yet the people of the United States are asked to tax themselves $50,000 to build the post office at West Palm Beach,

not to meet the necessities of a popular community but that a Congressman may have a record of doing something for his district—and that is what constitutes the "pork barrel."

The only criticism I care to make or will make as to the above editorial will be to call your attention to the following letter in reply to said editorial:

WEST PALM BEACH—A CHATTANOOGA FRIEND OF THE LITTLE FLORIDA CITY COMES TO ITS DEFENSE.

To the CHATTANOOGA TIMES:

In Sunday's issue of the Times appeared an editorial under the heading of "The Pork Barrel," one paragraph of which I append without copying, which refers to West Palm Beach, Fla.

This editorial unwittingly does so much injustice to that place, to the congressional Representative, Mr. SEARS, and to the fair and impartial editor of the Times, that I am moved to ask its correction, fearing that it may result injuriously to a much needed and deserved improvement in that thriving and most delightful little city in southern Florida.

I do this from two considerations. Your correspondent fully appreciates the power and influence of the able editorials which distinguish the Times, and their wide circulation and weight among thoughtful men, and especially in Washington, and feels, therefore, that such a statement might have a practical bearing against a most prosperous section. The effort of the Florida Representative to accomplish a good work for a constituency so noted, so liberal, so hospitable, and so flourishing as West Palm Beach; and, second, because having last year spent four months in Florida, one of which was at West Palm Beach, and having been so kindly and hospitably entertained there, I owe to that city the grateful obligation to try to avoid for it the inadvertent injury which might be done it by so good a friend as the editor, and so influential a paper as he adorns in editing in my home city.

West Palm Beach is one of the most delightful little cities on the east coast. It has a population of over 5,000 resident people. It has grown greatly, miraculously, since the census of 1910. It has numerous hotels, fine schools, two or three banks (of one a former Tennessean and possibly at one time a neighbor of the editor is president). This gentleman—Mr. Reece—was from upper east Tennessee. There are many Tennesseans there, and it has as fine, wholesome, active, and liberal a citizenship as there is in Florida or any other Southern State. During the late spring and late fall and winter months it has a transient population (getting mail there) of from 10,000 to 20,000.

The post office is a very important, busy affair, and will grow busier with lapse of time, until even a $50,000 post office will be wholly inadequate. The one at present there is, I assume, in a rented building. It is under good management and your correspondent enjoyed courtesies from it which he gratefully remembers, and hopes to enjoy them later in a more commodious and fitting structure, commensurate with the merits of the city and the needs of the Government.

West Palm Beach, just across Lake Worth from Palm Beach proper, is the main residential and business section of the two places. Very few people at present reside in Palm Beach, but residents and business men, of which latter there are many, in many large houses, do much business in Palm Beach across the lake, which is reached by two bridges and innumerable boats. The Continental Hotel is located there—the largest one built by Mr. Flagler—containing 2,200 rooms, and said to be the largest in the world. For the last of the winter months it is thronged by thousands, as are the other hotels, both large and small.

Whatever the demerits of the "pork barrel"—and it has doubtless many—this is not one of them, and I hope your keen sense of propriety and justice will cause you to so correct your admirable article by giving place to this communication.

D. L. SNODGRASS,
Chattanoogan.

I have never met Mr. Snodgrass, but I desire at this time to thank him for the evident spirit of fairness which prompted his reply to said editorial.

Lincoln's War Speech—As a Member of Congress He Freely Criticized the President Who Took Us Into a War With Mexico.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 12, 1917.

Mr. MOORE of Pennsylvania. Mr. Speaker, in 1848, when James K. Polk was President of the United States, Abraham Lincoln was a Member of the House of Representatives from the State of Illinois. Although every phase of Lincoln's character will doubtless be discussed throughout the length and breadth of this land on this his natal day, it is nevertheless interesting to here recall that the immortal President, as a Member of Congress, was not afraid to stand up for what he believed to be righteous, even though it became necessary in doing so to criticize a President. Since all things bearing upon Lincoln's life are appropriate for discussion to-day, I take the liberty, in view of the wretched position in which the Government finds itself along the Mexican border in this year of our Lord 1917, to draw attention to Lincoln's speech on the Mexican situation as it appears in the Congressional Globe of January 12, 1848.

It will be observed by those perusing this speech that Lincoln as a Member of Congress did not hesitate to exercise his constitutional right of saying what he thought. "The military glory," which he intimates in this speech might have influenced the President in his declaration of war, does not seem to have materialized after 20 months of strife in Mexico and an increasing anxiety and distress on the part of mothers, wives, and children in the United States. Lincoln also had the opportunity to observe that war was costly as well as destructive. All this, of course, without regard to that momentous war experience into which he was later to be plunged as President of the United States.

LINCOLN WANTED TO BE RIGHT.

Throughout the whole of Lincoln's speech it appears that the Illinois Congressman was not sure that the President was right in declaring war, and that, although he would like to "stand by the President," there was such an uncertainty as to what the war was about that to enter into it on such grounds as the President had given was unjustifiable in justice or patriotism. At this critical period in American history, when influences, more or less subtle, are endeavoring to hurry the United States into a European war, the words of Lincoln may be read with profit:

THE WAR WITH MEXICO.

[Speech of Mr. A. Lincoln, of Illinois, in the House of Representatives Jan. 12, 1848, on the resolutions referring the President's message to the various standing committees.]

Mr. Lincoln addressed the committee as follows:

Mr. Chairman, some if not all the gentlemen on the other side of the House, who have addressed the committee within the last two days, have spoken rather complainingly, if I have rightly understood them, of the vote given a week or 10 days ago declaring that the War with Mexico was unnecessarily and unconstitutionally commenced by the President. I admit that such a vote should not be given in mere party wantonness, and that the one given is justly censurable, if it have no other or better foundation. I am one of those who joined in that vote; and I did so under my best impression of the truth of the case. How I got this impression, and how it may possibly be removed, I will now try to show. When the war began it was my opinion that all those who, because of knowing too little, or because of knowing too much, could not conscientiously approve the conduct of the President (in the beginning of it), should, nevertheless, as good citizens and patriots, remain silent on that point, at least till the war should be ended. Some leading Democrats, including ex-President Van Buren, have taken this same view, as I understand them; and I adhered to it and acted upon it, until since I took my seat here; and I think I should still adhere to it were it not that the President and his friends will not allow it to be so. Besides, the continual effort of the President to argue every silent vote given for supplies into an indorsement of the justice and wisdom of his conduct; besides that singularly candid paragraph in his late message, in which he tells us that Congress, with great unanimity (only 2 in the Senate and 14 in the House dissenting), had declared that "by the act of the Republic of Mexico a state of war exists between that Government and the United States"; when the same journals that informed him of this also informed him that, when that declaration stood disconnected from the question of supplies, 67 in the House, and not 14, merely, voted against it; besides this open attempt to prove by telling the truth what he could not prove by telling the whole truth, demanding of all who will not submit to be misrepresented, in justice to themselves, to speak out; besides all this, one of my colleagues [Mr. Richardson], at a very early day in the session, brought in a set of resolutions expressly indorsing the original justice of the war on the part of the President. Upon these resolutions, when they shall be put on their passage, I shall be compelled to vote; so that I can not be silent if I would. Seeing this, I went about preparing myself to give the vote understandingly when it should come. I carefully examined the President's messages to ascertain what he himself had said and proved upon the point. The result of this examination was to make the impression that, taking for true all the President states as facts, he falls far short of proving his justification; and that the President would have gone further with his proof if it had not been for the small matter that the truth would not permit him. Under the impression thus made, I gave the vote before mentioned. I propose now to give concisely the process of the examination I made and how I reached the conclusion I did.

PRESIDENT'S ATTITUDE WAS MISLEADING.

The President, in his first message of May, 1846, declares that the soil was ours on which hostilities were commenced by Mexico; and he repeats that declaration, almost in the same language, in each successive annual message—thus showing that he esteems that point a highly essential one. In the importance of that point I entirely agree with the President.

To my judgment it is the very point upon which he should be justified or condemned. In his message of December, 1846, it seems to have occurred to him, as is certainly true, that title, ownership to soil, or anything else is not a simple fact, but is a conclusion following one or more simple facts; and that it was incumbent upon him to present the facts from which he concluded the soil was ours on which the first blood of the war was shed.

Accordingly, a little below the middle of page 12, in the message last referred to, he enters upon that task; forming an issue and introducing testimony, extending the whole to a little below the middle of page 14. Now, I propose to try to show that the whole of this—issue and evidence—is, from beginning to end, the sheerest deception. The issue, as he presents it, is in these words: "But there are those who, conceding all this to be true, assume the ground that the true western boundary of Texas is the Nueces instead of the Rio Grande; and that, therefore, in marching our army to the east bank of the latter river we passed the Texan line, and invaded the territory of Mexico." Now, this issue is made up of two affirmatives and no negative. The main deception of it is that it assumes as true that one river or the other is necessarily the boundary, and cheats the superficial thinker entirely out of the idea that possibly the boundary is somewhere between the two, and not actually at either. A further deception is that it will let in evidence which a true issue would exclude. A true issue made by the President would be about as follows: "I say the soil was ours on which the first blood was shed; there are those who say it was not."

CLAIMING SOMETHING THAT WAS NOT OURS.

I now proceed to examine the President's evidence, as applicable to such an issue. When that evidence is analyzed it is all included in the following propositions:

1. That the Rio Grande was the western boundary of Louisiana, as we purchased it of France in 1803.
2. That the Republic of Texas always claimed the Rio Grande as her western boundary.
3. That, by various acts, she had claimed it on paper.
4. That Santa Anna, in his treaty with Texas, recognized the Rio Grande as her boundary.
5. That Texas before and the United States after annexation had exercised jurisdiction beyond the Nueces, between the two rivers.
6. That our Congress understood the boundary of Texas to extend beyond the Nueces.

Now for each of these in its turn:

His first item is that the Rio Grande was the western boundary of Louisiana, as we purchased it of France in 1803; and, seeming to expect this to be disputed, he argues over the amount of nearly a page to prove it true; at the end of which he lets us know that, by the treaty of 1819, we sold to Spain the whole country, from the Rio Grande eastward to the Sabine. Now, admitting, for the present, that the Rio Grande was the boundary of Louisiana, what, under heaven, had that to do with the present boundary between us and Mexico? How, Mr. Chairman, the line that once divided your land from mine can still be the boundary between us after I have sold my land to you is, to me, beyond all comprehension. And how any man, with an honest purpose only of proving the truth, could ever have thought of introducing such a fact to prove such an issue is equally incomprehensible. The outrage upon common right, of seizing as our own what we have once sold, merely because it was ours before we sold it, is only equaled by the outrage on common sense of any attempt to justify it.

A CASE OF CLAIM AGAINST CLAIM.

The President's next piece of evidence is that "the Republic of Texas always claimed this river (Rio Grande) as her western boundary." That is not true, in fact. Texas has claimed it, but she has not always claimed it. There is at least one distinguished exception. Her State constitution—the Republic's most solemn and well-considered act; that which may, without impropriety, be called her last will and testament, revoking all others—makes no such claim. But suppose she had always claimed it. Has not Mexico always claimed the contrary? So that there is but claim against claim, leaving nothing proved until we get back of the claims, and find which has the better foundation.

Though not in the order in which the President presents his evidence, I now consider that class of his statements, which are, in substance, nothing more than that Texas has, by various acts of her convention and Congress, claimed the Rio Grande as her boundary—on paper. I mean here what he says about the fixing of the Rio Grande as her boundary, in her old constitution (not her State constitution), about forming congressional districts, counties, etc. Now, all of this is but naked claim; and what I have already said about claims is strictly applicable to this. If I should claim your land by word of mouth, that certainly would not make it mine; and if I were to claim it by a deed which I had made myself, and with which you had had nothing to do, the claim would be quite the same in substance, or rather in utter nothingness.

PUTTING IT UP TO SANTA ANNA.

I next consider the President's statement that Santa Anna, in his treaty with Texas, recognized the Rio Grande as the western boundary of Texas. Besides the position so often taken that Santa Anna, while a prisoner of war—a captive—could not bind Mexico by a treaty, which I deem conclusive; besides this, I wish to say something in relation to this treaty, so called by the President, with Santa Anna. If any man would like to be amused by a sight at that little thing, which the President calls by that big name, he can have it by turning to Niles's Register, volume 50, page 336. And if anyone should suppose that Niles's Register is a curious repository of so mighty a document as a solemn treaty between nations, I can only say that I learned, to a tolerable degree of certainty, by inquiry at the State Department, that the President himself never saw it anywhere else. By the way, I believe I should not err if I were to declare that during the first 10 years of the existence of that document it was never by anybody called a treaty; that it was never so called till the President, in his extremity, attempted, by so calling it, to wring something from it in justification of himself in connection with the Mexican War. It has none of the distinguishing features of a treaty. It does not call itself a treaty. Santa Anna does not therein assume to bind Mexico; he assumes only to act as the President, commander in chief of the Mexican Army and Navy; stipulates that the then present hostilities should cease, and that he would not himself take up arms, nor influence the Mexican people to take up arms, against Texas, during the existence of the war of independence. He did not recognize the independence of Texas; he did not assume to put an end to the war, but clearly indicated his expectation of its continuance; he did not say one word about boundary, and most probably never thought of it. It is stipulated therein that the Mexican forces should evacuate the territory of Texas, passing to the other side of the Rio Grande; and in another article it is stipulated that to prevent collisions between the armies the Texan army should not approach nearer than within 5 leagues—of what is not said—but clearly, from the object stated, it is of the Rio Grande. Now, if this is a treaty recognizing the Rio Grande as the boundary of Texas, it contains the singular feature of stipulating that Texas shall not go within 5 leagues of her own boundry.

PRESIDENT INDEFINITE AS TO BOUNDARY LINES.

Next comes the evidence of Texas before annexation, and the United States afterwards, exercising jurisdiction beyond the Nueces and between the two rivers. This actual exercise of jurisdiction is the very class or quality of evidence we want. It is excellent so far as it goes; but does it go far enough? He tells us it went beyond the Nueces, but he does not tell us it went to the Rio Grande. He tells us jurisdiction was exercised between the two rivers, but he does not tell us it was exercised over all the territory between them. Some simple-minded people think it possible to cross one river and go beyond it, without going all the way to the next; that jurisdiction may be exercised between two rivers without covering all the country between them. I know a man, not very unlike myself, who exercises jurisdiction over a piece of land between the Wabash and the Mississippi; and yet so far is this from being all there is between those rivers, that it is just 152 feet long by 50 wide, and no part of it much within a hundred miles of either. He has a neighbor between him and the Mississippi—that is, just across the street, in that direction—whom, I am sure, he could neither persuade nor force to give up his habitation; but which, nevertheless, he could certainly annex, if it were to be done, by merely standing on his own side of the street and claiming it, or even sitting down and writing a deed for it.

But next, the President tells us, the Congress of the United States understood the State of Texas they admitted into the Union to extend beyond the Nueces. Well, I suppose they did—I certainly so understand it—but how far beyond? That Congress did not understand it to extend clear to the Rio Grande is quite certain by the fact of their joint resolutions for admission expressly leaving all questions of boundary to future adjustment. And, it may be added, that Texas herself is proved to have had the same understanding of it that our Congress had by the fact of the exact conformity of her new constitution to those resolutions.

COVERED ISSUE "WITH MANY WORDS."

I am now through the whole of the President's evidence; and it is a singular fact that if anyone should declare the President

sent the army into the midst of a settlement of Mexican people, who had never submitted by consent or by force to the authority of Texas or of the United States, and that there and thereby the first blood of the war was shed, there is not one word in all the President has said which would either admit or deny the declaration. In this strange omission chiefly consists the deception of the President's evidence—an omission which, it does seem to me, could scarcely have occurred but by design. My way of living leads me to be about the courts of justice; and there I have sometimes seen a good lawyer, struggling for his client's neck in a desperate case, employing every artifice to work round, befog, and cover up with many words some position pressed upon him by the prosecution, which he dared not admit and yet could not deny. Party bias may help to make it appear so; but, with all the allowance I can make for such bias, it still does appear to me that just such, and from just such necessity, is the President's struggles in this case.

DRAWING THE PRESIDENT OUT.

Some time after my colleague [Mr. Richardson] introduced the resolution I have mentioned I introduced a preamble, resolution, and interrogatories (see CONGRESSIONAL GLOBE, 1st sess. 30th Cong., p. 64) intended to draw the President out, if possible, on this hitherto untrodden ground. To show their relevancy I propose to state my understanding of the true rule for ascertaining the boundary between Texas and Mexico. It is that wherever Texas was exercising jurisdiction was hers; and wherever Mexico was exercising jurisdiction was hers; and that whatever separated the actual exercise of jurisdiction of the one from that of the other was the true boundary between them. If, as is probably true, Texas was exercising jurisdiction along the western bank of the Nueces, and Mexico was exercising it along the eastern bank of the Rio Grande, then neither river was the boundary, but the uninhabited country between the two was. The extent of our territory in that region depended not on any treaty-fixed boundary—for no treaty had attempted it—but on revolution. Any people anywhere, being inclined and having the power, have the right to rise up and shake off the existing government and form a new one that suits them better. This is a most valuable, a most sacred right—a right which, we hope and believe, is to liberate the world. Nor is this right confined to cases in which the whole people of an existing Government may choose to exercise it. Any portion of such people that can may revolutionize and make their own of so much of the territory as they inhabit. More than this, a majority of any portion of such people may revolutionize, putting down a minority intermingled with or near about them who may oppose their movements. Such minority was precisely the case of the Tories of our own Revolution. It is a quality of revolutions not to go by old times, or old laws; but to break up both and make new ones. As to the country now in question, we bought it of France in 1803, and sold it to Spain in 1819, according to the President's statement. After this, all Mexico, including Texas, revolutionized against Spain; and still later Texas revolutionized against Mexico. In my view, just so far as she carried her revolution by obtaining the actual, willing or unwilling, submission of the people, so far the country was hers and no farther.

WANTED TO JUSTIFY WAR VOTES.

Now, sir, for the purpose of obtaining the very best evidence as to whether Texas had actually carried her revolution to the place where the hostilities of the present war commenced, let the President answer the interrogatories I proposed, as before mentioned, or some other similar one. Let him answer fully, fairly, and candidly. Let him answer with facts, and not with arguments. Let him remember he sits where Washington sat; and, so remembering, let him answer as Washington would answer. As a nation should not, and the Almighty will not, be evaded, so let him attempt no evasion, no equivocation. And if, so answering, he can show that the soil was ours where the first blood of the war was shed—that it was not within an inhabited country, or, if within such, that the inhabitants had submitted themselves to the civil authority of Texas, or of the United States, and that the same is true of the site of Fort Brown—then I am with him for his justification. In that case I shall be most happy to reverse the vote I gave the other day. I have a selfish motive for desiring that the President may do this; I expect to give some votes, in connection with the war, which, without his so doing, will be of doubtful propriety, in my own judgment, but which will be free from the doubt if he does so. But if he can not or will not do this—if, on any pretense, or no pretense, he shall refuse or omit it—then I shall be fully convinced, of what I more than suspect already, that he is deeply conscious of being in the wrong; that he feels the blood of this war, like the blood of Abel, is crying to Heaven against him; that he ordered Gen. Taylor into the midst of a peaceful Mexican settlement purposely to bring on a war; that originally having some strong motive—what I will not stop now to give my opinion concerning—to involve the two countries in a war, and trusting to escape scrutiny by fixing the public gaze upon the exceeding brightness of military glory—that attractive rainbow that rises in showers of blood—that serpent's eye that charms to destroy—he plunged into it, and has swept on and on, till, disappointed in his calculation of the ease with which Mexico might be subdued, he now finds himself he knows not where.

CHALLENGES THE PRESIDENT'S POLICIES.

How like the half-insane mumbling of a fever dream is the whole war part of the late message. At one time telling us that Mexico has nothing whatever that we can get but territory; at another, showing us how we can support the war by levying contributions on Mexico. At one time urging the national honor, the security of the future, the prevention of foreign interference, and even the good of Mexico herself as among the objects of the war; at another, telling us that, "to reject indemnity by refusing to accept a cession of territory would be to abandon all our just demands, and to wage the war, bearing all its expenses, without a purpose or definite object." So, then, the national honor, security of the future, and everything but territorial indemnity, may be considered the no-purposes and indefinite objects of war. But, having it now settled that territorial indemnity is the only object, we are urged to seize, by legislation here, all that he was content to take a few months ago, and the whole Province of Lower California to boot, and to still carry on the war—to take all we are fighting for and still fight on. Again, the President is resolved, under all circumstances, to have full territorial indemnity for the expenses of the war; but he forgets to tell us how we are to get the excess after those expenses shall have surpassed the value of the whole of the Mexican territory. So, again, he insists that the separate national existence of Mexico shall be maintained; but he does not tell us how this can be done after we shall have taken all her territory. Lest the questions I here suggest be considered speculative merely, let me be indulged a moment in trying to show they are not.

PRESIDENT DID NOT CALCULATE THE COST.

The war has gone on some 20 months; for the expenses of which, together with an inconsiderable old score, the President now claims about one-half of the Mexican territory, and that by far the better half, so far as concerns our ability to make anything out of it. It is comparatively uninhabited; so that we could establish land offices in it and raise some money in that way. But the other half is already inhabited, as I understand it, tolerably densely for the nature of the country; and all its lands, or all that are valuable, already appropriated as private property. How, then, are we to make anything out of these lands with this encumbrance on them, or how remove the encumbrance? I suppose no one will say we should kill the people, or drive them out, or make slaves of them, or even confiscate their property? How, then, can we make much out of this part of the territory? If the prosecution of the war has, in expenses, already equaled the better half of the country, how long its future prosecution will be in equaling the less valuable half is not a speculative but a practical question, pressing closely upon us; and yet it is a question which the President seems never to have thought of.

WAR STARTED; NO PEACE IN SIGHT.

As to the mode of terminating the war and securing peace, the President is equally wandering and indefinite. First, it is to be done by a more vigorous prosecution of the war in the vital parts of the enemy's country; and, after apparently talking himself tired on this point, the President drops down into a half-despairing tone, and tells us, that "with a people distracted and divided by contending factions, and a Government subject to constant changes, by successive revolutions, the continued success of our arms may fail to obtain a satisfactory peace." Then he suggests the propriety of wheedling the Mexican people to desert the counsels of their own leaders, and, trusting in our protection, to set up a government from which we can secure a satisfactory peace, telling us that "this may become the only mode of obtaining such a peace." But soon he falls into doubt of this, too, and then drops back onto the already half-abandoned ground of "more vigorous prosecution." All this shows that the President is in no wise satisfied with his own positions. First, he takes up one, and, in attempting to argue us into it he argues himself out of it; then seizes another, and goes through the same process; and then, confused at being able to think of nothing new, he snatches up the old one again, which he has some time before cast off. His mind, tasked beyond its power, is running hither and thither, like some tortured creature on a burning surface, finding no position on which it can settle down and be at ease.

"A BEWILDERED, CONFOUNDED, AND MISERABLY PERPLEXED MAN."

Again, it is a singular omission in this message that it nowhere intimates when the President expects the war to terminate. At the beginning Gen. Scott was, by this same President, driven into disfavor, if not disgrace, for intimating that peace could not be conquered in less than three or four months. But now, at the end of about 20 months, during which time our arms have given us the most splendid successes—every department, and every part, land and water, officers and privates, Regulars and Volunteers, doing all that men could do, and hundreds of things which it had ever before been thought men could not do; after all this, this same President gives us a long message without showing us that, as to the end, he has himself even an imaginary conception. As I have before said, he knows not where he is. He is a bewildered, confounded, and miserably perplexed man. God grant he may be able to show there is not something about his conscience more painful than all his mental perplexity.

APPENDIX.

ARTICLES OF AN AGREEMENT ENTERED INTO BETWEEN HIS EXCELLENCY DAVID G. BURNET, PRESIDENT OF THE REPUBLIC OF TEXAS, OF THE ONE PART, AND HIS EXCELLENCY GEN. SANTA ANNA, PRESIDENT-GENERAL IN CHIEF OF THE MEXICAN ARMY, OF THE OTHER PART.

ARTICLE 1. Gen. Antonio Lopez de Santa Anna agrees that he will not take up arms, nor will he exercise his influence to cause them to be taken up, against the people of Texas, during the present war of independence.

ART. 2. All hostilities between the Mexican and Texan troops will cease immediately, both by land and water.

ART. 3. The Mexican troops will evacuate the territory of Texas, passing to the other side of the Rio Grande del Norte.

ART. 4. The Mexican Army, in its retreat, shall not take the property of any person without his consent and just indemnification, using only such articles as may be necessary for its subsistence, in cases when the owner may not be present, and remitting to the commander of the army of Texas, or to the commissioners to be appointed for the adjustment of such matters, an account of the value of the property consumed, the place where taken, and the name of the owner, if it can be ascertained.

ART. 5. That all private property, including cattle, horses, negro slaves, or indentured persons, of whatever denomination, that may have been captured by any portion of the Mexican Army, or may have taken refuge in the said army, since the commencement of the late invasion, shall be restored to the commander of the Texan Army, or to such other persons as may be appointed by the Government of Texas to receive them.

ART. 6. The troops of both armies will refrain from coming into contact with each other; and to this end the commander of the army of Texas will be careful not to approach within a shorter distance than 5 leagues.

ART. 7. The Mexican Army shall not make any other delay, on its march, than that which is necessary to take up their hospitals, baggage, etc., and to cross the rivers; any delay not necessary to these purposes to be considered an infraction of this agreement.

ART. 8. By an express to be immediately dispatched, this agreement shall be sent to Gen. Vincente Filisola, and to Gen. T. J. Rusk, commander of the Texan Army, in order that they may be apprised of its stipulations; and to this end they will exchange engagements to comply with the same.

ART. 9. That all Texan prisoners now in the possession of the Mexican Army, or its authorities, be forthwith released and furnished with free passports to return to their homes; in consideration of which a corresponding number of Mexican prisoners, rank and file, now in possession of the Government of Texas, shall be immediately released—the remainder of the Mexican prisoners that continue in the possession of the Government of Texas to be treated with due humanity; any extraordinary comforts that may be furnished them to be at the charge of the Government of Mexico.

ART. 10. Gen. Antonio Lopez de Santa Anna will be sent to Vera Cruz as soon as it shall be deemed proper.

The contracting parties sign this instrument for the abovementioned purposes, in duplicate, at the port of Velasco, this 14th day of May, 1836.

DAVID G. BURNET, *President.*
JAS. COLLINGSWORTH,
Secretary of State.
ANTONIO LOPEZ DE SANTA ANNA.
B. HARDIMAN,
Secretary of the Treasury.
P. W. GRAYSON, *Attorney General.*

Lincoln and Gettysburg.

EXTENSION OF REMARKS
OF
HON. WILLIAM H. COLEMAN,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Monday, February 12, 1917.

Mr. COLEMAN. Mr. Speaker, time rolls on. A century has passed and eight years more since Abraham Lincoln was born. More than half a century has gone since the life of that little babe in the fullness of its manhood went out. These years have served to increase our reverence and love for this great and good and gentle man. Yesterday I read, or more correctly, reread "The Perfect Tribute," by Mary Raymon Shipman Andrews, and the thoughts it prompted in conjunction with the inspiring words to which we have this day listened impels me to give expression to some views I hold relative to this greatest battle of the Civil War that caused the utterance of Lincoln's great speech and the writing of the little book to which I have just referred.

It was on the 19th day of November, 1863, at the consecration of the Gettysburg National Cemetery that Lincoln delivered his since famous speech. Everett, who for two hours had entertained the vast throng assembled, hastened to congratulate the President, who seemed to feel that his speech had been a failure, and on receiving congratulations from the President in turn, Everett replied:

I should be glad if I could flatter myself that I came as near the central idea of the occasion in two hours as you did in two minutes.

And, with due regard to the greatness of Everett and his speech of that day, his judgment has become the judgment of the world.

That speech, one of the greatest in history, reads as follows:

Fourscore and seven years ago our fathers brought forth on this continent a new Nation, conceived in liberty and dedicated to the proposition that all men are created equal. Now we are engaged in a great Civil War, testing whether that Nation, so conceived and so dedicated, can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of it as a final resting place for those who here gave their lives that that Nation might live. It is altogether fitting and proper that we should do this.

But in a larger sense we can not dedicate, we can not consecrate, we can not hallow this ground. The brave men, living and dead, who struggled here have consecrated it far above our poor power to add or to detract. The world will little note nor long remember what we say here, but it can never forget what they did here. It is for us, the living, rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us; that from these honored dead we take increased devotion to that cause for which they here gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that government of the people, by the people, for the people shall not perish from the earth.

Now, call to mind the battle that gave occasion for Lincoln's speech and how on the first day Hancock arrived to take temporary command as the Union troops were retreating to Cemetery Ridge, where they renewed their stand. Being later relieved by a superior officer, Hancock rode back and reported to Meade that Gettysburg was a proper place to give battle. The second day of battle raged, with both armies in their full strength fighting desperately for victory. Then came the third day of contest and the spectacular and gallant charge of Pickett's band of 14,000 men. They covered a front of 1,600 yards, with a distance of 1,400 yards to traverse before reaching the Union lines. The heavy cannonading slackened and the men began their march. The Union artillery opened upon them with shot and shell, but on they marched, filling up the great gaps torn in their lines. As they came nearer canister did its deadly work, but on the brave men continued. Approaching the Union lines, a fire of musketry burst forth before which it was impossible for men to stand, and the cause of the South was lost as Pickett's men, in honorable retreat, gave way before the fusillade. It is true that the war was not yet ended, but it was also certain that Appomattox was bound to follow the retreat of Lee from this famous battle field.

And now I call your attention not to the scene of battle but rather to the questions settled on this famous battle field and the results that have flowed therefrom.

At this distant day we of the North are apt to see but one side of that controversy. Let me direct your attention to the formation of the new Government in 1789 to replace the confederation under which the States had been so loosely held together, and in doing so to remind you of the struggle early in

the history of the Constitutional Government between the Federalists and States-rights men.

No power was granted in the Constitution to coerce a rebellious State, nor was authority found in that instrument for a State to secede. Nationalism versus State sovereignty was the issue causing the formation of our first political parties. The alien and sedition laws brought forth from Thomas Jefferson the doctrine of nullification in his authorship of the Kentucky resolutions. Nullification was the seed that bore the fruit of secession. The belief in the right of the State to secede prompted Jefferson Davis in 1861 to say:

There are no laws of the United States to be executed within the limits of a seceded State. We recur to the principles upon which our Government was founded; and when you deny the right to us to withdraw from a Government which, thus perverted, threatens to be destructive of our rights, we but tread the path of our fathers when we proclaim our independence and take the hazard.

Between the writing of the Kentucky resolutions and the utterance of Jefferson Davis there were more than 60 years of development and discussion of this problem. Nor was it an issue like that of slavery, upon which men differed largely as a result of a fixed boundary line. The doctrine of secession was first asserted on the floor of Congress in 1811 by Josiah Quincy, of Massachusetts, in his speech opposing the admission of Louisiana into the Union. Rhode Island, in language almost as strong as the Virginia resolutions, declared:

The powers of government may be resumed by the people whenever it shall become necessary to their happiness.

Judge Rawle, of my own State of Pennsylvania, wrote:

The States may wholly withdraw from the Union, but while they continue they must retain the character of representative republics.

With statements like these from northern people the Virginia resolutions do not seem so rebellious, as they in substance declare the Federal Government to be a compact to which the States are parties, and in case of a dangerous exercise of powers not granted by the said compact the States have the right and are in duty bound to interpose for arresting the progress of the evil.

Even at the outbreak of the war Horace Greeley, in his New York Tribune, said:

The right to secede may be a revolutionary one, but it exists nevertheless.

And the New York Herald in a similar strain:

Each State is organized as a complete government, holding the purse and wielding the sword, possessing the right to break the tie of the Confederation and to repel coercion as a nation might repel invasion.

Such an opinion was largely entertained by northern as well as southern people, notwithstanding the work of Hamilton and Marshall and other great Federalists. Notwithstanding that in 1830 the whole theory of our Government was fully and thoroughly debated in the United States Senate in one of the greatest oratorical contests that ever took place in that historic body, when Robert Hayne, eloquently and ably sustaining the cause of State sovereignty, was masterfully and effectively answered by Daniel Webster in defense of the Federal Union.

The lifeblood of our Government—

Said Hayne—

is the independence of the States, and if the General Government were the sole judge of the extent as well as limitation of its power, then the States have lost their sovereignty and independence.

To this the great Webster replied:

If the Government of the United States be the agent of the State governments, then they may control it, provided they can agree in the manner of controlling it. If it be the agent of the people, then the people can control it, restrain it, modify, or reform it.

And then in positive assertion:

It is, sir, the people's government—made for the people and answerable to the people. And the people have declared this Constitution to be the supreme law of the land and have never given authority to any State legislature to construe or interpret it.

While the debate was still in progress a political dinner was held in honor of Thomas Jefferson, and the President, Andrew Jackson, was a guest. Called on for a toast, the President proposed:

Our Federal Union—it must and shall be preserved.

That prophecy was fulfilled by the success of the Union arms at Gettysburg, costing, however, in this battle and those by which it was preceded and followed, the sacrifice of 700,000 lives, composed of the noblest manhood of the Northern States and the best chivalry of the Southland.

What was it, then, that was settled by the Civil War? First and foremost that the Government of the Constitution was in fact a Nation and that the laws made in pursuance thereof were the supreme laws of the land. Next, that the States were not independent sovereigns, but subject to the Nation's laws within the limits of the Constitution, as interpreted not by the States but by the Supreme Court of the United States. Third, that the moral wrong of slavery be obliterated and the cause of human liberty advanced to the general good of human kind.

Among the fruits of this war is our reunited Nation with its tremendous power for good—a world power in truth which would have been impossible without the preservation of the Union. As such we have given freedom to Cuba, maintained the open door in China, contributed to the enlightenment of the Philippines, upheld the Monroe Doctrine, built the Panama Canal—an achievement of peace to the lasting benefit of man, one of the results of our twentieth century nationalism made possible by the successful outcome of the Civil War, in which Gettysburg was the deciding factor.

Not only has it accomplished all of these things, but also, as a natural outcome of the Nation there perfected, with its love of peace and friendly attitude toward all other powers has placed us in the forefront of the world movement to effect an endurable peace through international boards of arbitration or courts for the settlement of disputes between governments, and thereby abolishing a greater scourge than slavery itself, the awful, the horrible, the barbarous scourge of war.

You say to me that this is an idle dream, and in view of the readiness with which the Christian nations of Europe, saved at Tours from the military fanaticism of the Saracen hosts, have leveled their guns against each other, I would be inclined to agree with you. But judged by the impetus gained by the forces of peace in the past 25 years, with the two Hague conferences now history and their splendid results—I say this in spite of European conflicts—written in living records; with the best thought of modern civilization directing its energies against war, and the certainty of a Third Hague Conference to be convened soon after the present fearful conflict is ended, I say to you it is more than idle dream and may be a vision real of the Third Hague Conference joining the world's nations in peace as effectually as the third attempt of Cyrus West Field joined the continents in his successful laying of the Atlantic cable. And the devastating war now raging may be the principal means to this desirable end.

Let us hope that as the treaty of Portsmouth, which settled the Japanese-Russian War, was followed by the calling of the Second Hague Conference by the Czar of Russia (which permission was granted him through the chivalry of Roosevelt, who had previously suggested the conference) so the treaty that concludes the present struggle shall lead to a prompt calling of the third conference, at which the warring nations shall join hands with the neutrals and each other to prevent another such conflict, and that the message flashed across the Atlantic cable may be repeated and flashed by wireless to all the world—"What hath God wrought!"

The present war of nations, surpassing anything in warfare heretofore known, may cause you to doubt the growing power of peace, but do not forget that before the Second Hague Conference the President of the United States (William Howard Taft) in 1904 inserted in impending treaties with other countries these words:

That all questions, without reservation, shall be settled by arbitration rather than by a resort to war.

This was advanced ground, and though it failed, does not the fact of the attempt having been made indicate the tremendous progress of the peace movement and bid us hope for an early attainment of desired results?

While thus giving praise to President Taft for his efforts in the cause of peace, let us also give credit to our present Chief (Woodrow Wilson) for his splendid efforts to maintain neutrality and preserve the peace of this Nation. And in this critical hour, when the question of peace or war is trembling in the balance, may he be guided by the God of Lincoln and the God of nations in the course that he should follow. And my earnest prayer is that that course will preserve peace to the people of this Nation and lead to the peace of the world.

It was William T. Sherman who said:

I confess without shame that I am tired and sick of war; its glory is all moonshine. * * * It is only those who have not heard a shot nor the shrieks and groans of the wounded, friend or foe, who cry aloud for more blood, more vengeance, more desolation.

Members of Congress, many of you sons of the men who engaged in that war in which Sherman fought, followed as it was by splendid achievements and wonderful good, would these good results have come without that war? I can not answer! I do not know! Perhaps it could have been! But at any rate we know that great good did follow the awful carnage that was wrought. And I hope that out of the present giant conflict, with the sacrifice of millions of men, women, and children, something of good will come to future generations. With my limited vision I can think of nothing that can in any sense repay for the horror of this war, unless it be the realization of the world's leading nations of the folly of such conflicts, and their entering into an

agreement each with the other that disputes hereafter will be settled as recommended by President Taft—by arbitration rather than by a resort to war.

I feel strongly on this thought of peace, and hope that this Nation of ours will not become involved in the war now raging, but that from our vantage ground we may be permitted in the near future to bring the warring nations to an understanding and reestablish the peace of the world and restore good will among men.

The Battle of Gettysburg and the Civil War have long since ended. Fifty-three years and more have passed since Lincoln's Gettysburg address. The hatreds born of that war have been largely overcome, and in the celebration to-day of this one hundred and eighth anniversary of Lincoln's birth the sons of Confederate and Union soldiers will join in singing the praises of this martyr to the cause of union.

The fact that feelings of hostility are no longer entertained between the sections was beautifully illustrated at the fiftieth anniversary of the Battle of Gettysburg, when 50,000 veterans met on that hallowed ground. What a change had come. It was not enemies, but friends, that there assembled. They were brothers, all reviewing the past and paying worthy tribute to each other's valor as they rehearsed the deeds of 50 years before. What a transformation had taken place on that bloody battle field, where such splendid heroism had been displayed in face of grape and canister and fire of musketry. Behold now the magnificent spectacle of former warriors engaged in a wonderfully impressive demonstration under the folds of the flag of peace.

See again the charge of Pickett's men. They form—or what was left of them—and march toward the Federal position. Watch them as they traverse that same old ground. They approach the Union lines. They have reached the bloody angle, but no blood is spilled this day. Instead of shot and bayonet they meet the outstretched arms of Yankee soldiers as with cheers the grizzled veterans clasp each other in warm embrace. No discord, enmity, or strife, but all was harmony, friendship, peace. Wearer of blue joined hands with those who wore the gray, and with united hearts and hands paid tribute to one flag, one land, to them one Nation evermore.

It was a remarkable pageant, an unprecedented earthly scene, like unto a celestial gathering of which I dearly love to dream, a gathering of Lee and Grant and the 700,000 brave who died a soldier's death, joined now by the great body of their comrades since gone to their last rest. They mingle there in grand reunion on the other side of Jordan's shore, where, away from the noise and conflict of battle, away from prejudice and misunderstanding, each shall look upon the other, realizing that all fought for what they believed the right. Oh, it will be a grand assemblage; all hearts now loyal to the flag victorious that waved triumphant at Appomattox. And the stripes of the flag for that reunion will be made of blood that flowed down here and the robes of white they wear up there, with the sky above as the field of blue, set rich with stars that shine all true. And there in the midst of that vast host enthroned the one they love the most, greater by far than Grant or Lee, the foremost figure in that vast throng, kindliness beaming from his eyes, his face resplendent with a loving smile, his soul brimful of heavenly joy. If my dream is true, what a fitting tribute to the wise and gentle Lincoln, who led his people through four years of bitter strife, and then, with the dawn of peace, to which he so much contributed, yielded up his noble life. Like Moses, who had led the people of Israel almost to the promised land, which from Mount Pisgah he was permitted to view, so Lincoln, from the viewpoint of Gettysburg, and later Appomattox, raised his eyes and beheld, though he could not enter, the promised land of peace.

Address of the Secretary of State.

EXTENSION OF REMARKS

OF

HON. HENRY D. FLOOD,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 12, 1917.

Mr. FLOOD. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I incorporate in them an address made by the Secretary of State before the alumni of Amherst College on Saturday night.

The address is as follows:

COLLEGE SPIRIT.

[Delivered at Amherst alumni dinner Feb. 10, 1917, at the New Willard, Washington, D. C., by Secretary of State Lansing.]

Mr. Toastmaster, Ladies, and Gentlemen, This gathering in honor of Old Amherst has come at a critical time for our country, a time which was not forseen when the date was chosen. It is a time of anxiety for us all, a time of heavy responsibility for some of us. We are looking forward into the uncertainties of the future and we are striving to read what it holds in store for us and for our country. We can hardly close our eyes to the fact that we are standing near to the verge of the war which has for two and a half years wasted the great empires of Europe and brought untold woes to mankind. Ominous though the situation may seem, there is always the hope that our country may be spared the terrible calamity of being forced into the conflict. It is now as it has been from the beginning the wish and endeavor of this Government to remain at peace with all the world if it can do so with honor.

I can not discuss here the supreme subject of American thought to-day, either to review the past or to prophesy for the future. In the existing uncertainties you must realize that it would be unwise for me to do so. It is not a time to speak. It is a time to think, to think earnestly and deliberately. It is a time for coolness and self-restraint rather than for surrender to the natural impulses which are aroused by great events affecting the national honor, the national duty, and the national welfare of our country.

Contrary to the natural inclination of one whose every thought has been filled with the momentous happenings of the past few days I shall not talk to you of these events which means so much to the American people. I can only say this, that with the same patience, the same forbearance, the same deliberation and care, with which he has met the previous difficulties in our foreign affairs, the President will meet the present crisis. The Nation can trust him to act justly and honorably and fearlessly whatever may lie before us. In his hands the destiny of the United States is sure; the national honor is safe.

When I knew some months ago I was to attend this dinner I determined to say a few words to you on a subject which has been in my mind for a long time, and, though it does not apply directly to the present international situation, it has a very direct relation to it, so that I feel justified in presenting to you the thought.

As a son of Old Amherst addressing his brothers I wish to speak to you about the Amherst spirit and how it finds its counterpart in other relations of life, particularly in the relation which each one of us as a citizen of the United States bears to his country.

College spirit springs from a sentiment of affection for the institution to which we, its graduates, owe so much. It is not based on material interest or on selfish considerations. There is no ulterior motive to arouse that spirit or to deprive it of its generous nature or unselfish purpose. It comes from the heart rather than from the head. It is essentially emotional and wholly sentimental. We should rejoice in that fact. We should rejoice that in some things at least we can be sentimental in an age when the general disposition of men is to reduce everything to terms of utility, and when the standard of excellence is sought in answering the question, "To what material use can it be put?" That question embodies to my mind the general tendency of modern thought toward the various phases of the relationship of man to man and of man to society.

The American people—and I think they are no different from other peoples—have been growing more and more utilitarian in these later years; their thoughts and acts more and more influenced by what is called the practical, and less and less by what is called the ideal. Immediate and tangible benefit is the apparent goal of American effort. To a large extent, a very large extent, it has absorbed the thought and energy of our people. In every sphere of human activity—social, religious, political, and industrial—this conception of the thing desirable in our national life has become increasingly potent.

We who are living in this period, particularly at a time like the present, ought to take stock of the spiritual as well as material resources of this Nation. It may be said that the average man to-day has been wont to weigh in the scales of expediency national duty and national honor—all those intense sentiments which in the old days kindled the souls of men and made the United States a great, independent Nation, dedicated to human liberty.

To Americans who cherish the spirit which inspired the fathers of the Republic, to Americans who revere the memory of those

who half a century ago laid down their lives for the right as they saw it, to Americans who measure conduct by a sense of duty rather than by material benefit, this tendency of present-day thought has been viewed with apprehension for the future of the Republic.

It is, indeed, a commentary on the American people that not a few thinking men have been asking with serious concern: Have American eyes grown dim to the achievements of the past? Has the blood of patriotism ceased to throb in American veins? Have we forgotten that our heritage of liberty was sealed with the lives of devoted men, and that it is a sacred trust which we must hold and transmit unimpaired to the generations to come?

I believe most firmly that every one of these questions can be answered in the negative. I believe that at heart the American people are loyal and patriotic. Put to the test, I do not fear the outcome. I know that the people are to be trusted and that to them the honor of the Nation is dearer than life itself. And yet I feel that the spread of materialism has been a menace to our national character to which we should not be indifferent, a menace which ought not and must not continue.

The greatness of this Nation does not lie in the immensity of its territory nor in its millions of population nor in the vastness of its resources nor in the intellectual and economic progress which finds no parallel in history. The greatness of America lies in the hearts of its citizens. If those hearts beat true, nothing else matters. We should recognize this and if we do recognize it, do you not perceive that it depends upon the potent influence which sentiment exercises over the American people?

Sentiment may be scoffed at as useless by materialists—indeed, "sentimentalist" and "idealist" have become terms of contempt, almost of reproach, in these latter days—but was it not sentiment which gave independence to America; which made us free and powerful? The sentimental love of country is the noblest passion which can possess a people. It is that sentiment which is exalted by history, which is the theme of song and poetry, and which is preserved for the ages in molded bronze and chiseled marble. In the potency of that sentiment rest the destinies of the United States.

To preserve in their high place in the life of the Republic those great impulses which have made us a virile and proud Nation, we must cultivate sentiment and emphasize the ideal more than we have done in recent years. We must cease measuring accomplishment by dollars and cents. We must remember that character is not built on accumulated riches but on ideals. It is so in the individual. It is equally so in the nation.

Sentiment of every sort, provided its object is noble, is worth while. It is worth cultivating and encouraging, for the sentimentalist is the man who will always subordinate his own interests to those of the nation. He thinks in terms of the ideal and not in terms of the material. In bettering his own character he does his part toward upbuilding the character of his country.

While every noble sentiment should be strengthened, I see in the sentiment which we call "college spirit," one that is closely akin to patriotism. It is true that its sphere is much smaller and the possible demand for personal sacrifice is far less, but there is the same loyalty, the same enthusiasm, the same desire to serve without reward. I can not imagine a man who possesses college spirit being other than a patriot. True to his alma mater, he will always be true to his country.

Every man who has come forth from the halls of Amherst ought to retain sentiment in his life and to give to it a higher place than to the material things for which we must all labor but to which we should not sacrifice our manhood or the ideals on which real manhood rests. It is not enough that a man should wait till a time of crisis to give expression to sentiment; it should be with him always a living force in his daily life. I believe, therefore, that an Amherst man, imbued with the true spirit, can perform no more patriotic service than to do all that he can to destroy the influence of utilitarianism, which is a menace to national life, a corrupter of national aspirations, in that it sets up a false standard of values.

We should never forget that the future of the United States is in the hands of those of its citizens who are loyal to its traditions, who are devoted to its ideals, and who love their country not because it is rich and powerful and offers opportunity, but because it stands for human liberty, for righteousness, and for eternal justice. Men who look beyond the material things are the ones who place the Nation above all and who are the first to stand forth when the call comes for service.

May the old college spirit, which has burned in our hearts since our college days, flame forth with new fervor. May it spread beyond the confines of the college until the love of Amherst is transformed into the love of country, and may the same sentiment which to-night draws us together broaden and deepen until it becomes the loftiest patriotism of which the human heart is capable.

It is thus I read the place which college spirit should take in the Nation, and it is thus I read our duty as Amherst men and as true-hearted Americans, not only to-day under the stress of unusual circumstance but also when daily life is uneventful and commonplace. We owe a service, a continuing service, to our country which we will faithfully perform, or I am deceived in the power of the spirit of Amherst and in the type of men which Amherst has sent forth into the world. Let us prove by the part we play in our community, in our State, and in the Nation that "Amherst man" is a synonym for "American patriot," and that devotion to the purple and white means first, last, and always unwavering devotion to the Red, White, and Blue.

Outraging American Commerce With Neutral Countries.

EXTENSION OF REMARKS

OF

HON. BENJAMIN K. FOCHT,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 10, 1917.

Mr. FOCHT. Mr. Speaker, we have heard much that is vague and unsubstantiated regarding the outrages committed against American commerce by the British Government and how our business men and manufacturers have suffered in consequence of England's interference with trade with neutral countries, but it has been hard to ascertain and support facts. There are many reasons for this, and the principal one doubtless is that our shippers are glad conditions are no worse or that it would be useless to enter complaint with our home government. We have a correspondent who has suffered great losses and inconveniences and who states his complaint in a more or less emphatic way in the following letter which is substantiated by accompanying data:

MOUNT UNION, *December 18, 1916.*

Hon. B. K. FOCHT,
Lewisburg, Pa.

DEAR B. K.: I inclose two notices from the trade department of the British Embassy, Washington, advising of cabling expenses necessary in order to find if the two parties named therein may have permission from the British Government to receive the goods which we want to send them.

It is very humiliating that American citizens must repeatedly ask Great Britain before any goods can be shipped to the neutral countries of Europe. Great Britain needs a good "beating up." Unfortunately, Germany has not had a square deal through the American press. We are no special descendants of Germany, but our opinion is that she is no worse than Great Britain.

With kindest regards and wishes for a happy Christmas,

Yours, very sincerely,

EDWARD M. GREENE,
Mount Union Tanning & Extract Co.

—

TRADE DEPARTMENT, BRITISH EMBASSY,
Washington, D. C., December 15, 1916.

MOUNT UNION TANNING & EXTRACT CO.,
Mount Union, Pa.:

(J. H. Goldschmidt, Copenhagen.)

The trade department of the British Embassy beg to advise you that the cabling expenses in connection with your application of the 12th instant amount to $3.95 and that it would be convenient if you would remit this sum at your earliest opportunity.

—

TRADE DEPARTMENT—BRITISH EMBASSY,
Washington, D. C., December 15, 1916.

MOUNT UNION TANNING & EXTRACT CO.,
Mount Union, Pa.:

(Norwegian Tanners' Association (notify John Jerndahl), Christiania; A. S. Bergens, Skofabrik, Bergen.)

The trade department of the British Embassy beg to advise you that the cabling expenses in connection with your application of the 12th instant amount to $6.65, and that it would be convenient if you would remit this sum at your earliest opportunity.

—

1112 RHODE ISLAND AVENUE NW.,
Washington, D. C., February 4, 1917.

Hon. B. K. FOCHT,
Representative, Seventeenth District of Pennsylvania.

DEAR SIR: As a constituent, I beg leave to express an opinion on the danger now threatening.

It is unreasonable to go to war with a nation which does not want to go to war with us, but has used every possible effort up to this last declaration to keep the friendship of the United States. In this war the principle of freedom of the seas has been also violated by England. It is stultifying to go to war with Germany for her violation

and at the same time to lend the force of our Army and Navy to England in support of her violation. Under the influence of British diplomacy, British business, and an American-British press, and under the leadership of British sympathizers we are in danger of becoming united with the British union.

America has preached peace, humanity, agreement on some terms of peace, ceasing from horrible bloodshed. Now she is about to exemplify this pure doctrine by plunging into and increasing this same horrible bloodshed and inhumanity. This is not our war. Switzerland, in far worse situation, but with far better management, has successfully maintained her neutrality. It may not yet be too late (also it may be too late) to retrieve our blunders in statecraft.

"He kept us out of war!" He is not doing so now. The common people now look to Congress to guard their interests. Please do not permit them to be sacrificed.

I live near Lewistown. Went home last fall to vote for you and the rest of the ticket.

Very respectfully,

M. F. F. SWARTZELL.

NEWPORT, PA., *February 7, 1917.*

Hon. BENJAMIN FOCHT, M. C.,
Washington, D. C.:

Expect you to do all you can to keep us out of war. Honor not at stake. We want peace, not to be enslaved by old England.

C. A. RIPPMAN.

LEWISTOWN, PA., *February 5, 1917.*

Hon. B. K. FOCHT, M. C.,
Washington, D. C.

MY DEAR MR. FOCHT: If the United States enters into war with the central powers upon the pretext offered, it will be a most miserable blot upon the escutcheon of American history. Are we a race of barbarians that at the least difficulty we shall grasp arms and sally forth to the shedding of the blood of our fellow men?

The plain people of this country know full well that the "vulture class," who have been stripping the country of food and other supplies needed at home, are instigating the present clash because the continuance of their war-profit graft is threatened. If the American people sanction war upon such contemptible grounds, may God pity civilization.

We look to such as you, Mr. FOCHT, to keep the Nation within the bounds of sanity and reason. War involving America would be a world calamity. Verily the rights of humanity call louder than the yelping of the jingo press and the gnashing of the munition "patriots."

Faithfully, yours,

L. F. SESINGER.

WOMAN'S PEACE PARTY,
PENNSYLVANIA BRANCH,
Philadelphia, February 7, 1917.

Hon. B. K. FOCHT,
Washington, D. C.

DEAR SIR: Believing that the sentiment of the country is in favor of peace rather than war, the Pennsylvania Woman's Peace Party urge you to do your utmost to bring about a settlement of our differences with Germany by mediation or other peaceful means.

Very sincerely, yours,

MRS. HANNAH CLOTHIER HULL,
Chairman.

MRS. E. B. DONALDSON,
Corresponding Secretary.

GAINESVILLE, N. Y., *February 9, 1917.*

Hon. B. K. FOCHT,
Washington, D. C.

DEAR SIR: I am an old resident of Lewisburg, Pa. Your brother has been our family physician for 30 years. Your brother, John B. Focht, has his name on my diploma, which I received at State University in 1905. Your paper, Saturday News, has been in our home for a great many years.

I feel that I can claim a right to write to you expressing my deep regret in the President's foreign policy. We deplore the fact that he has so hastily broken diplomatic relations with Germany, and still more that he has called upon other neutrals to follow his policy. The action of other neutrals declares clearly the absurdity of Wilson's attitude. England is exultant already over the President's action, and, if possible, will either lead or drag us into war, which is inevitable unless restraining influence be brought to bear upon the President.

We do not believe that American soldiers should help England fight her battles. We are Americans first, last, and always, but we believe in Americans for America and America for Americans. Will you kindly use your high office to warn Americans off the high seas and under all circumstances maintain neutral and friendly relations with all belligerents?

Respectfully, yours,

W. W. HEIM.

NEW YORK, N. Y., *February 10.*

Congressman BENJAMIN K. FOCHT,
Washington, D. C.:

Lottie, Lola, and George M. Kleckner and the undersigned, all born Americans, are for peace at any price except invasion.

W. H. KLECKNER.

MERCERSBURG, PA., *February 9, 1917.*

The Hon. B. K. FOCHT,
House of Representatives, Washington, D. C.

MY DEAR MR. FOCHT: In view of the possibility of the United States being drawn into the war, I am writing you, as my Representative in Congress, to ask that you use every means in your command and all the time that it may require, to keep this country from engaging at the last moment in a struggle for mastery which is not its own.

I strongly urge also that, except in case of invasion of our country, you demand that the President give a clear statement of the conditions leading to our possible entrance into the war and of the results, present and future; and that the President and Congress submit to the people in a referendum the question whether we shall engage in a war to protect our right to enter a war zone or whether we shall keep out of this disastrous and endless entanglement in the imperialistic politics of Europe.

The President and Congress ought to use every expedient of diplomacy and economic pressure to bring the fighting nations into a conference. Regardless of any disaster to our shipping, Congress ought to debate deliberately whether it would not be better for this country to adjust its commerce to the war zone than dishonorably to enter the war in its final stage.

The fiery speeches of certain citizens and the unneutral articles of certain newspapers, especially in the Atlantic Coast States, have not in the past represented the true feeling of the people. I believe that the men who elected you are largely people who desire peace, and that they will back you to the limit in keeping this country clear of the war.

I am not writing this letter as a pro-German or a pro-ally or a Socialist, but as a United States citizen whose ancestors fought in the Revolution and who, with his father and brothers, has served in the Army.

Trusting that you will give this matter your most serious attention, I am,

Very truly, yours,

NED OSTHAUS.

Military Training.

EXTENSION OF REMARKS

OF

HON. HENRY I. EMERSON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 12, 1917.

Mr. EMERSON. Mr. Speaker. I desire to extend my remarks in the RECORD by printing therein a very interesting letter received by me from John G. White, one of the leading attorneys of the Cleveland (Ohio) bar on "Military training."

The letter is as follows:

CLEVELAND, OHIO, *February 6, 1917.*

Hon. H. I. EMERSON,
House of Representatives, Washington, D. C.

DEAR EMERSON: I write to urge you to support any bill which may be introduced providing for universal compulsory military training, and any providing that the raising of whatever soldiers may be necessary shall be done by conscription, as distinguished from either volunteering or draft.

I can only urge the stock arguments, but these are none the less valid and strong because they are obvious. I am old enough to remember how things went during the rebellion and also during the Spanish War, and I have read enough of true history of the United States as distinguished from school-book histories to know how things have gone in the past.
